Let the Power Giant of Electricity Lighten Farm Homes and Labor

YOU have asked me to speak on the subject of supplying the farmers of the State of New York with electric service. I welcome the invitation, not only because of my great interest in the subject, but because I ought to have some qualification to speak on it. I was born on a New

OWEN D. YOUNG

York State farm, in a remote agricultural district, fifteen miles from the railroad. I worked on that farm until I was 21 years old. Out of doors we had no power except man power and natural horse-power, and indoors nothing but the grinding drudgery imposed upon my mother for unconscionably long hours every day. There were no milking machines; there were no milk separators; there were no power

churns; there were no power pumps; there were no silage cutters; there were no washing machines; there were no vacuum cleaners, there were no electric flat irons; there were no electric lights; there were no telephones; there were no automobiles; there were no radios. The weekly and semi-weekly newspapers were the communicators of intelligence. Muscles of human beings and of horses were the generators of power, and operated through the greater part of the year every day to the point of exhaustion. These are the recollections of my youth. For the last twenty-five years I have operated that same farm, and I do today.

Later, I became a practicing lawyer in Boston, and devoted the greater part of my time and study to the problems of electric light and power companies. This industry was just then emerging from its infant diseases, resulting from poor technical equipment, bad financing, and unsatisfactory franchises acquired by unwise methods. For fifteen years I devoted myself to the study of the light and power business, during which time it was establishing itself as a real instrument of public service. For the past twelve years I have been connected with a great electrical manufacturing company, and have had the opportunity to observe its field and study its problems. Consequently, I think I may say that I am a farmer; that I am familiar with the light and power business; and that I have some knowledge of electrical manufacturing.

The electrification of the farm requires the cooperative effort of all three—the farmer, the electric light and power company, and perhaps most of all, the electrical manufacturer. I know the difficulties of each. The problem is difficult, but it must be solved. Farms must be made attractive as a place to live, and profitable as a business. Their produce must be made as abundant and cheap as modern devices and inventive genius can make them, in order to guarantee our food supply.

As a social problem, life on the farm, and particularly in the farm houses, must be relieved of its exhausting drudgery through the application of electric power, just as we have

By OWEN D. YOUNG

relieved its desolating lonesomeness by the telephone, the automobile, the moving picture, and most of all, by the radio.

The farm can be and is being made the best of all places in the world to live. The business of farming must be made to yield profits commensurate with other business.

I welcome that Monday morning when the electrically driven milking machine shall have milked the cows; the electrically driven separator shall have produced the cream; the

Bringing Electricity To the Country

ON the editorial page of the issue of American Agriculturist for September 20, 1924, we said:

"When it came to setting up machinery which will practically rule Germany under the Dawes Plan, it was agreed by all of the powers that Young was the man who could do it. *****The name of Owen D. Young will go down in history as one of a few men who did so much for humanity by helping to bring to an end the European chaos following the World War. His name will also be pointed to with pride by American farmers as another of the great leaders of American life who started their careers as barefoot farm boys chasing their cows out of the hilly pasture lot."

Mr. Young found time to devote to this great cause of humanity in spite of the fact that, as chairman of the Board of Directors of the great General Electric Company, he is one of the busiest men in the country. A few days ago we heard him deliver the address on this page and it was so good and on a subject so important to every farmer, that we asked permission to print it so that you all could have the benefit of it.

The address was given at a meeting of farm leaders and representatives of the great gas and electric companies of New York State, and it was called for the purpose of devising ways and means of making electricity cheaper and easily available to the farmers. We can think of nothing that will lighten the drudgery of hand labor and bring more happiness and brightness into every farm family than electric light and power at a price within the farmers' means. Therefore, American Agriculturist will do everything it can to encourage this effort.

electrically driven churn shall have made the butter. At the same time in the house, the electrically driven washing machine shall be automatically doing its work while breakfast goes on and we shall have sunny, brighter, and happy Mondays in place of the old blue ones. And they were blue, and rightly blue in the old days with the milk coming into the house from the barn; with the skimming to be done, and the pans and buckets to be washed; with the churn waiting attention; with the wash-boiler on the stove while the wash-tub and its back-breaking device, the wash-board, stood by; with the kitchen full of steam; the breakfast cooking in progress, and one pale, tired, and discouraged woman in the midst of this confusion. Hungry men were at the door anxious to get at the day's work. Blue were those Mondays indeed.

"How to Electrify the Farm" can be solved by answering four other questions: (1) What can the farmer do; (2) What can the power

company do; (3) What can the manufacturer do; (4) What can the State do?

First, let us see what the farmer can do! Above all, he must be interested in his business. He must be open-minded, and hungry to find new methods by which he may make his undertaking both more pleasant and more profitable. Pride in the advancement of his business, and the initiative to advance, are essential. Leadership must come from the men who own and live on their farms and take pride in their business. I am happy to say this class yet remains as the great back-bone of America. Whether one speaks economically, socially, or politically, they are the anchorage of this country. The farmers should insist upon the study of electrification by their agricultural schools and colleges, by their farm organizations, and require a constant and unending publicity of the results of such studies through their farm journals.

In each community, they should endeavor to develop a universal sentiment in favor of a power supply and general agreement to take the service in order that rights of way may be economically obtained, and the cost of service distributed over the largest possible number of customers. Both the automobile and radio are later developments than electric light and power. They have had wide sale among farmers. It is probably explained by the fact that these may be individually bought, whereas electric service requires cooperative group action. The farmer is too much of an individualist to be a good cooperator. He must learn to cooperate if he is to get electric service.

The one point I want to make to the farmer is that the manufacturing companies may produce devices, the electric power companies may bring electricity to his door, but the question remains with the farmer whether he will put it to work. It is he, in the last analysis, who must say whether or not electricity is to be used in agriculture.

Second—What can the Power Company do? First of all, it can show such interest in the study of the needs of the farmer as a potential customer as it has heretofore done so effectively with reference to industrial and commercial customers. When the great hammers of a steel works needed power, the electric power man was there with his motor and his wire. When the coal mines were using mules to haul the coal to the surface, he was there with his electric locomotive, his elevator, and his wire, and he put the poor mule out of business. When the textile and other similar mills were full of belts and shafting, impairing light, creating noise, and endangering life, he was there to relieve the situation with his individual motor and his wire. When the bake shop needed ovens, he was there with his heating devices and his wire. When the stores needed light, he was there with his highly development specialized lamps and his wire.

But when the cows were to be milked, when milk was to be separated, when the cream was to be churned, when the curd was to be cut, when silos were to be filled, when grinding machines were to be run, unfortunately the electric power man was no there with his motor and his wire. He has been largely in-

What About Potato Acreage?

SPEAKING of potatoes, a lot of growers are wondering just what to do this year. The experience of the past two years, particularly the last one, has been very discouraging. It used to be a good rule to plant a lot of potatoes when seed was cheap, but so many farmers got to following this rule that it became rather doubtful practice.

However, we are not likely to have another such discouraging year as the last one was. It is a pretty good policy in any farm practice, or in life itself for that matter, to keep to the middle of the road and not jump too much to one side or the other. If we were planting potatoes this year, we would plant about the same acreage that we had during the past five years.

There is one other factor that we fear must be taken into consideration by potato growers and that is the fact that there is an increasing tendency on the part of city consumers to eat more substitutes for potatoes. If growers had a large potato organization, we are sure that it would be a paying proposition to spend a considerable amount of money regularly in educating people in the food value and tastefulness of the good old "spud."

The Need For New Farm Machinery

IN recent years the great ingenuity and mechanical ability of the average farmer have been put to the test to make every farm machine last just as long as possible. There has been little money to buy machinery or other equipment. This may not have been good business, but with the lack of money it was absolutely necessary. The time has come, however, when thousands of farmers are up against the proposition of buying at least some new equipment. The loss in time, money and disposition in tinkering up worn-out machinery has about reached the limit. Fortunately, in the East at least, there is a little more money in sight this year than there has been in some time and some of this will go for necessary new equipment.

The automobile has been a factor in influencing the lack of purchase of necessary farm machinery. In 1923, only three cents of the farm dollar were spent for farm equipment; nine cents were spent for automobiles and

their up-keep; and four cents for radios, jewelry and phonographs. We do not believe that any too much money was spent by the average farm family for amusement. Some of the money that went into the automobiles also helped the farm business, and in general farm people have too little recreation.

But these figures do emphasize the fact that farm equipment expenditures were comparatively low, and that we have now come to the time when considerable new equipment must be purchased. It goes without saying with the price of farm labor where it is that farm machinery is needed today as never before.

Better Markets and Better Cows

SOMETIMES we are inclined to think that Denmark is overquoted as an example of accomplishment in agriculture. But in studying the facts, we must admit that the Danish farmer has considerable to boast about in what he has done for his business in the last half century. The Danish farmer sets the example for all the world in cooperative enterprise. No group of farmers anywhere think of starting any cooperative organization of any size without studying what Denmark has done. Denmark's cooperative farm products are to be reckoned with in many of the big markets of the world, including our own. This little country is a striking example of what can be done by cooperation when all the farmers will cooperate.

But organization is not the only thing the farmers of Denmark are noted for. In forty years, the average production per cow in Denmark had doubled. In America, in fifty-five years, dairymen have increased the production per cow about 53%, or only about one-half of what the Danish farmer has done. There is a tendency on the part of a great many dairymen to make light of suggestions about keeping records on the dairy, getting rid of the poor cows, and of putting the dairy generally on a business-like basis. These practices, coupled with cooperation, are what have made Denmark farm products famous the world over, and placed the Danish farmer even with a few acres of land on a good financial basis.

The costs of milk production are increasing yearly in the United States. There is no likelihood that they ever will be very much less, so we say again, and we will continue to say, that the men who stay in the dairy business in this country and make a decent living at it will be only those who make tests, keep records, and weed out the poor stock.

For Better Feeling Between Country and City

THE new Secretary of Agriculture, William M. Jardine, recently made a statement that there should be more cooperation between city and country, between the business man in the town and the business man on the farm. The Secretary said: "Each must realize that neither can prosper without the other."

It is hard sometimes for farm people to keep from being indignant at city folks, for without question the interests of city and country are often openly antagonistic. They are, for instance, on the question of taxation. The majority of city people want taxes reduced on incomes while farmers must get their relief in reduction on real and personal property. But on the whole, Secretary Jardine is absolutely right. There may have been a time when the farmers were entirely independent of the city. Today the city people make a market for our products and it is not good business to antagonize our customers.

The Secretary is right also from a social standpoint. We have lived in both country and city, and have come to the conclusion that "folks is folks" and human nature is much

the same wherever found. We are all of us citizens of the Great Republic and fundamentally all of us have many of the same hopes, ideals and aspirations.

Seventy-Five Years of Farm Records

IN all of the interesting things that M. C. Burritt has written for us from week to week, perhaps the article in this week's issue is the most outstanding. It is said of farmers that they will not keep farm records. If this is true, there is a good reason for it, for it is something of a job to keep books after a long day's work in the open. But it is a job that must be done in modern farming and the fact that a family has such records for 75 years, as have the Burritts, is remarkable and commendable.

Explanation of the Junior License Law.

IF you are interested in the question of getting a junior automobile driving license, turn to page 427 and read the explanation of how to go about it. This explanation has just been issued by the Motor Vehicle Bureau of the State Tax Department and is based on the new Junior License Law just passed by the last New York State Legislature. This bill was worked for by AMERICAN AGRICULTURIST.

Eastman's Chestnuts

DID you men folks ever notice that curious habit that the women have of taking special delight in every once in so often completely upsetting the arrangement of the furniture in a room? I think most of the women are alike this way, for I know that when I was a boy at home and just got nicely used to sleeping in the bed in one corner of the room, I would find that it was moved over to the other end. The "Mrs." also has this little custom of upsetting the established order of things every little while. (Hope I am away from home when she reads this!)

Maybe men are more creatures of habit than are the women. Anyway, I know that the older I get the more things I like to do according to habit. If I sleep in the bed with its head toward the North for three weeks, it annoys me exceedingly to find it headed South.

I can sympathize with the British soldier during the late war, whom a Tompkins County subscriber to AMERICAN AGRICULTURIST told me about recently. The British had just vacated the line of trenches which were soon occupied by the Germans. The Germans had not been there long before they saw a lone figure hurrying across No Man's Land toward them. They were amazed, but their officers ordered them not to shoot for they were curious to find out what the British soldier meant by this foolhardy move. They soon found out.

When he got near enough for them to hear, he yelled: "SAY, HAVE ANY OF YOU BLOKES SEEN ANYTHING OF MY OLD PIPE?"

Then there is the other old chestnut about the man who went to the doctor and said: "Doctor, why couldn't I live to be ninety years old?"

"I do not know," said the doctor. "How old are you?"

"Forty," said the man.

"What bad habits have you got? Do you drink?"

"No."

"Smoke?"

"Chew?"

"No."

"Then," said the doctor, "WHY IN THUNDER DO YOU WANT TO LIVE FIFTY YEARS MORE?"

Patience is bitter, but its fruit is sweet.—PROVERBS OF FRANCE.

Why Is Land So Cheap Down East?

And Other Interesting Letters from the Editor's Mail

THE above question is inspired by the broadcast article by Mr. A. W. Gilbert in your issue of November 15th. With your large circulation in New York, Pennsylvania and other Eastern states, you surely must have many readers who will be interested in this subject and no doubt there will be some who can give a satisfactory answer.

By the census of 1920, there are 29,885,558 people living in the ten states east of Buffalo, something over 26 per cent of the population of the whole United States, and furnishes the Eastern farmer with more consumers for his products than he can begin to supply. All of which enables our farmers to obtain top prices for their crops right at home and without being obliged to pay long haul freight rates and middleman's profits, as do the Corn Belt farmers and those still further West.

The following tables from the "Year Book" of the United States Agricultural Department for 1923 will serve to visualize these matters more fully than can be done by a mere printed statement of the leading facts bearing on the above question:

Average Yield per Acre for 7 Years, 1914-1920					
Bushels	Corn	Wheat	Oats	Rye	Hay-Tons
New York	37.3	21.5	34.0	17.6	1.35
Pennsylvania	41.6	17.7	34.7	17.0	1.41
Iowa	27.9	18.0	38.9	17.8	1.48
Illinois	34.1	17.4	39.8	16.9	1.29
Indiana	35.9	16.1	36.5	15.1	1.34

Average Price on Farm for 7 years, 1914-1920.					
Bushels	Corn	Wheat	Oats	Rye	Hay-Tons
New York	\$1.32	\$1.70	\$6.67	\$1.39	\$17.40
Pennsylvania	1.14	1.68	.64	1.30	18.94
Iowa	.83	1.54	.50	1.18	13.78
Illinois	.88	1.64	.54	1.24	17.07
Indiana	.89	1.66	.53	1.24	16.40

Average Price for Good Plow Land per acre in 1924	
New York	\$ 75.00
Pennsylvania	68.00
Iowa	169.00
Illinois	148.00
Indiana	101.00

Let your readers look at the difference in the farm price per bushel, ranging from 17c on oats in favor of New York to 49c on a bushel of wheat as against Iowa, the leading Corn Belt state, and tell why land in Iowa sells at nearly two and one half times the price for an equally productive acre in New York or Pennsylvania. Then too the difference in the interest on the purchase price will average nearly \$5.00 an acre in favor of the Eastern states.

I have no fault to find with the price of land in Iowa, and if President Coolidge's warning is not heeded, we may some of us live to see land selling in this country at Japan's price, where, I am told, good land, near good markets, sells as high as \$1500 an acre, owing to the crowded conditions as to population, etc.

If the farmer goes out to buy a farm, does he ask "What will it pay?", the same as though he contemplated a purchase of railroad or bank shares? If he does pursue that conservative method, then why are Eastern acres of good plow land selling at such low prices?—F. W., New York.

Rules of the Road

Adopted at the Last Meeting of the Anti-Automobile Society

1. Upon discovering an approaching team, the automobilist must stop off side and cover his machine with a blanket painted to correspond to the scenery.

2. The speed limit on country roads this year will be a secret,

and the penalty for violation will be \$10.00 for every mile an offender is caught going in excess of it.

3. In case an automobile makes a team run away, the penalty will be \$50.00 for the first mile, \$100 for the second and \$200.00 for the third, etc., that the team runs; in addition to the usual damages.

4. On approaching a corner, where he cannot command a view of the road ahead, the automobilist must stop not less than 100 yards from the turn, toot his horn, ring a bell, fire a revolver, halloo, and send up three bombs at intervals of five minutes.

5. Automobiles must again be seasonably painted, that is, so that they will merge with the pastoral ensemble and not be startling. They must be green in spring, golden in summer, red in autumn, and white in winter.

6. Automobiles running on the country roads at night must send up a red rocket every mile, and wait ten minutes for the road to clear. They may then proceed carefully blowing their horns and shooting roman candles.

7. All members of the society will give up Sunday to chasing automobiles, shooting and shouting at them, making arrests and otherwise discouraging country touring on that day.

8. In case a horse will not pass an automobile, the automobilist will take the machine apart as rapidly as possible and conceal the parts in the grass.

9. In case an automobile approaches a farmer's house when the roads are dusty, it will slow down to one mile an hour and the chauffeur will lay the dust in front of the house with a hand sprinkler worked over the dashboard.

10. If after following the above rules, someone accidentally or otherwise hits your car and it is in need of repair, do as the majority of

auto owners do—get it fixed.—A. L. C., New Jersey.

* * *

Yours for a Better World

I AM a plain farmer woman, the mother of a large family of growing boys and girls, and I wish to thank you for printing that splendid article in AMERICAN AGRICULTURIST, "Help Now or Fight Later" by Mr. Henry Morgenthau, I believe it is the best article I have ever read in your paper and I have been a reader for a number of years.

I felt as if I had read a sermon. It should rouse fathers and mothers to action all over the land. I believe our first task is to conquer the enemy in our own country.

We train our children in the home to be honest, law-abiding, God-fearing citizens, and as soon as they pass the threshold, they hear the very things they have been taught to respect and revere laughed at.

America has been called "the land of the free and the home of the brave". Is this the name our forefathers fought and died for? Did Washington and Lincoln give their lives for this? Was it for this our Constitution was ordained and established? As all nations look to us for example, not only must we furnish the pilots, but America must be the Pilot; God help her to be a worthy one.

Is she in a position to pilot any one until she can blot this stigma from her name?

It reminds one of some great evil sore which keeps spreading and reaching out towards a vital spot. God help thinking men and women to rise up and put on their armor, a mighty army to battle with this menace before it enters our very homes.

Is America safe for posterity as she stands today? Her future is knocking at the door but in many, too many, homes, there is no one to open to her. The occupants are all busy with jazz, wine, mah jongg, and the struggle for wealth and social position, while next door are men and women not born on our soil stretching out eager hands to receive her. There is no use in ignoring the situation. It is easier to face it now than it will be later.

We sent our missionaries to China and they learned to respect our religion and many accepted it as their own. Later they were shocked when one of their worst gambling games became popular here and swept the country from coast to coast. We read that Chinese women are taught modesty of dress and habits from birth. What must they think of the costumes worn by some of our women? How much more effective our missionary work would be if they found us living up to our teaching.

As for a plan, we have had one for centuries. It is age old, given us by the "Prince of Peace" while here on earth. Until it is universally adopted and practiced there can be no lasting "peace on earth, good will toward men". Yours for a better world, Mother o' Nine.

WHICH IS BETTER—CASH OR CARRY? By JOHN M. BLAT.

Thousands of farmers are paying heavy rates of interest on what they buy in the form of "time prices". Yet many of these same farmers could borrow from banks at 6 to 8 per cent per annum. So our cartoon asks: "Which Is Better—To Let the Banker Carry You and Pay Cash, or to Try to Carry 'Carry' Forevermore?" What is your answer for your own case? From the Progressive Farmer.

how to mix cement and when to use it

What makes good concrete? It is easy to say—good Portland cement, clean sand, and gravel or stone that is free from dirt. These materials, in proper proportions, are mixed with water and placed in position to harden.

It sounds simple; it is simple. But to be sure of the best results you should follow the clear directions given in "Concrete on the Farm," the free Atlas book on permanent construction. Money-saving improvements are described throughout the 98 pages of this book. It is fully illustrated, and it covers farm construction from barns and silos to troughs and fence posts.

"Concrete on the Farm" is published for free distribution by the makers of Atlas Portland Cement—for over thirty years "the Standard by which all other makes are measured." You incur no obligation in sending for a copy. Mail the coupon now. Learn how concrete can help you to save money, to make bigger profits, to add definitely to the value of your property.

Making Apples Bloom

How Nitrate of Soda Did It---Other Fruit Items

FOR many years back the practicability of fertilizing orchards has been discussed pro and con and every year finds us contradicting some old theory and building up a new one. Some growers do not believe in the application of chemicals to apple trees. Others find that a light feeding does the trees good. Up in Ontario County an experiment was conducted a year ago that brings out another slant on the subject.

Redman Brothers at Hall, have a block of trees in their orchard that they say, have never set a good crop of apples. The trees blossom out well every spring but the "blow" did not set fruit. This condition bothered the Redman boys and they took up the problem with "Dad" Pease, the Farm Bureau Manager. In fact the experiment came up as a result of filling out a questionnaire that Pease sent out to the members asking if there was some definite problem they would like to have solved. In filling out the questionnaire they asked that a specialist be sent from the College to visit them. Professor Oskamp went out to the farm and after looking things over suggested varying applications of nitrate of soda.

Good Care of No Avail

The orchard which is about 45 years old has had good care for the past five years. The orchard has been clean cultivated and the trees have been thoroughly sprayed. One winter the Redmans removed a large number of fruit spurs, believing that this practice would tend to secure a good set of fruit. But the results were negative. Each spring the blossoms were plentiful but they did not stick and set fruit.

Professor Oskamp's recommendations that nitrate of soda be applied was based on the supposition that perhaps there was not sufficient available nitrogen in the soil for the blossoms to set fruit. As nitrogen is readily available in the form of nitrate of soda, it was applied last spring on May 12, being broadcast on a rainy day just one week after the delayed dormant spray had been applied. It was well scattered under the trees, extending out to the farthestmost extremities of the branches. In order to check up results, the demonstration was laid out so that there would be a block of untreated trees to check against those trees that were treated. The trees that were treated received an application of from five to eight pounds per tree.

Treated Trees Set A Crop

Full blossoming occurred during the period between May 27 and June 6. Rains were sufficient up to the calyx period of bud development and the nitrate had ample opportunity to be well washed into the soil, absorbed by the root hairs and transferred to the blossom buds.

Here is what happened. From the 16 trees that were treated with varying amounts of from five to eight pounds of nitrate of soda, there were harvested 208½ bushels of apples or an average yield per tree of 13 bushels. There were 27 trees that remained untreated for checking purposes. These 27 trees yielded 28½ bushels of apples or an average yield per untreated tree of one bushel. "These results," writes county agent Pease, "seem to indicate that in this particular orchard, nitrogen was needed to aid the blossoms to set fruit."

Is it any wonder that the Redman Brothers are enthusiastic Farm Bureau members?

Trees Damaged by Animals

What can be done for young peach and apple trees which have been damaged by field mice and rabbits? The bark has been chewed off of some a few inches up from the ground; some have been attacked from the ground to the branches. Please let me know what to do.—C. H. K., Pennsylvania.

If the trees have been completely girdled during the winter and they are two or three year olds, it might be better to take

them out and plant new two or three year olds in their place. On the other hand, if the damage has not completely ruined the tree it is possible to paint the damage with creosote or any of the coal tar products which prevent rot, in some cases tacking back or binding the bark if this is necessary.

Where girdling has been practically completed and the value of the tree justifies, bridge grafting, as it is called, may be used very successfully. This consists of cutting a scion from the branches in the Spring when the sap is flowing and the wood is in good healthy condition, and cutting the two ends so as to fit in at the upper and lower ends of the damaged portion. These scions complete the union between the cambium layer above and below the break and allow the tree to continue its growth.

Prevention Methods

As prevention is the most effective cure, it might be well to consider by another season the use of wire guards. It is impossible to keep the mice away by this method and when there is heavy snow it will not prevent damage from rabbits, although many farmers and fruit growers use such collars to advantage. Your local general supply man can probably put you in touch with various types of these collars. White-washing with a mixture containing poison is also used effectively by some fruit growers.

Mixing Poison Bait

For the mice you may find poison baits placed at a favorably location in the runways among the roots a more effective way of control. A poison such as the following has been very effective in many cases. It is placed in the runs and at the entrance of burrows in amounts of not more than a teaspoonful at a place.

"Dissolve one ounce of strychnine sulphate in 2 quarts of boiling water. Dissolve 2 tablespoonfuls of laundry starch in ½ pint of cold water. Add the starch to the strychnine solution and boil for a few minutes until the starch is clear. A little saccharin may be added if desired, but it is not essential. Pour the hot starch over 1 bushel of oats in a metal tub and stir thoroughly. Let the grain stand overnight to absorb the poison."

A Spraying Rod Valve Pays

I HAVE watched a good many people spray with ordinary farm equipment and have never seen one who had a good valve at the hand end of the spraying rod where an extension was used. Now an extension will make spraying much more effective and easier even if it be but a short one, but you should have a small brass valve located where the hose attaches to turn off the spray when not needed. I have seen a pile, fully half the spraying material wasted by letting the spray run when it was not being directed where it would do good. In a few trials you will learn to manipulate this valve to make every drop of the spray do good and it will be much less mussy work as well. I never cared for a valve at the nozzle for it is seldom in reach if you are fitted to do good work.—R. RAE.

Fight San Jose Scale

SAN Jose scale is a constant source of danger. It kills trees in quick time. It cannot be kept out of any orchard if it is in the vicinity for it is carried by birds on their feet, the young being free mite-like insects when first born. It multiplies with extreme rapidity. The only safe plan is to spray the orchard every winter or early spring while dormant with a strong solution that would do injury to the trees is growing at the time. Lime-sulphur is ordinarily used. This spray should be as much a part of the spraying program as that for fruit eating insects. If all the little colonies brought to your orchard by birds each year are thus destroyed before they spread over the whole tree they will not seriously damage it.—L. H. COBB.

Treating Seed Is Easy

It Will Help Cure Crop Ills

WHEN I was county club agent up in Livingston County, New York, several years ago, I ran into a number of places where folks were having trouble with scabby potatoes. We had several potato projects in the county that year and some of the boys had previously raised potatoes of good size but were discouraged because they had so much scab. In one place in particular it was a shame to think of the boy giving up growing potatoes because he got such good yields but so much scab made it a useless venture. I started to talk potato treatment but I did not get very far when the boy's Dad interrupted with a criticism that he thought it was too much trouble. He had the opinion that there was a lot of fussing to be done and that such accurate records had to be kept that it was more like a laboratory experiment than a farm job. About the only thing to do was to treat the seed right then and there to show "the man from Missouri." He said that is what he was when I said it was an easy job. We jumped in the fliyer and drove to the town drug store for some mercuric chloride. Before noon we had the job finished.

It is easy. All that potato treatment consists of is dissolving some mercuric chloride or corrosive sublimate (you can buy it in any drug store) in hot water and then dilute it. Four ounces of the corrosive sublimate are first dissolved in a little warm water because it is more soluble in warm water. A quart is enough. When it is all dissolved it is then diluted to 30 gallons of ordinary well water and the seed is soaked in this solution. Of course there are precautions to be taken. The main one is to make sure that no stock, chickens or humans have access to this corrosive sublimate because it is a very poisonous substance. The second precaution is to use no metal containers.

Soak the Uncut Seed

The four ounces of white powder can be dissolved in a glass bottle and then diluted in a 50 gallon water tight barrel up to the 30 gallon mark. The uncut potatoes are placed in this solution and are allowed to remain there for an hour and half. Then they are taken out and spread on the barn floor to dry. Where a small amount are to be treated they can be suspended in the barrel right in the sack.

The solution loses its strength very rapidly, so that only three different batches can be treated with the one solution. The third batch of spuds should stay in the solution about two hours. After the third batch it is thrown away and a fresh solution made up. Where a fellow has a lot of potatoes to soak it is wise to have several barrels in use at the same time.

On the occasion which I mentioned previously, we naturally did not plant the potatoes on the same land in which they were planted the year before. Scab was in the soil and if the scab is in the soil, treating the seed alone will not entirely eliminate the trouble. So we removed the boy's project to fresh ground. The trick worked. That fall the youngster had several bushels of nice bright clean potatoes to sell. In fact his exhibit at one of the county fairs brought a prize.

How to Treat Oats

Seed treatment is a mighty good insurance. There are other crops that respond to seed treatment where the seed may carry disease and result in increased yields. This is true in oats, barley and cabbage. Oat and barley smut take heavy tolls every year that run into the hundreds of thousands and it is easily controlled. The grain is simply piled on the barn floor after it has been run through the fanning mill a couple of times. A solution of formaldehyde is sprinkled over it. This formaldehyde can be bought at any drug store. If you buy it make sure it is

40%. A pint of this is diluted in 40 gallons of water. When the diluted solution is sprinkled over the pile of oats, the grain is gradually turned over with a scoop shovel until you are sure every kernel is moist. When you have reached that point, the grain is then piled and covered with bags or blankets. It is a good idea to do it the last thing in the evening and leave the pile stand over night when it can be uncovered in the morning and spread to dry. It is very simple and anybody can do it.

Treating Cabbage Seed

One of our biggest losses in the cabbage crop is from black rot and black leg, fungus diseases. Seed growers are rapidly reaching the point where these diseases will cease to trouble us through the selection of seed stock. Where you are not sure about the seed it is a good idea to treat. The method generally advocated is the use of corrosive sublimate, the same material used in treating potatoes. You can get this corrosive sublimate in tablets, a very convenient form. One tablet is dissolved in a pint of water and an ounce of the powder is dissolved in 7½ gallons of water. Remember here, as in the case with potatoes, to use no metal containers. Tie the seed loosely in cheesecloth bags containing not more than a quarter pound of seed each and soak in the solution for 20 or 30 minutes. After the seed is taken out it is rinsed thoroughly in clean water and spread out to dry. It is not safe to do the drying over a hot stove or in the hot sunshine.

Hot Water Method More Drastic

This treatment will kill all the parasites that is on the outside of the seed. It does not kill it on the inside, therefore a more drastic method is used, which consists of soaking the seed in hot water for 30 minutes. A large tub or wash boiler is partly filled with water and heated to 122 degrees Fahrenheit. The bag of seed which should not contain more than one quarter of a pound, tied loosely, is stirred constantly through the water with a thermometer. As soon as the temperature of the water begins to go down add a little boiling water slowly so that the temperature is kept constantly at the right point. At the end of 30 minutes, the bag of seed is removed, dipped in cold water to cool and then spread out to dry.

As was mentioned before this method is drastic and if the seed is a low vitality the cure may be worse than the ill in that it may kill all the seed. It is a good idea to test your seed for germinating qualities before you treat it with the hot water method. Your college of agriculture will be glad to test your seed for you if you are not sure of yourself. As far as the treatment of it is concerned, it is as easy as rolling off a log.—F. W. OHM.

Rule to Measure Hay

I have sold my farm. How can I determine the number of tons of hay which I have left?

Any general rule will only give approximate results because of the greatly variable conditions, but the rule for finding the number of tons of hay in a mow is to multiply the length, width and depth in feet together and divide by 450 for timothy hay and 550 for clover and alfalfa hay. There will be variations according to how much it has settled and of course there will be more weight in a given space at the bottom of the mow than near the top.

Coal Ashes As a Fertilizer

Are coal ashes good as a fertilizer?

We often get inquiries about this. The answer is no. There is very little plant food in coal ashes. On certain heavy soils they have a lightening effect which does some good.

Certified Blue Tag Seed Potatoes

Our Blue Tag seed potatoes led all other certified seed in the 1924 official tests conducted in New Jersey and Long Island. Write for delivery prices on late and early varieties.

"Let There Be Light"

(Continued from page 417)

terested in serving these other larger consumers in more concentrated areas. I am not criticizing the power companies for what they have failed to do. I am commending their spirit of today.

Their achievement in this country as compared with the development in any other is one of the outstanding testimonials to the energy and ability of the men who have directed this great industry. All I wish to say to them is that having made such progress in these other fields, and having from necessity so long neglected the agricultural need, the time has come when they should now give special attention and study to agricultural problems and to ways and means of furnishing agricultural service. They should create agricultural departments with men who not only know the electrical business, but who know the farming business. It will not do for the electric power companies to send men to the farms who do not know on which side of the stanchions to install a milking machine. One reason why the farmer has not been open-minded is because the people who have been trying to sell him electric service have really known nothing about his needs.

Need Agricultural Departments

Just as the electric light and power companies now have Industrial Departments, they should, in the future, have Agricultural Departments. These departments should be in the hands of men familiar not only with electricity, but with farming. They should be in close touch with the agricultural schools and colleges. They should be working through cooperative committees, such as the New York Committee on the Relation of Electricity to Agriculture. This Committee is composed of representatives from the State College of Agriculture, the farm bureau, the Grange, and the Empire State Gas and Electric Association. In my judgment, the power companies and the manufacturing companies should aid the work of this Committee, not only with skilled men, but by providing it with funds to enable it to do its job. I am told that \$25,000 is needed for the first year. I hope it may be obtained promptly.

The Obligation of Power Companies

Now, again, let me say a word about what I conceive to be the increasing obligation of power companies to supply service to the smaller communities and the agricultural districts. Twenty-five years the light and power companies did a local business in each municipality. A generating station suited to the size of the community in which the franchise was granted, and a distributing system adequate to cover its needs was a power company. Within that community, it was their privilege and their obligation to supply service to its citizens. Each individual service might not be wholly profitable, but if the earnings from the community as a whole showed a fair return on the capital invested there, the power company was satisfied.

Today, a change has occurred in that business. The art has developed and the industry has extended with the art. It has been found that it is in the interest of the industry as well as of the community to have great central power stations, favorably located, supplying a large territorial district comprised of many communities, in place of the small individual plants for each community. The cost of power supply is reduced through these larger and more economic generating units. It has been found of advantage to the power companies to diversify the load by the different uses to which power is put in different communities at different times of the day. This, too, is of advantage to the power companies in that it makes their investment more productive. When, however, great districts are served by a single power company, when great power transmission lines are run through rural communities in order to connect one city with another, when the farms and small villages find that they can not tap these lines

for service which run directly by their door, they begin to ask, and, in my judgment, properly ask why if they are a part of this great integrated power district, they should not have their service too. In other words, I think the power companies must remember that when they extend their operations over wider areas, and put their network of power lines over large districts, they take on an obligation to serve the people of the district in which they have the privilege of operating.

Two Views on Service

This does not mean that they can run lines to the last farm, or even the last village in that district, but it does mean that they must view their obligation as they have always done, as one having two aspects, one economic, and the other social. The company must neither ride the economic hobby to the point where its service is not generally available in the community nor, on the other hand, can it ride the social hobby as some loud-speaking and visionary persons outside of the industry urge, to the point of financial bankruptcy. Wise human judgment must be exercised in the service of the citizens of the district in which the company operates, and I am happy to say that, for the most part, the power companies have exercised such judgment, and that accounts largely for the high favor in which they are held and the stability of their business and their securities. I have never contended that a small plant in a small village, whose duty it is to supply the village, had any obligation to run a line 15 miles in the country to supply the farmers along that line.

Should Study the Farmers' Needs

What I do say is that if a company sees fit to connect up 40 or 50 or 100 such cities and villages in its own interest, then its obligation, subject to the economic limitations which I have mentioned earlier, is to supply that whole district electrically, not the cities alone, but the villages and agricultural areas as well within the field of their operations.

So I ask of the power company which extends its lines over great areas and connects up many cities and towns to regard the farmer within that territory as one to whom it owes an obligation. If the power companies will recognize such obligation, then I ask them to study the farmer's needs and within every reasonable economic limitation to supply the service.

Now as to the manufacturer. He, too, is subject to the indictment of want of interest. He has sought to apply electricity to everything in the world except the farm. He has spent enormous sums on research and engineering to find out how to make industries more productive and economical. He has been unremitting in his toil to apply electricity to transportation, both on sea and land. He has been constant and devoted in his attention to

Continued on Page 428

Why and How I Plow

(Continued from page 415)

wise a lot of things just mentioned are far more important. One liked to see straight furrows because of the general impression that the plow has a desire and willingness to do his work well. I started by saying that I was not sure why dairy farmers do not plow and till their soil better. One reason we feed our crops to animals and the product per cow may not be less if our fields are poorly tilled, because we have dairy rations of grains to make up all other deficiencies. Animals eat what is grown good or bad and we do not have to meet market demands.

Sometimes we do not have ready money to meet the cost of preparing fields for future cropping, sometimes we care more about getting over with a job than the quality of work done, sometimes we have equipment only partially equal to the task in hand and sometimes, well, we don't care.—H. E. Cook.

A Bag of ALPHA CEMENT

is made up of elements that for ages were in the form of solid rock. Mixed with great care, ground fine, burned thoroughly and then reground finer than flour under strict chemical supervision, these elements make an extraordinary binding material that knits sand and stone, or sand and gravel, into improvements solid as rock.

ALPHA CEMENT improvements never rot or rust; can't burn; require no painting.

TUCKAHOE, N. Y.

Sixteen High Points on Brooding Chicks

HERE are sixteen practical points on brooding chicks:

First, for brooding less than 100 chicks use hens or portable hovers. For 100 or more, use colony brooder stoves in the shed type house 8 by 12 feet. Coal stoves are usually more reliable than oil stoves.

Second, not more than 250 to 300 chicks should be put under one stove.

Watch Action of the Chicks

Third, brooder temperatures on the litter near the outer rim of the deflector of the brooder stove should be about 100 degrees F. the first week; 96 degrees the second week; 92 degrees the third week, and 88 degrees the fourth week. The action of the chicks rather than the reading of the thermometer indicates the correct temperatures. Chicks should lie spread out in a circle around the edge of the hover. When they crawl under each other or gather near the stove they are cold. When they crowd out from under the hover and peep shrilly it indicates that the temperature is too high.

Fourth, use one inch mesh netting in the brooder around the hover to keep the chicks from straying away to the corners during the first two or three days after they are first put in the brooder house.

Get Chicks on the Ground

Fifth, get the chicks on the ground as soon as possible, usually at five to seven days. Use one inch mesh netting to confine chicks near the house for the first three or four weeks, then give free range. Block up under the house at once, using one inch wire netting.

Sixth, use earth or sod runways from the house.

Seventh, use dry clean, cut straw, cut clover, or alfalfa for litter. An inch or two of sand under the litter is advisable.

Do Not Take Heat Away Too Soon

Eighth, do not take heat away until chicks are well feathered. Fire up heater on cold or wet days to prevent crowding or smothering.

Ninth, use chestnut coal in coal stoves. *Tenth*, have the stoves working well before the chicks arrive.

Eleventh, provide shade. An orchard is an ideal place for rearing chicks.

Twelfth, move the colony houses to new ground.

Thirteenth, to prevent gapes, move to new ground each season.

Fourteenth, to prevent white diarrhea, get eggs or chicks from disease-free stock. There is no known cure for genuine white diarrhea.

Fifteenth, promote health by inducing the chicks to exercise and keep busy.

Sixteenth, free grass range is the thing.

—L. M. Hurd.

He Fattens Them Fast

RAISING ducklings successfully is no easy job, but a neighbor of mine, does it. And what is still more of a job, he makes them weigh six pounds at the age of twelve weeks. He has been doing it right along, too.

"The first thing in raising ducks," he says, "is to get strong, fertile eggs, and I prefer them from ducks that are two years old because they are larger, stronger and better breeders. Pekin ducks, the breed I raise, dress and sell better than other kinds and they will lay 100 eggs annually if fed right."

"Duck eggs require more moisture than hen eggs and are hurt more easily through overheating, but they can be hatched as well in incubators as hen eggs. Watch the eggs carefully from the 26th to the 28th day and if the ducklings do not break out of the shell in a short time, a little help will not hurt them."

"I feed a bread made of cornmeal, 50 per cent; bran, 40 per cent; fine sand, 5 per cent; and wheat, 5 per cent. I soak the bread in skim milk and feed it wet. Ducklings should never be given

White Diarrhea

Remarkable Experience of Mrs. C. M. Bradshaw in Preventing White Diarrhea

The following letter will no doubt be of utmost interest to poultry raisers who have had serious losses from White Diarrhea. We will let Mrs. Bradshaw tell of her experience in her own words:

"Gentlemen: I see reports of so many losing their little chicks with White Diarrhea, so thought I would tell my experience. I used to lose a great many from this cause, tried many remedies and was about discouraged. As a last resort I sent to the Walker Remedy Co., Dept. 437, Waterloo, Iowa, for their Walko White Diarrhea Remedy. I used two 50c packages, raised 300 White Wyandottes and never lost one or had one sick after giving the medicine and my chickens are larger and healthier than ever before. I have found this company thoroughly reliable and always get the remedy by return mail.—Mrs. C. M. Bradshaw, Beaconsfield, Iowa."

Cause of White Diarrhea

White Diarrhea is caused by the Bacillus Bacterium Pullorum. This germ is transmitted to the baby chick through the yolk of the newly hatched egg. Readers are warned to beware of White Diarrhea. Don't wait until it kills half your chicks. Take the "stitch in time that saves nine." Remember, there is scarcely a hatch without some infected chicks. Don't let these few infect your entire flock. Prevent it. Give Walko in all drinking water for the first two weeks and you won't lose one chick where you lost hundreds before. These letters prove it:

Never Lost a Single Chick

Mrs. L. L. Tam, Burnetts Creek, Ind., writes: "I have lost my share of chicks from White Diarrhea. Finally I sent for two packages of Walko. I raised over 500 chicks and I never lost a single chick from White Diarrhea. Walko not only prevents White Diarrhea, but it gives the chicks strength and vigor; they develop quicker and feather earlier."

Never Lost One After First Dose

Mrs. Ethel Rhoades, Shenandoah, Iowa, writes: "My first incubator chicks, when but a few days old, began to die by the dozens with White Diarrhea. I tried different remedies and was about discouraged with the chicken business. Finally, I sent to the Walker Remedy Co., Waterloo, Iowa, for a box of their Walko White Diarrhea Remedy. It's just the only thing for this terrible disease. We raised 700 thrifty, healthy chicks and never lost a single chick after the first dose."

You Run No Risk

We will send WALKO White Diarrhea Remedy entirely at our risk—postage prepaid—so you can see for yourself what a wonder-working remedy it is for White Diarrhea in baby chicks. So you can prove—as thousands have proven—that it will stop your losses and double, treble, even quadruple your profits. Send 50c for package of WALKO (or \$1.00 for extra large box)—give it in all drinking water and watch results. You'll find you won't lose one chick where you lost dozens before. It's a positive fact. You run no risk. We guarantee to refund your money promptly if you don't find it the greatest little chick saver you ever used. The Leavitt & Johnson National Bank, the oldest and strongest bank in Waterloo, Iowa, stands back of our guarantee.

WALKER REMEDY CO., Dept. 437, Waterloo, Iowa.

Send me the () 50c regular size (or () \$1 economical large size) package of Walko White Diarrhea Remedy to try at your risk. Send it on your positive guarantee to promptly refund my money if not satisfied in every way. I am enclosing 50c (or \$1.00). (P. O. money order, check or currency acceptable.)

A Story For Dairymen

Why The Cow Could Not Get Up

ONE evening a few winters ago one of my neighbors stopped me in the post office saying: "I'm afraid I'm going to lose my best cow—my highest producer. She's just freshened, but she can't get up. No fever, not yet anyway—just weak." And I said: "Charlie, you deserve to lose two or three cows—just that way—for experience is the only teacher you will learn anything of. But I'm sorry for the cow, and if you will go into town tonight and get some fine, raw, bone-flour, you will find that cow will lap it up like candy—and probably be all right in three days."

D. S. KELSEY And this all came to pass. While a cow will not so rob her own carcass of calcium, to produce more milk than her rations afford the surplus for, she will do—did do—that very thing for her un-born offspring, draining her own system until the very bones were wobbly and weak!

An old dairy neighbor across the street from Charles' was then using 20 tons of limestone each year, while the young man made fun of his ideas. But today, these same two farmers use, together, two car-loads of limestone, and sometimes three a year, and each is now a very prosperous past-president of the Connecticut State Dairymen's Association.

The Weakest Link

Let us agree without argument, upon a certain long-proven fact; that any chain is no stronger than its weakest link. For instance, if your men are building boxes out of boards and nails, and run out of nails, they cannot make any more boxes—no matter how much lumber they use.

Or again, seeing that your 10,000-pound cow must in each week provide about two pounds of dissolved lime in her milk-output (besides putting first, a good deal into her own 1100-pound body, for every cow eats first for herself, and second, for your milk) IF YOU FEED HER BUT ONE POUND OF CALCIUM CARBONATE PER WEEK, SHE WILL SURELY HALVE HER MILK-OUTPUT, for the mineral ash content of milk is practically the same among all cows—three-quarters of one per cent by weight, and nearly four-fifths of that ash is calcium oxids. There is no 2%, or 4% or 5% about it as there is in butter-fat. The growing calf, or human baby, for which nature is providing this milk, will need and use that large daily dose of lime in building up its body.

The Chemistry Of It

Now, to make sure that we know exactly what we are working with (and doing) let us burn up one perfectly good load of cow hay—one ton. If this 2000 pounds was of early-cut timothy, the resulting ash would contain about 26 lbs. of calcium oxide. If it had been clover hay, nearly twice 26 lbs., and if it were a load of alfalfa hay, there would be over 60 lbs. Fully as much lime as is found in a ton of good bran.

But suppose we were to so burn up a ton of silage—corn-silage, I mean. Then we should find less than 3 lbs. of calcium ash. If it were a ton of dry corn-stalks even, not more than 10 or 12 lbs. of bone-making lime would be therein.

And all this often is exactly the *why* of so many "poor-production" records! Your cow cannot build boxes without nails—any more than your men can. WHY NOT GO AND BUY MORE NAILS—plenty of nails, in fact? Why not have them lying around in abundance, and always handy (abundant lime-content, in that your "men" (cows) will at least have

tasty, succulent foods, I mean) so no excuse? There will still be plenty of other ways for them to dodge to find or make excuses—but this one is so simple, so sure and easy a matter!

The Safe, Sane Way

ANYBODY CAN GROW CLOVERS, IF NOT ALFALFA, on any good "corn land," provided only that their legume crop, whichever it is, is also well provided with "nails." YOU CANNOT GROW FIFTY POUNDS OF CALCIUM OXIDE INTO A TON OF CLOVER HAY IF THE LIME IS NOT THERE IN THE SOIL! And it takes a good many pounds of raw, ground limestone to make a pound of "lime-water" which is the favorite drink of all leguminous plants. 700 pounds of water will carry up only one pound of lime, the chemists say. That is the proportion in the druggist's "lime-water." Therefore your two tons of clover hay on an acre must drink at least sixteen thousand pounds of lime-water (allowing for those parts of the plants not removed by the mower) and all this in the few growing weeks of spring.

Doesn't it really seem as though a wise farmer would "see the point," and make certain his soil carried "nails" in plenty so that he could surely grow clovers or alfalfa (two tons of wheat-bran per acre) and thus give his cows all the "nails" they could use? Then—then, how his cows would pound out the "boxes," for cows are a most foolish lot! They seem to just love to appropriate and work up into beautiful, valuable milk, twice or thrice as much food as they need merely for themselves.

Do you suppose any manufacturer, who had machines that were not merely perfectly auto-motive, but FED THEMSELVES TOO, AND WITH UNERRING SKILL (so long as the necessary material was provided) do you think for one moment he would not see to it that these wonderful machines were fully provided for—that there would be no "weak link in the chain?"

Wouldn't he fairly sing, over and over to himself, this significant sequence of familiar terms:

Calcium, Clovers, Cows, Cream, Cash? Cash to buy more lime to grow more legumes, to make into more milk—or, rather, far more economically-produced milk, and dairy products of all kinds?

Feeding Cabbage to Milch Cows

I should like to feed cabbage and potatoes to my cows, but I understand they give the milk an undesirable flavor. What has been the experience of others in their use? Could I safely feed them on small quantities?—G. H., New York.

CABBAGE and potatoes supply succulence in the ration and may be used economically during periods of low prices. Like succulent feeds they tend to affect the milk with undesirable flavors and odors when fed under certain conditions of quantity and time.

Government tests indicate that dairy cows may be fed as much as 24 pounds of cabbage immediately after milking without imparting any objectionable flavors or odors to the milk. On the average, however, the feeding of 14.3 pounds of cabbage within one hour before milking will cause objectionable flavors in the milk, and an increase in the amount of cabbage fed will intensify the flavors produced. Proper aeration, however, will reduce strong abnormal flavors to some extent, and some of the slightly abnormal flavors may be eliminated.

When dairy cows consume an average of 14.8 pounds of potatoes one hour before milking, slightly abnormal flavors and odors may be produced in the milk. They are slight, however, and would seldom be perceived by the average consumer. Increasing this amount to as high as 28.7 pounds does not increase the abnormal flavors. That amount may be fed immediately after milking with no effect whatever on the flavor of the milk.

You Buy Feed for Just One Purpose:

To make milk at the lowest possible cost

■ ■ ■

YOU should not guess—you should know—that your monthly feed bill is being kept down to the very last penny.

How can you know?

Do this:

1. Weigh feed and milk, for just one day, to find out how many pounds of milk you are getting from your present grain ration.
2. Figure your present grain cost of producing 100 lbs. of milk.
3. Then feed Unicorn for a month, taking six days to make the change of feed.
4. Weigh feed and milk again and figure cost of making milk with Unicorn.
5. Subtract your smaller Unicorn cost from your larger former cost.
6. The difference will be enough to convince you that Unicorn actually does produce milk at lowest possible cost.
7. And that's exactly the purpose for which you buy feed for your cows.

For a two-cent stamp we will send you one of our new slide rule Milk Cost Finders. Gives cost of making 100 lbs. of milk at all prices for feed.

Or get one free at any Unicorn feed store.

CHAPIN & COMPANY

327 S. La Salle St., Chicago, Ill.

EASY, NOW, TO OWN AN OTTAWA MILKER!

ONLY \$35

Puts it Milking for You Costs Nothing to Install

Now, with our Low Direct-from-Factory Prices and Easy Terms, any farmer or dairyman with 5 to 100 or more cows can not afford to be without the wonderful OTTAWA Milking Machine. Soon pays for itself milking only 6 cows. Saves money, time and hard work.

Find out today about this milker that milks the human way; is a self-washer and has no pulsator; no pipes or rods; no springs or valves. Easier to use; easier on cows. Milks 2 or 4 cows at once, 18 to 40 cows an hour. No cost to install; comes all complete ready to milk. Small Down Payment—a Whole Year to Pay.

ALSO DOES BELT WORK

Cash or Easy Terms

30 Days' Trial. Try the OTTAWA Milker on your own herd for full 30 days. Guaranteed for 10 years.

Reviewing the Latest Eastern Markets and Prices

MILK PRICES

THE Dairymen's League Cooperative Association announces the following prices that dealers will pay the League during the last half of March for milk testing 3% in the basic zone of 201 to 210 miles of New York City. It is understood of course that the prices mentioned below are not received by the farmer but go into the pool. They are prices dealers pay the League.

The reduction in Class 1 amounts to 27 cents per hundred while in Class 2 the reduction is 10 cents per hundred in each class, A, B, and C. Class 3 prices remain the same as in early March.

It is reported that the Directors have voted that these new prices for the last half of March will be continued in April unless conditions warrant further change.

Class 1 Fluid Milk	\$2.80
Class 2A Fluid Cream	1.90
Class 2B Ice Cream	2.05
Class 2C Soft Cheese	2.00
Class 3A Evaporated whole milk	

Cond. whole milk	1.90
Class 3B Whole milk powder	1.85
Class 3C Hard cheese other than	

American	1.65
----------------	------

Class 4 prices will be based on butter and American cheese quotations on the New York market.

Sheffield Producers

The Sheffield Farms Producers announces the following prices for 3% milk in the 201 to 210-mile zone:

Class 1	\$2.80
Class 2	2.00
Class 3	1.65

Class 4 prices determined by butter and cheese quotations on the New York market.

Non Pool Cooperative

The Non-Pooling Dairymen's Cooperative announces the following prices for 3% milk in the 201 to 210-mile zone:

Class 1	\$2.70
Class 2	2.00
Class 3A	1.80
Class 3B	1.75

Interstate Producers

The Interstate Milk Producers Association (Philadelphia Price Plan), announce the receiving station prices or the price to the farmer in the 201 to 210-mile zone from Philadelphia for 3% milk is \$2.19. In the 101 to 110 mile-zone, the price is \$2.29.

BUTTER DOWN AND UP AGAIN

Since our last report the butter market had quite a set back as far as prices were concerned but part of this loss has

been recovered. Prices went down to 44c for 93 score and 43c for 92 score. The factor that was most influential in this reduction was a 6½ cent break on the Chicago market. That added to the general unsettled feeling on the market due to the approaching spring flush and natural increase in production, caused prices to slump. About the 7th, the market regained some of its former strength and there was no difficulty in bringing prices back to 45½c on fanciest grades with 92 score bringing a cent less. The price situation may sound gloomy but a year ago the fanciest butter on the market was only bringing 43c with 92 score at 42c.

Another very encouraging feature of the market which we are glad to report, is that withdrawals from storage have been the heaviest in the history of the trade. Local warehouses reduced their stock during the week ending March 4 by almost a million pounds, while street stocks were something like 16,000 tubs below last year. The Producers Price-Current, the official market organ, says that it looks as though the trade will be entirely dependent on fresh butter before May 1, a very encouraging situation when we consider the tremendously heavy storage stocks that were carried through the winter. Statistically the butter market is in a very good position. We have reached the time of the year when receivers are anxious to keep their floors clean and avoid accumulations. In spite of the fact that every day sees a greater swing from held to fresh goods, nevertheless storage reductions continue in a very satisfactory manner. Although prices on top grades suffered in the relapse, lower grades of creameries held their own in fact the bottom price is a half cent better than it was a week ago.

CHEESE SLIGHTLY EASIER

The cheese market has felt a little easier tone during the past week, 26½c representing the top of the market on held goods with white cheese a little scarcer than colored marks. The average run of held whole milk flats is bringing from 25 to 26c. Fresh cheese has also eased off a little, 24c now representing the top of the fanciest cheese while average run goods are bringing 23c with a few bringing a quarter cent premium. It is interesting to compare these prices with those of last year. Fresh State flats were quoted on May 12, 1924 over a range of 16½c to 18½c.

EGG PRICES THE SAME

There have been no changes in prices for nearby eggs since our last report. Nearby average extras to closely selected extras are worth anywhere from 37 to 40c with lower qualities ranging from 33 to 36c. Most of the stock arriving falls in this latter case. There has been some storage of real fancy closely selected white eggs with pale yellow yolks. However, the situation is not at all firm. With the passing of the holidays and heavier shipments coming in, immediate outlets are more difficult to find and we may see some shading of prices to avoid heavy accumulations. The tone is nervous and irregular and receivers at the moment are inclined to do some shading in order to keep stocks moving and avoid any carry-overs. Nearby gathered whites are worth from 29½ to 35½c.

Fancy to extra fancy nearby brown eggs are worth from 33 to 37c. Storage operations are not very wide-spread. Prices are a little too high to encourage heavy storing and the entire situation is such that it is not considered to have much stability.

Prices a year ago on the very fanciest and most closely selected nearby whites ranged from 33 to 35c. The fanciest henery browns were bringing 29c. There is a lot of consolation in comparing these prices with those of the present time.

FANCY LIVE FOWLS HIGH

Farmers who have had fowls to ship, especially colored fowls and have them in prime condition, have been realizing good prices. There has been an unusually fine demand for real fancy fat fowls and the available supply has been light. Stock measuring up to these requirements were bringing on April 8 from 35 to 38c a pound with Leghorns from 33 to 34c. The

supply of express broilers has also been light, especially on fancy marks. Some sales of selected Plymouth Rock broilers have been reaching above 60c. Leghorn broilers that are small have been bringing 45c while large stock has reached as high as 52c. The heavier birds have a decided edge on the market at the present time.

A year ago heavy fancy colored fowls were bringing from 26 to 28c and Leghorn fowls were bringing from 25 to 26c. Broilers a year ago were worth from 45 to 65c.

NO CHANGE IN POTATO PRICES

As far as prices are concerned the potatoes from up-state New York and Maine, have not improved. States are still quoted at \$1.50 to \$1.75 per 150 pound sack with Maines 25 to 35c a sack better. These are straight carlot sales, jobbing prices are slightly better. There has been a little more activity in the old potato market of late but this refers only to the volume of business and not to prices realized by shippers. The Jewish and Easter trade was mostly responsible for the improvement which is temporary. Also part of this increased activity may be due to the fact that fewer potatoes are coming from Long Island. Long Island growers are now in the heart of their planting season and these planting operations are taking all of their time and interest. A few Long Island's that are still being shipped are not of any great consequence in the market. This has opened up the channels for States and Maines a little more. There may be a few very temporary occasions when the market will come to life like this but the activity is not sustained. It is more like a few nervous twitches before the end. We cannot look for any consistent improvement this late in the season in view of the fact that southern arrivals are increasing. The price of southern potatoes is beginning to reach the point now when consumers will take hold more freely. The fanciest of the Florida Spaulding Rose are now down to \$8 for the most choice offerings. Some States are beginning to come in spongy and these naturally are having difficulty in finding an outlet. Where stock is still nice, bright and clean, of good uniform size, the demand at the moment is fairly active. If any man is so unfortunate as to still be holding in carlot quarters it seems to be the consensus of opinion that it is more desirable to ship on consignment than wait for F.O.B. sales. Due to the condition of the market, dealers are not inclined to do an F.O.B. business.

BEAN MARKET DRAGGING

There is no improvement in the bean market. Some lines are suffering more than others. Marrows have eased off so that the most choice are worth \$9.75 at the outside with common marks ranging down to \$8.75. Prime pea beans are still worth from \$6 to \$6.25 although in some instances \$6.50 is still reached. Most business in red kidneys is being done at \$10 per hundred. There are a few sales at \$10.25 but this is extreme. Common to fair stocks are selling at \$9.50 to \$9.75. White kidneys are meeting a very dull market, prices ranging from \$8.50 to \$9.00.

HAY MARKET EASIER

The hay market is still easy due primarily to the fact that there are something like 100 cars of hay in the 33rd Street sheds. Most of it is in large bales. With such heavy stocks on hand it is practically impossible to get better than \$25 a ton on the fanciest grades and most of the hay on hand is of low grade which is bringing anywhere from \$17 to \$20 a ton. Some trash is said to be clearing up as low as \$10 a ton. It is difficult to figure out why some folks continue to ship in this trashy inferior hay. Some of it is good for little more than bedding and still they persist in shipping it in. A man would be much better off plowing it under for its fertilizing value or feeding it and shipping in live stock.

When the transportation and selling charges have been deducted, we fail to see where the shipper realizes anything at all. This man not only fails to make ends meet on his shipment but his inferior stuff is pulling the market down on the fancy grades.

MAY WHEAT THE SAME

May wheat holds about the same position as it held last week. On April 7 the market closed at \$1.47 which is only

a fraction of a cent better than it was a week ago. On our last week's report there was a typographical error. The low point reached with \$1.40½ and not \$1.04½ as appeared in the columns. The future market is not stable. Cable advices will send the market one way or the other in very short order. Corn and oats are stronger. A report that Italy is in the market to purchase 20 million bushels of wheat was a stabilizing influence and responsible for advances. An unexpected rise of quotations at Liverpool also helped to give the market an upward slant. There are still persistent reports of crop damage in Ohio and Indiana.

Cash Grain Quotations

New York cash grain market is as follows, quotations being F.O.B.:

WHEAT, No. 2 hard winter \$1.65½; CORN, No. 2 yellow \$1.25; No. 3 yellow \$1.20¾; No. 2 mixed \$1.24¾. OATS, fancy white clipped 59 to 61c; ordinary white clipped 55 to 58c; No. 2 white 51½ to 52c. RYE, \$1.25.

Local Buffalo Feed Market

The local Buffalo feed market was as follows during the first week in April: ground oats \$37; spring wheat bran \$24; hard wheat bran \$30; standard middlings \$24.50; soft wheat middlings \$35.50; flour middlings \$34.50; red dog flour \$41; white hominy \$39; yellow hominy \$39; corn meal \$35; gluten feed \$37.75; gluten meal \$48.50; 36% cotton seed meal \$41; 41% cotton seed meal \$43; 43% cotton seed meal \$45; 34% old process oil meal \$39.

MEATS AND LIVE STOCK

The market has eased off a little on live calves, in view of slow trading on the market and more or less indifferent demands. During the last week it has been taking real prime marks to bring \$14.50. Most of the trading has been going on anywhere from \$10 to \$14. Live lambs are worth \$16.75 for prime marks but comparatively few are coming through. Most of them are in the range of prices from \$13 to \$16. Very few ewes are being received. Prime ewes are worth from \$9 to \$10 with common to good stock \$5 to \$8.50. Fancy hogs are worth from \$13.50 to \$14.

Receipts of country dressed veal calves have been heavy and with the holidays rapidly coming to a close, we may see a slight easing off in prices. At the moment the demand is good but it is hard to say how long it will hold up. Choice country dressed veal calves are worth as much as 19c with prime marks in the neighborhood of 16 to 18c. Common to good stuff is worth all the way from 8 to 15c.

SWINE BREEDERS

150--Pigs For Sale--150

Chester and Yorkshire cross and Berkshire and Chester cross, all weaned and good blocky pigs, no runts. Pigs 6 to 7 weeks old \$6 each, and 8 to 9 weeks old \$6.50 each. Also 25 Chesters and 30 Berkshires, pure bred, 7 weeks old, sows or boars \$7 each. Shipped to you C.O.D. on your approval. No charge for shipping crates.

New York Farm News

Early Fruit Prospects Along the Lake Shore

THE past week has fully justified

By M. C. BURRITT

March was an unusually open month.

the suspicions of the weather man's intentions about spring, expressed in the last week's notes. Slushy snow, cold rains, prevailing chilly north winds have all occupied a prominent place in the weather program since March 28th. By contrast with the beautiful spring weather of the previous ten days, the weather seemed worse than it really was. Quite a lot of water fell and the ground is wetter than it was ten days ago. No plowing has been done on the heavier soils along the lake, but some furrows have been turned on gravelly and sandy soils farther south.

On April 4 the weather though cool is clear and sunshiny with renewed promise of spring.

Grain and Meadows Look Good

The general condition of wheat and meadows seems to be excellent this spring. Wheat has not "heaved" at all, and even the very late sown pieces look well. They are a little backward in spring growth, but the plants all seem to be in good condition and the color is fine. Absence of severe freezing at night during March has been favorable. Where the stand of clovers and grasses were good to begin with, the meadows give promise of excellent yields. It will be largely a question of seasonable rainfall.

Fruit Buds Promise Well

I have made a good many inquiries about the prospect for peach bloom, in an effort to find out the condition of the prospective peach crop. Apparently it is quite spotted. There are many reports of buds killed and light probable bloom. On the other hand, some growers more favorably located close to the lake or on high ground report a probable full bloom. The large proportion of dead buds is a little hard to explain because buds matured fairly well before cold weather in the fall, the early and mid-winter though steadily cold produced no very low temperature in Western New York 5° F. below zero being about the extreme—and there were no unseasonably warm periods until late March with no severe cold since. The normal expectation would be for a good blossom, but judging from all I have seen and heard it looks like a very spotted condition with a probable crop considerably below the average.

On the other hand, apples give promise of a generous bloom, especially Baldwins. This is a year when we would expect a good crop of this variety and not so large a yield of the fall varieties which bore more heavily last season. But even these will have a good deal of bloom apparently. Our Twenty Ounce, Kings and Dutchess seem to be prepared to bloom well but Wealthy and Alexander very lightly. Buds, too, seem to be vigorous. They are swelling very perceptibly now and it will not be long to the delayed dormant spray. Peach buds show white and round and Bartlett pears, which promise good bloom are a greenish white and show prominently.

What Records May Show

We have kept complete records at Beechwood Farm for more than twenty years, as my father did before me for more than fifty years. We can trace back farm financial history through practically every year for a full seventy-five years quite completely. As it is my belief that we as farmers do not make sufficient use of bookkeeping and records in general, I shall from time to time use some of our records in these notes in order to bring out farm management facts and make certain points more definite. While farm costs vary widely and records are chiefly valuable on the farm where they are kept, they may serve to illustrate some things. We keep a cash book posting to an enterprise ledger monthly and a labor book in which we post directly each day. An hour or two on the train this week gave opportunity to summarize some labor records for March.

Two of us — or rather one and three-quarters, for I am away some—put in 397 hours or an average of about 9 hours a day beside chores during the month. Fifty-three per cent of this was pruning and hauling peach and apple brush, 18 per cent on poultry, and 8 per cent on repair of equipment.

Of the total 16 per cent was unproductive, that is on real estate, equipment, farm personal and other items which do not give a direct return. The horses only worked 135 hours, an average of 1¾ hours per day or about 18 per cent of the total possible time—one reason for the high cost of horse labor on farms. The truck was used only 30 hours or 12 per cent of the time available and the tractor 2 hours—more high costs.

We have finished a complete job of pruning and cleaning up the brush in one 23 year old orchard. The record shows an average cost of 19.5 hours of man labor and 6 hours of horse labor per acre. Using average rates of 50 cents an hour for men and 20 cents for horses—we won't know our actual rates until the end of the year, of course—we find that this pruning job has cost us \$10.94 an acre or a little less than 35 cents per tree, about 70 per cent of which is pruning and about 30 per cent "brushing."

How to Get A Junior Operator's License

IN the enactment of a law permitting the issuance of operators' or chauffeurs' licenses to persons between 16 and 18 years of age, the State still adheres to the general policy of making 18 years the minimum age of those authorized to operate motor vehicles on the public highways. The exception made in the act which Governor Smith has just signed is the result of the urgent request of various granges and persons in rural districts.

The new legislation is not mandatory. It permits the issuance of licenses to junior operators, subject to regulations established by the Commissioner of Motor Vehicles, but such licenses will not permit holders to drive cars in New York City or to operate motor vehicles except in traveling to and from school or in the ordinary pursuit of the business of the parents or guardians of the licensees.

"As the new law takes effect immediately," Charles A. Harnett, Commissioner of Motor Vehicles, said today, "I have adopted a policy by which I will not act favorably on any application, except as follows:

"Applications of those who are at least sixteen years of age and who can prove it by a birth certificate; who live in a strictly rural community, which community is deprived of any bus or rail service, and where the distance between the school and the home of the applicant is more than a mile, and who, after all these points have been conclusively shown, can then demonstrate their ability to operate a motor vehicle.

"Second, applications of boys under eighteen and over sixteen, who can furnish proof of birth; who can prove to the satisfaction of the department that they were engaged heretofore in assisting their parents on the farm, where such is in a strictly rural community, or who can prove that since July 1, 1924, the operation of the Motor Vehicle Law has prevented them from rendering such service, as indicated, and who can qualify in driving a machine."

Applications for junior operator's licenses will be received at the office of the Commissioner of Motor Vehicles in Albany, and not at the office of any district director or county clerk. A special affidavit will be required and a limited license will be issued, and it is

REBUILD Your Old Silo Into a New Craine!

Is your stave silo weakened, twisted, tipped or collapsed? Now's your opportunity to *rebuild* it into a handsome, strong, durable, Craine—the Silo of Giant Strength—at half the cost of a new silo.

Then you get all the advantages of the famous Craine three wall construction—a structure absolutely water tight, frost resisting, weather proof and there to stay. Once up, you can forget it—no lugs or hoops to tighten. An inside wall of fitted upright staves, a wall of water-proof, "Silo felt," then an outside wall of handsome, strong, spiral Craine-lox Covering that binds, cross supports and holds every stave rigidly in place.

Craine Silos make good silage and keep it good! Get all the facts today; address

CRANE SILO COMPANY
Box No. 120

Norwich, N. Y.

CRANE TRIPLE WALL SILOS
THE SILOS OF GIANT STRENGTH

Time Tested Windmill

The Auto-Oiled Aermotor has behind it a record of 10 years of successful operation. In all climates and under the severest conditions it has proven itself to be a real self-oiling windmill and a most reliable pumping machine.

An Auto-Oiled Aermotor, when once properly erected, needs no further attention except the annual oiling. There are no bolts or nuts to work loose and no delicate parts to get out of order.

There are no untried features in the Auto-Oiled Aermotor. The gears run in oil in the oil-tight, storm-proof gear case just as they did 10 years ago. Some refinements have been made, as experience has shown the possibility of improvement, but the original simplicity of design has been retained while greater perfection of operation has been achieved. The Aermotor is wonderfully efficient in the light winds, which are the prevailing ones. The self-oiled motor works with practically no friction, and the wind-wheel of the Aermotor is made to run in the lightest breeze. It is also amply strong to run safely in the strongest winds. In any condition of wind or weather you may be sure that the Auto-Oiled Aermotor will give you the best of service. It is made by the company which established the steel windmill business 38 years ago.

GLOBE SILOS

You buy 50 years of progress

That is why we thought of the extension roof—it reduces the cost per ton capacity. An exclusive Globe feature. Globe Silos are absolutely air-tight because of the heavy matching walls, double splines, sealed joints and adjustable doors. Made of spruce and fir. You cannot buy a better silo. Write today for our catalog and price-list; silos, tanks, ensilage cutters, stanchions, etc. **GLOBE SILO CO., Box F Unadilla, New York**

expected these will be ready about April 25. No one under 18 years of age will be allowed to operate a motor vehicle without a junior operator's license.

New York County Notes

Tioga County—On the 19th of March a terrible gale hit our section of the country and folks thought it might be the tail end of the tornado that hit the middle west. Considerable damage was done through our section by a high wind, blowing down trees and chimneys and putting telephone lines out of commission. The church sheds in Flemingville were partly leveled and considerable damage was done on the Tioga County fair grounds.

The run of sap this spring was quite free and many of our farmers have made considerable syrup which sold at retail at \$2 to \$2.50 per gallon. During the last week in March we had a light snowfall that made a mess of the roads and travelling difficult.—Mrs. C. A. B.

Essex County—Snow disappeared rapidly during early March before all the pulp wood and logs could be drawn. Cattle wintered well. Cows that will

freshen soon are selling anywhere from \$60 to \$75. During the last week in March potatoes were selling at 50c per bushel, eggs at 40c per dozen and hay was rather scarce at \$20 a ton. M. E. B.

Cortland County—Fair weather has enabled the farmers through this section to get their spring plowing well under way. A few had their oats sown by the second week in April. The price of milk paid to farmers dropped 27c a hundred on April 1 at both the Borden and Sheffield Stations at Homer. This applies to Grade A milk. Farmers who were unable to sell their cabbage are now feeding it to cattle. Unimproved roads have been very bad this spring.—G. A. B.

Chautauqua County—Sugaring was about over by the second week in April. It has been a very poor season. The make was short of poor quality. We have been having considerable cold freezing weather which has been bad for the meadows. Not much plowing has been done as yet as it has been too cold and wet. Old hay is plentiful and cheap as are potatoes. Cabbage had a short turn for the better selling at 2 cents a pound. On Saturday April 4, the Charlotte Center grange celebrated its 35th anniversary.—A. J. N.

STATEMENT OF THE OWNERSHIP, MANAGEMENT, CIRCULATION, ETC., REQUIRED BY THE ACT OF CONGRESS OF AUGUST 24, 1912.

OF AMERICAN AGRICULTURIST published weekly at 425 Carroll St., Elmira, N. Y., for April 1, 1925.

State of New York, County of New York, ss.

Before me, a notary public in and for the State and county aforesaid, personally appeared Henry Morgenthau, Jr., who, having been duly sworn according to law, deposes and says that he is the president of AMERICAN AGRICULTURIST, Inc., and that the following is, to the best of his knowledge and belief, a true statement of the ownership, management (and if a daily paper, the circulation), etc., of the aforesaid publication for the date shown in the above caption, required by the Act of August 24, 1912, embodied in section 443, Postal Laws and Regulations, printed on the reverse of this form, to wit:

1. That the names and address of the publisher, editor, managing editor and business managers are:

Publisher, Henry Morgenthau, Jr., Hopewell Junction, N. Y.; Editor, E. R. Eastman, 557 VanCortlandt Park Avenue, Yonkers, N. Y.; Managing Editor, E. R. Eastman, 557 VanCortlandt Park Avenue, Yonkers, N. Y.; Business Manager, Henry Morgenthau, Jr., Hopewell Junction, N. Y.

2. That the owners are: (Give names and addresses of individual owners, or, if a corporation, give its name and the names and address of stockholders owning or holding 1 per cent. or more of the total amount of stock.) AMERICAN AGRICULTURIST, Inc., New York, N. Y.; Henry Morgenthau, Jr., Hopewell Junction, N. Y.; E. R. Eastman, 557 VanCortlandt Park Avenue, Yonkers, N. Y.; Elinor F. Morgenthau, Hopewell Junction, N. Y.; Henry Morgenthau, 417 Park Ave., New York, N. Y.

3. That the known bondholders, mortgagees, and other security holders owning or holding 1 per cent. or more of total amount of bonds, mortgages, or other securities are: (If there are none, so state.) None.

4. That the two paragraphs next above, giving the names of the owners, stockholders, and security holders, if any, contain not only the list of stockholders and security holders as they appear on the books of the company, but also, in cases where the stockholder or security holder appears upon the books of the company as trustee of in any other fiduciary relation the name of the person or corporation for whom such trustee is acting, is given; also that the said two paragraphs contain statements embracing affiant's full knowledge and belief as to the circumstances and conditions under which stockholders and security holders who do not appear upon the books of the company as trustees, hold stock and securities in a capacity other than that of a bona fide owner; and this affiant has no reason to believe that any other person, association, or corporation has any interest direct or indirect in the said stock, bonds, or other securities than as so stated by him.

That the average number of copies of each issue of this publication sold or distributed, through the mails or otherwise, to paid subscribers during the six months preceding the date shown above is (This information is required from daily publications only.)

Henry Morgenthau, Jr., President.

Sworn to and subscribed before me this 30th day of March, 1925.

(Seal) Nathan Greenberger.
(My commission expires March 30, 1925.)

"Let There Be Light"

(Continued from page 423)

every kind of device to make the turnover and marketing of goods quicker and simpler and more profitable. I say the manufacturer has not yet met by sufficient expenditure of energy or money the problem of the farmer. Without electrical machinery adapted to farm use, the farmer can not extend the use of electricity to his profit. Unless he can extend to his profit, he will not use it, and unless he becomes a substantial consumer of power, it will be economically impossible for the power companies to supply the service. Therefore, the manufacturing companies must endeavor to develop these agricultural applications. The farmer must be open-minded enough to use them, and if these two things are done, the power companies, I am sure, can and will provide the lines. It is the manufacturer's job and his responsibility, and, so far as I am able to speak for the great concern with which I am proud to be connected, I pledge you now its cooperation and its effort in trying to answer the question before us.

The Obligation of the State

And now as to the State. What can it do? This is one field, in which I have not had experience. Let me be very specific now and address myself to the State of New York. No where else in the world are there such resources of water power contiguous to so great a market. The God-given storage of the Great Lakes and the drainage area of half a continent is collecting water and equalizing its flow over the falls of Niagara and down the rapids of the St. Lawrence, all for the economic benefit of the State of New York. All we have to do is to take advantage of it. Nature has done her share. Relatively small developments have been made. Millions of horsepower run to waste every year. This waste takes place, not because the electrical art and industry can not harness these great powers; not because they are too timid to try. The record is that they have sought and are seeking the opportunity to develop these powers but as yet no adequate permits have been given. In addition to the great powers on the boundary streams, which are capable of carrying base load operations of the State, we have smaller powers in the Adirondacks, on the Genesee, and on the Delaware, which, with adequate storage, could be developed to carry the peak loads which occur at different hours during the day. These powers can be laid down on great bus bars throughout the State and made available everywhere within the State.

A Political Football

What would it mean to the Mohawk Valley if a million horse-power were to be laid down along its six tracks of railroad and the barge canal? Industries which have been seeking the cheap coal of Pennsylvania and the waterway of the lower Delaware, would find their way into the district in which I now stand. The increasing population of that district would enlarge the market for all the farms in this State. They would become more valuable instead of becoming less valuable. Our industries would be largely increased instead of standing more or less stationary. Still, the power which is necessary to do this job runs to waste. And why? It is because the people of the State of New York have permitted this great economic question to become a political football. One would think that all of the people of the State would demand such a simple and desirable development. When gold is discovered in Alaska, the front pages of the newspapers are filled, and thousands of men from all countries rush to dig it out and increase their wealth. Yet here, we let values larger than all the gold in the world run to waste. These we could conserve for the benefit of the people of the State. For the farmers in better markets; for the workmen in better wages; for the railroads in better transportation.

Why is it? What are the slogans which mislead us? One is that the grasping

company is trying to destroy the scenic beauty of Niagara Falls, and yet I think I am right in saying the latest studies show that in view of the corrosion, scientific handling of the Falls must be had in order to preserve their beauty, and that it may be had consistent with great additional power development there.

Aim to Conserve Nature

Next time the slogan is the destruction of the Adirondack forest—the playground for the people. I think I know every foot of the Adirondacks. I yield to no one in my love for them and in my desire to preserve them. I think I know the needs of the power companies. I would not impair the beauty of that great playground to develop power, nor would I permit any people having special interests, whether they be political or otherwise, to prevent the adequate use of these powers for the benefit of all the people of the State under a visionary and unfounded cry of forest destruction. Are we so incompetent in this State, that we can not develop plans to conserve and use the waters of that great watershed for the benefit of all the people of the State without destroying or impairing in the least the beauty and the development of that great forest? Personally, I am sure we can.

Denies a Power Trust

And finally, the most effective slogan of all—the power trust is trying to steal these natural resources for its own benefit and take them away from the people. Mr. Chairman, if there be a power trust, which I deny, most people would admit that I am competent to speak about it. It is evident that nobody can make a dollar out of these falling waters except by harnessing them for the service of the community. No capitalization of the developing company can be had and no rates can be charged except such as are approved by the Public Service Commission of the State. What is there to this charge of stealing the water power if they can only be developed under State control, and if they can only make their money by rates approved by the State, and if their income can only arise from putting the power which is now going to waste to the service of the people.

For twenty-five years, we have permitted these great economic resources of the State of New York to run to waste while the politicians have played foot-ball with this subject. I propose that the people of the State demand now that this economic proposition be dealt with on an economic and sensible basis; that the powers be made available, and that we substitute economic progress for political horseplay.

As to St. Lawrence powers, I am happy to say that that problem is being studied by an international commission under the leadership of the Secretary of Commerce of the United States.

Questions Needs Impartial Handling

Now, I have not wandered so far away from the electrification of the farm, because the development of these great water powers is one of the ways in which not only industries may be enlarged, but the welfare of the farms may also be advanced. When we substitute the power of falling water for coal which we do not produce, and the transportation of which clogs our railroads, then we will make a great step forward in all electrification, and not the least, the electrification of the farm.

I have had some experience both in this country and abroad in seeing politicians attempt to handle economic problems. I have seen them fail. If the people of this State will demand a non-political and impartial handling of the question of water power development and the adequate distribution of that power without discrimination throughout the State, then I am sure that our industries will grow, our barge canal will have its traffic, our farms will be in a position to demand and receive electric service, and their productivity and their value will be increased.

DUX PEKINS of giant frame for rapid growth. Market size in 10 weeks, also Indian Runners, easy to raise, always a market. Cat. free. **WAYNE CO. DUCK FARM, Clyde, N. Y.**

He Fattens Them Fast

(Continued from page 424)

dry feed. Five times a day they are given all they will clean up in a short time and I never allow stale feed to lie around. This ration is fed until they are twelve weeks old.

"Ducks never contract diseases, but they do get rheumatism from wet, dirty quarters. Never let the ducklings become wet, for chilling is disastrous to them. When white feathers appear, however, water will do them no harm."

How to Successfully Raise Geese

GOSLINGS require most careful attention when first hatched, but after they are a month or so old they are among the hardiest of fowls. It is important to keep them warm and dry at first, and feed them a little at a time and often—say, four or five times a day.

For their first food give them a mixture of corn meal and shorts, mixed with bread or cracker crumbs, hard boiled eggs chopped fine, etc. Also supply them with some tender grass as a relish right from the start. As the goose is essentially a grazing bird, grass in its ration is quite important at all times. Other grain food, along with meat scraps, should be added to the ration gradually as the goslings grow.

Until the goslings are a week or ten days old, keep them in small, movable pens, so that they can be let out each day on fresh ground, where they can pick grass and bugs. Gradually increase the extent of the ranging space until the goslings are a month old, and then turn them on a wide range, where they will find lots of pasturage to make rapid growth.

They Appreciate a Swim

It is not necessary that geese have water in which to swim, but a small stream or pool is much enjoyed. If this cannot be provided, it is essential that they have an abundant supply of good drinking water.

After goslings are turned on pasture, if the grass is in good condition it is not necessary to feed them more than twice a day at first, and later, once a day. It really is not best to keep them fat from the start unless they are to be sold as 'green geese' as soon as they are large enough to market. There is no use in keeping a gosling fat if it is to be kept for later use as a breeder.

In such cases, the main object should be to get as large a growth of frame as possible. This requires lots of grass, bugs and worms, and grains like oats and buckwheat that are not fattening. Feeding geese grain once a day will keep them familiar with the owner and tame them so they will come at call.

As fall approaches and the grass begins to fail, corn should be substituted for one of the other grains, as it is more

(Continued on next page)

fattening. Starting at least once a month before the holiday season, feed the geese all they will eat of a mixture of corn and oats at first, and corn alone later, as in fitting geese for market it is hardly possible to make them too fat.

About two weeks before market time place the geese in a limited enclosure and feed them to the limit until they reach the maximum weight and condition. Then sell them as quickly as possible, before they begin to lose their appetite or suffer from overfatness.—Ebner Whitaker.

Red Mites on Laying Hens

I have 350 White Leghorn hens, hatched last April, which have been laying well since September. Although their combs are healthy and they eat well, the feathers on their heads and necks are all coming out, and the heads look inflamed but with no sores. I killed one and found no liver or intestinal trouble. I can find no lice or other vermin.

The mash consists of corn meal, ground oats, alfalfa meal, gluten, bran, wheat middlings, calf meal, oil meal, salt and a tonic, the last four only as seasoning. The scratch grain has equal amounts of wheat, oats, buckwheat boiled oats, and potatoes, also grit oyster-shells and charcoal.

Can you tell me something to give them in their mash or water?—E. L., Pennsylvania.

ALTHOUGH it is difficult to identify poultry troubles at long distance, the trouble you describe appears to be red mites, a very serious pest at times. The mites are whitish, appearing red when filled with blood. They operate at night and hide during the day in the crevices of woodwork, the cracks in walls, and the sockets of the perches. They come out at night and suck the bird's blood. Attack of these mites causes an unthrifty condition of the bird, and when the fowls are heavy layers it is so much of a tax upon their vitality that the feathers may drop and a condition resembling moulting appear.

Disinfecting the House

In controlling red mites the house and perches should be thoroughly sprayed with a 50% creolin solution or other disinfectant, and kerosene oil or turpentine should be squirted into the cracks and crevices in the house where the red mites will hide during the day-time. Dusting the fowls themselves with insect powder is also considered important. To check up on the red mites, we suggest that you go into the laying house at night and examine several of the unthrifty birds.

Depluming mites, or scabies as they are called, cause a similar appearance on the bird. They are usually found around the rump or upon the breast, rather than on the neck as you describe. These depluming mites, however, are always found on the bird's body near the base of the fallen feathers.

We know of no way to rid fowls of pests of this kind by adding anything to the mash or drinking water, as the way to attack mites and such pests is at the source of the trouble itself. Your

RELIABLE BABY CHICKS

Produced under Supervision of Men Trained by Poultry Department, Ohio State University

R. E. FADER

When the Poultry Department of Ohio State University agreed to train and authorize men as inspectors for the Accrediting of hatcheries which come up to their standard, Mr. R. E. Fader of Norwalk Chick Hatchery immediately put his flock under such supervision. He is hatching and selling nothing but Accredited chicks. Mr. Fader has been in the poultry business 22 years and has an unusual record for success in his line of work. His flocks are carefully bred and the chicks he produces are healthy and strong.

He is offering chicks from eight breeds at a fair price. The public can buy chicks from the Norwalk Chick Hatchery and feel sure that they will get honest and square treatment. Mr. Fader will send a fine illustrated catalog on request, if he is addressed at the

mash and scratch feed seem to be well balanced and we have no suggestion to make in this connection. However a few drops of potassium permanganate added to the drinking water until it is a light cherry red is a good disinfectant, particularly during wet spring days. The permanganate in the drinking water checks the spread of colds and is used successfully in preventing the appearance of such diseases as roup. When used, the drinking water containing potassium permanganate should be made fresh every day.

Get the Young Pigs To Eat Early

WHEN pigs are ten days or two weeks old they begin to take an interest in their mother's ration, mining around it. It's an excellent idea to encourage this interest, as they should be led to eat something in addition to the regular milk diet supplied by their mother just as soon as they show an inclination to desire to supplement their milk ration.

To do this, we find it is necessary to have a small pen for the pigs alone. A creep can also be made through the fence just large enough to admit the pigs and small enough to exclude the mother. They will also soon learn to eat sweet or sour milk, but not too much sour or buttermilk should be given for the first two weeks, as this will often bring on "scours". After the first two weeks, we add a little fine feed or wheat shorts to the milk. This ration promotes rapid growth and they relish it. If this ration is started in time, the pigs can be weaned at three to four weeks old, which is a great benefit to the sow, as she doesn't get "dead" poor.—W. H. Harrison.

Van Wagenen Finds A Kindered Spirit

(Continued from Page 419)

cially those which have to do with the old times in New York's history.

It always pleases me to see a good Dutch name and I am sure that you have one. My mother's people were Dutch with the name of Snyder. Great, —, —, grandfather Loderwick S. was in the Revolution. You doubtless know of Van Wagenens who also took part. The list in "New York in the Revolution" speaks for itself.

In the recent issue of the AMERICAN AGRICULTURIST when you told how much pleasure you received in visiting old graveyards I said, "Here is a kindred spirit" for it is also a pleasure and inspiration to me to do this same thing.

My father has told of your speaking at Farmer's institutes at Argyle, I believe, so I suppose you are familiar with such historic spots near here as Schuylerville, Ft. George, site of Ft. William Henry, Ft. Ann, Whitehall or Spensborough. Our farm lies across the Champlain valley from the line of Burgoyne's march, up from the Barge Canal about two miles. We often dig up arrow heads down on the lowlands or "swamp" and so you see, being in such an atmosphere, one cannot help but be interested in these places and things which ought to be of interest to Americans forever.

If you are ever near Adamsville stop at John Telford's and we can surely find something interesting to talk about.—E. T., Washington Co., N. Y.

The Trouble Maker—By E. R. Eastman

THE men sat quietly watching and listening to the coming storm. Jagged, forked lightening ripped its way across the darkened night sky to be followed quickly by the crash and rumble of thunder. A little breeze flicked around the corner of the house. A moment later the breeze became a wind.

"Listen," said Winslow. Above the noise of the thunder and the wind they could hear a distant roar.

"It's coming," said the lawyer, "and it's a real one."

The wind became a hurricane and in the flashing of the lightning the men could see the trees and shrubbery along the road and in the yard bending to the gale. The wind lessened for a moment and the pattering of rain quickly increased to a roar as it struck the tin roof on the porch over their heads.

Lightning played almost incessantly, and the roar of the storm was so great that the men could not talk had they wanted to. But they did not. The power and the majesty of the storm impressed them with the futility and the smallness of human thought and action.

Crash! Involuntarily the men jumped. "That struck near," shouted Winslow. "Your barn—or one of the trees."

"No," replied Jim, "It was a little farther away I think."

Then the storm began to pass and it grew quieter.

"Mostly electric," said Jim. "Not much rain. But I think it is going to be cooler."

Already the roar of the rain on the roof had begun to let up. The wind died to a steady breeze. The lightning and the thunder were passing over the distant horizon.

"Well, Jim, it's getting late. Guess the rain is about over, I'll back the old flivver out, and take Winslow back to town."

"That's better," laughed the boy, "than having the sheriff take you to jail."

"It's the sheriff's car at that," said Winslow.

The three men got up and stretched themselves.

Suddenly Winslow stiffened. "What's that?" he said. "A fire?"

"By gosh, it is!" said the sheriff. "It's a building too!"

Jim was already off the porch. "Come on!" he shouted. "Get your car out quick!"

In a minute he had the barn doors open, and the three men were in the car. As the automobile with throttle wide open skidded dangerously down the narrow muddy road, Dave shouted:

"Whose place is it, Jim?"

"Ball's," answered the boy grimly. "That heavy crash got either his house or his barn! I can't tell which, but they're close together and both are likely to go!"

CHAPTER XXIX

As the three men in Messenger's car neared the Ball place, an awesome and terrifying sight greeted them. The lightning had struck Ball's barn, and set fire to the hay or chaff which had evidently smoldered a while and then burst into a flame. Jim saw that the destruction of the barn was certain. The inflammable hay, straw and chaff on the south side were ablaze, sending the great leaping flames and heavy clouds of thick black smoke high into the air, vividly lighting the night and giving out an intense heat. The roof, damp from the rain, was the only thing that had checked the fire at all.

The men drove as near as they dared and jumped out. Even in his excitement Jim thought of the last time he had been on the Ball place. John Ball wouldn't hold anybody up with a gun tonight, he thought. Needed all the help he could get. Hardly anybody there yet, either. They would have difficulty in saving the house.

Most of the neighbors had been asleep and were slow to arrive. One good thing, thought Jim, because of the warm weather,

Ball was still turning his cows out nights and they would not be in the barn; but what about the horses? Had they gotten them out? Where was everybody anyway?

He rushed up to the door of the kitchen and was almost bowled off his feet by some indescribable thing, large and soft and smothering. Startled, he jumped to one side, and then saw it was a feather bed in motion; back of it was Mrs. Ball.

"Get out of the way! Get out of the way!" she cried.

"Where are the men folks?"

She made no coherent reply, and Jim, noticing that she was almost beside herself with excitement and fear, let her pass. He hurried into the kitchen. On the table was a flickering oil lamp and by the telephone stood Dorothy, partly dressed.

Jim saw that she was busy calling for help and turned and ran out of the house. In the yard were the lawyer, the sheriff, and a few neighbors who had just arrived.

"Dave, take charge here," shouted Jim.

"Get some men pumping water; have them bring out quilts and blankets from the house. Wet them, get them on the roof,

they had been, why hadn't he seen them when he went to the house?

He stepped back to estimate the progress of the fire on his end of the barn. Flames on the other side roaring twenty feet in the air, brought every detail in blazing relief. The north end nearest to him was fairly solid yet. Little flickering flames were blazing on different parts of the roof but the main fire had not reached that side yet. To be sure, it was only a matter of a few minutes before the little flames would concentrate into a great one, but even then they would burn up and not down.

The boy paused in his thought to wonder what he was trying to figure out.

Yes, that was it! He was sure. Some way he knew that Johnny and the hired man were in the stable after the horses. As if to confirm his thought, someone grabbed him by the arm.

"Where's father?" Dorothy gasped.

"I don't know," answered the boy. "Isn't he up at the house?"

The hands on his arm clutched him like

What Happened in the Story Last Week

It took the crowd that attended Jim Taylor's trial, several moments to fully realize what had taken place during those last dramatic moments of the trial. The presiding judge had committed suicide under very mysterious circumstances. Jim had been acquitted and word had been received from the headquarters of the Dairymen's League that the farmers had won their fight. When their emotions did find expression a holiday was celebrated in Speedtown that had not been known for many years past. Bands played, bells rang and whistles blew and farmers paraded and marched through the streets of the little town.

In the days following Jim's trial, the country settled once more into the ways of peace. However, things were not the same with Jim. Between Jim and Johnny Ball there had been no reconciliation. Winslow, Dave Messenger and Jim are still very much attached to one another. It is on a hot July evening that the three sit on the porch of Jim's house talking milk strike and politics. Both Winslow and Messenger point out to Jim that although the League has won the fight and better prices may come for a while, nevertheless it could not do the impossible. They bring out that both sides have much to give and take and that the final settlement of the whole situation lies somewhere near the middle of the road. While they are talking a severe storm comes up and the vividness of the lightning presages trouble.

and keep them wet. Ball and Mead must be down getting the stock out of the barn and I'll go down there," and he started for the barn.

By this time, the roof on the south side of the barn was afire but fortunately the wind was not very heavy and was blowing away from the house, not strong enough, however, to keep the burning shingles from falling in every direction.

"Ball and Mead must be getting the horses out," Jim said to himself. "One good thing, the horses are in the basement on the north side where the fire has not yet gotten badly started."

Rushing across the yard from the house toward the basement door on the north side, Jim saw the headlights of cars and heard men running. Help was coming. With a lot of help and water from the spring and the pump, they might be able to save the house.

"Funny where Ball and Mead are, though," he thought. "Couldn't be in the barn. No one could live in there. If they haven't gotten the horses out, it's too late. They'll have to go with the barn."

With these thoughts rushing through his mind as he ran, Jim came to within a few feet of the stable door on the north side. He stopped to wonder what he could do next. If he could find Ball and Mead, they could go back to help save the house. But it worried him. It was strange where they were so long. There was no possibility that they were foolish enough to be in there still after those horses. Yet where were they?

There was a crash, followed by a brighter glare and a great roar of flames. The roof on the farther side of the barn had fallen in. He could hear the shouting of men up near the house. Probably Mead and Ball were up there with them, but if

a vice, but her voice was calm.

"No," she answered. "He told me to get help on the 'phone, while he got the horses out."

"Good Lord!" said the boy. "Then they are in there yet! I knew they were," and started for the basement door.

"Jim!" cried the girl. "Oh, Jim!"

But Jim did not hear. He was already in the murky, smokey gloom of the stable.

Far down at the other end of the long stable there was an ominous glow. Jim knew what that meant. The fire on that end had burned clear through to the basement. But there was one advantage, the light from the fire relieved the pitch blackness of the stable so that he could see a little when he could hold his eyes open. The sharp, acrid hay smoke was almost blinding and the heat made breathing a torture. Above the roar of the fire he could hear the plunging of the frantic horses. He remembered that the horses' stables were near that end and to the left.

Stumbling forward, the boy tried to call but every time he opened his mouth, his shout ended in a strangled cough. But someone heard him. At least he thought so—Yes, now he was sure of it.

Stooping a little, Jim groped his way as fast as he could toward where he thought he had heard the answer. Putting all his breath back of it, he shouted again. A man loomed out of the haze so close that Jim could touch him. He reached out and grabbed him. It was the hired man.

"Where's Johnny?" gasped the boy.

Choking and strangling, the big fellow tried to answer.

"Get down," said Jim. "Get down on your knees," and the two men dropped and held their heads close to the floor. Breathing was easier.

"Where's Johnny?" Jim repeated.

"Ain't he out?"

"No. When did you see him?"

"Came in—with me—arter the horses

—told me to—to get Pete—and he'd get out—old Duke—but I—couldn't do nothin'—with the danged brute—went crazy—plunged 'round—like to've killed me—wouldn't back out—after I had him loose—burn and be danged—for all o' me!"

Suddenly the big fellow collapsed. Jim shook him roughly.

"Come out of it, Bill!" he shouted. "You've got to get out of here."

After a moment the hired man began to breathe more regularly and pulled himself to his knees. Jim hauled him along the floor for a few feet.

"Keep going straight ahead or you'll burn," he ordered. "The door out is only a little ways."

"Can't," said Bill. "Got to get Johnny," and he turned feebly around in his tracks.

Maddened, Jim grabbed him and snaked him around again, and gave him a rough push toward the door.

"Get the H— out of here," he gritted, "I'll get Johnny."

Then he went back toward where he could hear the plunging horses. Calling to mind the plan of the stable, Jim remembered that the big gelding had his stall at the end of the horse stables and Duke had the next stall. John Ball could not be in the stall with Pete because that was where Bill had said he had gone. If the old man had not crawled by him in the darkness by this time, he must still be struggling with Duke. One good thing, the increased glow of the fire at the other end made it easier to see. The smoke, too, had followed the great draft upward and relieved his breathing a little.

Jim got back to the horse's stall without difficulty. The next problem was to get by him, for the maddened beast was kicking and lunging from one side of the stall to the other. He shouted at him, but the horse paid no attention.

Only for an instant the boy paused. There was no time to lose and he must make sure that John Ball was not in that stall at the horse's head. Watching his chance as the horse lunged to the other side, Jim sprang in beside him and to his head. He had a halter on, but the rope dangled loose. It had either been untied or cut. Ball had been there. Where was he now?

Jim grabbed the horse by the halter and swung his weight on his head, trying to back him out of the stall. Instead of backing, Duke plunged forward with him and to keep from being jammed against the manger, Jim let go his hold and sprang sideways.

As he dropped, his foot touched something soft. Trying to keep out of the range of the horse, he stooped to explore what his foot had touched. Under the manger his hand came in contact with the huddled body of a man.

"My God!" prayed the boy. "How will I ever get him out!"

All this had taken but two or three minutes. The smoke had partly cleared, but the heat was almost unbearable. The whole side of the barn on the opposite side of the stable was afire. If he attempted to carry Johnny past the plunging horse, they would both be crushed or injured, so that they would never reach the door.

Now he had it! If he could blind the horse, in some way, probably could back him out, but how to do it? His coat, of course! Funny he had not thought of it before. He grabbed it off, and threw it over the horse's head. Duke quieted immediately and Jim took him by the halter, spoke to him gently and backed him out of the stall.

As he let go of him, to return to John Ball, Jim saw his coat fall from the horse's head. He became a crazy beast again, and instead of going for the outside door, where Jim had headed him, he turned and plunged directly down the stable toward the fire.

When Somebody Cares

A Visit with the A. A. Philosophy Man

LOVE is both the most precious and most perilous passion in the world.

By REV. J. W. HOLLAND

fiber of their souls, and keen straight be-

All joys, all tasks of toil, all human bliss get their incentive and quality from the fact that somebody Cares.

There goes the Plowman singing as he drives his team, the laborer whistling at his machine, the business man humming as he opens his desk, not because they love to toil, but because their work blesses Somebody who Cares.

I listen to the home-maker, busied with the many, many cares of her house and the farm, pausing to pat the cheek of a cooing baby, forgetful of her own ease, pouring the unstinted wealth of her devotion and love into homely duties, and complaining not, because there is Somebody who Cares.

Youths and maidens stand long before the mirror, like proud birds preening themselves in intense effort to make their charms pleasing to Someone who Cares. Don't let some old cynic write to me and say that he or she never did that. I know better.

Do you know, that I believe that the Good God must have known that the best way to get His children to perk up, and do their best, was to let them read their glory from Another's eyes.

Men face temptations that try every

cause of those who Care.

Through long years of denial and hardship women will keep their thoughts pure and beautiful for the one reason that Somebody wants them to do so.

Hearts that Care can also suffer. All tragedies are strung to this wire. A man or woman can little harm one who does not love them, but they can make life a hell for Someone who Cares.

A challenging bit of advice of my father was this: "Do nothing that would make your mother weep." That may sound to some young men like a bit of Sunday School advice, but for me it is wise as the wisdom of senators.

Just recently a bruised and beaten man came to me. Once he had loved a woman, and she had proved untrue, and had hurt him. Now, he says that all women are alike. It is not true, but he thinks so.

"Though much the human heart may bear; Some people get more than their share Of broken heart and whitened hair."

And all, just because they Care.

The highest thought I can get about God is that He Cares for us. If He does, then He must have some interest in how we treat each other. If we wrong others we wrong Him whose nature is to Care.

That is the Gospel of Jesus: God is a Father whose heart is hurt by the sins of men. I do not know of a greater thought to steady our desires and keep us straight.

A religion of law and duty is never so strong as a religion of love and beauty. In that religion only is there vision enough to make us triumph.

Somebody Cares!

The Trouble Maker

(Continued from opposite page)

As the boy knelt to take hold of the unconscious old man, he realized that his strength was going and that he could not carry the old man; he would have to drag him. The heat was past endurance.

Flames were licking up both sides of the barn; now the basement ceiling over his head began to burst into small flames in places. The smoke had increased again, biting into his eyes and lungs. Panting and gasping in his struggle, he pulled Johnny from the stall out on the main floor, and dropped beside him utterly exhausted.

"Must give up," he thought. "Can't go another foot."

Suddenly he stiffened, every nerve jumping in utter horror. From down the other end of the barn toward the fire came a horrid scream, repeated again and again. The horse had gone into the fire!

Once more galvanized into action, Jim sprang to his feet and tugged at the old man. A few feet, and a pause; then a few inches and a pause. Sometimes, he seemed to struggle as in a nightmare, without moving at all, and then he would remember that blood-curdling scream and redouble his efforts.

Through the drifting smoke, he could see the flames licking toward him on both sides and overhead. Every breath was an agony. His very clothes seemed to burn his body. His face felt scorched.

Now it seemed that he passed beyond feeling. All that was left was just a memory of that scream and the one thought that he must get out.

There was the door. . . . A few feet more and he would have it. . . .

Ah! A breath of fresh air. . . . The door. . . . Men shouting. . . . A woman's voice that seemed familiar calling his name. . . . A sensation of falling as from a great height, and then—oblivion!

(To be continued)

Delco-Light pumps are gear-driven. That means there is no belt to slip or break. It means continuous, dependable and economical water service for your farm,—every drop used in the house and barn pumped by smooth, quiet electric power.

25 Models

There are Delco-Light pumps to fit every requirement,—deep well and shallow well, direct current and alternating current—32 volt and 110 volt.

Ask your Delco-Light dealer to tell you how little a Delco-Light pump for your farm will cost and how easily you can get it on the Delco-Light plan of time payments.

A Book on Carpentry

I am thinking of doing some repairing in the carpenter line and I thought I would write your people and see if you could tell me where I could get a book of instructions on carpentry work. If you can give me any information along that line; I would appreciate it very much.—J. G. C., Pennsylvania.

For general house carpentry work I would recommend House Carpentry by Griffith and published by the Manual Arts Press, Peoria, Ill. Also write to the Radford Architectural Company, Chicago, Ill., and ask them for a list of their books on carpentry. For farm carpentry, I would suggest the Farmers' Shop Book by L. M. Roehl, published by the Bruce Publishing Company, Milwaukee, Wis.

Solution of Last Week's Puzzle

A Message From a Reader

A Dress For Spring - - - A Wardrobe For Baby's Things

THINKING perhaps you may enjoy a note of appreciation, I am going to sit down at once while I have your paper in my hand and tell you how good this particular issue of March 14th seems to me. Generally I enjoy all the issues. However, how are you to know which I enjoy and which I do not, if I don't tell you myself? Do you also want to know what I do not enjoy? Well, if you do, say so and I'll tell you what. Sometimes when you fill up our Household space with such bunk as the "Ideal Wife" and "Ideal Husband" "stuff." Ha! Ha!

I have found out in baking potatoes that all our family like the medium or small potato about the size of eggs better than the very large potato. They bake quickly and I have more shell—the best part to me. This year our potatoes did not ripen properly and would settle and burn while still hard. After I had burned every available cooking utensil, I thought of steaming and baking, and began baking small potatoes. The small potatoes bake more quickly than the same size will steam.—Mrs. O. D. B. C.

YOU were very kind to tell us how much you appreciated the issue of March 14th. I only wish that all of the issues could please you as much. However, our readers have a great variety of tastes, and we do try to please the majority. We recognize the impossibility of having every issue of the paper appeal alike to each individual, so the best we can do is to rely upon our friends to tell us what they like and what they do not like.

A very good example of the difference in opinion was shown by the hearty response which we received when the contests on the Ideal Husband and the Ideal Wife were in progress, so that simply goes to show you that some of the readers liked it very much. Therefore, I repeat that we are always glad to hear from our readers if they do not agree with the majority, as well as when they are pleased over some issue of the paper, or some article which appears on our pages. We do appreciate the interest which prompts one to take the trouble to write and hope that we may have the pleasure of hearing from you again.—THE EDITORS.

Household Hints

Why not use one of the drawers of the sewing machine for a filing cabinet for

clippings? I find so many helpful sewing items that I wish to save for future references or a crochet pattern or some bit of fancy work illustrated that I wish to keep. These are placed in envelopes which just fit in the drawers. Each envelope is marked, crochet patterns, fancywork, sewing hints, care of machine,

securely in muslin bags, dip them well in this lime mixture and hang them up in a dry place.

When wanted for use, cut the string, pull down the bag and you will find your meat as fresh as when you put it away.

—C.W.W.

Growing Pansies

PERHAPS you are such a busy mother and housewife that you do not think you can attempt anything outside; but a bed of pansies will not require much labor and will repay you a thousand fold, for their mission is to cheer, comfort and make happy. Their other name, heart's ease, means all those attributes.

There are many kinds and colors of pansies and care should be used in buying the seeds. Every catalogue gives descriptions of the varieties and the seeds will come true. If you want large flowers, buy the mammoth; if you want white pansies, buy seeds of that kind. You will get just what you sow.

Many people sow the seed about the middle of August, simply pressing them into the soil, as they are tiny. The latter part of September they are transplanted to their permanent home. When the cold weather of November appears the bed is covered with leaves, using boards to hold them in place, and in spring when danger of snows is past, the leaves are removed and soon the plants are a mass of bloom. If you pick them every day they will give you blossoms all summer.

However, you can have pansies this year if you did not start them in August. I sow the seed in the hot bed in April and the plants begin blooming in the early summer. A ten cent package of seeds will give blossoms enough to fill the house with sweetness, and still be some for friends and neighbors.

After becoming established they need no attention outside of picking. They delight in a rich soil and cool weather and for this reason they are usually planted in a partial shade. Many people give them a northern exposure.—Mrs. GEORGE GRAY.

Baby's Wardrobe

ELLEN BROWNING

THE Baby's Wardrobe is much more convenient than the trunk or dresser.

It consists of a box about 36 x 30 x 24 inches. It is to be nailed to the wall with

Fig. A.

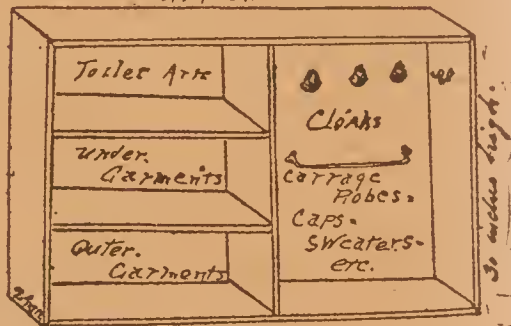

Fig. B.

etc.; in this way whatever I want is easily found and is just where I want it.—Elinor Smith.

A Quick Method for Preserving Fresh Eggs

GET the dry slaked lime, fill shallow boxes—(boxes one inch deeper than eggs are when standing one ends). Make holes in the dry lime, placing eggs pointed end up, far enough apart so they don't touch one another. When box is filled, cover with a layer of lime and smooth off with a stick. In this way the yolks will not adhere to sides and you can get one egg out without disturbing the others.

—C. W. W.

A Method for Keeping Meat Free from Mold and Worms

FARMERS frequently have more sausages, hams and beef on hand than they can use at once, and are despaired to know how to keep it free from mold and worms, and in fact keep it so it won't dry out and get tough.

The following is a method that will solve all your worries:

Take a lump of fresh lime, slake it to the consistency of thin mush. Then have your fried sausage, and hams, or beef tied

the open side outward. Place two shelves (C) in the left hand half and hangers in the right. See drawing Fig. A.

The entire box may be hid from the eye by gathering cretonne or other substantial material upon a string or curtain rod and hung around the wardrobe in a manner that is easily adjusted. See Fig. B.

In one of these wardrobes Baby's clothes are always at hand and are no trouble to put away.

The Early Bird Needs a Good Bedspring!

Men who labor and women who work need complete rest at night—the best rest that they can get. And this is the kind that the Ideal Spring gives, because it is made of spiral springs. Extra tall, finely tempered, spirals that stand upright. Buoyant spirals that mould to the body's form—that properly support the spine and give true relaxation to tired nerves and muscles. That's why it is the most comfortable bedspring made. Ask your own furniture dealer about the

Timely Styles and Receipts

Aunt Janet's Pet Marmalade---Game for a Crowd

NOW is the best time for making orange marmalade for at this season the citrus fruits are cheapest and have their best flavor. The following recipe is not original with Aunt Janet, but she has used it and found it highly satisfactory to the man of the house, who is very critical in the matter of marmalades. It is sometimes called amber marmalade.

Orange Grapefruit Marmalade

- 1 large grapefruit
- 2 large navel oranges
- 1 lemon
- 5 pounds sugar
- 18 cups cold water.

Wash fruit, cut into very thin slices and cut the slices into narrow strips. Use every part of the fruit but the cores and seeds. Cover the fruit with the water and let it stand 24 hours; boil it rapidly uncovered for 10 minutes and let it stand another 24 hours; bring it to the boiling point and add the sugar. Boil it 2 hours or until the jelly point is reached. The cooking should be done in a broad, shallow uncovered pan.

Shelves For the Jars

THIS is the season of the year when one can easily induce the good man to do little jobs about the house. Perhaps you have not a good place to keep your fruit jars. Get him to fix up some broad strong shelves. They are a great help in a cellar.

The necessity for having them strong and secure was impressed on me once when I found a loaded shelf leaning at a most dangerous angle. I had a very narrow escape that year.

One of my friends in a recent letter told me of a loss she had last fall. She lives in a large city, so she had to buy all her fruit, strawberries, raspberries, currants, plums, peaches, etc. She had, she said, about eighty jars stored away on a broad shelf which was high up on one of her kitchen walls.

She and her husband were sitting reading one evening in the fall, when suddenly there was a loud crack heard and then a tremendous crash; rushing to the kitchen, they found all the precious fruit in a heap on the floor. You can imagine her feelings. The only thing she could be thankful for was that no one was under the shelf when it fell. It certainly would have killed a child.

This is the lesson to us all of the dangers of overloading shelves. Jars of fruit are heavy and it is a good plan to have plenty of shelves and "not put all our eggs in one basket," as the saying is, or all our jars one one shelf.—"FLORA."

The Prosaic Egg Dressed Up—Poached

POACHED eggs have long been a favorite supper dish in our family. They appeal to all appetites and are easily digested. The eggs may be poached in milk, meat stock or salted water. For the following recipes salted water was used. Eggs poached in meat stock are always served plain on toast; the meat stock itself imparting enough flavor. When made in milk the milk may be thickened slightly and poured around the toast.

To vary the ordinary poached egg pour melted butter or browned butter over it after it has been placed upon the toast or season with celery salt. Grated cheese sprinkled over the top or crushed dried parsley or celery leaves are a delightful improvement. A thin slice of ham placed between the egg and the toast is also a palatable manner to serve the egg.

POACHED EGGS IN POTATO NESTS also are very good. Form balls of cold mashed potato, then scoop out the centers and place in the bottom of each nest a layer of grated cheese. Place in oven until nests are a golden

brown and the cheese is melted. Remove to a platter and place a poached egg in each nest, add a dash of paprika, garnish with parsley and serve at once.

POACHED EGG IN BISCUIT WITH BROWN GRAVY. We use this way of serving poached eggs when we have left-over gravy and stale biscuits. Re-heat the biscuits and cut out a center large enough to hold the egg. Drop in the poached egg, pour around it as much of the brown gravy as you wish and serve at once.

POACHED EGGS IN TOMATO SAUCE. Brown one small onion in a pan, add one cup of fresh or canned

of the teams find the hearts and throw kisses until their leader collects the heart. They do not speak. The side collecting the most points wins. Red counts one, white counts five, and the blue counts ten. It is great fun to see two or three girls standing over a dignified woman throwing kisses to call the attention of their leader.—ANNA.

Matron's Shingled (?) Hair

THE jar of the car keeps pins and hair loose especially if the hat does not fit as it should. Most hats nowadays are made for bobbed hair, but a good many

The Popular Jumper Dress

These spring-like dresses for children or for grown-ups are simple in design and easy to make. The skirt and suspenders may be made of a heavier, darker material, while the blouse of material lighter in color and weight gives a charming softness about the face, besides having the practical feature of being washable and therefore easy to keep fresh.

Pattern No. 2398 may be flannel, plain or plaid kasha or of cotton materials such as linene, or gingham. The pattern cuts in sizes 8, 10, 12 and 14 years, and includes a little straight line dress which is worn with a wide leather belt and a long or short sleeved guimpe. Pattern 12c.

2413

The dress pattern No. 2413 cuts in sizes 16 years, 36, 38, 40 and 42 inches bust measure. Size 36 requires 3 yards 36 inch material for dress and 2 1/4 yards 36-inch material for blouse. Pattern 12c.

TO ORDER: Write name, address, pattern numbers and sizes clearly and correctly, enclose correct remittance in stamps or coin (coin sent at own risk) and mail to the Pattern Department, AMERICAN AGRICULTURIST, 461 4th Ave., New York City.

tomato pulp, salt and pepper to taste and one teaspoonful of sugar. Stir in slowly one-half cup of water. When the mixture is thoroughly heated thicken with one tablespoonful of cornstarch. Pour into a deep platter, drop the eggs carefully into the sauce allowing a nice space between each one, sprinkle over the eggs a little powdered celery leaves and serve immediately.

REBA NELMAN.

A Heart Hunt

This is a good game for a large crowd and an excellent mixer. Cut a large number of hearts—red, white and blue. Select two teams of about six on a side and a leader. The teams retire and the hearts are hidden in plain sight; on laps, in the hair, on the floor, or any place. Only the leaders carry baskets. The other members

refuse to have their hair cut, so a person I know has compromised.

She combs and brushes her hair all nicely to the front, head stooped over, and first does it up in some becoming fashion all over the front of her head, using a side comb placed near the forehead to confine all loose flaring ends and to arrange it over the face, fan like, with the pins on top. Now her hat sets jauntily, the back of her head is well groomed and has the shingle effect. When she gets to the end of her journey, there are no tails sticking out and she is comfortable as far as the hat goes, for it sits on so decently and stays there.—J. JOHNSON.

Carrot and orange marmalade is loaded to the gun wales with vitamins and hardly stays in glasses long enough to pay to cover with paraffin.

With dirt-loosening naphtha and splendid soap working together —Fels-Naptha—the golden bar—gives greater washing-value than you get in any other form. Are you getting the extra help of Fels-Naptha in washing clothes?

Your dealer has Fels-Naptha—or will get it for you

How to Get Money at the Bank—Investment Advice

A SHORT time ago one of our subscribers wrote us as follows:

"I would like to know if there is a place in my County where I can get a loan to buy seeds and fertilizer? I do not have good results from my crops on account of the poor quality of the seeds and I do not have money to buy the best."

This raises again, the old, old question of farm credit. It is a problem that some time during the year bothers thousands of farmers. It is usually settled in the wrong way by the farmer getting his credit of the dealer instead of the bank and thereby paying too much for it because the dealer is not in the banking business. We answered the question as follows:

"If I were in your circumstances, I would go to a bank in a small place near you that has a reputation for doing business with farmers and ask for an interview with the cashier or with one of the officers. Tell him frankly, just how you stand financially and just what you want to do with the money if you get it and ask for a loan on your note, signed by yourself and your wife. I personally know from my own experience, that this can be done for I once found a bank that would help me out in this way. There is nothing embarrassing about telling a banker about your financial standing any more than it is to tell a doctor about your health. The banker has a right to know just how you stand financially before he can decide whether or not he can help you. He has other people's money to protect, but a great many bankers will take a chance on a man with good character though he has not much financial collateral."

This letter was written on March 28th. On April 1st, the subscriber again wrote us as follows:

"I wish to thank you for your kind advice as to how I could obtain a loan for farm seeds. I had no trouble whatever to get the money the way you advised me to do."

Of course, this plan will not always work, but more and more country bankers are coming to realize that their very best success lies in working with farmers to build up the local agricultural business. There are cases where the banks will not be able to loan money. There are other cases where they will not loan money to farmers when they could very well do so, but we believe that if you go frankly to them as suggested in the above letter, and tell them confidentially exactly how you are situated and what you plan to do, most local bankers will be inclined to try to help you out.

May we add the suggestion however, that the old time farmer always had something of a horror of borrowing money. He perhaps was too conservative and often held up the progress of his own business through lack of capital. But on the other hand, too much credit, too easily obtained, can also very easily be a curse for it must always be paid back with interest. So this is just a word of caution. Borrow only what you are sure you need, and spend it only after the greatest care and deliberation to make sure as far as possible that the results will justify the expenditure.

Questions About Investments

Financial Department: I have \$1500 stock in the First National Oil Company of Texas which I think had some very good property including producing wells. They consolidated with other interests and want a cash consideration in addition to old stock for stock in the new company. I have no more money for them. Must I say good-bye to my investment?—R. W. H., Pennsylvania.

It is heart-rending to think of a man with limited resources risking hard earned dollars in any of these Texas oil promotions. We have no information about this specific company but it is our earnest advice to put no more money into this or any similar venture. All oil stocks are essentially speculative even those of long established companies with a ready market for their shares. Just now there is an enormous over-production of oil and some of the best managed concerns are unable to make satisfactory profits. What chance is there then for a new company of unknown rating in this intensely competitive field? It seems a hard thing to

say but as far as we can see there is nothing to do but to charge your loss to experience.

* * *

I have at present \$1500 to invest and I would like to have your advice or the safety of the following firms: S. W. Straus & Co., Alfred Benscher & Co., 206 Broadway, N. Y. C.; American Bible Society annuity bonds (circular enclosed). I would like to invest my money in some security that is safe and that will bring some higher returns than the liberty bonds and then again I would like to invest it so should I need the money in a year or two I could turn my holdings into ready cash. —H. E. G., Pennsylvania.

Of the firms you name the mortgage bonds offered by S. W. Straus have a high reputation. In each case, however, the security depends upon the particular property on which it is a lien. Also you must remember that these mortgage bonds are usually not easily marketable. We cannot advise you about the other New York company unless you state what security they are offering.

The annuity bonds offered by the American Bible Society we consider good. They are, however, annuities, that is to say interest is paid while you live and after your decease the principal goes to the Society. These too, as far as we know, are not marketable and for that reason are not desirable.

If you want something which you can turn into cash readily the best course is to buy a high grade preferred stock. The best of these stocks, such as U. S. Steel and Atchison, both preferred, sell to yield around 5½ per cent. A higher return with all reasonable safety may be obtained by buying Niagara Falls Power preferred, which is of \$25 par, pays \$1.75 annually and sells about 28 to yield 6¼ per cent.

* * *

What do you know about the Butler Plantation Inc., New York City, developing Butler Island and other lands adjacent to Georgia. Their representatives are V. E. Hodges and Waring Thomas. They are canvassing Chenango County to find five men who will give them \$750 each for which he is to receive 50 shares preferred stock at \$15 per share and 50 shares common. They guarantee to resell the preferred stock at the end of one year and you still have the common left.—O. F. N., New York.

We have no information about this promotion except that contained in your letter. We advise against entering upon any such speculation. If you have money to invest in real estate the best place to do it is in your own neighborhood where you can estimate values for yourself or can get an opinion from an expert on whom you can rely. It is very foolish for a farmer in Chenango County, New York to send his money to Georgia.

* * *

Seeing the good advice you gave to farmers about investing their money in stocks and bonds I would like to know about the Wisconsin Electric Power Company. Is this a safe investment? I am enclosing a clipping from a Milwaukee paper. —M. F. M., New York.

Wisconsin Electric Power is a subsidiary of the North American Company and

CALLER (who has been painstakingly spelling out words)—The story I heard about Miss B-i-n-k-s and the M-a-j-o-r is even more s-c-a-n-d-a-l-l-o-u-s! LITTLE JOAN (nonchalantly)—There's only one "L" in "scandalous." —Judge.

its 6¼ per cent preferred stock recently offered to its customers and described in the clipping you enclose is, in our opinion, a reasonably good investment. The only apparent objection is that there might not be a ready market in case you want to sell. Better in that respect would be American Water Works and Electric 7 per cent preferred selling about 103 and listed on the New York Stock Exchange.

* * *

As a reader of your valuable paper, please permit me to take the liberty to inquire as to standing and reliability of Cochran and McClure Co. investment brokers of Chicago who make a specialty of first mortgage real estate bonds, particularly residential apartments. W. L. M., New York.

As far as we know the house you name is reliable but you must remember all these real estate mortgage bonds depend for their rating entirely on the specific piece of property on which they are a lien and it is never safe to consider them as a whole.

Is Your Well Water Pure?

WE often get inquiries as to how well water on farms can be tested to make sure that it is safe to drink. In order to answer these inquiries we wrote to the New York State Department of Health at Albany and received the following instructions for getting water tested.

"This is in answer to your inquiry as to how to obtain an analysis of spring or well water. It will be necessary for the farmer who wishes the water tested, to refer the problem to the Health officer in his jurisdiction. If, in the judgment of the Health officer, examinations are advisable, it will be necessary for him to make a sanitary survey of the sources of the water and record the results on cards accompanying the containers, which he can obtain from the laboratory on request. These examinations are made without charge.—L. M. Wachter, Chemist."

In other words, if you have any doubts regarding the purity of your drinking water, the first step is to refer to your local health officer and if he deems it advisable he will take the necessary steps for having the water examined.

We Back Our Guarantee

THE following letter shows perhaps better than any other way how AMERICAN AGRICULTURIST stands back of its advertisers. So that farm people may be absolutely sure when dealing with our advertisers and a square deal, a careful investigation is made of all advertisers who wish to enter our paper and all those about which we have any doubt are refused the use of our columns. In spite of this of course, an occasional unreliable firm does get in. When this happens our readers are protected by our guarantee. In order to be protected by this guarantee you must mention AMERICAN AGRICULTURIST when writing advertisers. Here is the letter:

Dear Mrs. H.: For some months we have been trying to adjust a claim which you have against one of our advertisers. So far our efforts have been unsuccessful although this man has promised several times to settle and advised our attorney that he had already sent you a check. This proved to be untrue and although we have taken the matter up with him again, he has failed to acknowledge our communications. Occasionally an unreliable man will get into the advertising columns of the paper, but we use our best efforts in an endeavor to accept only reliable advertising. That is one reason why we guarantee our ads and why we are now enclosing our check for \$28.00 the amount of your claim.

We trust that this will meet with your approval and that you will not hesitate in the future to answer any of our advertisements for we always intend to stand by our guarantee. We have placed the name of this man on our list of unacceptable advertisers.

Likes Our Insurance Policy

"I received check from North American Accident Insurance Company of Chicago for \$72.80 and will say I am absolutely satisfied. Will also say it is by far the best thing I know of in the shape of an accident insurance. No red tape whatever.

"Wishing you success and thanking you for making it possible for your subscribers to enjoy the benefits of this insurance at so low cost, I am."—R. J. F., St. Lawrence County, N. Y.

WATCH your horses carefully these days. Guard them against strained tendons, stiff joints, troublesome growths. The instant an exterior ailment appears, treat it with Gombault's Caustic Balsam. A Fireside Reflection

Concerning Ontario County and Certain Other Matters

By JARED VAN WAGENEN, Jr.

NOW and then some one asks me just where is the really best agricultural region in all New York state. Then, especially if I am the least bit facetiously inclined, I indulge myself in perfectly proper and praiseworthy local patriotism by assuring them that the real God's Country—the very Golden Heart of

Jared Van Wagenen, Jr. the state—is that wonderful strip of chocolate-colored alluvium which make up the Schoharie flats beginning at a point a little below Schoharie Junction and extending up the creek to about the site of the great Gilboa dam and even above this point in scattered patches. This formation reaches its highest development around Middleburg, "The Hook," "Clauver Wye" and best of all perhaps under the jutting precipice of "Vroman's Nose."

This fat valley constitutes a ribbon of land, say thirty miles long and from a few rods to perhaps three quarters of a mile in width. In all there may be three or four thousand acres of it. Much of it has been tilled by white men for more than two hundred years and some of it was tilled before that by Red Men for an unknown period. It is light, friable level, store-free, naturally underdrained and there is a current local proverb of my country which says "worth a farm on Schoharie flats." Soberly—the Valley deserves all the praise that can ever be given it. I ought to add that our farm does not lie in this favored region but twelve miles west among the limestone hills. Incidentally I feel a bit sorry for the man that cannot some how utter a boast concerning the lands of his own country.

* * *

Having thus delivered myself, if the inquirer is still intent upon getting

information, I say that the best agricultural region of the state is included in the Ontario Shore counties, meaning thereby Wayne, Monroe, Orleans and Niagara with their kindly lake climate and their very highly developed horticultural interests.

Then to this list I add Livingston, Genesee and Ontario and I stop feeling that perhaps these seven counties have a larger proportion of high-class land than any others. I am not sure that I have been quite fair. Perhaps I ought to include Seneca and Cayuga and possibly "little Yates" and Onondaga. Also I feel guilty because I have not given due weight to the splendid alfalfa-bearing limestone hills of Oneida and Madison. Let me make this further admission. There are none of the counties which I have named that have not within their limits lands of low value. Conversely it is true that there is hardly a county in the state that has not at least small areas of splendid land but I speak in general terms.

* * *

But last week I was in Ontario County and so it is freshest in my memory. Some of the finest agricultural traditions of our state are associated with this imperial county. Close to its eastern edge near Geneva is the

Swan Farm, formerly owned by that Scotch emigrant and splendid farmer, John Johnson where in the early thirties of the last century was laid the first drain tile in America. Agriculturally this farm will always be classic ground.

* * *

Then just on the western outskirts of the city of Geneva is the farm of the New York State Agricultural Experiment Station where for more than forty years has been patiently investigating agricultural problems and which has given us a vast mass of data concerning many questions. The farms of the State College of Agriculture at Ithaca are naturally of only fair fertility—just decent average land but the Experiment Station farm is beautiful rolling fat land—as good as any in a famous county.

Most of northern Ontario is a fertile and lovely region—level enough so that there is small use for side-hill plows and with lime enough so that alfalfa is at home. Moreover it is comparatively close to sea level and this together with the modifying influence of the lakes gives it a climate which is very kindly as compared with much of the state. Accustomed as I am to farm fields which are in part steep and rugged and on many of which the tractor has no real place, I feel a bit envious of the man who is so favored as to do his work on these gently rolling, almost stone free lands. When I ask the Farm Bureau man where is the very best land in the county and press him for an answer, he replies "Holcomb and East Bloomfield and Hall." Some years ago I met a man with a wide and intimate acquaintance with western New York and he assured me that there was a block of about 6000 acres in the township of Bloomfield that all in all had no equal in the state—but I do not vouch for the absolute correctness of this statement.

* * *

It goes almost without saying that there are few

Pulling out the profits

There's one sure way to make your tractor pay for itself, and that is to keep it always in tip-top condition, constantly ready for the hundred and one uses to which a tractor can be put on any farm.

But no tractor can stand the gaff of heavy-duty work, unless it is properly lubricated.

Socony Motor Oil is a "proper" oil. It is designed specifically to resist high engine temperatures, to give a maximum compression seal, and to develop the utmost in power. Whether used in combination with Socony Gasoline or Socony Kerosene as a fuel, it gives longer life to the tractor, and longer tractor life means larger profits.

Consult the Socony lubrication chart below for the proper grade of Socony Motor Oil for your tractor. The nearest Socony dealer will be glad to quote you prices in metal 30 or 50-gallon drums, with faucet. It costs no more, and is mighty convenient.

Remember that SOCONY is "Standard"

What Readers Want To Know

Getting Rid of Quack Grass---Other Crop Items

I have several fields that are badly infested with quack grass and now I notice that it is spreading. What is the best way to control this? It is one of the worse pests we ever had to fight.—A. L. B., New York.

YOUR experience is the same as that of thousands of other farmers. You will have to work hard to keep the grass from spreading and your best weapon will be tillage. Thorough tillage will gradually prevent the roots from taking hold and eventually you will find that it will give way, but not until after it has made a strong fight for existence. It is a costly job but it can be done. Plowing and harrowing the ground in the fall to bring the roots to the surface is one way, burning the roots after they have been brought together in one big wind-row.

During the growing season from now on, cultivation should be practiced almost religiously. In small batches it is not so difficult because you can hoe continually and rake the small parts together. When you come to field conditions, however, you have a different problem.

Cutaway Harrow a Valuable Implement

One of the best implements is the cutaway harrow. It will chop the sod up and tear it to pieces. If this is followed with a spring tooth harrow or a good peg tooth harrow, you can work wonders. A crop that requires a lot of cultivation, such as corn will help to keep it back.

In some places quack grass comes in because the previous year it was allowed to go to seed. If it is mowed off before the seed is matured you can often stop its spread.

Dwarf Essex Rape for Hog Pasture

What would you suggest for a hog pasture this year? We have a piece of land that is situated near the hog yard that is not of much value and we have heard that we can make cheap hog gains by giving pasture.—H. B. W., New York.

IT is very true that you can reduce the cost of raising pork materially by pasturing your hogs. The indications are that we are going to see high prices for pork this fall and the cheaper a man can raise them the better off he will be. We are assuming that the land is not growing anything of value at the present time. If it were in alfalfa, we would say turn the hogs right in, for there is nothing better than alfalfa or clover as a hog pasture. It is fairly permanent and its feeding value is very high. Undoubtedly you will have to plant a crop and you have the choice of two. Dwarf Essex Rape is about the best bet you have although oats and peas are very fine.

If it is at all possible we would get into the plot of ground you have in mind with a good disc harrow and cut it up thoroughly. Work it both ways or three ways until you have the land well cut up and pulverized. Then broadcast 5 pounds of Dwarf Essex Rape seed to the acre and harrow it in. If you do not graze it too closely you will have excellent pasture all summer. The hogs will relish it and you will find that they will make wonderful gains.

Oats and Canada field peas may be substituted using a bushel of each to the acre. This crop will carry a little more feeding value, but you will find it will not stand as heavy grazing as rape.

Setting Out an Asparagus Bed

What are the most important points to keep in mind in setting out an asparagus bed. We are going to try a small patch at first. We have never had any experience with the crop and we appreciate a few hints on getting started. How many plants or roots will I need?—C. L. D., New York.

IN the first place select a piece of ground that is well drained and fertile. Furthermore the soil should be

deep and located where you are sure you are not going to interfere with other crops. Remember when this crop is once planted it stays in the same place for several years. Plow the ground thoroughly and deep. Work it up well. Barnyard manure will be of infinite value if you have plenty of it. When your ground is well worked up open up dead furrows 4 feet apart and set the roots at the bottom of the furrows which should be 10 inches deep. The roots are placed 2 feet apart in the row. They are then covered with 3 or 4 inches of soil which can gradually be piled as the plant develops.

In buying your roots insist that you get one year old roots. After the dead furrows are filled level, keep the ground well cultivated and free from weeds. Next year as soon as the ground is easily worked, it is a good idea to throw up soil ridges, over the top of the roots in order to get a slightly longer stalk in cutting.

Setting the plants 2 feet by 4 feet, you will need 5445 plants, but it is safer to get a few more in case some do not measure up to your standard of a good looking root.

Sunflowers and Soy Beans With Silage Corn

Would you advise growing either sunflowers or soy beans with corn for silage. What are the advantages of such a mixture and what has been the experience of those who have tried it?—A. D. C., New York.

THE main object in sowing sunflowers with silage corn is to insure a crop where the climatic conditions are not entirely favorable for corn. In northern New York there are some sections where it is hard to mature a corn crop and by adding sunflowers a man is sure of getting at least part of his crop through. Some men grow nothing but sunflowers although if they had their choice they say would prefer corn if they were sure of the crop. The general consensus of opinion seems to be that there is more labor in harvesting sunflowers and corn combined although this is off set by the fact that the feeding value of the combination of sunflowers and corn is greater.

The feeding value may be increased by including in the planting soy beans. These fill up the bottoms so that when you include them in the crop you are producing almost the maximum amount of fodder.

A great deal depends on the amount of sunflower seed to be planted. Your local conditions will determine this to a great extent. The same holds true with the rate of planting soy beans. Ordinarily you would use from 2 to 4 pounds of sunflowers and from 8 to 15 pounds of soy beans. If there is no one in your section who has done this it would be wise to go at it slowly and feel your way rather than try this experiment on your entire crop. If you call on your Farm Bureau Manager, he may know of some one who has made an experiment on it and this experience will be of considerable value in guiding you for the first time. In selecting your variety of soy beans you may use either Ito San, Manchou or Black Eye Brow.

PRISON GOVERNOR (to released convict)—I'm sorry; I find we have kept you here a week too long.

Shifts in the Dairy Trade Winds

A Market Review Showing Better Times Are Ahead

DAIRY markets have turned right about face. A year ago, prices of dairy products were at the bottom of the depression trough. Today they have already started on their climb to a more favorable position. 1925 promises to bring a definite turn in the fortunes of those who have hung onto their cows through twelve months of high feed prices and low dairy product prices.

Last year was a period of record production of butter and cheese, of unprecedented accumulations of butter in storage, of low prices and of record consumption. Likewise, it was a time of high feed costs.

Today, production is running slightly less than last year, prices of butter, cheese and milk are higher, and, if nature is kind, the pain of high feed costs will be relieved as soon as the new crops are assured.

This turn of events confirms the view that the dairy industry is not subject to such severe and prolonged depressions as those which occasionally affect producers of most other farm products. The storm clouds began to gather about fourteen months ago and already the skies are clearing.

The quick shift toward improvement is all the more significant when the highly stimulating influences prevailing from 1921 to 1923 are considered. Prices of dairy products were attractive, feed grains were low, many other farm products were unprofitable, the gospel of diversification was being broadcast everywhere, and finance was made easy for the man willing to milk cows. It would seem that very serious overproduction might have resulted, which would take a long time to correct. The fact that the tendency to expand dairying was worldwide made the potential danger seem all the greater.

But, if the conclusion is justified that improvement can be expected this year, then a lot of tears have been spilled in the last twelve months in needless worry over the future of the dairy business. While it may be a little early to assume that we are emerging from the woods, all the market facts and circumstances indicate that we are much more than halfway through it.

One of the reasons why conditions did not become so adverse as some of the observers expected, lies in the fact that a good deal of the expansion in dairying from 1920 to 1924 was merely getting back to normal. During the period from 1917 to 1920, feed and labor were high compared with butter prices, so that production was curtailed. The output in 1920, which has been used so often as the base year in determining the trend of production seems to have been abnormally low.

Many factors, all working together, contributed to the enormous dairy output in 1924. Most prominent was the momentum of the tendency to expand the industry which started back in 1921. More heifers were coming into milk, increasing the size of the national milking herd. The habit of more liberal feeding, formed while grain was cheap, helped to raise the output per

cow, at least during the first ten months of the year. Cool weather and ample rain kept pastures in good condition, so that production was unusually well sustained during the late summer and fall. In fact, the principal increase in butter production, as compared with 1923, occurred from July to October.

The gain in production in 1924 was the fourth successive year of increase. From 90 billion pounds in 1920, as estimated by the United States Department of Agriculture, the total milk output closely approached 114 billion pounds in 1924, a gain of 26 per cent. The increase was only partly due to a larger number of dairy cows. From January 1, 1920, to January 1, 1925, the

During the same period in 1923, prices had advanced 17 cents a pound. Compared with June, prices in July, 1924, averaged $1\frac{1}{2}$ cents lower, August, 3 cents lower, and September, $3\frac{1}{2}$ cents lower. Usually, the market rises after June.

While butter prices were holding on a low level during the late summer and fall, when they usually are working higher, prices of feed grains were steadily rising. This was due to the small crop of corn and to the upward tendency in bread grains. This made the position of the dairymen extremely uncomfortable. The abundance and cheapness of hay and other roughage only partly compensated for the higher cost of concentrates, particularly corn.

The principal reason for the improvement which can be seen in dairy markets is found in the decline in production which first became apparent last fall when indoor feeding started and it was necessary to depend on grains and purchased feeds to keep up the milk flow. Grain prices were so high that the process of converting them into milk did not look attractive. Receipts of butter at the leading markets for the four months from November to March, inclusive, were about eight per cent smaller than in the same months a year previous, in spite of the fact that there were more milk cows on farms, particularly in the butter producing states. The decline in receipts made it possible to move out the storage holdings which oppressed the market during the fall and early winter.

The position of the dairymen has been improved, also, by an increase in consumptive demand and by the decline in foreign competition. The American consumer ate more dairy products last year than ever before. It is true that a lower level of prices was necessary in order to bring about the larger consumption, but it has shown the enormous amount of dairy products this country is capable of using.

The consumptive demand for dairy products during 1925 is not likely to shrink from its present size. The income of the industrial classes was reduced somewhat in 1924 because of less complete employment and shorter working hours. The outlook for the rest of 1925 is that labor will be as fully employed as in 1924. There is no sign of any industrial depression that would be severe enough to affect the demand materially. This conclusion is reinforced by the fact that butter has sold at retail in the last fourteen months at only about 35 per cent over 1913 prices, whereas most foodstuffs have shown materially greater increases.

The foreign butter situation has lost some of the aspects which looked so alarming twelve to eighteen months ago. Since the war, Germany has been importing only two or three million pounds of butter annually. During 1924, however, she came back into the importing class on an even larger scale than before the war. Her imports for the year were 118 million pounds against a pre-war average of 111 million pounds. Her purchases of Danish butter took the major

(Continued on Page 447)

number of milk cows on farms increased 1,597,000 head, which is only a little more than the average rate of increase for the last six or seven decades.

As nearly as the matter can be determined, about one-third of the gain in dairy production was due to the larger number of cows. The other two-thirds was due to more generous feeding because of low prices for feeds and hay, as compared with prices of milk and butter, and to the milking of cows not ordinarily kept for dairy purposes.

Lower prices were more necessary in 1924 than in 1923 in order to move the product into consumption. Butter, cheese and milk all declined sharply in price last spring. A moderate recovery occurred in the final months of 1924 and thus far in 1925, the tone of the markets has been distinctly better than a year ago.

Owing to the favorable climatic conditions last summer and fall, butter piled up in storage long after the time when it usually begins to move out. Total holdings in the United States on September 1 amounted to 156 million pounds, by far the largest on record, and fully 54 million pounds more than on the same date in the year previous. This huge surplus helped to keep prices down during the time when the seasonal tendency is strongly upward.

On July 1, for example, 92 score creamery butter at New York brought $40\frac{3}{4}$ cents wholesale. On November 1 it sold at $40\frac{1}{2}$ cents.

Prizes for Roadside Markets

NEARLY every farmer has learned the lesson, often through bitter experience, that there is no point in raising a good crop if it is not well sold. The problem of marketing becomes more important every year and because it is so important, AMERICAN AGRICULTURIST spends much time and money in trying to put before our people the latest and best marketing information.

In recent years, the roadside market has brought a good many extra dollars and solved some marketing problems for a large number of farmers. The roadside market is one way that farmers have to get some benefit from the State road that goes by the farm. But from our study of this style of marketing, we believe that many of them fail and others do not reach their highest success because they are not rightly conducted. For some reason, there is a tendency to charge too high prices. City people may bite once or twice, and we know from our own experience that they are often right, when they say that they can buy the same products in the markets next to their city home for less money than they can get them at the farmers' roadside markets.

Another point on which the roadside markets greatly differ is the quality of the products for sale and their neat arrangement. Most people buy on appearance, and if when they do, they get a high quality product also, they are going to think more kindly of the roadside market.

Another practice that is destroying the roadside market as an outlet for real farm products is the fact that a majority of them seem to be degenerating into hot dog and pop drink stands. The excuse for a farmer's roadside market is to make an outlet for farm products. It is possible, maybe, to add a few other things strictly as a side line, but we believe the biggest possibilities for a roadside market lie in making them attractive places where the motorist can stop and get the fresh fruit and vegetables, poultry, dairy and other farm products of the highest quality at reasonable prices. We believe also that there are possibilities for neighbors to cooperate in establishing a joint roadside market which could serve as an outlet for the products of several farms.

Because of our belief in this form of mar-

keting, AMERICAN AGRICULTURIST is going to offer some prizes for a discussion of this subject from those who have had successful experience. For the best letters on the subject "My Experience with the Roadside Market" together with a picture of the market, AMERICAN AGRICULTURIST offers a prize of \$10; for the second best, we will pay \$5; and for the third, \$3; and a dollar for any other letters on the subject that we can use and have space for. The letters should be about three hundred words in length, and the pictures must be sharp and clear. The letters and pictures will be judged upon a basis of 75% on discussion and 25% on the picture. If in the opinion of the judges any of the prize winning letters are of equal merit, double prizes will be awarded. Write plainly and on one side of the paper. The contest closes June 1, and we suggest that you get your contribution in as early as possible. Winning letters will be printed in one of the early June issues.

A Good Veto

GOVERNOR Smith is to be congratulated for vetoing the Hewitt State Fair Bill. This bill abolished the State Fair Commission which manages the Fair and in its place provided for a Fair Manager, responsible to the State Council of Farms and Markets. AMERICAN AGRICULTURIST favors the elimination of the State Fair Commission. We believe that government by commission is costly and inefficient, and gives too much opportunity for political patronage. But the Hewitt plan would have been worse than the present system of management. It provided an entirely new scheme of government machinery and we are already cursed with an altogether too complicated form of state government with its dozens of unrelated and improperly subordinated departments.

Under the Hewitt Bill, the State Fair manager would not have been responsible to the Commissioner of Farms and Markets as are all the other agricultural department heads; but would have reported instead directly to the Council of Farms and Markets. Why this foolish arrangement of disorganization? The State struggled along for some years with a similar dual arrangement when it had a commissioner of markets and another commissioner of agriculture. This was found unworkable and the offices were finally combined in the present Commissioner of Farms and Markets.

If the proposed plan of consolidating many of the State departments and commissions goes through, the Hewitt Bill is unnecessary anyway. Under this plan of consolidation, the State Fair Commission will probably be reduced to a single manager. He should be hired then for his ability rather than for his politics and he most certainly should be made responsible directly to the State Commissioner of Farms and Markets.

Give The Pasture a Chance

NOW is about the time for the annual caution about turning cows out to pasture too early. It is always a temptation to get cattle out as soon as the grass begins to show green. But every good dairyman knows it is bad for both the cows and the pasture. When turned on too quickly, the grass is not started enough to have any substance and it spoils the appetite of the cattle for their regular feed; at the same time, too early pasturing sets the pasture back so that it does not recover from it in all of the season.

Thousands of good dairymen are learning also that when they have good cows it pays to supplement pasture during the greater part of the season at least with feed. There are very few of the pasture lands of the East that are able to maintain for any length of time grass in sufficient quantities to supply the all-around needs of the high producing dairy cow. Of course, this does not go for poor cows

No kind of good dairy advice applies to them for the simple reason that they do not belong to nor fit into the modern dairy scheme.

Coming—"The One-horse Fiddler"

A FEW days ago I was requested to say something in the AMERICAN AGRICULTURIST about Music Week, which is to be celebrated during the week beginning May 3rd. As a rule, I do not believe much in these special "weeks" for this and for that. There are getting to be so many of them that there are not enough weeks in the year to go around. But I am interested in calling attention to music because I know of no other single thing responsible for more happiness to the human family than music in its various forms.

So I got to thinking what I might say to you that might lead you to sing an extra song or so or play the phonograph or even whistle a little more as you go about your work, and it came to me that perhaps I could put my ideas about music into a short story. This I have tried to do in a story called "The One-horse Fiddler" and it will appear when The Troublemaker is finished.

Many of you have been kind enough to say that you liked "The Troublemaker". I hope you will like this short story. Anyway, writing it gave me an opportunity to pay my respects to the old ballads and folklore songs which, in my opinion, far surpass all of the modern jazz and even the high-toned operas in real melody and in appeal to the best in all of us.—E. R. Eastman.

Eastman's Chestnuts

JARED VanWageningen's story in a recent issue of AMERICAN AGRICULTURIST about the fine lands of Ontario County where there are no stones reminded me of the weary days of my own early experience as a boy in working out by the day and month hoeing potatoes and corn. Even after good tillage machinery was in use on every farm, most of the older generation never thought a piece of potatoes had had proper care until it had been properly hilled up with a hand hoe. Back in the days when hand labor was cheap, maybe they were right. I still like to see, as I occasionally do, a piece of potatoes with every hill constructed just so and with not a weed showing.

But what a terribly monotonous job it was, day after day, day in and day out, for a boy, or for a man for that matter, with not a single interest in the job except to get it done! And how doubly hard hand hoeing was, when what little dirt there was had to be obtained in a constant fight with the stones. Thank the Lord for the thousands of river, valley and lake lands in the East that more than outbalanced the stones, and made the East, particularly New York, rank high in agricultural production.

When you think of those hill lands, no wonder the boys of a preceding generation left the farms, and no wonder the New England farmer settled in the West. They fled from the stones of their native hillside!

I was thinking of all this as I read Mr. Van Wageningen's article, and I remembered the old story of the stranger that was driving along a country road and saw a farmer working with his hoe in a particularly stony field.

The stranger stopped to pass the time of day and said to the farmer:

"These are pretty hard times for farmers, aren't they?"

"Yes," said the farmer, as he kicked disgustedly at a cobblestone, "BUT I AIN'T AS POOR AS YOU THINK I AM. I DON'T OWN THIS FARM!"

Quotations Worth While

The great secret of success in life is for a man to be ready when his opportunity comes.—DR. PAULI.

Husbands as Fathers

And a Reader's Letter on His Experience With Electricity on the Farm

THERE is no question but that all wives should be good mothers, but it is not fair to let that father forget his importance. No farmer would expect to build up a valuable herd of purebred cattle by keeping it a secret that the sire is a scrub. The old saying, "Be sure your sins will find you out," was never more true than in the matter of heredity.

A sweet faced woman lives across the way but why that troubled look in her eyes? She evidently married for love alone for in spite of her efforts to bring up her boys she is facing the truth, "Like father, like son."

HAS KEPT THE HOME FIRES BURNING

ABOUT ninety years ago, my grandfather moved to this farm bringing my father, Nelson H. Royce, who was about fourteen years old, with him. My mother's name was Emily Bryant, whose grandfather was a Revolutionary War soldier.

March 5, 1857, I was born, and I am the only son of the farm to live and grow to manhood.

My father was an invalid much of his life, which threw labor and responsibility on me early, so that I received only a small education at school. But I have tried to learn something every day. As soon as I could read, my mother gave me the American Agriculturist to study so that I might be a farmer. I have always stayed on the farm and kept the home fires burning.

There never is a time when one is too old to suffer from losing faith in one who has been loved and trusted. How many people start out in life with high ideals and at forty or fifty lose faith in their fellow men and then fall. Children are quick to discover hypocrisy on the part of the parent and the chances are that they would know early in life.

A boy does not have to be very old before he looks to his father for an ideal and want to be "like papa." I have often thought how it must cut that mother to the quick, when she tries to train her boys to receive the answers "Papa does." I never knew what it meant for my boys had one of the best fathers and though he was taken away just at the age when boys most need a father, nothing has been such an aid in helping them resist the temptations that come to the adolescent boy as to be able to truthfully say, "Your father wasn't that kind of a man. I want you to be like Father."

Why Discipline Sometimes Wanes

During the past generation, the father was usually the final authority in home discipline. On account of present business conditions, many families of children are scarcely acquainted with their father. He leaves home before they are up, perhaps he sees them at night, perhaps not. If he is a traveling man, he may mean to them a person who occasionally spends Sunday and pays the bills. Is it any wonder that the discipline of the home is falling down? Mothers as a rule are too indulgent and the firmness of the father is needed to keep the balance.

As boys and girls feel their own physical strength increasing, they feel a greater respect for authority if there is physical power behind it, even though it is never used. We recognize this in our larger schools by employing men as principals to aid the teachers in discipline. The mother of a family is not always physically fit to handle a rebellious child. Unless the father is ready to help, control may be lost never to be regained.

The training of a child is like the building of a house. Wise training during the first ten years represents a solid foundation, but of what value is that foundation unless we complete the house by building equally well during the second ten years of life? Granted that the mother has opportunity to live closer to the child during its early years, but no one who has led their young folks over what is called "Fools' Hill" will question the statement that the adolescent period is one of the most critical seasons of life.

Who but the father has the chance to know the kind of men who are attracting the attention of his daughter? Fortunate the girl whose companions know that they are responsible to her father. What a safeguard also, when her father is a living example of the kind of man into whose keeping she may safely trust her future. Who but the father can enter into the active sports that should act as a safety valve to the accumulating energies of the growing young man? To be chum and counselor of his sons and daughters is the glorious privilege of fatherhood.

Experience Is a Factor in Training

The ability to train children is not a matter of sex but rather of understanding the principles of psychology though that person may not know it by that name. Many a good woman is utterly unfit to train vigorous red-blooded boys and girls because she has never known what it is to be tempted, to fight it out, and to conquer. Few of us understand an experience unless we have known the same ourselves. Children are too precious to trust that the mother will be skillful under all circumstances. The home was established with two parents because it needs the co-operation of both in that most difficult task of training the child to become a noble man or woman.

The past generation made the mistake of *autocratic* authority. The pendulum swung to the other extreme and we are reaping the harvest of *no* authority. It is time the pendulum returned mid-way and the father and mother joined hands in an earnest study of how to understand and to lead their children. Then, and then only, shall we produce a generation of better folks.—Mrs. G. C. C., New York.

Electricity on the Farm

MY first real experience with electricity dates back about thirty years. At that time electricity was just coming into general use. Our town like many others at that time, was illuminated at night by kerosene lamps set upon a post about eight feet high. At this time I secured a job as Printer's Devil in a dingy little country printing office where we got out a weekly edition of a country newspaper and a large amount of job printing. This experience served as a post graduate course to a rather limited high school education.

One of my first duties was the care of the lighting system, consisting of a number of old kerosene lamps, and here is where I could really and truly sympathize with the housewife who has to depend on this kind of illumination. My employer conceived the idea that since we were using steam for heat and power, we might also belt up a small dynamo and have an independent electric lighting system. Since I was engineer and master mechanic, it fell on me to install the first plant in the village which I did very successfully and the effect of these lights was a wonderful stimulant to night work.

Here I wish to say that I had no former experience with electricity as I had just come in green off the farm having spent the previous winter on a dairy farm, from which we peddled our product in the village at five cents per quart, and I had received ten dollars per month and board for my services.

My object in writing this is to show the young men the value of awakening the initiative within, which prompts them to assume larger responsibilities

and work out their own problems. It is a mighty good thing to get hold of a number of different kinds of work for this practical vocational training will come into play later in life to good advantage, having a real cash value later in life, even on the farm. Six years ago we installed a milking machine. I also had a vision of some of the modern conveniences for the farm home, so I purchased a three-horse gas engine for power. The engine is of the throttle governor type, as this furnishes a more steady motion than the electricity spark governed type which are not satisfactory to run an electric generator.

But like most farmers, our resources have been limited so our electric lights only came two years ago. I first bought a small belt-driven generator

This is a picture of a real American farm boy left to grow in the out-of-doors of a hundred acre farm. The cows are out, and he is answering the call to arms by starting the wheelbarrow of fence fixing tools for Dad. He stands beside a stone house that has weathered the storms of eighty-five years.—E. J. L., Oswego Co., N. Y.

and belted to the flywheel of our gas engine, also a set of storage batteries, large size 240 ampere hour capacity and wire and electric fixtures. Then I secured the services of an old friend who had become competent as a wireman and with the aid of our son and myself we soon had the whole thing installed at the small cost of about four hundred dollars. We have about thirty lights in the house and they take care of the barn very nicely including the hen house. It would be a terrible hardship to have to go back to the old kerosene lamp and lantern. I feel that the fire risk is lessened enough to repay the interest on the investment and I think insurance companies should make the same deductions they do for lightning rods.

But this is not all, the current also takes care of our water pumping system for the kitchen and bath room, automatically and perfectly.

The cost of operation is very small. It takes four to five gallons of gas per week in our shortest days. We used about the same amount of kerosene in the old days, and had very little light. When we use the milking machine we charge the batteries at the same time and this will nearly keep them supplied. We only milk about ten cows. The expenses for extra light bulbs has been very small thus far. We have all arrangements for electric cleaner and washing machine, but lack the cash at present. The reason why more farm homes do not have these modern conveniences is the low prices of farm products and high taxes.—E. E. Wicks.

Lincoln Said—

Among free men there can be no successful appeal from the ballot to the bullet.

* * *

Let us have faith that right makes might, and in that faith let us to the end dare to do our duty as we understand it.

A Fireside Reflection

(Continued from page 349)

large dairy herds in this locality. These men are growing wheat and hay, potatoes, cabbage, beans, canning crops, apples and small fruits. A few are feeding steers and quite a number are fattening lambs—a business by the way that is turning some very nice profits for skillful men—but they are milking comparatively few cows for the simple reason that it has always been possible to make a living by types of farming that were less exacting and confining than cow keeping. You and I who are dairymen may as well frankly confess that we are such largely by force of circumstance and environment because men as a rule do not dairy on a large scale where land is level, fertile and easily tilled.

* * *

But southern Ontario is different. The hills are higher the slopes more precipitous, the soil lighter in texture and not nearly so well supplied with lime so that it is not a part of the natural alfalfa belt. Indeed it might be said that this region shows unmistakable evidences of an out cross with the Southern Tier. Still, it has some specialized and interesting agriculture. It is one of the few localities in the state where sheep have always maintained a rather important place and around the southern end of the lake, especially Vine Valley and Naples grapes are very largely planted. Grapes by the way is one of the few crops that has paid good money right through the depression and this year beans make a bright spot in the general gloom of the potato-cabbage country.

Canandaigua is one of the important Finger Lakes. It is only 16 miles long—pretty small as compared with Cayuga or Seneca but neither of them can excel it for beauty. I have viewed most of these lakes from various vantage points but I have just found a new view that perhaps fills my eye a little better than any other that I can remember. I know that the casual tourist does not see it for it is on a hilly, rutted dirt road between Naples and Bristol Springs. Here set in a frame of hills you have spread out before you the entire expanse of the lake with its bays and headlands and the little city of Canandaigua almost on the horizon.

* * *

Ontario County was the heart of the Empire of the Iroquois Confederacy. Indeed according to their myths, Bald Hill on the shores of the lake was the exact spot from which their far off forefathers sprang.

It is a matter of common consent that the allied tribes, the Six Nations or the Iroquois Confederacy possessed the most advanced Indian culture in America. By all standards they were far superior to the other tribes around them. They were wise law givers and great warriors. Their military powers was known and feared for a thousand miles and through out this beautiful Western New York country they had extensive corn fields and orchards and permanent villages. The end of their long career came suddenly and tragically. Largely through their friendship for Sir William Johnson they espoused the cause of the British rather than the Colonies and this led to their terrible punishment meted out by Sullivan's Expedition. These raiders cut down their orchards, ruined their corn fields, burned their villages and slew many of their bravest warriors. It was a blow from which they never recovered and some historian has said that within twelve years following the Revolution this brave, dignified and one time powerful people had ceased to be a factor in our state.

* * *

On the lawn in front of the beautiful Court House at Canandaigua is an enormous granite boulder with a bronze tablet commemorating one of the last acts in this tragedy. Here on Nov. 11, 1792 was held the last general council of the United

States and the Iroquois Confederacy and the resultant treaty was signed by Timothy Pickering on behalf of our Government and by "Sachems and warriors—Farmer's Brother, Corn Planter, Red Jacket, Little Beard, Fish Carrier, Little Billy, Heap of Dogs, Handsome Lake, Half Town and fifty others." It was once again the worldwide, age-old story that never in war or peace can the savage compete with civilized men.

It is hard to realize the rapidity with which this country was settled immediately following the Revolution. The men who made up the army for Sullivan's Expedition was composed of men from eastern New York and from New England and they never forgot the fertility and beauty of the Genesee Country through which they had marched. To men accustomed only to the thin, stony New England fields, it must have seemed an almost fabulous land—an El Dorado of grain if not of gold. With the coming of peace and the consequent opening up of these lands, the men of the old East literally swarmed in and took possession of them.

In 1788 a certain Col. Maxwell, a soldier of the Revolution was employed as a surveyor of the unknown and uncharted lands of Ontario County and he wrote home to his Massachusetts wife—"I have no doubt that within the course of a very few years there will be many worshipping assemblies of Christians where now the wild beasts howl and that the time is not far distant when this wilderness shall blossom as the rose"—an enthusiastic prophecy that was fulfilled perhaps even more rapidly than he anticipated.

* * *

There is a fine and to me almost dramatic tradition concerning the settlement of Farmington close to the Wayne County line. This old community, largely Quaker by the way—was colonized by two Comstock brothers in 1789. They came in the autumn, built their cabins and so lived through until spring. Then with the coming of grass, one of the brothers made the long journey back to Massachusetts charged with a most vital mission and responsibility. He was to bring back a cow. He drove her a great trek of some three hundred miles or more, but at Geneva some 25 miles from his destination, I imagine to his veritable consternation, he suddenly found his herd doubled in numbers but nothing daunted he flung the newly arrived youngster across his shoulders and marched the remaining distance and thus came triumphantly to his home. Doubtless he was able to state in conventional phrase that "both mother and child are doing well."

If I were a great artist and could paint a picture which should worthily exemplify and typify the Spirit of America it would not be of some great military hero with plums and spur and belted sword mounted upon a prancing horse and surrounded with all the panoply of war, nor would it be some statesman in legislative halls making an impassioned appeal to his countrymen but it would be Nathan Comstock marching down a woodland trail somewhere west of Geneva with a young calf over his shoulder laid and the bovine mother pressing at his heels.

* * *

I think that I have before intimated that I am fond of wandering in old country burying grounds. Often when a Farmer's Institute is held in a church I have taken the opportunity to go outside and there among the monuments spell out the histories written there on marble or slate or sandstone. As compared with New England or the Hudson Valley these western New York cemeteries seem very recent. Still, death was with the pioneer from the beginning and he laid away his dead and set above them brief records in which some time you may read romances and again tragedies. I remember that close beside the highway from Gilberts-

New Postal Rates Go Into Effect: How They Concern You

ON April 15th the new postal rates went into effect. The last Congress authorized the revised rates in order to provide revenue for the increase of wages of postal employees on the average of \$300 per man. It is estimated that the increase in wages will reach \$68,000,000. These higher rates are considered only temporary. A Congressional committee is going to go more deeply into the subject of postal rates during the coming year in order to submit to our next Congress a bill that will embody it in a permanent rate and practice.

The new schedule of rates involves practically every class of mail matter with the exception of first class letters which remain as before at 2 cents. Government postal cards also remain the same at one cent. Private mailing cards, including souvenir picture cards will take 2 cents instead of one cent. Second class rates on newspapers, magazines and periodicals have been increased slightly.

New Parcel Post Rates

Third class printed matter, which includes circulars in open envelopes has been raised from one to one and a half for each 2 ounces or an increase of 50%. Furthermore the weight limit has been reduced from 4 pounds to 8 ounces, thereby throwing large mail order catalogs into the fourth class or parcel post service. Fourth class or parcel post rates have had a flat increase of 2 cents added for each package. This flat increase of 2 cents is called a service charge which is omitted from parcels collected on rural delivery routes including shipments of butter, eggs and other farm produce. For parcels that demand speedy service on trains and transfer stations a special handling charge is distinct from special delivery. Special delivery means messenger service delivery in cities and is added to the special handling charge when a shipper wants this service. In other words if you send eggs through parcel post and you want them to get to your customer in a hurry, it will cost in addition to the regular postage, 25 cents in "special handling charge", plus 10 cents for special delivery. The special handling charge hustles up the delivery as far as the customer's post office and the special delivery hastens service between the final post office and your consumer's door.

Special Service Rates Increased

In addition to the foregoing increase there are increases in the so-called special service classes including money orders, registered and special delivery mail. The special delivery charges on letters and parcels weighing 2 ounces or under, the old charge of 10 cents remains unchanged. Where parcels weigh from 2 to 10 pounds the fee is increased to 15 cents and parcels weighing 10 pounds will require a 20 cent stamp.

Registered mail fees have been increased from 10 to 15 cents for \$50 valuation while the 20-cent charge for \$100 valuation remains the same. Where a return receipt for registered mail is requested, an addition fee of 3 cents is charged. Fees on money orders have also been increased by a sliding scale, averaging around 2 cents on orders up to \$20. Insurance rates and return receipts for insurance have also been increased in proportion.

C. O. D. fees are raised to 12 cents on collections up to \$10 and to 15 cents on \$50 collections instead of 10 cents as at present.

As far as AMERICAN AGRICULTURIST and its service to its readers are concerned, there is little or no increase to speak of. In fact the only matter that is involved at all is our pattern service. Due to the increased rates, AMERICAN AGRICULTURIST is forced to charge 13 cents for its pat-

Here it is

AS THE world's largest manufacturers of farm electric plants we have been working for months on the development of a lighting plant that could be sold at a radically lower price—a price so low that it would bring electricity within the reach of every farm home in America.

We knew that a million farm homes were ready for electricity—that a million farmers realized the money-saving, time-saving value of electricity—that a million farm women had learned that electricity would lighten the burdens of farm life and bring new happiness and new opportunities to their families.

A Price That Is Revolutionary

We realized that a small reduction in price was not enough. It must be revolutionary—drastic. And we wanted to be able to offer this plant on very easy terms—so that every farm home, whether owned or rented, could have the benefits that are so much appreciated on the 200,000 farms where Delco-Light is now in use.

And Now It's Ready

Today the new Delco-Light is ready. It is more than we had hoped. Quantity production—modern engineering—millions of dollars worth of machinery—re-

search and invention—have produced the Delco-Light that can make all farms electrically lighted farms.

A 600 Watt Non-Storage-Battery Plant

The new plant is a genuine Delco-Light in every respect—full 600-watt capacity, strong, sturdily built, economical in operation. It is equipped with a standard Delco starter and an economical starting battery. And its price is only \$195 f.o.b. Dayton—the lowest price and the greatest value ever offered in a Delco-Light electric plant.

Complete Installation at a Remarkably Small Cost

In addition to this, special arrangements have been made whereby the Delco-Light Dealer in your community will install your plant and wire your house for five lights, to be located wherever you specify. You will receive with the plant five beautiful spun-brass lighting fixtures complete with bulbs.

And all of this—installation, wiring, fixtures, everything ready to turn on the

An Opportunity for Salesmen

In a number of territories we have openings for Delco-Light products dealers and salesmen, who want a permanent and profitable business of their own. Previous experience is unnecessary as we conduct our own training schools. If interested, send for full information.

terns instead of 12 cents which we formerly charged.

Several new stamps have been designed to coincide with the dictates of the new postal bill. There is a new 1½ cent stamp which bears the name Harding. There is a ½ cent stamp that bears the name Nathan Hale. The 1½ cent embossed stamped envelope carries a brown oval stamp bearing the bust of Washington. These are the first new stamps for general current use, except those issues for memorial purposes, since the 3 cent stamp of war time.

A Fireside Reflection

(Continued From Opposite Page)

ville to Morris in Otsego county is a white marble slab with a long and very laudatory inscription to the memory of Hannah Cooper a sister of the novelist J.

Fennimore Cooper who was killed at this place by a fall from her horse. In similar mood is a marked set by the road side in the hill-country of Western Massachusetts where I once read the brief story of a man there killed in 1811 by "the over turning of a cart load of hay." But behind the Church at Bristol Center there is a stone which while less explicit than those of which I have just spoken has in it more than a hint of some pioneer tragedy. It is a slab to the memory of young Clement Wilder who departed this life, Feb. 15, 1809.

"Like a flower in the morning of May
I was active and healthy at noon
Death suddenly called me away
At night I lay dressed for the tomb."
"STOP READER AND LEARN TO DIE"

In a strange way this epitaph breathes the very spirit, of Puritanism, for them

lights—will cost you only \$53 in addition to the price of the plant itself.

A Small Down Payment—Balance on Easy Terms

Finally, we have arranged that this new low cost for Delco-Light, completely installed, can be paid on terms so easy that anyone can take advantage of them. The total cost is only \$248, including freight (a little more west of the Mississippi). But you make only a small down payment. The balance is payable on easy terms, arranged to suit your convenience.

Write for Details

Never before has such an offer been made. Never before has Delco-Light cost so little and been so easy to buy. It means that any farm home—your home—can have Delco-Light today.

We want to send you the full details of this remarkable offer. Write immediately for full information—specifications of the plant, illustrations of the fixtures that come with it, details of our complete installation and wiring plan and the figures that show how easily you can now get Delco-Light.

Sign and mail the coupon. There is no obligation.

DELCO-LIGHT COMPANY
Dept. J21 Dayton, Ohio.

Please send me full information about the new Delco-Light Plant at \$195 and your special offer on complete installation. This inquiry does not obligate me in any way.

Name.....
Address.....

Death and the Judgment seemed a very real thing and men counted it not unmanly to proclaim their hopes and fears to the world.

Perhaps Puritanism had in it a taint of gloom. Perhaps it is true that they could hardly hear the happy laughter of a little child without asking if something ought not to be done about it. But nevertheless, if they spoke of life as a dark and gloomy vale of tears, they held, I think more vividly than we a belief in the final triumph of righteousness and serene and eternal sunshine on the other side. I opine that the sermons of Jonathan Edwards are cheerful reading as compared with the cynical, pessimistic outgivings of some of our latter day saints—say for example Mr. Sinclair Lewis in "Babbitt."

All of which is respectfully submitted as having no very direct relationship to the agriculture of Ontario County.

From 4,000 matured hens. Bred for utility and size. MARVEL POULTRY FARM, Georgetown, Del.

DAY OLD TURKEY HATCHING EGGS from our Mammoth Bronze Breeding Flocks that have been certified \$6 for 13; \$45 for 100. Literature on request. A turkey book that is complete in every subject on turkey raising of natural and artificial methods. \$1 postpaid.

JAMES J. CUMMINGS

Plymouth,

New Hampshire

The Chick's Early Care Is Important

THE attention given to the newly-hatched chicks during the first two or three weeks of brooding is of prime importance. Strong, sturdy chicks, well-grown, should make a good profit, if properly handled when they become layers.

It is our experience that during the first two or three days, the young chicks should be kept close to the hover by means of six-inch boards set on edge to form a fence around the hover about a foot from its edge; gradually this area can be enlarged so that the chicks have the run of the entire brooder house by the time they are five days old.

The next step is to get the chicks outdoors into a temporary yard. This should at first be three or four feet in diameter, capable of being gradually enlarged. The chicks may be given a little more run each day. By the time they are ten days old, in ordinary weather they can be given free range. The runway from the brooder-house floor to the ground should be constructed so that there are no corners in which the chicks can huddle. We find a pile of sods or coal ashes makes the best sort of runway.

Feed Plenty of Milk

The first food the young chicks receive should be sour skim milk. This should be placed in fountains or shallow pans where all the chicks will be sure to find it. It is best to give them no water during the first two or three weeks so that they will drink a larger amount of milk.

Solid foods should not be given until the chicks are 48 to 60 hours old. To feed earlier, means certain trouble with resulting poorer chickens and heavy mortality.—L. HAYDEN, New York.

How We Hatch Turkey Eggs

THERE are certain factors in the incubation of turkey eggs which are very important, and which mean a great deal in determining the number of fully matured poult and cockerels raised in the following year. In a large measure the criterion of success in turkey raising is the number of fully matured turkeys raised in proportion to the total number of eggs set. Therefore the eggs as laid must be given the very best attention. High fertility is desirable, and incubation should be carried out in such a way that as many of the eggs as possible will hatch. Naturally, the vigor of the breeding stock and the manner in which it has been managed will determine in large degree the quality of the hatching eggs.

Turkey eggs should be collected regularly every day, in the opinion of prominent turkey raisers, and kept in a room at a temperature of from 50 to 60 degrees. They should be turned every day, but handled carefully and not kept for over two weeks.

Hens Like Secluded Nests

Turkey hens will cover from 15 to 20 eggs. Nests are most conveniently arranged on the ground or in boxes or barrels and should be covered so that the turkey hen will not be disturbed. At the same time she should be taken off daily and allowed to exercise and she should be given plenty of water to drink, and clean wholesome feed, such as a mixture of wheat and oats.

When the turkey hen becomes broody she should be allowed to sit on the nest for two or three days before being entrusted with the eggs. When she has remained on the nest for two or three days she should then be given her eggs.

Shifts in the Dairy Trade Winds

(Continued From Page 441)

share of that country's surplus, leaving the British markets more nearly free for the product of the Southern Hemisphere.

Since last spring, foreign markets have been higher than ours most of the time. In January, 1924, New York prices were 13 cents higher than London. During most of the past winter, New York has been 5 to 10 cents lower than London. The difference is narrower right now, but there is no reason to expect severe competition from foreign butter when our prices drop below 40 cents. With an eight-cent tariff to pay, it is obvious that such a price means a very poor return for foreign producers.

Dairymen in foreign countries as well as the United States have had to reckon with high feed costs, so that production abroad may decrease the same as in this country. Furthermore, consumption in many European countries is not yet back to normal and increased output abroad with lower prices will probably be accompanied in part at least by a rise in foreign demand. European demand probably cannot be expected to increase as fast as it did in 1924, however, when the return of Germany as a large customer was the chief strengthening factor. Production in western Europe is back to what it was before the war and Russia is again becoming an important source of supply for foreign markets.

While the outlook is a hopeful one, it will be necessary to raise the efficiency of production if attractive profits are to be maintained. The most important step in this direction is the elimination of the low producing cows.

In the recent investigation to determine whether the butter tariff should be increased above the present 8-cent figure, the United States Tariff Commission found that it cost less to produce butter in Denmark than in the United States. But, they found that the average yields in Denmark were much above ours. For the two years from 1921 to 1923, the average annual production per cow on the farms studied in Denmark was 6,600 pounds of milk and 269 pounds of butter. On the farms studied in the United States, the average yield was 4,708 pounds of milk and 179 pounds of butter. These farms were distributed over 24 different districts in seven middle western states, extending from Ohio to Nebraska.

Poor cows are worse than poor markets when it comes to keeping the farmer poor.

Charge Made That Bootleg Milk is Being Sold in New York City

THE New York City papers are carrying sensational stories about bootleg milk and cream, which, it is claimed, are being sold in the city. Bootleg milk and cream are defined as milk and cream which have been admitted to sale in New York City without having passed the rules of the city Board of Health. There are eight charges made which, according to the *New York Tribune*, are as follows:

1. That since early in 1923 milk inspection has been growing lax, until at present certain dealers, known to the milk trade as "milk bootleggers," are selling adulterated and impure and illegal milk products all over the city.
2. That, in particular, adulterated, and impure and illegal cream is sold, by these "bootleg" dealers to milk retailers in all parts of the city.
3. That the sale of this adulterated and impure and illegal cream, labeled for adults, children and infants, has been growing for two years, and is continuing to grow, by the underselling of honest milk and cream dealers.
4. That this adulterated and illegal cream is brought into the city from Wisconsin, Minnesota and other distant points, including Canada, in direct violation of the health regulations, and without inspection by the Health Department.
5. That this adulterated and impure

 MORE MILK**

GOOD HEALTH, good appetite and good digestion are the essentials of a good milker.

Every cow in your herd can be put in milking trim with a course of

Dr. Hess Stock Tonic
 A Cow Tonic and Regulator

Your cow is a machine. To convert your grain, hay, silage and fodder into pails of milk is her function. The more she eats each day, if she is able to digest it, the more milk you get.

Dr. Hess Stock Tonic contains the dairyman's favorite remedy, Nux Vomica—the greatest of all nerve tonics—cow remedy, appetizer and digester. It contains Quassia, a stomach tonic; whets the appetite, promotes digestion. It contains Diuretics, to keep the kidneys active. It contains Laxatives, to keep the bowels regular, so that there is no clogging of the system during heavy feeding.

Just regular milk giving where Dr. Hess Stock Tonic is included in the ration.

Excellent for cows at calving time. No retained afterbirth. Feed it before freshing. Good alike for all cattle.

Buy it by the pail

Costs Little to Use

The price of one gallon of milk tonics a cow for two weeks, 25-lb. pail, \$2.25; 100-lb. drum, \$8.00 (Except in the far West, South and Canada)

Honest Goods—Honest Price. Why Pay More?

REMEMBER—When you buy any Dr. Hess product, our responsibility does not end until you are satisfied that your investment is a profitable one. Otherwise, return the empty container to your dealer and get your money back.

DR. HESS & CLARK, Inc., Ashland, Ohio

Dr. Hess Dip and Disinfectant
 Keeps the Dairy and Stables Healthful and Clean Smelling

What does it Cost to feed 1 cow 1 year?

It costs just what you pay for 1 1/2 tons of feed, because that's all the average cow eats in a year. Realizing this, can you afford to feed any but the best dairy ration to your cows, especially when you know that good feed will return in profits many times its slight additional cost as compared with inferior feed? Quality and uniformity make Larro both highly productive and truly economical. Manufactured from a tested, proven formula that never changes, every sack of Larro is the same—no matter when or where you buy it.

Reviewing the Markets

MILK PRICES

THE Dairymen's League Cooperative Association announces the following prices that dealers will pay the League during the last half of March for milk testing 3% in the basic zone of 201 to 210 miles of New York City. It is understood of course that the prices mentioned below are not received by the farmer but go into the pool. They are prices dealers pay the League.

Class 1 Fluid Milk	\$2.80
Class 2A Fluid Cream	1.90
Class 2B Ice Cream	2.05
Class 2C Soft Cheese	2.00
Class 3A Evaporated whole milk	
Cond. whole milk	1.90
Class 3B Whole milk powder	1.85
Class 3C Hard cheese other than	
American	1.65

Class 4 prices will be based on butter and American cheese quotations on the New York market.

Sheffield Producers

The Sheffield Farms Producers announces the following prices for 3% milk in the 201 to 210-mile zone:

Class 1	\$2.80
Class 2	2.00
Class 3	1.65

Class 4 prices determined by butter and cheese quotations on the New York market.

Non Pool Cooperative

The Non-Pooling Dairymen's Cooperative announces the following prices for 3% milk in the 201 to 210-mile zone:

Class 1	\$2.70
Class 2	2.00
Class 3A	1.80
Class 3B	1.75

Interstate Producers

The Interstate Milk Producers Association (Philadelphia Price Plan), announce the receiving station prices or the price to the farmer in the 201 to 210-mile zone from Philadelphia for 3% milk is \$2.19. In the 101 to 110 mile-zone, the price is \$2.29.

BUTTER HOLDING ITS OWN

There has been little change in the butter market as far as prices are concerned since our report last week. On April 11 there was a slight weakening when prices receded a cent but by Monday they were up again. The recovery and advance has been held without difficulty. The consumptive demand is excellent and this is a very strong factor in keeping the market up to its present tone.

The fanciest marks of creamery butter are selling for 45 cents while 92 score butter is a cent lower. Lower grades have continued the improvement they showed last week and the inside price of the butter market is now 36 cents.

CHEESE STEADY TO FIRM

The cheese market is just about maintaining a steady to firm tone on high grades of cured cheese. The market is not quite as sure of itself on fresh stocks. We are coming into the season now where the make will increase through the natural spring flush. A good many factories opened up on the first of April in New York State and this will undoubtedly create some reaction in the market, not immediately perhaps but through this flush season. Prices on held goods are about the same, 26½ cents representing the top of the market for fancy and special marks with average run goods selling a cent lower. The fanciest fresh State flats are bringing 24 cents at the outside while some are turning at 23 cents. This is a shade lower than they have been selling. Average run fresh goods are generally trading at 22½ cents. If receipts from Wisconsin are any indication the make is running short of this time last year. Storage holdings in New York City storage houses are under the 1924 figures to the extent of something like 100,000 pounds.

EGGS GETTING WEAKER

Heavy receipts and the falling off in consumptive demand is not doing the egg market any good. 38 cents now represents the outside figure on the fanciest marks. There are so few eggs of this class arriving that it does not represent the true level of the market. The average run of nearbys will bring anywhere from 33 to 36 cents. One of the reasons

why the distributing trade is quiet at the moment is because of the Jewish holidays, and a falling off in demand following the Lenten period. On top of this weaker demand, we have heavier receipts with the result that the market has taken on an irregular tone and values are not well defined.

Nearby whites are worth anywhere from 32 to 38 cents. Nearby gathered whites range from 30 to 34 cents, nearby brown eggs that grade from fancy to extra fancy are bringing 33½ to 35 cents.

LIVE POULTRY EASIER

The live poultry market has turned easier as far as prices are concerned following the Easter and Jewish holidays. Fancy colored fowls were selling as high as 38 cents. At the moment there is not enough business to justify quotations. After the market finds itself we will undoubtedly see fancy fowls selling around 30 to 32 cents. Those shippers who took our advice to get stuff on to the market by the 13th met a good market. We said that the 14th would be a short day and it was. The stock that arrived late on the 14th met weakening prices. On the 13th fancy nearby colored broilers sold as high as 65 cents. A limited number of sales were made at 70 cents for particularly fine stock. It is expected that the whole market will ease off to a marked degree, but some receivers are of the opinion that we will see good prices continuing. There is no question but what quality stock will sell well.

POTATO MARKET EASIER

The dull tone continues to prevail in the potato market. As a matter of fact the dullness does not stop with the tone but has become evident in prices where potatoes are not showing much class. This indicates and facts bear it out, that the market is gradually turning somewhat easier. Clean bright well graded States still bring the same as has been paid during the past few weeks, but where there are some "off" characteristics, prices are beginning to turn to a lower level. This weakness is not only true with States and Maines but the easier feeling has invaded the market on Southern potatoes.

States in 150 pound sacks are selling in the neighborhood of \$1.50 to \$1.75 for fairly good stuff in carlots. Where sacks do not show much class we will begin to hear of prices below \$1.50. Maines in 150 pound sacks are worth anywhere from \$1.75 to \$2.10. Jobbing sales are running a little higher. A few Long Islands are still rolling but they are becoming less of a factor in the market every day.

MAY WHEAT HIGHER

The future market on wheat is better than it was a week ago. May wheat on April 15 closed at \$1.55 which is 8 cents better than it was a week previous. Dry weather in the Ohio Valley has had some effect on the market as well as complaining reports about weather condition in the big wheat sections. May corn closed at \$1.09½ on the 14th. Corn has been moving in sympathy with wheat right along.

Buffalo Cash Prices

Since Buffalo is an important milling center for wheat feeds and linseed meals we are quoting feed prices F. O. B. Buffalo, prices as of April 11th compiled by the New York State Department of Farms and Markets: Ground oats \$36; spring wheat bran \$25; hard wheat bran \$31; standard middlings \$26; soft wheat middlings \$36; flour middlings \$33, red dog flour \$41; white hominy \$40; yellow hominy \$40; corn meal \$46; gluten feed \$36.25; gluten meal \$48.50; 36 per cent. cotton seed meal \$40.50; 41 per cent. cotton seed meal \$42.50; 43 per cent. cotton seed meal \$44.50; 34 per cent. old process oil meal \$38.

Cleaner floors
with Less work

Armstrong's
Linoleum Rugs

*Wear longer-genuine
cork linoleum clear
through to the
burlap back*

The cost is so little

Your Kitchen

About the easiest way to protect your kitchen floor from the stampede of heedless barnyard stained boots is to cover it with an Armstrong's Linoleum Rug. No more beating, shaking, or old-fashioned, back-breaking scrubbing brush methods.

"2 minutes mopping and—CLEAN!"

Your Living-Room

There's precious little beauty and no satisfaction left in a floor covering that still looks soil-stained and grimy right after you clean it. The beauty of an Armstrong's Linoleum Rug lies in the fact that it always looks neat and clean.

"2 minutes mopping and—CLEAN!"

"And even now, old floor, you're not really clean. That's what's so discouraging

—you ought to look far brighter after all the scrubbing I've given you. I'm THROUGH—I simply MUST have a floor covering that's easier-to-clean."

Armstrong's Linoleum Rugs *are* easier-to-clean. "2 minutes mopping and—CLEAN!" And they *stay* clean longer because an Armstrong Rug is always solid, genuine cork linoleum clear through to the burlap back.

You just *can't* dislodge ground-in soil from a floor surface that splinters and chips off into pits and jagged hollows, without going back—hands and knees—to the old-fashioned, back-breaking scrubbing brush. So let's forget that once and for all, and get an ARMSTRONG RUG.

Armstrong's Linoleum Rugs

This flame heats the kettle ~ not the kitchen

See how the focused flame of the Florence sends the heat straight where you want it!

COOKING heat thrown out into the kitchen means a three-times-a-day drain on your time and temper. Cooking heat that goes straight to the bottom of the kettle will give you the best cooking results in the least amount of time.

That's the working principle of the Florence—the oil range with *focused heat*. Specially designed burners send the heat directly into the cooking, where you want it.

Naturally, this more efficient stove helps you cook better meals. The certainty and the simplicity of the Florence cut out all the guess-work. You can have the right heat—where you want it—at the turn of a lever. To start the Florence you have only to turn a lever, touch a match to the asbestos kindler, and the range is ready to cook your dinner.

Florence kitchens are cool in summer

No use to hope for a cool kitchen if your cooking stove throws much of the heat out into the room. The Florence uses the heat for cooking and leaves the kitchen cool—a pleasant place to work on a hot summer day.

Your first glimpse of the Florence will tell a story of service and beauty. The sturdy frame is built for years of hard use; the shining enamel means just as many years of good looks. Here's an oil range that you, as a good housekeeper, would be proud to have in your kitchen.

Go see for yourself

Ask one of your neighbors who use the Florence to show you how convenient it is. How it lights at a turn of the lever and a touch of a match to the clean asbestos kindler. No wicks to trim. Let her tell you how reasonable the Florence is in its demands for kerosene—one of the cheapest fuels known, and one that is always easy to obtain.

Or—go to the nearest department, furniture, or hardware store and look the Florence over.

This cut-away view shows how the blue flame of the Florence goes straight to the cooking. The heat is *focused* just where you want it for quick cooking.

The Florence Leveler

is one of the Florence's many refinements—a device on each leg, which overcomes any unevenness in the floor. Just turn the screw to the exact height indicated by the spirit level on the feed pipe.

Florence Stove Company

Makers of Florence Oil Ranges, Florence
Ovens, Florence Water Heaters, and Florence
Oil Heaters.
Made and sold in Canada by McClary's,
London, Canada

Just look at the oven. There's no other oven like it. The "baker's arch" prevents heat pockets. The patented heat spreader insures even baking. The asbestos lining holds the heat and saves time and fuel. A heat indicator on the oven door shows the amount of heat in the oven.

FLORENCE Oil Range

"Get Rid of the 'Cook Look'" is the name of a booklet that contains information about the Florence Oil Range, that is both valuable and interesting. If you will give us your name and address we will send it to you free of charge.

Stop Mistakes in Painting How to Know the Real Paint Store

KNOW it by *visible evidence* in the form of the Farm Painting Guide.

When you see a paint store that displays the Farm Painting Guide rest easy on the following points:

That store has the right type of paint, varnish, stain and enamel for every surface. That store will give you accurate counsel. That store will give you the same skilled service no matter who waits upon you — clerk or proprietor. That store will recommend good painters if needed.

The explanation is: That store, in securing for its customers the Painting Guide Service, has brought you the authoritative recommendations of Sherwin-Williams who specialize on surface finishing problems of every kind.

From the Farm Painting Guide select the correct type of material, just as you select the correct color from the color card. No uncertainty. *Save this copy of the "Guide" to use when needed.*

"PAINT HEADQUARTERS"

It is the store with the Farm Painting Guide

Look for the Hood White Arrow

WHY? Because it marks the new Hood Flat Tread Balloons. The flat tread is important to you because it shows less destructive side wall flexing—insures longer balloon tire life.

Hood developed this flat tread principle in balloons. A Hood Balloon at proper inflation puts more rubber on the ground—gives better traction—more speed with less motor

overload than the average balloon, and the Hood self-cleaning, non-skid tread assures maximum car safety.

Let the Hood dealer tell you how Hood is maintaining quality for your protection.

Let the tire prove these statements to you.

Get the facts—they're behind the Hood White Arrow.

The Hood White Arrow is a time tested guarantee of design, materials, and workmanship. Look for this identifying mark—for safety, economy and dependability.

New York Farm News

Western County Notes by M. C. Burritt

UP here in the western end of the Empire State along Lake Ontario's shores we are having a regular spring; cold cloudy days and warm sunshiny days, rainy days and clear dry days, with their alternate promise of an early and a late spring. But it is interesting because it keeps us all guessing. On the whole, the weather has been favorable and a spring somewhat earlier than the average seems certain now.

We got the plows started last week. We have one orchard all plowed, and the rubbish and leaves—and we hope this source of infection with them—all covered in good shape. We also have a good start on the oat and pea ground. A thirty mile drive back from Lake Ontario on the 12th showed plowing to be quite general. Certainly sixty per cent. of the farmers have made a good start on the ground intended for spring grain planting. Some have finished plowing for spring grains but I only saw one field which had been fitted. As far as I have been able to learn no sowing had been done on April 12th. A few farmers were plowing sod ground.

Getting Spray Rigs Ready

Fruit buds are making some progress on the warmer days. Men are tuning up their spray rigs for the battle with the scabs and bugs which is soon to begin. This consists chiefly of minor repairs for most growers are apparently trying to make the old rigs do another year. As far as my observation goes comparatively few new outfits have been purchased this year. After getting along with overhauling an old outfit for nearly fifteen years we have been compelled to improvise another. This we did by the purchase of a second hand wagon tank and a Ford engine and frame which we have had a local garage man hitch up to a standard pump. A short test indicates that the outfit is satisfactory. I shall have more to say about it as the experience of the season brings out the faults and good features of the combination.

A Good Home Garden Pays

The making of the family garden is also the order of the day on well conducted farms. This important asset of life on a farm is too often neglected and seldom made the most of. I shall never forget the impressions of farm gardens, par excellence, which I have received from trips through the Pennsylvania Dutch farmers' territory southwest of Harrisburg. To my mind they represent an ideal use of this farm asset. The thrifty growth of a variety of products, in neat rows, the scrupulous cleanliness, the enclosure in whitewashed fences, make these Dutch gardens stand out as the important part of the farmstead which it ought to be.

Bring Much Satisfaction

From a cold blooded farm management point of view it is sometimes argued that it is better to put the work on profitable field crops and buy the garden "sass", and from a dollars and cents standpoint there is sometimes justification for this view. Just now, however, when most farm crops are low in price and retail prices are high, this argument does not hold. In fact, the farm management men are now urging more and better home gardens. At all times the true garden lover rebels at this mercenary point of view for he wants his garden for its fresh, crisp, tasty, products and the satisfaction it brings him.

Son Has a Junior Project

This is Easter vacation week for the children in school. Son and I must build a small chicken house for his junior project. Sixty Rhode Island Red eggs are in the incubator, and will be transferred to mother hens about the

end of the week. When they hatch we must have a home ready for them. We shall build a house about 6x8 mostly from old lumber about the farm. Son buys the eggs and hires them hatched, pays for what lumber is purchased, and expects to pay this back by selling mother fat cockerels—our leghorns are poor eating—and eggs next winter. He will have his poultry experience and education earlier than his father did, thanks to the wise provision for junior project work by country, state and nation.—M. C. Burritt.

News from the North Country

THE sugaring season that came to an end in this section recently, proved to be one of the poorest in several years. On the average not more than half a crop was secured, though of extra good quality. The season opened early in the month of March, but owing to the windy, cold and much of the time cloudy weather that prevailed, it was very unfavorable for the free running of sap, though it did run at intervals until well into April.

The price received on the local market has been from \$1.75 to \$2.00 per gallon, with sugar at 25c per lb. though many of the large producers contract their entire output of syrup with some of the large tobacco companies. With the mild, moderate weather that prevailed throughout the last half of March, farmers were able to start their plowing, which is something quite out of the ordinary in this northern latitude.

Cows in most instances came through the winter in pretty good condition and are keeping up a fairly good flow of milk, which with the price received at present, makes the outlook quite encouraging at present for the Lewis County farmers.

Milk cows seem to be in good demand at prices ranging from \$60 to \$100 per head, the latter figure being received for prime young cows, that have recently freshened and are in good condition.—Charles L. Stiles.

Central New York Grangers Meet at Syracuse

ABOUT 200 Grangers from Central New York attended Grange Day at the College of Agriculture at Syracuse University on April 3rd. The program included addresses by Lieutenant Governor Lowman, Congressman John C. Ketcham of Michigan, State Master S. L. Strivings of the New York State Grange and Dean F. F. Moon of the College of Forestry of Syracuse. Other speakers were Raymond Cooper, lecturer of the New York State Grange and Professor R. M. Adams of the New York State College of Agriculture at Ithaca.

Congressman Ketcham was introduced by Dean Nye of the Syracuse College of Agriculture. He said that if this country is to experience general prosperity, farm produce must bring more satisfactory prices.

Lieutenant Governor Lowman of New York struck a very vital cord when he said, "We need a revision of the entire state tax system. A scientific levy on incomes is fairer for the farmers than a tax on property."

State Master S. L. Strivings reviewed the history of the New York State Grange. He said that the purpose of the Grange is broader than price determination, and has to do with the society and spiritual as well as the economic life of rural people. Professor Adams lent a humorous touch to the program. He gave many rhymes which he has written to teach his lesson in an amusing way. Dean Moon spoke of the importance of the farm wood lot. He emphasized its value as a source of revenue, and stated that it is too often neglected.

HINMAN MILKER

The Hinman User gets CLEAN Milk

because —

his Hinman Milker is so simple that it's easy to keep it thoroughly clean. Many a Hinman Milker, in steady use for over fifteen years, is producing milk just as clean today as it did the first time it was used! We will be glad to give to any dairyman, the names of others who have proved this with their Hinman Milkers.

It Pays

to own a Hinman. Because it brings all the saving of time, hard work and money and maintains your same standard of high grade milk!

Ask Us

for the facts. Write for free illustrated catalog. Get our prices. It costs nothing to find out the truth. It's worth knowing. So write to us today for catalog and information that will interest you.

How We Hatch Turkey Eggs

(Continued From Page 446)

If a number of hens are sitting at the same time, care should be taken to see that they get back to the nests properly and that no nest is left uncovered.

Both chicken and turkey hens, while sitting on turkey eggs, should be dusted with sodium floride, using a small inch under each wing, around the thigh joint, over the back, under the body and around the vent. In this way the hen is rid of lice and the poult at hatching times are not liable to be infested with the parasites.

—W. H. B., New York.

How I Feed Ducklings

THE best feed that I have found to start ducklings is composed of bread and milk. Soak the bread in the milk until it becomes quite soft, then squeeze part of the milk out until the bread crumbles well. Young ducks will thrive on this feed and very rarely will troubles due to digestive disorders be experienced when ducklings are fed in this way.

After a few weeks a feed of equal parts bran and cracked corn or cornmeal may be allowed and the ducklings can be gradually changed to this from the bread-and-milk feed.

Old mature ducks can be almost constantly upon the water and thrive well, requiring very little feed, especially if the water be of swampy nature and plenty of roots and minnows are to be had. Young ducks, however, are extremely tender and it is not best to allow them access to water, particularly when the weather is cool.

Hatch Later Than Chicks

It seems that the thrifter ducklings become the more susceptible they are to the effects of cold weather and water. For this reason it is advisable to hatch them later than chicks and when weather conditions are generally mild. At any rate they must be protected from cold, damp weather until well feathered, whatever the season. Heavy rains will drown young ducks just as quickly as young chickens.

Pasture of some sort is fine for ducklings. However, they should not be permitted to range clover or any other short pasture where bees abound, as considerable loss may result, for the ducks are sure to catch and swallow some of the bees. A quick, violent death results.

Young ducks are persistent insect hunters. Last summer we turned a bunch of ducklings into an alfalfa field a part of which was thickly infested with grasshoppers. The ducks were constantly chasing grasshoppers and it is needless to say that they grew rapidly on this diet of alfalfa and hoppers, in addition to the bran and cornmeal that they received. Incidentally grasshoppers were very scarce before the first frost came.

—VERNE MOORE, Ind.

Avoid Drafts Around Incubator

TO get a good hatch of strong chicks, commercial poultry keepers deem it essential to have the incubator in the right kind of a room, properly ventilated. A room that will hold an even temperature of 60 to 70 degrees is as important as having an incubator that will hold a temperature of 103 degrees.

If an incubator cellar is used, it should be large enough to provide for the future expansion of incubator capacity. A ceiling 8 feet in height is preferred, as it permits a layer of air to circulate over the machine and provides room for the

expansion tank and other fixtures found on most incubators.

The length and width of the cellar, of course, will depend on the size of the incubator to be used and the number of machines to be placed side by side. As a rule, an inside width of 12 feet is ample for a single machine and 23 feet if two machines are placed side by side. Windows, the 3-light cellar sash, are desirable on each side. They are placed preferably approximately 8 feet apart if the building or room is 23 feet wide and 10 feet apart if 12 feet wide.

While the incubator cellar is most commonly ventilated by opening the windows this method has serious objections. It is rapidly being replaced by the indirect method which provides plenty of fresh air at all times without drafts.

An Experience With Broilers

WHICH is the most profitable breed to raise for broilers? This question would probably receive as many answers as there are breeds of poultry. In this connection, the experience of a woman I know, a Mrs. Stetzel, may prove of interest.

On March 17, last year, 1700 chicks were taken from incubators on the Stetzel farm and placed in four brooder houses. Of this number, 450 were White Leghorns, which were placed in a brooder house by themselves. The remainder of the lot were almost equally divided between Rhode Island Reds, Barred Rocks, White Orpingtons and White Wyandottes, all of which, together with the Leghorns, were purebred stock. The chicks of the heavier breeds were mixed together in the three brooder houses.

These 1700 chicks were given exactly the same care and attention and were fed the same ration. During the first week in June, when the chicks were just a few days more than ten weeks old, Mrs. Stetzel went through the flocks and selected the largest of them to sell as broilers. She picked out 150 of the largest Leghorn cockerels, leaving the pullets, and from the heavier breed flocks she selected 390, including pullets as well as cockerels, and about the same number of each of the four breeds.

The Leghorns weighed 222 pounds and brought 32 cents per pound, or \$71.04, a fraction over 47 cents each. The broilers of mixed breeds weighed 430 pounds and at 35 cents per pound brought \$150.50, a trifle less than 40 cents each. Mrs. Stetzel naturally favors the Leghorns now.

The above is in no wise offered as conclusive proof of the superiority of one breed over another, so far as concerns their profitableness as broilers, but is simply given to show the results in one particular instance in which more than one breed was put under the same care, conditions and feed.

Do Not Forget Lime and Grit

JUST because spring weather is soon upon us, is no excuse for getting some of the essentials of the hens diet. Some folks have an idea that because the hens can get out they can get enough grit and lime without supplying them. We have found that this is a mistake. Thin shelled eggs have cost us quite a penny. We keep a box in one corner of the hen house full at all times. It is not necessary to have special boxes for lime and another one for oyster shells and another for grit and charcoal. We find it more convenient to get them already mixed up and in one batch and supply them with these essentials in the form of a succotash like mixture.—F. W., New York.

LAWRENCE P. UHL

THE OLDEST AND LARGEST INDIVIDUALLY OWNED AND OPERATED HATCHERY IN OHIO. I am a PIONEER in the Baby Chick business. For 20 odd years I have been producing high class Baby Chicks which have gone out to thousands of Poultry people of America and proven highly satisfactory. For years previous to 1910, (when he retired), I was associated

with M. Uhl, New Washington, Ohio, who was Father and originator of the Baby Chick business in Ohio, making the first shipment of Baby Chicks 25 or more years ago. Since 1919 my output has been entirely taken by dealers who supplied a long line of year after year customers. I have now decided to give the GENERAL PUBLIC an opportunity to buy my high class Chicks direct from the Hatchery here at New Washington and I am in a position to furnish these excellent Chicks in almost any quantity and on short notice at the following prices:

THE VALLEY HATCHERY, R. No. 1, Box 12, Richfield, Pa.

OHIO CHICKS & LAY

Increase your profits with big sturdy chicks from pure bred, selected, tested heavy laying, free range flocks. 24 years experience back of them. Barred & White Rocks, R. C. & S. C. Reds, White & Brown Leghorns, Anconas, White Wyandottes. Our profit sharing plan is something new—it will make more for you. Write today. Dept. N, The Ohio Hatchery, Decatur, Ohio.

HAMPTON'S Black Leghorn Chicks

Our 14th season hatching this wonder breed. Hardest, Handsomest, Greatest Layers. Most profitable of all breeds. Catalogue free. Write today. A. E. Hampton, Box A, Pittstown, N. J.

The Trouble Maker—By E. R. Eastman

CHAPTER XXX.

From where he sat resting in a quilt in a big chair on his porch, Jim Taylor let his gaze rove lazily over the landscape. He wondered at the contrast of the quiet scene with the excitement at the fire of the night before.

The mellow haze of late Indian summer lay over the peaceful countryside. The sun was warm, but not too warm, and a gentle breeze drifted around the porch corner from the north. Across the valley, Jim could see a neighbor with his boys digging potatoes. Up and down the valley, fields of state corn cut and stooked, and buckwheat in the shock contrasted with the brown fall meadows. In some of the cornfields, Jim could catch the gleam of the yellow pumpkins shining in the sun.

"Kind of pleasant," mused the boy. "Even Dave Messenger might agree that it was peaceful here this morning."

As he thought of his friend, the sheriff, Jim smiled, and then quickly frowned.

"Hurts even to smile," he said slowly. He lifted his bandaged hands. "Wonder if there will be many scars. Must ask the old 'doc' the next time he comes."

"Funny about Johnny. Doc said he wasn't hurt much. The horse only knocked the wind out of him, and being under the manger saved him from being trampled on; then dragging him down low on the floor must have kept him from being burned."

Turning his head slowly and painfully where it rested on the back of the chair, Jim looked down across the fields to where Ball's big dairy barn had stood. Nothing was there but a black ruin over which the smoke still drifted.

"How blank it looks," he thought. "Oh, well, it might have been worse. They saved the house, and the barn and its contents were well insured in the Grange."

Thinking a little, but for the most part just resting and listening to the hens clucking about the yard, or to the energetic rattling of the dishes in the kitchen, the boy lay relaxed in his chair. He was tired and exhausted from his experience of the night before and there had been much excitement from solicitous friends that morning who had either come to see him personally or called to inquire about him over the telephone.

His experience at the fire now seemed like some ghastly nightmare. Of what had happened after he had gotten out of the burning barn, he remembered little. They had told him this morning how the sheriff had taken command of things, and how men had obeyed him without questioning as they worked frantically with every available quilt and blanket to cover the roof of the house to keep it wet. Few had stopped to realize where Ball and his hired man and Taylor were until Jim had disappeared in the stable and Dorothy had run back to the group of men at the house screaming for help. When she had once made the situation clear, the tall lawyer and the little sheriff and Dorothy had led the running men back to the north end of the stable where Jim had gone in.

Jim remembered how old 'Doc' Weston's face had shone with pride when he told him that morning how those three who had led the crowd back to the barn paused only for an instant to get disjointed information from Bill Mead before they had plunged straight toward the inferno in the stable where the boy had gone after the old man. Luck had been with them, for they found the two almost on the threshold of the door and had carried the old man and Jim, both of whom were now unconscious, into the air and to safety.

Jim had heard several times that morning, too, how Dave had gone back to his work of directing the saving of the Ball house, while strong arms had gently placed Ball and him in the sheriff's car. Jim also knew from the lips of his lawyer friend how Dorothy had insisted upon riding in the back seat with an arm

around each of the unconscious men and with a soft shoulder under each of their heads to protect them from the jolts of the car.

They had told him, too, that with the coming of early morning old John Ball had insisted that he was "as right as a cricket," and that he wanted to be taken home. So he had gone, and Jim had not seen him. Neither had he been conscious of the presence of the girl. After the doctor had gone and she had found that neither her father nor Jim were seriously injured, she had returned to take care of her mother.

As soon as Ann Jenkins had heard that Jim was hurt, she had come directly to take charge of his household.

"Wants someone with common sense around," she had said.

Under her efficient direction, things moved and Jim felt grateful. Some of the callers were not allowed to see him at all, others were "shooed" away in no uncertain manner, after they had talked to the boy for a couple of minutes.

"Ain't goin' to let 'em tire you all out,"

Suddenly he was aroused by the sound of loud voices in the kitchen, and then it was quiet again.

After a few minutes, a man, walking with a little limp, came sneaking around the house, and into Jim's line of sight. It was Bill Mead.

"Good mornin'," said Bill, in a low tone of voice, taking off his slouch hat and turning it around and around awkwardly in his hands. "How you feelin'?"

"Pretty good," said Jim. "How are you?"

"Oh, I'm all right, 'cept my lungs are a little sore from the smoke and I got a sore foot where the danged galoot of a horse jumped on me."

"Awfully glad it wasn't worse," said Jim.

There followed a silence, while Bill stood twisting his hat in his hand, looking first at Jim and then nervously over his shoulder, plainly ill at ease, but with something on his mind.

After a moment, Jim looked at him and smiled and said:

"Why don't you sit down, Bill?"

"Can't," said the hired man. "Old

right. I can't shake hands with you because of these darned bandages, but I kind of got a sneaking notion that you and I are going to stick by each other from now on."

The hired man's face broke into a grin. "You bet your bottom dollar we are. I'm goin' to stick by old Johnny, too. City wages can go to the duce. I know which side my bread is buttered on. Me and Johnny are goin' to have the foundation for the new barn started within a week."

Interested in his conversation, Bill had forgotten to watch over his shoulder. Suddenly he remembered and turned to find Mrs. Jenkins glaring at him ominously from the kitchen door.

"Good-by," he said quickly. "I got to go!" and he ambled off around the corner of the house, forgetting even to limp.

"Hate to pester you all the time," said Mrs. Jenkins to Jim, "but I declare these folks just won't let you alone."

"What's the matter now?" asked Jim.

"That county agent feller, Bradley, wants to know how you're feelin'."

"That's all right. Tell Bradley I'm fine; will be all right in a day or two."

Jim closed his eyes to rest again, but somehow the mention of Bradley's name made things less peaceful. He could not keep from wondering over and over again how much of an understanding there was between Dorothy and Bradley.

"They're probably engaged," he thought. And then he remembered his resolution to limit his friends to men and to put women out of his life. So he turned resolutely to other things and fell to thinking about what he could do to help elect Winslow to the county judgeship.

The peculiar put-put-put of a flivver coming up the road interrupted his thought again. He watched it lazily for a moment and then straightened a little in his chair as he saw it was John Ball, and that the old man was coming to a stop by his gate. Slowly and painfully Ball climbed out of his car and leaning on a stick that he had picked up for a cane, came up the walk toward Jim.

"Good mornin'," he said simply. "How do you find yourself?"

"Good morning," said Jim. "I'm feeling pretty good, and expect to feel better. And you?"

"Right as a cricket. Tired and lame, and feel as if I'd had a bad sunburn, but thanks to you, I'm still on earth and feelin' good."

"Good," said Taylor. "Come up on the porch and have a seat."

Ball came up and sat down, and for a while an awkward silence fell between them.

"Too bad about the barn, Johnny," Jim said finally.

For a moment the old man did not reply.

"I can stand the loss of the barn. It was pretty well covered with insurance," he said.

Then he turned his head away to hide the telltale quivering of his beard.

"But it was pretty tough to have the horses go that way."

Suddenly he turned almost savagely toward the boy.

"Jimmy," he said, "I've been a darned obstinate old fool, but I guess I've had my lesson if it did take all summer, and the burning of my barn to give it to me. This mornin' when I got back there and found how the boys must have worked to save my house, and how as I look at you and see what you went through to save my own worthless hide, I think I'm beginnin' to see what this idea of cooperation means that you've been talkin' about all summer."

Jim looked at the old man and was struck by the way he had aged during the past months.

He held up a bandaged hand. "Hold on, Johnny," he said. "I've been doing some thinking lately, too, and I concluded that I didn't know it all, either. You're right about there being no sub-

(Continued on opposite page)

What Happened in the Story Last Week

DAVE Messenger and Lawyer Winslow have been visiting Jim, discussing the recent trial, politics and the milk situation. During the evening a terrific thunder storm came up. The storm was as short as it was severe. Immediately after one particularly severe crash, too close for comfort, the rain and wind subsided. At this point Messenger and Winslow started to go back to the barn but on their way to the barn they noticed the flare of a fire not far distant. The three immediately hastened to lend a helping hand. Only a glance told Jim that it was one of the buildings of the Ball farmstead. They got there before other help had arrived. Jim delegated Messenger and Winslow to proceed to cover the roof of the house with blankets and bedding and then wet it down to prevent the sparks from the burning barn, which the lightning had struck, from setting fire to the homestead. When Jim failed to find John Ball and Bill Mead at the house, he realized they were in the barn trying to get out the horses and he rushed to their assistance. Groping his way through the smoke he found Bill Mead almost overcome and got him out of danger. Jim then plunged back into the horse stable which had already started to burn and fighting his way through the blinding and choking smoke searched for his old neighbor. He found him unconscious in a stall of one of the horses. Due to the crazed animal's plunging and rearing he was unable to get Ball out. By almost superhuman effort he covered the animal's head with his coat and lead it out only to have the maddened beast rush back into the stable when its head was once uncovered, to its death. However, the way was now clear to rescue the old man. By this time flames were licking the walls about him. The task seemed impossible due to the heat and unbearable smoke, but foot by foot he gradually drew the old man to the threshold of the stable and safety. Other farmers who had come to help saw him and rushed to his assistance. As help arrived Jim lost consciousness.

she said when Jim had protested feebly at her brusqueness.

Now she poked her competent head out of the door of Jim's kitchen. For a moment, the boy, half asleep, did not see her, while she stood in the door watching him. So Jim did not notice the look of sympathy and tenderness which shone for a moment in the woman's face.

"Jim," she said gently, "Caroline Hicks is on the 'phone. Wants to know how you are. What shall I tell her? I declare to goodness, I'm s'prized at that woman's nerve calling you up and trying to be friendly after all she's tried to do to you!"

The boy turned his head slowly around to bring Ann's face into his vision. A smile lighted up the tired face which was reddened and inflamed by the fire.

"Tell Caroline I am coming fine," he said, "and that all I need is a black cat!"

Ann's bulky form disappeared within the door and again the peace and quiet of the morning descended upon Jim.

'S'prize Jenkins' just chased me out of the back door of the kitchen with a broomstock, and I don't want her to catch me here—Besides, ain't fit to set with you."

"What's this?" said Jim, a little irritably. "What ails you?"

Bill swallowed another gulp.

"Ain't fit to set with you," he repeated. "Felt kind of sick this mornin', couldn't hardly crawl up here, but, by gosh, when I got out of bed this mornin', says I to myself, says I, 'Bill, you danged old fool, you done wrong and now you go to fix it,' but mebber it can't be fixed."

Jim looked at the big fellow who seemed to him for all his years to be just a big overgrown boy, and as he looked, he was not thinking of their fight that fall in the cornfield, nor of Bill on the witness stand. He remembered instead the night before when exhausted and almost strangled, the hired man had turned around on the barn floor after Jim had headed him for the door and had started back after Ball.

"Bill," he said, "forget it. You're all

COMING! A NEW SERIAL

"The Valley of Voices" By George Marsh

A new serial that will soon appear in *American Agriculturist*. A mystery of the great out-doors, a story of the Frozen North—the kind of story that holds you spell bound throughout the entire narrative. Watch for further announcements.

American Agriculturist, April 25, 1925
stitute for hard work. Young folks don't ever pay enough attention to old folks experience. Save a good deal of trouble, if they did. I expect I've been pretty disagreeable this summer. I still believe that we farmers have got to organize to sell our stuff, but that doesn't mean that we haven't got to work hard and use our brains and farm it well, too." So I guess you're not to blame for all the trouble that's been between us this summer."

The old man bent over in his chair and laid a hand on Jim's knee. Tears stood in his eyes.

"I've got to get it out, Jimmy; I've got to get it out. All summer I've been callin' you a name that don't fit at all, and I want to take it back. I said you were a trouble maker, and you ain't no trouble maker."

"I haven't meant to be, Johnny," said Taylor. "And I've been very sorry all summer that I seemed to be making trouble for you. Let's just forget it, and start where we left off."

"No, I want to do more than that," said the old man. "You've got your League sellin' scheme goin' and I'll admit it seems to be workin', although only the years can tell how well it will work out. But for a long time I've been sort of figurin' on a scheme, too. Guess that's why I was so mad when you got interested in this organization idea. I thought the way to work things out was by better farmin' right here at home."

"Got to do both," said Jim.

"You know," continued Ball, "I've always kept a good bull and I bred up some pretty good grade cows, but for a long time I've wanted to do better than this. Always hesitated though to take the jump because I ain't so young as I used to be. Wife and I have managed to save a little money, and you got the youth and brains."

The old man leaned forward again and put an appealing hand on Jim's knee.

"Let's put the farms together, rebuild the barn, and put in purebreds."

For a minute Jim looked at his friend.

"Johnny," he said, "this is mighty fine of you, but I think you are making this offer not so much because you are interested as because of what happened last night. And so you will have to forgive me when I tell you I don't believe I can do it."

The old man was hurt.

(Concluded next week)

Bootleg Milk

(Continued from page 447)

and illegal cream is brought, contrary to health regulations, in moving vans and in motor trucks without the name or address of the owner, on ferryboats from Jersey City, and distributed to retailers all over the city.

6. That tags, required by health regulations, are changed on this adulterated and impure cream in Jersey City, and that "bootleg" cream is brought into the city under ordinary tags, which tags are changed in this city.

7. That this adulterated and impure and illegal cream is stored openly in some milk warehouses in this city; and that the same adulterated and impure cream also is stored in breweries and other such places, in direct violation of the health regulations.

8. That, despite the known menace of typhoid carried by milk products, this adulterated and impure and illegal cream, sold over the city for adults, children and infants, is not only brought to the city daily by carload, but is "doctored" with preservatives; "doctored" to reduce its butter fat, and "doctored" by mixing with coconut oil.

This "adulterated, impure and illegal cream," the report continues, costs the wholesale "milk bootleggers" from \$18 to \$20 for a can of forty quarts capacity delivered in New York. The price paid to producers in the West and Canada is \$14 and \$16 per can, the report says, the balance of \$4 covering freight and other charges. Honest wholesale dealers handling pure cream, in accordance with health regulations, pay a minimum of \$24 for a forty-quart

Bringing a Giant to School

Teaching tricks to a giant is child's play compared to the problems met by the men who trained electricity to the service of mankind.

It took over a hundred years from the time Franklin first brought electricity from the clouds, before the electric light and power industry could make even its first crude beginning. But now, in less than half that time this industry has leaped from nothing to the service of sixteen million consumers.

The day in 1882, when Edison opened his first generating station in New York, marks the birthday of electric light and power service. It was 1884 before electric motors could be bought. The transformer without which the range and usefulness of electric power would have been forever restricted was brought out in 1885 by William Stanley. In 1890 the first long distance power line was built in Colorado, and water power development became a practical possibility.

Since that time cheaper production and wider distribution have been the problems on which the industry has concentrated. The steam and water turbine and the mercury boiler are making cheaper production possible. High power transmission lines and interconnection are daily broadening the territory served.

The task now engaging the best thought of the industry is electric service for the farmer. This is still the greatest problem of them all.

The Committee on the Relation of Electricity to Agriculture is composed of economists and engineers representing the U. S. Departments of Agriculture, Commerce and the Interior, American

Farm Bureau Federation, National Grange, American Society of Agricultural Engineers, Farm Lighting Manufacturing Association, and the National Electric Light Association.

NATIONAL ELECTRIC LIGHT ASSOCIATION

can delivered in New York, the report declares.

The adulterated cream is brought to New York over five main line railroads, being transshipped to these railroads in New York and other Eastern states, according to the report. It is being shipped into New York from many Western and Canadian points, including St. Paul, Minneapolis, Reedsburg, Wis., and Belmont, St. Thomas and Brownsville, Ont., it is charged. The illegal cream is stored in a midtown brewery and a cold storage plant, the report declares.

The report goes on to enumerate the provisions of the Sanitary Code which govern milk distribution, and which the document charges are being grossly violated. One of these provisions stipulates that cream must be sold to the consumer not more than three days after pasteurization, whereas the report alleges that the committee is in possession of tags showing that cream which was shipped from Reedsburg, Wis., has lain in a New Jersey freight yard seven to fifteen days after pasteurization.

"In addition, the Department of Health is without power to enforce its regulations, or Sanitary Code, on milk-producing points in Wisconsin, Minnesota and other states and Canada. What the Department of Health can do is to stop such shipments coming into the city, and this is not done," the report adds.

"On the contrary, this cream is transported about the city streets in motor trucks, is stored in regular milk warehouses where health inspectors come, is stored also in breweries, is "doctored," reduced in butter fat, mixed with coconut oil, preserved with alkalies, and finally distributed to retailers and sold in all parts of Manhattan, the Bronx and Queens.

"The facts given to the people of the city in this report form only a small part of the full story of the 'bootleg cream' industry flourishing in New York," the report concludes.

Solution of Last Week's Puzzle

Aunt Janet Reflects On Housecleaning

Is The Spirit of Home Living Crushed In The Gears of Housecleaning

IF Aunt Janet could today look straight into every home where the A. A. goes, she would undoubtedly find the large majority of them in the throes of the Spring housecleaning—with all which that term implies.

A doctor said to me one May, "Truly once a year all the women go crazy. It's hard for even a doctor to get in if the good woman is cleaning house. Such a crazy uproar it does seem to a mere man!" And just so it does seem at certain stages of the process, and I wonder if it is absolutely necessary to do all the things that women usually do when getting rid of winter's dusty, grimy footprints and welcoming in beautiful Spring.

Sunshine is a Disinfectant

It is natural that we should want the blessed sun to shine into as many corners as possible and to expose all possible draperies, beds, blankets and rugs to its germ-killing rays; or that all washable curtains should get a well-deserved freshening; but just how far shall we carry all this business? Do we make a sort of fetish of the job at whose shrine we can worship periodically with the women of the neighborhood? If we were denied the privilege of saying to Mrs. Jones or Mrs. Hawkins, "I cleaned the whole attic today," or "I'm all through cleaning upstairs," or of saying at the next meeting of the grange "Such a washing this week! all the bedroom curtains!" the whole process would soon sink into the place where it belongs, a mere matter of routine, even though it occurs more seldom than the weekly cleaning.

It is quite possible to plan the house cleaning so that it does not call down—and sometimes justly so—the joking, rather caustic remarks of the masculine representatives of our race.

Planning Will Overcome Much Confusion

It has been said that the "brains-management" of any organization determines its success, and surely that applies to that most important institution of society, the home. To manage so that the greatest possible returns in comfort, convenience and happiness is truly the home-maker's constant job, and we all admit it is a very complex one.

Therefore, in this matter of the Spring cleaning, it becomes necessary to even more carefully systematize than usual. By planning ahead and having on hand a supply of cleaning materials, by having ready to hang the new draperies, by doing a part of the house at a time, shutting it off from the rest of the house so that the family has a place to live meanwhile, we may avoid many of the trials that harass already frayed nerves.

Duty Should Not Blind Us to Beauty

The unfortunate feature of the whole thing is that we women too often let the job interfere with our enjoyment of one of the loveliest seasons of the whole year. We become blinded to the fact that buds are bursting into leaf and flower, that the birds are making sweet harmony, that the grass is covering the earth with a magic carpet, and that this is a great old world after all. Life is very short, at best, and if we see it as a procession of household tasks to be done, we miss the finest aspect of living granted to human beings.

The household machinery should be merely the vehicle upon which the family rides in the pursuit of a "full and satisfying home and community life." Then the driver of that vehicle—the home-maker—must become as expert at the job of managing it as does her husband at the job of running the flivver or the tractor, so as to avoid the bumps and deep ruts which may otherwise

prove too great obstacles for smooth operation of the complex household machine.

Aunt Janet

"The Spring Fever"

THIS is a real spring day," remarked Mrs. Dunn as her neighbor, Mrs. Martin, led the way into the latter's living-room. "Makes one want to clean house, but I know from sad experience that there isn't any using doing that until we can let the furnace fires go out." She paused on the threshold, looked around, and then exclaimed, "Well, I declare! YOU HAVE been cleaning house, haven't you?"

Mrs. Smith laughed, "What makes you think so?" "Well," gazing admiringly about, "the furniture has been changed, the pictures don't look like the same, there is another rug on the floor, —and even the curtains and draperies

are different. What's the idea? Expecting company?"

"Sit down," invited Mrs. Smith, "and I will tell you how I fool my family and others, twice a year. "When I tear February from the calendar, and see March staring me in the face, I immediately begin to feel the housecleaning urge. Everything looks worn, faded and grimy.

Avoiding Bare Windows

"When I was first married, I used to pitch right in and clean,—then about the 1st of June have to do it all over again. Then I had a bright idea which I have since carried out about the 1st of March and 1st of December each year, with untold satisfaction. Gradually, as I could afford it, I bought inexpensive material, and made extra curtains and draperies for all the windows; when one set became soiled I could then immediately substitute clean ones, doing away with unsightly bare windows while hurrying to get the soiled curtains laun-

dered. Twice a year, on cleaning day I gave the house a more thorough cleaning than usual, rearranged all of the furniture, rehung the pictures, changed the living and dining room rugs, and after washing the windows, put up my nice, clean curtains and draperies.

"In the spring I remove all the winter bouquets, substituting pussy willows, gay artificial flowers from the "five and ten," or a pot of living primroses, and behold! the miracle is wrought. I defer all decorating, refinishing of floors or woodwork until danger of cold weather is past, and the furnace has breathed its last breath of soft coal smoke over my porches, then everything about the place gets scrubbed, scoured, painted or varnished."

The Idea Spreads

Mrs. Dunn arose and started for the door. "What's your hurry?" inquired Mrs. Martin anxiously. "I've absorbed your bright idea," grinned Mrs. Dunn, "and I'm going right home to put it into execution. I have a lot of old curtains, mended and laundered which I have been saving for the summer cottage; these I can put up in place of those grimy lace ones. Just you wait until you see my house with its face washed," she laughed as she closed the door.—Miss E. DuB.

New Uses for Old Blankets

THE time of year is at hand for the homekeeper's inventory. Especially do we notice with regrets if some of our prized blankets are too worn to last another year.

I have found that by encasing the blankets (double, of course), in a cheesecloth cover that they will last for years after they would be useless otherwise. All that is necessary is to sew the edges of the cheesecloth to the edges of the blankets, and to tack them like a comforter with, of course, only a few such knots.

I have known women to place the blankets between material, and make comforters out of them; but the comforters thus made are generally heavier than most of us like, and the blanket use is taken away, while with the cheesecloth covering, one still has one's blankets as such, and they really last for years.

Then, I have found such a wonderful use for blankets that are past using in any way for the beds that it really takes the sting out of knowing that they are gone. They make the very finest of rugs. They are easier prepared than most kind of rugs, for the strips are so long, and when they are made up they are almost as pretty as a Navajo blanket.

If the blankets are white they can be dyed the richest, warmest reds, yellows, and purples imaginable. The ones I made were tan, so I did not color them. I had an old red broadcloth dress that was worn out, and this I used for the border of the rugs, and they are truly beautiful.

The finest thing about a rug made of wool is that the dust easily shakes out of them, and they do not retain spots like cotton rugs do.—A. L. N.

When making the starch, and not yet ready to use it (but one wants it made and cool, ready for the crucial moment) thin the starch to the proper consistency for using and then cover tightly until ready to use. This prevents the scum or crust that covers the top of starch if it is left unused, if only for a short time, and every housewife knows how detrimental this scum is to a nice finish on the laundered goods. If one removes this scum, and throws it away it means quite a waste of good material. So, cover it and save it.—Clarice Raymond.

Easy Simplicity Marks the Season's Fashions

The styles given below may be adapted to slender or stout figures by choosing materials right in color or design. For the two dresses for adults either wool jersey, flannel or one of the heavy silks would be suitable with a tendency toward the dark, plain materials for the overweight woman, while her slender sister may wear materials lighter in color and more figured in design.

The circular flares or godets give extra walking space and make an attractive break in the lines of an otherwise severe pattern. White pongee with embroidery in black and red would be effective, or satin crepe, crepe meteor, crepe faille, or crepe de chine would be suitable. No. 2421 comes in sizes 16 years, 36, 38, 40 and 42 inches bust measure. In the 36-inch size $3\frac{3}{4}$ yards of 36-inch material are required. Price 13c. The hot iron transfer pattern No. 730 (blue and yellow) costs 15c extra.

This practical jumper dress may be made of flannel, plain or plaid kasha, or of such cotton materials as rep or gingham. No. 2416 comes in sizes 14, 16 years, 36, 38, 40 and 42 inches bust measure. In the 36-inch size, $2\frac{3}{4}$ yards of 36-inch material for the dress, with 2 yards of 36-inch contrasting material for the blouse are required. Price 13c.

This cunning little dress or play frock designed in pattern No. 2437 cuts in sizes 2, 4 and 6 years. It buttons all the way down the back, which makes it especially attractive as it will be so easy to launder. It might also be used as an apron to be slipped on over a cloth dress, for a few minutes of play. Plaid gingham, percale, dimity or cotton pongee would be suitable materials for this little frock. In the 4-year size, $1\frac{1}{2}$ yards of 36-inch material with 1 yard of 18-inch contrasting are required. Price 13c.

The exceptional popularity of jumper frocks this season is shown in design No. 2417 which cuts in sizes 6, 8, 10, 12, and 14 years. This jaunty little jumper dress, which is made of one of those popular plaid materials, is also suitable for plain and striped kasha, flannel, wool jersey or gingham. For the 8-year size, $1\frac{1}{2}$ yards of 36-inch material for the dress with $1\frac{1}{4}$ yards of 36-inch material for the blouse and $2\frac{3}{4}$ yards of binding required. The blouse pattern is included. Price 13c.

For wear in the gymnasium or to school under her light dresses, this combination bloomers and underwaist would be just the thing for the small girl. Of serge or twill it would be nice for cold days, and of gingham or cotton materials, it would be nice to wear under a dress or made to match the dress of a very young miss. The pattern No. 1439 cuts in sizes 2, 4, 6, 8, 10, 12 and 14 years. The 8-year size requires 1 $\frac{3}{8}$ yards 36-inch material for the bloomers and $\frac{1}{2}$ yard 36-inch material for underwaist. Price 13c.

TO ORDER: Write name, address, pattern numbers and sizes clearly and correctly and enclose correct remittance in stamps or coin (coin sent at own risk) and mail to Pattern Department, AMERICAN AGRICULTURIST, 461-4th Ave., New York City. Prices of patterns now is 13c each.

Maple As a Food

Canny Ways of Saving---Clothes and Draperies

Editor's Note—Although new maple syrup and sugar are in themselves a delight to the palate, they may be used with telling effect as indicated in the delicious recipes given herewith:

Maple Tapioca Pudding.—Soak one cupful (pearl) tapioca in two cupfuls of cold water over night. Next morning, cook the soaked tapioca until it is transparent, using more water if necessary. Add a pinch of salt, a piece of butter, size of an egg, and three-fourths of a cupful of maple syrup, or one cupful of maple sugar. Bake about twenty minutes in a moderate oven. Serve with whipped cream, sweetened with powdered sugar, flavor with vanilla and sprinkle with finely chopped nut meats.

Maple Cake.—Two eggs, one-half pound of maple sugar, grated, one half cupful of maple syrup, one cupful of liquid coffee, one teaspoonful of cream of tartar, one teaspoonful of baking powder, two teaspoonfuls of cloves, one fourth pound of seeded raisins. Mix in flour, and make a little thicker than for a sponge cake. Bake in moderate oven. Ice with a white frosting.

Maple Sugar Tea Biscuit.—Take one quart of sifted flour, one even teaspoonful of salt, three rounding teaspoonfuls of baking powder, one large tablespoonful of butter, milk to make a very soft dough, sift together flour, salt, and baking powder, work in butter, and add milk, place on the moulding board, and make into biscuits, then spread each with maple syrup, or some grated maple sugar, roll up like jelly roll, in small biscuit form, bake and serve hot; eat with butter. They are delicious.

Maple Blanc-Mange.—Mix five tablespoonfuls of cornstarch, (level) with one cupful of milk, taken from a quart which was scalded, add one and a half cupfuls of maple syrup, a little salt, and a little soda. Cook twenty minutes. Serve in cups with whipped cream.

Maple Charlotte.—Soak one half ounce of gelatine in cold water to cover. Dissolve by standing it over hot water. Put three tablespoonfuls of grated maple sugar in a saucepan, stir till melted, add one pint of cream, let mixture boil gently to a creamy thickness, cool slightly, add yolk of two eggs, one tablespoonful of maple sugar, one teaspoonful of vanilla, two tablespoonfuls of cold milk, beaten till light. Stir in the gelatine, set aside to get cold, line a mould with sponge cake cut in slices. Pour in the cream, and cover the top of the mold with thin slices of cake, garnish with spun maple sugar and whipped sweetened cream, poured over the top of cake. This dessert should stand two hours on ice before serving.

Maple Walnut Cream.—Beat the yolks of three eggs, add gradually one cupful of hot maple syrup, and cook over boiling water, until thick. Remove from the fire, add one tablespoonful of gelatine, softened in one half cupful of cold water, stir until dissolved, place in a pan of iced water, stir until it begins to thicken, add three-fourths cupful of broken nut meats, fold in one-half pint of heavy cream, beaten until stiff; turn into molds and place on ice until firm.

Maple Cornstarch Mold.—Mix three tablespoonfuls of cornstarch, with one half cupful of milk, add two and a half cupfuls of scalded milk, one half cupful of maple syrup, and one teaspoonful of salt. Cook until the starchy flavor has disappeared. Pour into wet molds and allow to cool. Serve with milk sweetened with maple syrup.

Maple Pudding.—One quart of sweet milk, three tablespoonfuls of cornstarch, one cupful of maple sugar, grated, mix cornstarch with a little milk, heat the

milk, and stir in the sugar and moistened cornstarch. Cook in a double boiler.

—Miss H. A. L.

Ways of Saving

PROBABLY the outstanding economy in most families is taking advantage of really good sales, but one needs to know a bargain by sight even so. I know a man who claims the "dollar-day" bargains consist of material previously collected from the ice stores, and in some instances it does look that way. The mid-winter white sales and the midsummer sales are regular events staged for the dull season and it usually pays well to patronize these but not the "in between" sales with no logical excuse for existing. Remnant bundles often prove

A Dress For the Little Girl

No. 329-4 — Child's dress of lovely brick red tissue gingham, cross barred with white. Black and white French knots alternate in the line on each side of the flower sprays. In the flower sprays, a white daisy has a pale pink rose above and below it. The bow knot on the shoulder is white rope floss couched on with black. Red cross-bar tissue stamped for cutting outline and embroidery, sizes 4 and 6 years, with floss to embroider, \$1.00.

good investments when one needs that particular kind of remnants.

Another worth while economy is made by home dressmaking and making over. We often patch and darn when it is almost a question whether the saving is worth the labor involved, but unless one's time is very valuable, dressmaking certainly pays. Sometimes a long coat or cape may be ripped apart, washed, pressed, and made into a very pretty dress at almost no expense rather than the work. My best dress used to be a brown wool coat, but I made it into a long, straight dress, edged the neck with fur band trimming to match, faced sleeves and front opening with pale green silk, and finished the whole with two little silk rosettes with fur centers down the opening (at the side front) and one on each side at the low waistline there the slight fullness is caught up. The result is a pretty and fashionable gown at a cost of less than 50 cents.

A baby coat long since outgrown, and a few minutes, made daughter a pair of very "comfy" wool broadcloth bloomers, which she has worn to school all winter. My neighbor keeps her little girl supplied with bloomers made from her own wool serge skirts, for school wear.

One of the most satisfactory cooking economies I have learned lately, is buying a few cents worth of, suet every two or three weeks. I grind it through the food chopper and keep it on hand in cold weather for many purposes. When I warm potatoes, I put a big spoonful of suet in my frying pan, add a little chopped onion, and when the suet is hot slice in the potatoes. Chop fairly fine with a baking powder can or other chopper—I use an old chopping knife—and let brown nicely, stirring often enough to prevent burning. If they get too dry, add a bit

more suet. For a very good gravy melt a spoon of suet, add a small spoon of flour, and let brown richly. Now add enough milk to make the desired quantity of gravy and thicken to the consistency of good cream with a little flour mixed smooth with cold milk. Salt and pepper to taste. Any kind of meat or lean loaf is delicious baked in suet.

As long as fresh apples last, we use lots of apple sauce—it saves canned fruit and we like it very much, especially sweetened with home made maple syrup or sugar.

—MRS. E. M. ANDERSON.

About Your Window Curtains

AFTER washing curtains, fold them lengthwise down the center, and hang them thus on the line to dry.

Dampen without unfolding, pulling the hems out evenly, and they can be ironed very easily and quickly. The crease down the middle will not be noticed after they are hung.

Worn places may be concealed by dipping pieces of material like curtains, or net, in thin starch, covering the worn spots carefully, and pressing until dry with a hot iron.

Having hems the same width at top and bottom of curtains, prolongs the life of the curtain.

If you have a dark or sunless room, try using yellow curtains. Yellow cheesecloth makes sheer and satisfactory curtain material, or one can dip old white curtains in yellow dye.

When light cretonne draperies have faded, wash and boil them, then immerse in dye of the desired color. The color scheme of your rooms can be changed entirely by doing this. If the figures in the draperies remain distinct and the background is faded, do not boil but wash carefully before using the dye.

Take down curtains and draperies often and allow them to blow on the line, and the wear and tear of frequent laundering will be avoided.—Elizabeth B. DuBridge.

Little Economies

WHEN the roller in the clothes wringer wears out bind it with a long strip of cloth a little wider than the worn spot. Your wringer will continue to do service for a long time by replacing the strip as it wears out.

* * *

Cracked jars and crocks can have this mixture pressed into the cracks, then have a limber wire handy and wind it around them, draw tightly as possible and twist to fasten.—Clarice Raymond.

Service Department

Some More "Fools' Gold" Propositions

THE morning on which this is being written, the daily papers carried under big headlines, the news that a chemist by the name of Rodrian with headquarters at Gloversville, claimed to have discovered a process whereby he could produce pure gold from a certain kind of soil in the foothills of the Adirondacks. The newspapers state that the whole community is much excited and that many reputable local business men are backing the enterprise. Visions were had of another California or Klondike gold rush, and stock in the new company bid fair to sell like hot cakes. However, there came a considerable damper to all of the enthusiasm when Assistant State Attorney General, Borden H. Mills, arrived on the job and suspended the sale of stock and began a careful detailed investigation.

We never get over the feeling of wonder that there are such a large number of "suckers," in the world. It seems that there are few, if any of us, if a proposition is put up in the right way with big enough promises who will not "fall" for it. Mr. Morgenthau, the publisher of AMERICAN AGRICULTURIST, recently made the statement that he could open a peat bed on his farm at Fishkill and organize a company and within a week sell \$100,000 or more of worthless stock in it. We do not think this statement any exaggeration.

Agencies Working to Protect Investors

Fortunately, however, protective agencies are constantly doing more to save people from their own foolishness. For instance, it has only been a short time that the State Attorney General's office was equipped with authority and help to open immediately, an investigation such as the one mentioned above. Incidentally, the State Attorney General, ably assisted by such men as Borden H. Mills and Keyes Winter, are doing a lot in helping to stamp out stock frauds. Great credit should also be given for fraud preventions to such agencies as the Chambers of Commerce in the different cities and to the Better Business Bureau of New York City, managed by Mr. H. J. Kenner and the Vigilance Committees, representing Clubs and the Service Departments of farm papers.

Investment of Church Funds

"We have some money to invest (church funds) and we were talking of investing with the Commonwealth Bond Corporation of 50 East 42nd Street, New York City. Will you please give their standing and safety?"—L. W. P., New York.

THE mortgage bond company you name has a good reputation but we think that church funds ought to be put only in United States Government securities or if you can afford to take something not readily marketable a good first mortgage on property in your own locality which your own bank will recommend.

A Disappointed Boy

"I am enclosing herewith, a letter that my 17 year old son received, in answer to an add in a daily paper. Of course, I cannot convince my 17 year old son that the entire thing is a fraud, and that all they want is the \$4.85 and after receiving this, he would probably never hear from them again. However, I would not like to be unfair, and as you are always willing to render service to your subscribers, I would like you to send me any detail that you may be able to get on this matter."—Mrs. A. S. J., New Jersey.

THE letter which was enclosed from the Howard Land Association, had all the ear-marks of a fraud and because of its importance, we made a careful investigation. We took the matter up with the Chamber of Commerce of the State of New York among others, and they in turn referred it to the National Vigilance Committee of the Associated Advertising Clubs of the World, who answered:

"You are probably already familiar with this method of disposing of real estate involving the hackneyed 'free' lot method. The realtor always using some pretense to make a profit on the deal, either charging a sum approximating \$50 to cover the cost of title search, attorneys fees, etc., or else requiring the free lot 'winner' to purchase a lot adjoining the one awarded.

Suckers' names are obtained from advertisements having a simple jumble of words which can easily be arranged to spell the name of a famous president. We have no sympathy with such methods of selling real estate."

We have printed these facts somewhat in detail because we want to emphasize the fact again that there really is never anything in these "something-for-nothing" advertisements and it would seem that after reading the above correspondence after reading the above correspondence and reports that our people would be less anxious in responding with their hard-earned money.

How About Copying Lists At Home

ANOTHER scheme that has been practiced in different ways for a great many years is that of fooling people into thinking that they can earn money at home by copying and sending in lists of names and addresses.

We recently had an inquiry along this line from one of our subscribers about the Consolidated Listing Company of St. Paul, Minnesota. In their literature which the subscriber sent us, it was claimed that this company would pay from \$1 to \$10 per hundred for lists of names and addresses. They gave an example of one man that had made from one thousand to twelve hundred dollars a year using only his spare time and they claim also to pay 10c each for all newspaper clippings "sent as instructed." To this inquiry we wrote in part as follows:

"We wish to advise that while we have known a good many schemes of this kind, we have never found one of them reliable. If they do not get anything else, they at last get the \$1. that you send them and we find that there is always something more that they want later. No reliable company has any difficulty in getting lists of names. If you stop to think a moment, you will realize that all anyone has to do is to take the telephone book, to which anyone has access, from which he can get all the names he wants."

However, we always try to be fair and to make an investigation before making final decisions so we wrote to St. Paul and found that the Consolidated Listing Company was not listed in the telephone or city directories.

Refused Revolver Advertising

WE recently refused to take a revolver advertising account from a reputable manufacturer of revolvers. One reason is that it is against the law for any citizen to carry concealed weapons without a permit. Further than this, we may be wrong, but we believe that a great many accidents and crimes result from the fact that revolvers are too readily available. With a real gun it is different. Of course, they also result in accidents but this is offset by the fact that a good gun is a pretty good companion for a farm boy, after he has reached some years of judgment and may do much to keep him interested in country life.

Do You Want a Blacksmith?

"If I am not asking too much, I would like to hear from you if you know of any good location for a general repair shop. By that I mean wagon repairing and general blacksmithing. I have run a horse-shoeing and general repair shop here for about twelve years and I have a good business but in order to have it pay I must do horse-shoeing and that is what I want to cut out for a time anyway. I know there must be a good location for such a shop and I thought you might know of some. I want a place large enough for business for two men at least."—J. D. B., New York.

IT seems to us that there ought to be a lot of communities in New York State, where a good blacksmith is much needed by the farmers. One of the unfortunate things from the coming of the automobile is the fact that the good old-fashioned blacksmith with real skill, is disappearing from the country.

When you read this, if you think there is an opening for a blacksmith along the lines suggested above in your community, write to us and we will pass on the information to the above correspondent.

A Bag of ALPHA CEMENT

used in that new building improvement that you are planning will give you service in 1975 as well as in 1925.

Some Good Tips on Spring Feeding

The spring pastures will soon lure you into thinking that you have a new source of cheap feed. It will pay you to remember your past experiences and feed a good combination of feeds with your grass. You should buy a feed—not a tag. When you judge a feed solely by its analysis and price you may deceive yourself, but you can not fool the animal.

What the Tag Really Tells

State and Federal laws require all feed manufacturers to publish the minimum amount of crude protein, carbohydrates, fat, and maximum fiber contained in their products. They do this—on the bag and on the tag.

Some feeds may contain higher percentages than shown on the tag. All tags should give a list of the materials in the feed. But even these facts are only a limited guide in buying.

This is all the tag tells you and this information is good only up to a certain point. It doesn't tell you a thing about the quality of the ingredients, their safety, or how palatable or digestible.

You can't judge the value of any goods by the outside of the package. Let's forget analysis and price for a few minutes and think about what you GET for what you PAY. That is what determines values.

What kind of animals are you feeding? Do you know what kind of nutrients they are getting? Are they digestible, or locked up in fibre like nuggets of gold in the ground? What are you getting for the price you pay?

Feeding Methods Are Changing

Successful feeders now pay more attention to methods than to price tag and analysis. They are more interested in the health of their animals and in a program that insures better results from the right feed in the right amounts.

Successful feeders have quit buying feed to produce fertilizer and have learned how to feed a ration that is more easily turned into milk—beef—pork—mutton—eggs. They feed less—they make more.

This is due to a better understanding of feed values. A few years ago we thought that any kind of protein was just "protein", as salt is salt. Now we know better. There are several kinds of protein. Some are good—others are not.

We now know that when the cow stuffs herself with green grass she makes milk from her reserve strength. Grass is nearly 80% water and water alone won't make milk.

Be sure you feed the rations that actually make what you want—and at a profit to you. Use the right materials and mix your own rations, or buy a mixed feed from a manufacturer who sells quality.

Something That Can't Be Done

No manufacturer could stay in business very long by continually buying raw material in which there is a lot of waste. In manufacturing, practically all raw material is converted into something of value.

Your cows, steers, hogs and hens are machines. They can not produce up to a capacity set by the Great Designer unless you give them the right kind of raw materials.

Feed is the raw material which your animal machines convert into finished products. A cow may produce forty pounds of milk from twenty pounds of poor material, but she will do a better job with fifteen pounds of good feed.

You should buy the kind of raw material that the cow likes to handle. In other words the feed must be palatable. She must be able to turn it into milk with the least effort. It must be digestible.

As a food manufacturer—operating animal machines—you must have raw material containing the protein elements which are most easily convertible into finished products. Then you will increase your output and reduce your cost.

Your Safest Guide In Buying

No matter whether you are feeding dairy cows, steers, hogs, sheep or poultry your rations should contain the right amount of Corn Gluten Feed.

This pure corn concentrate is rich in the most needed proteins. In the processes of manufacture they become more digestible than the same elements in whole corn. This is why they make milk and meat instead of manure.

No other plant in the world has won as many victories in the feed lot as the corn plant has. Every great dairy test has been made with pure concentrated protein feeds—made from corn—as a large part of the ration.

Better still, corn is a safe feed. It is never used as medicine. It never caused a cow to slip her calf or become blind. Pure corn concentrates can always be depended upon to return their cost with a profit.

Your home-mixed ration should contain Corn Gluten Feed. Get it from your feed dealer or any manufacturer. If you buy a mixed ration be sure Corn Gluten Feed is in it.

After Seven Months in Jail

"Saving" Oil in your Ford is like trying to carry one more egg in a full basket

CARRYING one more egg in a full basket has been responsible for more broken eggs than many people would like to estimate. Of course, there's no necessity for dropping the whole basket, but when that *one* egg begins to slide, there's no telling where the thing's going to end—until it's "all happened."

It's like a Ford owner trying to save on cheap oil—the total possible gain isn't worth the risk. Suppose cheap oil would give as good mileage as Mobiloil "E"! Suppose your car would "get by" for a while without frequent repairs! Even imagine that it would continue to have lots of power and not quickly develop excessive carbon and fouled spark plugs! Even granting such fanciful claims, the saving—at best—could hardly amount to as much as \$5.00 a year!

But with poor or incorrect oil, no Ford *will* deliver the power, the smooth operation, the satisfaction and freedom from repairs and expense that the Ford Motor Company build into every car they make.

And cheap oil, as Ford owners have universally discovered, *doesn't begin to give the mileage of Mobiloil "E"*. Even those oils which cost less per gallon than Mobiloil "E" really cost more *per mile*—due to the much faster rate of consumption. *More miles per quart*, more miles of smoother, more powerful, expense-free operation—these are the surest guides to economy and satisfaction.

For the differential of your Ford car use Gargoyle Mobiloil "CC" or Mobilubricant as specified in the Chart of Recommendations. For your Fordson tractor use Gargoyle Mobiloil "BB" in summer and Gargoyle Mobiloil "A" in winter.

Let this sign guide
you to lowest cost-
per-mile.

What Readers Want to Know

Growing Potatoes For the Early Local Market

RATHER frequent inquiries for small quantities of good seed of early varieties of potatoes are sent to the College of Agriculture about this time of year. In other words, there is a specific demand for potato varieties which will mature sufficiently early to supply home requirements and small local markets during the summer months when late potatoes are not available and early potatoes grown elsewhere are relatively high in cost.

It is frequently not advisable to include potatoes in the list of vegetables to be grown in home gardens smaller than one-eighth acre in size because other more perishable and shorter season crops are more economical of space. However, in New York most farm gardens of larger area may well include varieties of potatoes which will produce a crop from early August to late September.

Early Varieties Not as Heavy Yielders

Although Irish Cobbler is the standard early variety from commercial production in New York State, it is not as early maturing as most other early varieties. Hence it has little advantage in this regard over varieties of the Green Mountain type which is classed as medium to late. The Cobbler sells well on most markets early in the season on account of its glossy white skin and excellent quality. This is the variety usually seen during July and August at store fronts in barrels covered with burlap, labeled "Red Star Brand from Virginia."

Prices of early potatoes usually vary with earliness of marketing. This is in response to the demand for the new crop when the supply of the latter is most limited and costly. Hence earliness of maturity in an early variety is very important. A point to be remembered, however, is that earliness and yield are generally inversely proportionate. Yields comparable to late varieties are not to be expected in early potatoes.

The Earliest Yielding Varieties

The earliest varieties of potatoes are those of the Early Ohio and the Triumph types. A fair yield of either of these can be obtained about two months after planting. Over most of this state this means that new potatoes can be dug by July 15 to August 1st. The Ohio type consists of such varieties as Early Ohio and Early Six Weeks, while the Triumph includes such varieties as Bliss Triumph, Red Bliss or Early Bliss and White Triumph, Norton Beauty or Quick Lunch. Early Ohio tubers are egg-shaped and faint pink in color. Bliss Triumph is similar to Cobbler in shape although shallower eyed and smoother and dark pink to red in color. White Triumph is similar to Bliss Triumph except it is white skinned. Both of these are of very good eating quality. The Early Rose is another early variety perhaps better known in New York, which is not quite as early as Early Ohio and Triumph. It is less popular than formerly on account of its long flat shape, many and often deep eyes, and pink skin.

Quality of Seed Is Important

The principal obstacle in the way of more general use of these earliest varieties for home use is the difficulty of getting disease-free, high yielding seed. Early Ohio, Triumph and Early Rose varieties are all very susceptible to the mosaic and leafroll diseases. The average strain of seed is badly diseased, and hence low yielding and unprofitable. Small scale production carried on under approved methods to satisfy local seed demands might well be undertaken by a qualified seed grower in at least a few counties of this state.

Where To Get Seed

The only supply of certified seed of Early Ohio variety produced in New York in 1924 is that of A. A. Grinnell Co., of Elba, N. Y. Similarly the Hickox-Runsey Company at Batavia is the only source listed for certified Bliss Triumph seed. Large or small quantities of certi-

fied seed of both varieties are now available from Wisconsin and Minnesota. Parties interested in sources of these varieties can be referred direct to growers in the above states, by inquiry of the Department of Vegetable Gardening. An ample supply of certified seed of the Irish Cobbler variety was produced in our own state last season. Those desiring such seed should inquire of either the local county agent, the New York Seed Improvement Cooperative Association at Ithaca, the New York Cooperative Seed Potato Association at Syracuse, or the Department of Vegetable Gardening at your college of agriculture.

—E. V. HARDENBURG.

An Emergency Crop for Hay

Last year I planted some oats and at the same time sowed some clover and timothy, but there doesn't seem to be any coming on this spring. I am in for very little hay, especially for my horses. I have a silo and I can feed the cows ensilage, but horses must have hay. What can I sow for a hay crop, something that I can cut this summer?—G. B., New York.

YOUR immediate local and farm conditions, with which we are not acquainted, will determine in a large measure what would be the best procedure to follow. If your land and location are such that it would pay you to go into cash crops that could be marketed in a nearby city, it may pay you to plow up the meadow and put in these cash crops and hunt around for a piece of hay to cut on shares. In other words the return from your land may be greater by growing a cash crop and buying the hay for the cost of the labor to cut it.

The best man to guide you would be your county agricultural agent, or farm bureau manager. He is right on the ground and will be glad to call upon you and help you solve your problem.

If you decide to plant another crop to harvest as hay, perhaps the best choice you have is a mixture of oats and Canada field peas. Oat hay alone is very good but you add to the nutritive value by adding Canada field peas. It is advisable to use two bushels of oats to $\frac{1}{2}$ bushel of Canada field peas.

Oats and Peas Most Desirable

Oats and vetch also make a good hay. If you have never grown vetch before it would be a wise precaution to inoculate the seed or inoculate the land before you sow it.

Millet is a quick growing crop and a crop that gives a fairly good amount of coarse hay. However, it is not wise to feed it to horses exclusively. For one thing, it has a strong reaction on the kidneys of a horse. Furthermore matured millet hay will sometimes cause trouble, the coarse heads creating internal disorders. Millet is a quick growing crop and could be mixed with a corn fodder in the ration. As a matter of fact there have been times when we had to feed our horses nothing but dried corn stalks and they come through the winter in good shape. We chopped the corn stalks up into short pieces and they apparently made good feeding. It is possible to plant corn heavily and get a crop of fodder. It is rather coarse, however, and does not compare however to oats and peas.

Thorough Mixing Improves Concrete

CONCRETE mixed two minutes is twenty to thirty-five percent stronger than concrete mixed only fifteen seconds. The two minute mix adds from 500 to 700 pounds strength per square inch to all ages of concrete. Resistance to wear is also improved.

It is the time of mixing, not the speed of the mixer that determines the strength of the concrete. It does not pay to sacrifice quality to speed of work. Mix at least two minutes.—Elmer Whitaker.

What You Pay for When You Buy Food

The Real Trouble Between Andrew the Consumer and Henry the Farmer

By C. E. LADD

ANDREW Davis lives in the city. He works as a mechanic and earns 90 cents an hour. Rents are high and he has two children to feed besides himself and his wife. Way back before the war Andrew worked on a farm in Central New York and earned \$45 a month with free house rent and two quarts of milk a day, potatoes and firewood furnished by the farm owner. But the superior attractions of city life drew him and a short apprenticeship developed him into a skilled operator of one of the almost human machines in a great modern factory.

He feels that he knows all about farming although he does not realize that folks and economic conditions have changed in the country during the past fifteen years to the same degree that folks and conditions in his city life have changed.

Where the Spread Went

Last winter Andrew paid five cents a pound for potatoes. Remembering that a bushel of potatoes weighs 60 pounds, he thought of this as \$3 per bushel and promptly kicked to his wife that farmers must be getting rich now-a-days with potatoes at \$3 a bushel. "When we moved into the city in 1910 we only paid \$1.50 a bushel for potatoes and farmers sold them for 50 cents."

Now let's see what Andrew paid for when he bought three-dollar-a-bushel potatoes. Andrew's brother Henry grew potatoes back on the home farm in Central New York. He received just 60 cents for them or 20 per cent of the retail price. The other \$2.40 went to pay for services by the local potato shipper, services by the railroad employees in transporting them, labor by the truckman and others in the city wholesale market and labor by clerks in the retail store. The potatoes traveled by the most direct route possible under present conditions from Henry's farm to Andrew's kitchen. On each pound of potatoes Andrew paid four cents for marketing services, largely to union laborers like himself and one cent to Henry, the farmer producer. Andrew didn't buy potatoes, he bought labor.

Henry Had Expenses, Too

If we want to go back one step farther, we may analyze the one cent per pound or 60 cents per bushel that Henry received. Henry, the farmer, is a capitalist in that he has money invested in land, buildings, livestock, and machinery. Henry, as an average farmer, is a laborer in that about seven-eighths of the work on the farm is done by himself and his family. The hybrid capitalist-laborer might reckon the cost of a bushel of potatoes somewhat as follows:

In producing one bushel of 60 cent potatoes, a man worked one hour, a horse worked one hour and machinery was used for one hour. Land was used upon which an interest charge of three cents should be made and one cent in taxes was paid. The fertilizer and seed cost of producing this bushel was 12 cents. If all other items were reckoned at actual cost there remains about 15 cents per hour to pay for the farmer's time. Yet the year 1923 was a better business year for the potato producer than was 1922 or 1924. In 1922 Henry received only 30 cents per bushel for his potatoes and this year he is only re-

ceiving 30 cents. Many of the things that he considers as necessities were thought of as luxuries in that earlier period. Andrew's class of workers has made a definite gain in standard of living and occupies a much more powerful position in society than they did twenty years ago. This is well. It is not only good for Andrew and his family but is good for all society and for the nation. Andrew is afflicted with that "Divine unrest" that makes for American progress and he wishes to have more comforts and luxuries and power.

Chasing Around in Circles

Andrew and Henry soon get to running in circles but they are two entirely different kinds of circles even though they are both true circles in that they make no progress.

Andrew strikes for higher wages because the cost of living is so high. The increased wage that he obtains must immediately be added to the price of the furniture that he helps to manufacture. But this furniture is purchased by the men who handle Andrew's potatoes in the marketing channel. Their increased cost of living must be reflected in greater pay for their work which will add to the cost of Andrew's potatoes and so the costs go around and around in the circle and get nowhere.

There is one thing that will justify a still higher wage for Andrew, his fellow workers and all the workers who handle the potatoes from worker to consumer. If each one of these men so handles his work that he produces more each day the gains that he makes in income will not be at the expense of other people. This extra daily production need not necessarily be brought about by more hours per day,

but may better be accomplished by more efficient work. Many of the workers who handle the farmer's product could increase their daily output of work to such an extent that society as a whole could afford to pay them more. This would help to break Andrew's circle.

Farmers' Circle Is Harder

Henry's circle is harder to travel. The present low price is the result of too large a supply of potatoes. Henry received about fifteen cents an hour for his work in 1923 and practically nothing in 1922 and 1924. Since all farmers are, in the last analysis, piece workers and since Henry as an individual can have little effect on prices, the only way that he can get a greater income is to work more hours and produce more potatoes. This, however, increases the bushels of potatoes produced so that the over-supply is maintained or

(Continued on page 469)

Only a small fraction of the price the consumer pays at the corner grocery goes to the farmer. By far the greater part goes to labor and service charges incidental to distribution.

ceiving 30 cents.

This particular problem is not peculiar to potatoes. Similar examples could be given in connection with milk, cabbage, apples and many other farm products.

If Henry was a tenant farmer he would quite likely move to town and get a job beside Andrew in the factory. But since he is a farm owner he will probably stick by in order to protect his investment in the farm and will hope for better times in the future.

Andrew is paying for a house. He owns an automobile and lives within a few blocks of an excellent school, hospital, library and theatre. He is not saving money as fast as he would like and there is always the possibility that he may be out of work for several weeks or months if business should become dull. If his children go to Normal School or College they will need to work a part of their way. Compared with men who did similar work twenty years ago Andrew is much better off. He has

The New School Laws

GOVERNOR Smith has signed the Cole Rural School Bills, and they are now a part of the law of the State of New York. The Governor and the Legislature are to be highly commended and congratulated for giving farm people this legislation.

These Cole Laws do not require or force any consolidation, nor do they remove any local power over the schools now held by farm people. But they will bring about great relief in farm taxes, and bring it where it is most needed, to the poorer rural school districts. Furthermore this legislation gives farm people opportunity and encouragement to gradually improve the educational advantages for country boys and girls.

One unfortunate feature of the Cole Laws is that they will not become effective until after July 1, 1926. It will be some time before we can judge them on their merits. In the meantime, let no one confuse you by trying to misrepresent or belittle this new school legislation. All that AMERICAN AGRICULTURIST suggests is that you first study the Cole Laws and then give them a fair trial, after which, such changes and amendments that experience proves necessary can be made.

In our opinion, this is the most important and far-reaching of any legislation affecting farmers that has been passed in a generation.

Another Contest

MISTAKES are not very agreeable things to talk about. It takes so much courage to confess a mistake that there are few people who will do it. This is unfortunate because mistakes are valuable. The child learns to stay away from the fire when he gets burned. Mistakes constitute experience and experience is about our only safe guide to the future.

Because we feel that errors are so interesting and valuable, we are going to conduct an unusual contest. For the best letter on the subject "THE WORST MISTAKE I EVER MADE", AMERICAN AGRICULTURIST will pay \$5; \$3 for the second; and \$2 for third; and \$1 for all of the other good letters we can find room to publish. If any two letters are of equal interest, we will pay the same prize to each contestant. We do not care whether you write about a mistake out of your own personal life or from some business venture. Maybe it was in buying a farm, or loaning money,

or in the way you conducted some particular farming operation, or an unwise investment, or maybe it was something more personal in your life. Whatever it is, write it up in a letter not over 300 words in length and send it in. Sign your name of course, but all letters will be considered confidential. No names will be signed to anything published. Contest closes June 1, and letters will be published in one of the June issues.

Is Farm Labor Increasing

THE problem of obtaining farm labor and the price that it receives this year is a very interesting one to all of us on the farm. The amount of available hired men in the State seems to vary with locality. We receive reports from sections close to the cities where farm help seems to be very scarce, while in other communities there seems to be an over-supply. It is also reported that some of the hired men are asking for shorter hours and bigger wages this spring.

We would like to hear from our readers as to what the labor conditions are in their vicinities. How about the number of hired men available, both married and single, as compared to preceding years? Write us also about the amount of month and day help, the wages that are being paid for all kinds of farm labor, and the hours that the men work.—Henry Morgenthau, Jr.

Prizes for Roadside Markets

LAST week we announced the prizes of \$10, \$5, and \$3 for first, second and third best letters on the subject "My Experience with the Roadside Market" together with a picture of the market. The letter may be from three to five hundred words in length and the pictures must be sharp and clear. The contest closes June 1st.

We are interested in this contest because we want to get material about and create interest in the roadside market. When conducted rightly this way of selling farm produce brings real results.

Plowing-in Potatoes

ON the home farm twenty years ago potatoes used to be the chief cash crop. Father and older brother usually rowed them both ways, although they were sometimes planted fairly close together and rowed only one way. One year on a piece of new ground, we plowed in the seed, dropping it in every third furrow as the ground was plowed. The next furrow covered them. We then dragged the ground repeatedly until the potatoes were ready to cultivate.

We have been in sections where plowing in potatoes is practical to considerable extent still. But that one experience at digging time was all we ever wanted of it. There was a big yield for the ground was new and fertile. But we earned every bushel of potatoes getting them out of the ground. It was like drilling a well as we went after each hill.

We do not think plowing in potatoes is a good farm practice. However there may be places where it is a cheap way to raise potatoes if one is satisfied with an average yield, so it would be interesting to get a few letters from farmers who have had experience in plowing in potatoes to know what that experience was and whether it proved satisfactory. Write us about it, and we will pass on the information to the rest of our readers.

Not Quantity But Quality Needed

R. H. C. Taylor, chief of the Bureau of Agricultural Economics of the United States Department of Agriculture, says:

"Unless farmers insist upon a satisfactory standard of living and withdraw from agriculture when they are not able to maintain this living standard, prices for farm products adequate to provide such a standard of living cannot be hoped for."

This is just plain common sense and all of the talk about the danger of abandoned farms and the need of "back to the land" is nonsense.

In 1820, about 87% of those engaged in gainful occupation in the United States were in agriculture. In 1920, this had dropped to 26%. This great change was brought about mainly through the introduction of modern farm machinery. From a farm production standpoint, the movement toward the cities has been the only thing that has saved the American farmer who remained on the land. If there were even 10% more farmers than there are now, we would have an agricultural depression all of the time.

The only thing that we must look out for is to make farm life so attractive that the best of the young folks will stay. The fact that farming has become a great profession and a great business combined, requiring as much or more skill, training, and education for success as any other occupation, will automatically help to keep the best men and women on the farms.

Curry On The Job Again

THE many friends of Curry Weatherby will be pleased to know that he is recovering rapidly from his long illness and expects to be back on his job as Circulation Manager of AMERICAN AGRICULTURIST in a few days. Curry has had a long, hard pull, ill with typhoid fever and complications since the middle of November, and so sick at times that we about gave up hope.

So it is with real joy that the AMERICAN AGRICULTURIST staff and all of his other friends will welcome him back to his work.

The Law Is A Poor Weapon

"Discourage litigation. Persuade your neighbors to compromise whenever you can. Point out to them how the nominal winner is often a real loser in fees, expenses and waste of time."—Abraham Lincoln.

THE above is a quotation in a speech which Lincoln once made on the law. We often think of it, particularly in our work with the Service Bureau, for it quite frequently happens that we are unable to settle a question by correspondence or personal interview so that the only resort left is legal action. Except in rare instances, when it comes down to a case of going to law, we advise our subscribers against it. There are times when it is necessary, when the amount is large, the cause right, and when there is no possibility of settlement in any other way. But in the majority of cases, any kind of a compromise which does not involve principles or right and wrong is better than a lawsuit.

When we were young and home on the farm, there was a disagreeable farmer in the neighborhood who was always threatening at the slightest provocation "to take the law to ye." About half of the time he was mixed up in some kind of litigation with the result that he finally lost most of his property and was generally disliked throughout the entire community. Many times he won his case "but lost his argument." He was a good example of what too much litigation will do for a man.

Eastman's Chestnuts

DID you ever notice how manners of speech, dialects and colloquialisms vary in different communities, even when they are not far apart? It is strange too that most of us have fallen into habits of slang and incorrect English that are often more awkward for the tongue to use and more unnatural to speak than are the correct forms. The negro in particular is amusing to listen to because of the way in which he "murders" the English language.

There is a story of an old negro whose worthless son was married secretly. The old man heard of it and asked the boy if he were married.

"I ain't saying I ain't," the boy replied.
"Now, you Rastus," stormed the old man, "I AIN'T ASKIN' IS YOU AIN'T; I IS ASKIN' YOU AIN'T YOU IS!"

Crop and Market Prospects

Read What Others Expect to Do and Plan Accordingly

Your Spring Business

THE following comments by Professors G. F. Warren and F. A. Pearson, of the New York State College of Agriculture, are taken from a bulletin called "Farm Economics". We have selected just a few things that you can get in a glance and that are of particular interest and value to our readers at this time.

Better Prices

Prices paid to farmers in the United States for food during February are one point below

January, but are 29 points above May of last year. Food at retail is 11 points above May of last year. This indicates that prices paid to farmers can rise by a large amount and not have food at retail increase by a high percentage.

Little Wheat Carried Over

The amount of wheat on farms is very low as compared with previous years. Apparently little wheat will be left at the end of the year. The amounts carried over are normally so small in proportion

to the crop, that a slight change in the weather may more than offset variations in the stocks carried over. The acreage of wheat for next year probably will be increased sufficiently to offset any changes in carry-over, so that prices for next year will be primarily dependent on the weather.

Hay Market Bad

The amount of hay on New York farms is much higher than last year. In many parts of the State, hay is so cheap that it

would seem desirable to hold it over, in case there is barn room. It is, of course, impossible to foretell prices for next year, but if the barns are kept filled, there will surely be a year when they can be emptied to advantage.

What About Cabbage?

The acreage of cabbage usually has been increased about one-fourth following years of high prices, and has been decreased

following years of low prices. If, during the period from 1919 to 1923, five acres of cabbage had been harvested in years following high prices and ten acres in years following low prices, the crops would have sold for a total of nearly one thousand dollars more than would have been received if ten acres had been set in years after high prices and five acres after low prices. In recent years the yields have alternated so that the largest yields usually occurred when the acreage was largest and vice versa. This combination has made the great fluctuations in production possible from year to year. The yields are largely determined by the weather. Some of the difference in yields may be attributed to better care in years following high prices.

The cabbage acreage last year was about average. The large crop was due to the high yields. In New York state the yield was estimated at 11.4 tons per acre. This was the second largest yield ever recorded. Since cabbage prices have been low this past season, the acreage for 1925 is likely to be reduced.

The Potato Situation

Considering the supply, potatoes for the past six years have sold for less than formerly. It has frequently been pointed out

in Farm Economics that, when the general price level declines, wages lag. In such a period the demand for the cheaper foods, such as potatoes, is low.

Another reason for the decreasing demand for potatoes may be due to the changes in our population. Fewer persons are doing hard physical labor. More persons are employed at machines or at desks. Foreigners have not come to the United States in such numbers as

formerly. Whatever may be the reasons it seems that during the past few years, a potato crop of about 3.5 bushel per capita is all that can be used at the normal price. If the demand had continued to increase as it did for fifty years prior to 1918, there would have been a normal demand at the present time for about 3¾ bushels per capita. Since we are in a period when the demand for potatoes is less than formerly, it is probably best for one to be conservative about increasing his potato acreage.

The large production of potatoes last year was due to an unusually large yield per acre. The yield was 10 per cent larger than the next

Coming—"The Valley of Voices"

THE Trouble Maker" will cease to trouble you with this issue. So for some time the whole staff of American Agriculturist has been reading dozens of novels and stories to select another serial of the same high grade that we are used to publishing in American Agriculturist. I am sure we have found it in "The Valley of Voices" by George Marsh which will start in this paper May 16. It is one of the very best stories I have read in a long time.

Do you remember the serial which ran some time ago in American Agriculturist, "The Hound of the Baskervilles" by Conan Doyle? Thousands of our readers were greatly entertained by this story. "The Valley of Voices" is a similar story, a mystery of the great frozen reaches of the Canadian Northwest. It has something to hold your breathless interest every moment, and yet the novel is not overdrawn or untrue to life. We have insisted that in any story we publish in addition to the action and the live plot, there must be good writing. It must have high literary merit, and "The Valley of Voices" does have. Our staff has been hard to please in making this selection and we paid a high price for the serial rights. I am sure that we have something in this story that is worth much more than your subscription price. It starts May 16. Watch for it.—E. R. Eastman.

highest potato yield recorded, which was in 1912. The acreage last year was 6 per cent less than the average acreage for the ten preceding years. Potato acreage does not fluctuate from year to year as does the cabbage acreage, but there is a tendency for farmers to increase the acreage following years of high prices. Present potato prices would not encourage increased planting. With the high wheat prices, the Northwest may raise more acres of wheat in 1925 and less potatoes. The high bean prices may encourage some farmers in this state to grow more beans and less potatoes. If the potato acreage this coming year remains the same as last year, and if there is an average yield, the crop would be about 10 per cent less than 3.5 bushels per person. A crop 10 per cent below normal usually sells for 18 per cent more than the usual price.

Outlook for Tomatoes

Because tomatoes require a long growing season, they are commercially grown in New York State in those counties bordering on Lake Ontario and Lake Erie. The farmers on the best land near Lake Ontario usually have so many apples and peaches to harvest that they do not have the time to harvest tomatoes. Therefore tomatoes are more commonly grown on the less desirable soil types, where the orchards are small. The yield of tomatoes for a number of years on the Clyde

soils in the town of Newfane, Niagara County, New York, has average 4.0 tons as compared with an average of 7.2 tons on the best fruit soils. Because so many of the farmers on the Clyde soils grew tomatoes, the average yield for all farms in this area for the past 11 years was only 5.7 tons. This would indicate that the Newfane farmers probably averaged about 9 cents per hour for their time spent on tomatoes in 1923; 22 cents in 1922; 31 cents in 1921; 66 cents in 1920; and 34 cents in 1919.

Cycles In Egg Production

There is a tendency to move in cycles in egg production, nine years from peak to peak or from low to low. The curve is not so smooth as the curve for horses, hogs, and beef cattle, but is sufficiently definite to indicate the tendency for periods of over and under-production to last about four to five years.

Canning Crops

Judging from the yields and prices, canning factory peas paid well in Livingston County in 1919 and in all the areas given for 1920. The low yield in Madison County in 1922 was partly due to a total loss on two farms where the crop was drowned out. The yield on the other farms averaged 1,262 pounds per acre. Where canning factory peas can be substituted for oats or barley in the rotation they usually pay better.

Sheeping-Killing Dogs

IN the January 30th issue of your journal, the writer takes notice of an article concerning dogs killing sheep in Steuben County, New York.

Some fifty years ago while starting into the sheep industry, dogs made such trouble, I had to sell flocks, as once chased by dogs they never outgrow the trouble and had best be fitted for market. A very good way to catch a sheep-killing dog is to select their runways and build a square rail pen about four feet high, drawing the top together in part. This slanting side outside allows the dog to ascend from outside to the top of the fence which is wired together, to prevent his getting through. Take a chunk of fresh meat, drag it in the ground about the trap, at night hook up the meat out of reach and throw a strong lively sheep into this trap inside. Soon as a dog finds he is fast and knows nothing but to get loose quickly as possible, he will forget the sheep. When a dog is cornered his courage is gone.

In the morning take a neighbor along to certify as to whose dog this may be, evidence sufficient to call for your damages at once. Such sheep dogs will go miles to obtain more dogs to assist their works. I am one that lost a splendid flock of choice breeding ewes by dogs.—S. G., Clinton Co., N. Y.

Editors' Note: The above letter raises a question we have had in our minds some time as to whether or not the danger of sheep-killing dogs is growing less. In the last two or three years we seem to have heard less about it, and are therefore somewhat under the impression that fewer flocks are being destroyed. What do you sheep men think about it?

WOODCUTTER—Much obliged, folks, saves me about a half hour's work.—JUDGE.

**SPRAYS
10 ACRES A DAY**
Just walk and press the nozzle.

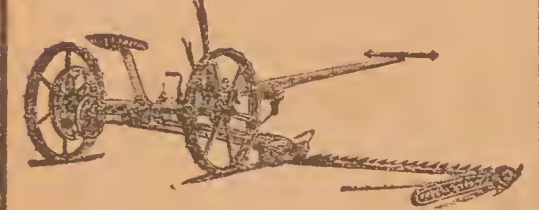

**SMITH
BANNER
COMPRESSED AIR SPRAYER**

For spraying garden crops, vegetables, flowers, trees, vines, shrubbery, etc.—for whitewashing and disinfecting poultry houses, barns, cellars—for washing windows, automobiles, etc. Few strokes of heavy brass pump compresses air to entirely discharge contents of four gallon tank. Automatic brass, non-clog nozzle, adjustable for fine mist or coarse spray. Shoulder strap for carrying. Made in both galvanized steel and brass. Simple, strong and efficient.

At hardware, seed and implement stores. If your dealer cannot supply you, write us for price and catalog.

D. B. SMITH & CO., Inc.
89 Main St., Utica, N. Y.

**Frost & Wood
MOWER**

One Horse and Two Horse Sizes

Popular throughout the world for many years. Thousands of satisfied users. Built for heavy crops and rough and hilly land. Roller bearings assure light draft. Its cutter bar strength and superior cutting mechanism give long service.

The Internal Drive Gear is always ready for work in heavy or light crops. Quicker response at knife bar, less wear on gears and fewer repairs. The knives keep on cutting when bar is raised to clear obstructions, saving time and crop.

Sizes 3½, 4, 5, 6 and 7 feet.

Write for catalog describing Frost & Wood Mowers, Dump Rakes, Side Delivery Rakes, Hay Loaders, Grain Binders, Corn Binders, Cultivators, etc.

Guaranteed by us and our dealers.

Why Berries "Run Out"

What the Hill System Taught Me

BEFORE I got into the strawberry

By E. W. TOWNSEND

ties are still "running out" as of old. The

business I was connected with a company that grew and marketed strawberries on a large scale and it was here that I first learned of their behavior. Under my first system of breeding plants and growing berries—a system handed down to me—I soon found that a variety, newly originated and showing great merits of productiveness and strong hardy plants, would in a few years become less hardy and less productive. I was told by some of the oldest growers of strawberries that this was the case with all varieties. It was said that varieties were only good for a few years, that they all "ran out" and others had to take their places.

I took this at the time to be the truth, and was sorry to see some of my favorite varieties "go out", especially my old favorite the Klondyke. I was the first one to get the Klondyke in Maryland. I bought 10,000 plants and divided them with an old friend who was president and manager of one of the largest strawberry concerns in the country. He liked the Klondyke also. We spent many hours talking over the possibility of its "running out".

Starting the Hill System

I had begun to practice the hill system on a small scale. The first year I produced more berries on half an acre under the hill system than any of my neighboring growers did on an acre. And my berries were larger, better colored and better in quality. The next year I had two acres grown under the hill system and still doubled in quantity and quality. My next trial with intensive cultivation was along the more modern lines of today. Instead of growing in hills—that is, cutting off all the runners as fast as they appeared—I rooted about six of the first plants that were produced, and then kept off the remainder.

Started With Large Mother Plants

Under this system I produced 8000 quarts of Klondykes to the acre, which was about three times the production under the old, matted-row system. The plants that I used for mother plants or stock plants to grow under the hill system, and later the single hedgerow system, were specially grown for the purpose of getting large plants with which to start. I had selected the very largest plants I could find in the beds near the mother plant and had grown these plants on rich, new soil. They were well spaced so as to give them a chance to build up a large stalky plant the first year before being moved. As I learned later, this was my first move along the right line in order to build up a variety and prevent "running out."

I had grown a productive plant at the start and gave it plenty of space to grow and to develop into a large, stalky, well-developed crown plant. I caught the idea. I saw I had it. I was sure of the fact.

Method Requires More Effort But It Pays

I called in my old friend, Jeff Staton, one morning in May to look at my three-acre field of Klondykes, grown the "Townsend" way, as it came to be called later. Jeff looked at the rows of shining, large, red Klondyke berries. He went half way the length of the rows before he said a word. He turned short around and said, "Ern, what have you done? Are these really Klondyke berries?"

We sat down in the middle of the field and I explained in a few words what methods I had used to produce them. His first words were: "Do you think we can teach our growers to grow them in this way? If we can, it is the greatest way on earth to grow strawberries." However, I am sorry to say that after the growers have seen them and plucked the berries with their own hands, they have turned a deaf ear to the improved methods of growing strawberries. Most of them continue to follow the line of least resistance. Vari-

eties are still "running out" as of old. The stock plants are being taken from the middle of the rows to set new patches.

The truth, and the whole truth of the matter is: a plant may be as easily built up as it is run down. If selection of plants is followed and restricted as to the number of plants grown to the square foot, strawberry plants are no exception to other plants. If a row of cabbage seeds is sown thickly in the row and allowed to grow up, very small cabbage results. The roots must have room to grow, and the heads must have room to spread out to get their natural size. Just the same principles apply to the strawberry. No plants are different; no trees are different; all must have room. There is no secret about it; just plain horse sense. Yet 90% of the berries grown in the United States today, I am afraid, are grown under the old crowded, matted-row, haphazard system.

Few Appreciate Value of Good Plants

The fact remains that there are few buyers of strawberry plants at this time who understand the importance of quality plants, to the extent that they will pay a price that allows nurserymen to grow the plants in the proper way and make a reasonable profit. When the growers learn what real quality plants mean they will pay the price. And they will get plants that are worth the price. It has been said that if a man makes a better mouse-trap than his neighbor, though he live in the woods a beaten path will be made to his door. This is true with the better grade of plants put on the market. Growers in time will find them out and make a beaten path to the plant men who are putting out the better article.

I was amused last year by a letter I received from one of the largest growers of strawberry plants in the country, one who makes a specialty of strawberry plants only. I had ordered a few plants of a new variety and paid a very high price for them. When the plants arrived they were so very small that I wrote the seller I was surprised that he should send out such small, trashy plants.

Need Large Plants to Produce

I received a reply in a few days to this effect: "We do not try to grow large plants. We try to grow the best plants". I made no further reply to the gentleman, as I felt that we were too far apart in our ideas. It is my opinion, and I have fully proven it to my own satisfaction, that in order to produce the best productive plants you must have room to produce a large plant. With plenty of room to grow, the plant will build up its own fruit stalk and fruiting bud system.

Plants may be called high names, such as Thoroughbreds, Highbreds, or any other "Breads"; but in my experience it has always taken the large, well-developed plants, those grown in thinly matted rows in the nursery beds, to give the highest yields of perfectly developed berries.

Thin the Apples This Year

GOING over the trees and picking off apples when small seems to the imagination as a big job, but it saves work when picking apple time comes. It is enough easier to pick a bushel of big apples rather than a bushel of little ones to equalize the labor of removing the surplus. So much for the work, but think what will be the difference in the value of the fruit. One farmer who grew very fine fruit told me that his apples were in demand at the orchard at \$1.75 per bushel when others around were selling for \$1.25. I was given a basket of selected culls that were better than the average sold from the ordinary orchards about. It pays to produce quality no matter how you go about it, and thinning fruits is a very sure way to make overbearing trees yield good fruit.—L. H. COBB.

Better Cultivation in Field and Orchard

A Real Double Purpose Harrow. Gangs can be closed together for field work or extended for orchard cultivation. Gangs are reversible in either position.

Now Only \$5.69 Puts A Witte On Your Place

Thousands Accept Liberal Offer On This Famous Throttling Governor Engine.

Thousands of farmers, appreciating the need for cheap dependable power on the place, have accepted the liberal offer of Ed. H. Witte, world-famous engine manufacturer. Mr. Witte makes the startling offer to put the standard Witte Throttling-Governor Engine to work for you for as low as \$5.69 down.

The famous Witte Throttling-Governor Engine, known all over the world, comes fully equipped on this offer. Has celebrated water-proof WICO Magneto and forty other improvements, including a new device that makes starting easy at 40 degrees below zero.

The Rugged, Dependable Witte

Long regarded as the cheapest and most dependable farm engine built, the WITTE develops 50% extra power on either kerosene, gasoline, distillate or gas. Operation on full load figures under 2c an hour. Trouble-proof and so simple that the women folks can operate it. Easily moved from job to job. More than 150,000 WITTEs are in daily use.

To introduce this remarkable engine to a million new users, Mr. Witte will send it anywhere, direct from factory, for a guaranteed 90-day test.

Every reader of this paper who is interested in doing all jobs by engine power should write today for a free copy of a remarkable new, illustrated book just issued by Mr. Witte, which explains the engine fully. You are under no obligations by writing. Just send your name, a post card will do, to the Witte Engine Works, 1803 Witte Bldg., Kansas City, Mo.; or 1803 Empire Bldg., Pittsburgh, Pa., and receive this interesting and valuable book that gives you valuable information about the application of engine power on your farm.

Why Do We Grow Oats?

Farm and Home Talks

WHAT Riley said
about May ap-

By M. C. BURRITT

active imagination.
They are pictures

plies to April as well this season:
May—I jes' 'bominate its promises,—
Little hints O' sunshine and
Green around the timberland—
A few blossoms, and a few
Chip birds, and a sprout or two,—
Drap asleep, and it turns in
'Fore daylight and SNOWS agin!

We've had a wonderful week of spring—
April 12 to 18—brilliant sunshine most
of the time, dry solid ground, but cool
winds which have held back the fruit
buds, and now at the end we're having
a cold northeast rain storm with almost
freezing temperatures, and the ground is
covered with snow tonight! We thought
spring had arrived at last. We are rudely
reminded that the last killing frost date
average is twelve days ahead yet. It
doesn't pay to be in too big a hurry with
spring seeding. Better to be safe than
sorry.

Can These Circles Be Broken?

Can Henry do anything to break his
circle? Can Andrew do anything to
break him? All society is affected by
these problems. Henry's problem is
the more acute because his products are
selling for only 20 per cent above the
pre-war price while his labor returns
him less than two-thirds of the pre-war
return in terms of commodities pur-
chased. Andrew, on the other hand, is
selling his labor at more than twice the
pre-war rate, while his cost of living is
only 50 per cent above pre-war.

Andrew is able to give his family
many opportunities that men in a sim-
ilar line of work could not give to their
families a generation ago. He and his
family have more leisure for the enjoy-
ment of the better things of life than
they ever had before. They are better
off physically and can attain much more
education and culture than was possible
twenty years ago.

Same Holds True for Henry

The same condition is not true for
Henry and his family. On account of
the low returns of the past four years
and the piece-work basis upon which he
works, he and his family are already
laboring beyond their physical strength
for long hours, often 14 or 16 hours a
day. This is not well for them physical-
ly or mentally. It is not well for socie-
ty as a whole nor for the nation. The
open country has always produced a sur-
plus of boys and girls to replenish and
rejuvenate the cities. It is important to
the cities that this crop of young men
and young women who come to them
each year shall be raised under condi-
tions that will aid the healthy and strong
development of their bodies and minds.
The great trouble that confronts
Henry and his neighbors is that the
farmers of the United States are pro-
ducing more food than society is willing
to buy. There is a surplus of food and
our marketing machinery cannot handle
it efficiently. Apparently the only solu-
tion is for many of these producers to
stop farming and move to town until
such a balance is restored as will insure
a demand at a fair price for the food
produced.

Circumstances That May Help

There are many circumstances that
may help the situation. Better market-
ing, more efficient work by handlers of
produce, lower freight rates and a main-
tained or increasing price level may
help. The basic facts are there, how-
ever. The supply of city labor is less
than the demand and the price of labor
is high. City labor is well organized
and can work aggressively for a better
place for itself in the world. The sup-
ply of farm products is greater than
the demand and the prices are low. For
generations farms have been isolated, in-
dependent business units. They will not
organize as strongly as city labor is or-
ganized for years to come. Their great-
est hope for better prices within the
next few years is through a shortage
of products. Enough farm workers
must leave the farm and move to cities
to restore a balance between demand
and supply. The quicker this comes
about the better it will be for farmers
and the nation.

The farmer must receive more money
for his products if he is to maintain his
standard of living. It is important to
the nation that the farmer's standard of
living be maintained not only to pro-

(Continued on 474)

What You Pay For When You Buy Food

(Continued from 465)

even increased and the price remains low
or possibly decreases. This is Henry's
circle.

These pictures are not a result of an

WOLVERINE Comfort Shoe

June 6, 1924

Michigan Shoe Makers
Rockford, Mich.

Dear Sirs: Two years ago I bought
a pair of your Comfort Work Shoes,
size 7. I have worn these shoes for
every day steadily ever since. The
only repairs were the nailing of one
of the soles.

They are almost worn out now and
I wish to get another pair of the same
style and size. Very truly,

(Signed) FRED BASTING,
Bloomington, Illinois

Two Years Wear PLUS + a new comfort for the tender foot

It's the way we tan our leather

A work shoe can be made
to wear like iron and still
be as comfortable as a carpet
slipper. It's all in the leather.
You'll realize this the first
time you slip into a pair of
Wolverine Comfort Shoes.
Thousands of men write us
letters like the one above.
They say Wolverines actual-
ly outwear three ordinary
pairs. And you never knew
such comfort in a work shoe.

The secret of this combin-
ation is in our leather. We
select the best hides for this
shoe. And we tan them our-
selves.

We have a special process
that makes the heaviest leath-
er pliable. Note how easily
the thick sole leather bends.
It's soft and easy on your
feet. But it wears like iron.
You'll say there never was a
work shoe like it for sum-
mer wear.

We specialize on work shoes
only. And from the hides to
the finished shoes we do every-
thing ourselves. That's why
you'll find Wolverines differ-

ent from any other work shoes.

Try a pair of Wolverine
Comfort Shoes this season.
Feel the mellow pliable leather.
Soft as velvet but tough as raw-
hide. You'll see why it wears
so well. And still feels as com-
fortable as a carpet slipper
from the first day you put it on.

There's a Wolverine shoe
for every job. For lumber
camp, mine, oil field, factory,
and farm—and for every sea-
son. Send today for our cata-
log that will show you your
shoe—the one exactly suited
to your needs.

If your dealer hasn't Wolv-
erines, please write us. We
will send our catalog at once,
and the name of your nearest
Wolverine dealer.

Don't Let Down on Your Grain Feeding

just because the grass is getting green.

The increase in milk flow caused by early pasture is only temporary and is generally followed by a sharp setback from which cows do not recover until they freshen again.

A simple grain ration—which costs little and can easily be mixed in your own barn—will keep your herd in good shape and producing steadily, no matter whether this year's pasture is good or poor.

We have a ration card containing six different rations to be fed with various kinds of hay and home-grown feeds. *One* of these rations will fit your method of dairying. All of them are easy to mix, safe to feed, productive of milk and very economical. If you want one, write to

Why Does the Test Vary?

Is the Average Butterfat Content Decreasing?

I am writing for information concerning milk test. I have been sending my milk to the creamery, and have been doubtful concerning the test. On October 18, I had a test of 5.60. Two weeks later the test went down to 5.00; two weeks later it went up to 6.00; and two weeks later, down to 4.60, with the same feed and same cows.

I do not understand how they would make so great a change in so short a time. It is not on account of increasing of milk. We have less milk in the last test than we had in the one previous when it tested 6.00. I expect my milk will be more than double the amount in the next two weeks' test. What would you advise in such a case?—J. N. W., Pennsylvania.

THIS letter is typical of the many which AMERICAN AGRICULTURIST frequently receives from dairymen who cannot understand why the butterfat test of their individual cows and of their whole dairy varies so much from time to time. The first and natural impulse is to blame the milk dealer for not giving a fair test. There are probably some instances where the dealers are to blame either through carelessness or from deliberately cheating. But such cases are becoming rare. Most of the dealers give an honest test.

Cow Test Associations a Check on Variations

The real facts are that individual cows and the whole dairy do vary considerably from time to time in the amount of butterfat that they produce. The large number of dairymen who are doing their own testing, either themselves or in cowtesting associations, have come to understand that variations in fat content do occur. Cowtesting associations have done much to clear up misunderstanding between local dairymen and their milk dealers on this point. If the dealer is inclined to be careless in making tests, he will not be with the dairymen's milk when he knows that those dairymen get their own information on testing from a cowtesting association; and the dairymen on their part know from their records that their cows are often to blame for the falling off of butterfat rather than the dealer.

It is not clearly understood as to why the same cow and the same dairy on the same feed fluctuate so much in the amount of butterfat which they produce. We will have to charge it to "just the nature of the beast." No one knows, for instance, why the Guernseys and Jerseys produce more butterfat per volume of milk than the other breeds. All we know is that they do. And the same is true for individual cows within the same breed.

Not Directly Affected by Feed

The amount of butterfat is not directly affected by the feed the cow eats; that is, you cannot directly increase the amount of fat by varying the quality or increasing the quantity of feed the cow eats. But the feed does have an indirect effect on the amount of butterfat for a cow kept in good condition will over a course of time have a higher test than she would if she had been poorly or unscientifically fed.

Every farmer knows, of course, that his tests will go down during the flush season when the cows are out to grass. He also knows that the test will increase toward the end of her lactation period. Most dairymen know also that the milk removed last from the udder is richest in butterfat. This is one reason why it is so important to milk the cow dry.

This whole problem of the production of butterfat is an important one. The

tendency of the market has been to pay best for low test milk. This has had its effect in generally reducing the amount of butterfat in milk to a dangerously low level. In talking with a man whose lifetime business has been handling milk, and who looks at these problems from the viewpoint of the farmer, he said:

"I think I can venture the assertion that the average butterfat test of milk throughout New York State has steadily gone down since the reduction of the minimum standard by law to 3% and 11.50 total solids, whereas it used to be 3.3 and 12% total solids.

"My recollection is that we had less trouble when the standard was 3.3 and 12% total solids with dairies that went below this than we do at the present time with the present low standard. Our average butterfat tests this spring seem lower than usual.

"There is really only one real good butterfat producing section left in New York State and that is the Delaware County Section. While this is a pretty broad statement, I think it is very true."

These remarks are something for every dairyman to think about, and they lead us back to the subject of this article, that is: "What causes an increase in the butterfat test?"

There are but two ways that will really increase the individual and dairy test, and those are, by using the breeds whose milk is rich in butterfat, or by paying more attention in all of the breeds to increase butterfat content by careful selection and breeding.

One Way To Success

ONLY one half of one per cent of all the dairy cows in the United States are being tested for production of milk and butterfat. The average yearly production of each cow in the United States is 3,627 pounds of milk. In Denmark 25% of all the dairy cows are in cowtesting associations and the average production of each cow is 5,666 pounds.

In the United States, Wisconsin leads in the number of cows in cowtesting associations. That state has 151 associations, which make about 25% of all there are in the country. This is no doubt one reason why Wisconsin has forged ahead so rapidly as a dairy state. Cowtesting associations lead to better methods and practices, better grain mixtures, better roughage and better sires, which taken all together, go a long ways toward putting dairymen on the road to success.

New York is the Leading Dairy State

NEW YORK and the Eastern states in general represent a diversified agriculture. Dairying is the chief farm business, but the fruit interests are among the best and largest in the world; poultry enterprises bring the Eastern farmers millions of dollars yearly; there is a heavy production of wheat and other grains, and New York and its surrounding states are leaders in the production of potatoes and other truck crops. This great diversification brought some prosperity to many of our farmers in 1924. Milk has not paid so well, and there was an overproduction of potatoes, which resulted in low prices, but when the fruit, poultry products, grain and truck crops were all in and averaged up, the general returns to a majority were fairly good, the best in fact in several years.

Famous Swedish Treatment Stops Abortion

Foreign Treatment Now Giving Amazing Results in Herds Considered Incurable. Easy and Safe to Use.

JOHN W. FROBERG

Chicago, Ill. — Complete freedom from the ravages of the disease contagious abortion that costs American farmers over twenty million dollars yearly is now possible through the use of an old Swedish abortion treatment, according to statements from thousands of American users. They say the treatment completely stops even the worst cases and has saved entire herds through its remarkable powers.

John W. Froberg, a native of Sweden, introduced the treatment in this country 9 years ago when he used it to cure his herd after all domestic treatments had failed. Its fame spread by word of mouth and wherever used proved practically 100 per cent successful. The treatment is easy to give, gets quick results and cannot harm the animals.

Cow, Calf, Control (C. C. C.), the American name of this treatment is now available for farmers everywhere and is distributed under the absolute binding guarantee that it will stop any case of abortion and that every otherwise normal cow will deliver a healthy calf or the treatment cost is refunded.

Any reader of this paper having abortion in his herd can receive free of charge and without obligation full information about this treatment by sending a postal to the Froberg Remedy Company 14 Lincoln Street, Valparaiso, Indiana.

WANTED 100 MEN

to represent me in calling on dairy farmers in New York State and selling them a GUARANTEED product costing from \$6.50 to \$13.50 depending on quantity purchased. This work must be done during the next three months. A good opportunity for the young man who wants to earn money for his college course. If you are interested and mean business, write me for full details on how you can earn \$200 a month. Address JOHN L. STRICKLAND, 260 State St., Carthage, N. Y.

New York is the leading dairy state. In 1923 this state produced over 7,000,000,000 pounds of milk. This immense amount of milk is all produced within a short distance of the greatest fluid market in the world, and thus the Eastern dairymen are assured of a permanent and good market for their milk. Consumption is increasing, and more and more of this milk is being used in fluid form. In 1923, over sixty per cent of the production was consumed in milk and cream.

The recent low prices of milk have set good dairymen to weeding out their poor producers and to studying to put their business on a more economical basis. For men who do this, 1925 promises good. Already the pendulum is swinging back toward better prices for butter, cheese and fluid milk.

Through my contact with farmers at several recent meetings, and through correspondence, I have noticed that there is more hope and optimism all the way along the line than I have seen before in some time. If we can keep our feet on the ground and do not overdo the production business this coming season, but proceed on good common sense business principles, we will see steady improvement during 1925, bringing a fair degree of prosperity for the coming year and laying the foundations for a sound and prosperous agriculture for the next decade.—E. R. EASTMAN, Editor, AMERICAN AGRICULTURIST.

Treating Horns Against Growth

Please tell me the best thing to apply to young calves' horns to keep them from growing. At what age and how do I go about it? I have tried several methods but have not had perfect results. I have 5 young calves ranging from 2 to 6 weeks old and I am very anxious to keep their horns from growing. Cows do much harm with horns and I do not like to let them.—F. S., New York.

THE practice of experienced live stock men varies somewhat, but in general the following method will work entirely satisfactorily.

The best time to prevent the growth of horns on a calf is when the animal is about 10 days old. At that time the button-like lumps where each horn will later appear is first noticeable. The hair covering this lump is clipped very close with scissors. It is best to call in a helper or neighbor to hold the calf securely.

A stick of caustic potash or caustic soda, which can be procured at the local druggist, is used. It is important in this connection to wrap the end of the stick securely in paper so as to protect the hands during the process. The exposed end of the stick is now dipped in water and, holding it as you would a pencil, rub the skin over the lump until it bleeds at the center. Rub vigorously, especially on the highest part of the lump and for a space around it about the size of a dime.

The caustic liquid is very strong and care must be taken so that none of it is allowed to run down into the eyes of the calf. The stick must be wet enough to have the end thoroughly moistened but not dripping.

Treating Cow with Paralysis

I have a four year old purebred Holstein cow that came in about six months ago. She had a hard time and seems to be afflicted with partial paralysis. She is well at heart, gives about 40 pounds of milk daily but we have to help her up. I have consulted a local veterinarian and he has prescribed different treatments. A treatment of saltpetre failed to respond. (2) Nux Vomica—7 doses (3) a quart of coffee daily. Still she fails to respond or get perceptibly stronger. Have you any suggestions?—F. R. T., New York.

THIS is a case for a professional veterinarian. We would judge from treatments one and two that the veterinarian was prescribing for partial paralysis. This belief is strengthened from the fact that treatment three is grandmother's remedy for the same ailment.

Now, assuming that it is partial paralysis the only other thing that we would suggest is applications of a turpentine-ammonia liniment. This to be applied over the affected muscles treating part of the area at a time. These cases are frequently difficult to overcome.

See a De Laval its Superiority is Evident

1. Easy as One - Two - Three

2. Try Let it prove how much cream it will Save

7 Sizes

3. Trade in your old separator as Partial Payment

Of course everyone who buys a cream separator wants the best; no one would deliberately buy a separator which would not skim clean or one which would skim clean for but a short time.

If there is any question in your mind about which cream separator is the best, it is an easy thing to settle. Just compare a De Laval side-by-side with any other machine you may have in mind. That is enough for most people—the superiority of the De Laval is clearly apparent.

But if merely seeing does not satisfy you, go a step farther and try them in actual use. Not one person out of a hundred who does this ever fails to choose the De Laval.

After you have convinced yourself that the De Laval is the best, and you know how much more cream it will save, trade in your old separator as partial payment on a new De Laval. See your De Laval Agent or write our nearest office below.

Time Tested Windmill

The Auto-Oiled Aermotor has behind it a record of 10 years of successful operation. In all climates and under the severest conditions it has proven itself to be a real self-oiling windmill and a most reliable pumping machine.

An Auto-Oiled Aermotor, when once properly erected, needs no further attention except the annual oiling. There are no bolts or nuts to work loose and no delicate parts to get out of order.

There are no untried features in the Auto-Oiled Aermotor. The gears run in oil in the oil-tight, storm-proof gear case just as they did 10 years ago. Some refinements have been made, as experience has shown the possibility of improvement, but the original simplicity of design has been retained while greater perfection of operation has been achieved. The Aermotor is wonderfully efficient in the light winds, which are the prevailing ones. The self-oiled motor works with practically no friction, and the wind-wheel of the Aermotor is made to run in the lightest breeze. It is also amply strong to run safely in the strongest winds. In any condition of wind or weather you may be sure that the Auto-Oiled Aermotor will give you the best of service. It is made by the company which established the steel windmill business 38 years ago.

Gossip from the Barns and News of the Sales Ring

H. W. BALDWIN

ACTING in accordance with a resolution passed by representatives of the five dairy breeds at a recent meeting in Washington, the trustees of the American Jersey Cattle Club have resolved not to recognize the 365 day test after January 1, 1926, but to accept the 305 day test instead. This new progressive move will be received with much satisfaction by breeders and dairymen who have the best interest of the industry at heart, for it will put testing on a much more practical basis and will eliminate the evils that may accompany the 365 day test.

* * *

The Brentwood National Sale at Brentwood Farm, Abington, Penn., April 30th and May 1st, will offer outstanding individuals from many of the leading Holstein herds in this country. The two day sale will be preceded by a show at the farm on April 29th. Among the sale entries are five animals that have been mentioned for All American honors.

* * *

At Trenton on May 15th will be held the dispersal sale of the herd of Langwater Guernseys at Beechwood Farm, Sharpsburg, Penn. The offering will include twenty-five of the offspring of Langwater Eastern King, one of the noted bulls of the Guernsey breed.

* * *

Hoppin Hill Dairy is the name William S. Fisher has chosen for his dairy farm at North Attleboro, Mass. Mr. Fisher, who formerly was with Meridale Farm at Meredith, N. Y., recently established his Jersey foundation herd.

* * *

The American Jersey Cattle Club testing report for the month of December shows that 54 cows in 15 New York herds produced over 50 lbs. of butterfat. Two cows owned by R. L. Bielby, Rome, and a cow owned by the N. Y. S. School of Agriculture at Farmingdale are tied for high production with a record of 72 lbs. of fat apiece.

* * *

The monthly report of G. W. Tailby, Jr., supervisor of dairy improvement associations in New York State, shows that for February, the Monroe county association led in number of 40 lb. cows. This association produced seventy-seven 40 lb. individuals. H. F. Thomson & Son, members of the boonville, Oneida Co., association had the high cow in both milk and fat. She is a Holstein with a record of 2345.5 lbs. milk and 79.8 lbs. fat for the month.

Commenting on prices, the report says: "At the close of the winter feeding period dairymen have the advantage of a continuing sag in feed prices. If milk holds its present level, current receipts will tend to offset the close margins that existed earlier in the winter. Oats and corn have dropped, but barley, gluten feed, and cottonseed meal show a slight rise. Nine of the common ingredients show an average drop of \$2.31 a ton. From now until pasture time buying should be on a hand to mouth scale."

* * *

Indiana county is now the leading bull association county in Pennsylvania, according to S. J. Brownell, extension specialist of the Pennsylvania State College. One of the outstanding groups is the newly organized Indiana County Holstein Bull Association, so far as is known the only abortion tested organization of its kind in the world. All three of the sires in the association, and the cattle owned by the members, are both abortion and tuberculin tested.

Of the three remaining associations in the county, two are Jersey associations and the third is a Guernsey organization. Records show an increased production ranging in value from \$1575 to \$2800 for the three associations.

White Diarrhea

Remarkable Experience of Mrs. C. M. Bradshaw in Preventing White Diarrhea

Mrs. Rhoades' letter will no doubt be of utmost interest to poultry raisers who have had serious losses from White Diarrhea. We will let Mrs. Rhoades tell it in her own words.

"Gentlemen: I see reports of so many losing their little chicks with White Diarrhea, so thought I would tell my experience. My first incubator chicks when but a few days old, began to die by the dozens with White Diarrhea. I tried different remedies and was about discouraged with the chicken business. Finally, I sent to the Walker Remedy Co., Dept. 438, Waterloo, Ia., for a \$1.00 box of their Walko White Diarrhea Remedy. It's just the only thing for this terrible disease. We raised 700 thrifty, healthy chicks and never lost a single chick after the first dose."—Mrs. Ethel Rhoades, Shenandoah, Iowa.

Cause of White Diarrhea

White Diarrhea is caused by the Bacillus Bacterium Pulverum. This germ is transmitted to the baby chick through the yolk of the newly hatched egg. Readers are warned to beware of White Diarrhea. Don't wait until it kills half your chicks. Take the "stitch in time that saves nine." Remember, there is scarcely a hatch without some infected chicks. Don't let these few infect your entire flock. Prevent it. Give Walko in all drinking water for the first two weeks and you won't lose one chick where you lost hundreds before. These letters prove it:

Never Lost a Single Chick

Mrs. L. I. Tam, Burnetts Creek, Ind., writes: "I have lost my share of chicks from White Diarrhea. Finally I sent for two packages of Walko. I raised over 500 chicks and I never lost a single chick from White Diarrhea. Walko not only prevents White Diarrhea, but it gives the chicks strength and vigor; they develop quicker and feather earlier."

Never Lost One After First Dose

Mrs. C. M. Bradshaw writes: "I used to lose a great many chicks from White Diarrhea, tried many remedies and was about discouraged. As a last resort I sent to the Walker Remedy Co., Dept. 438, Waterloo, Iowa, for their Walko White Diarrhea Remedy. I used two 50c packages, raised 300 White Wyandottes and never lost one or had one sick after giving the medicine and my chickens are larger and healthier than ever before. I have found this company thoroughly reliable and always get the remedy by return mail."—Mrs. C. M. Bradshaw, Beaconsfield, Iowa.

You Run No Risk

We will send WALKO White Diarrhea Remedy entirely at our risk—postage prepaid—so you can see for yourself what a wonder-working remedy it is for White Diarrhea in baby chicks. So you can prove—as thousands have proven—that it will stop your losses and double, treble, even quadruple your profits. Send 50c for package of WALKO (or \$1.00 for extra large box)—give it in all drinking water and watch results. You'll find you won't lose one chick where you lost dozens before. It's a positive fact. You run no risk. We guarantee to refund your money promptly if you don't find it the greatest little chick saver you ever used. The Leavitt & Johnson National Bank, the oldest and strongest bank in Waterloo, Iowa, stands back of our guarantee.

WALKER REMEDY CO., Dept. 437,
Waterloo, Iowa.

Send me the () 50c regular size (or () \$1 economical large size) package of Walko White Diarrhea Remedy to try at your risk. Send it on your positive guarantee to promptly refund my money if not satisfied in every way. I am enclosing 50c (or \$1.00). (P. O. money order, check or currency acceptable.)

Why We Stuck to Brown Leghorns

FOR several years when we first commenced housekeeping, 50 years ago, we had a flock of mongrel, or mixed fowls—black, white, checkered, large, small, smooth legged and winged legs.

We purchased a few here, more there; dressed those which were in condition to sell—kept those not fit for market; and they were the most mixed lot of fowls that I ever saw. Not only mixed in color, size, etc., but in disposition.

There were two tiny speckled hens that it was almost worth one's life to catch. They would fly straight for one's face, day or night, and to tell the truth we were all afraid of them. We resolved if any one of us could by hook or crook get hold of them, that the axe would tell the rest. And after several weeks of that exercise, we finally landed them. I know not what breed they were, but they "ruled the roost."

A Mixed Flock and a Mixed Product

But this mixed flock were great layers and I do not think we ever had as many eggs from the number of hens kept. But as the fowls were mixed, so were the eggs—all sizes and shades. At that time shipping eggs was not practiced to any great extent either by the individual farmer or the dealers, that is some 40 or 45 years ago.

Then shipping eggs began to be popular and dealers roamed the country for fresh eggs. After a little "white" eggs commanded the highest prices. Now it costs no more to produce "white eggs" than it does dark or tinted ones; and if one is producing eggs to sell—produce those that will bring the most money, of course.

Then we raised a flock of purebred White Leghorns. These were fine layers and one hundred of them, all so alike that I could not distinguish one from the other, made a pretty sight.

The Drawback with White Chickens

We usually kept around 100 layers, sometimes 120 and intended raising 100 chickens each year. Then came the drawbacks. It did seem as though everything that ought not to, saw those pretty white chickens and took their toll. Crows would fly down within four or five feet from our kitchen door and with the said door wide open and workers all about, and pick up the chickens and fly off with them. Sometimes by screaming at them, they would drop the chick and sometimes not.

We put up scare-crows—strung twine all over the hen yard and dooryard—starting it from the chamber window so teams could go underneath the net work. That helped some but still the crows had a lot of them each year and we thought something must be done.

Where Protective Coloration Worked

So we purchased a quantity of eggs of purebred Brown Leghorns and for many years we raised those. The color of the chicks were not so conspicuous, consequently we did not lose many. One year I remember I had 84 hatch and never lost a one. But usually "some" were missing.

We contended that the pretty Brown Leghorns were fully as good layers and their eggs as white and similar in size as were those of the White Leghorns and just as many of them.

Then too, the hawks did not pick up the brown ones as they had the white ones and we did not suffer as much loss with the hens. They seemed more tough to raise and the brown hens made "good" mothers, hatching and caring for their broods.

I have read so many complaints about the Leghorns leaving their nests while sitting and I am led to believe that lice and mites cause the trouble. We always guarded against that. We did not have either lice or mites in the hen houses, but sometimes in the hot weather, hens

(Continued on page 477)

Scene on a spring growing range—these birds get yeast in their wet mash each day

A ton of broilers in ten weeks

Amazing results are secured by adding Dry Yeast to the regular feed

BROILERS weighing 1½ pounds each at 10 weeks—that is the result secured by adding Fleischmann's Pure Dry Yeast to the growing ration. And out of 1491 baby chicks put into brooders at the start of the feeding period, 1368 were carried through to marketing age. *This was a mortality of only 8.24 per cent—less than half the usual loss experienced poultrymen have come to expect!* This excellent showing was made in severe mid-winter weather!

On the basis of mortality, Fleischmann's Pure Dry Yeast was directly responsible for saving more than 100 chicks and for helping carry them to market age. At the price received—55 cents a pound, or about 83 cents each—Dry Yeast feeding gave an extra profit of nearly \$100 over and above the cost of the Yeast!

These results are amazing—but the explanation is simple.

As soon as Dry Yeast, dissolved in water or milk, is added to the feed, it begins at once to ferment. (When fed in a dry mash, Yeast acts on the feed as soon as it is eaten.) It acts upon the feed in a way similar to digestion itself, breaking down the food elements of the mash (which must be broken down before they can be completely digested) and making them ready for easy, rapid absorption.

Three definite benefits

This better assimilation keeps the chicks in fine growing condition. Yeast makes chicks stronger and keeps them so. And its mild laxative effect prevents the digestive disorders which sometimes ruin whole broods.

Fleischmann's Pure Dry Yeast comes in 1 lb. and 2½ lb. packages, 25 lb. kegs, and 100 lb. barrels. Your dealer should be able to supply you. If not, order direct from us, enclosing check, cash or money order with the coupon below. And ask for a copy of our new bulletin—it's free. The Fleischmann Company, 69 Bank Street, New York City.

Reviewing the Latest Eastern Markets

MILK PRICES

THE Dairymen's League Cooperative Association announces the following prices that dealers will pay the League during the last half of May for milk testing 3% in the basic zone of 201 to 210 miles of New York City. It is understood of course that the prices mentioned below are not received by the farmer but go into the pool. They are prices dealers pay the League.

These are April prices:

Class 1 Fluid Milk	\$2.80
Class 2A Fluid Cream	1.90
Class 2B Ice Cream	2.05
Class 2C Soft Cheese	2.00
Class 3A Evaporated whole milk	
Cond. whole milk	1.80
Class 3B Whole milk powder	1.80
Class 3C Hard cheese other than	
American	1.70

Class 4 prices will be based on butter and American cheese quotations on the New York market.

The following are April prices, but it is believed the May prices will not change appreciably.

Sheffield Producers

The Sheffield Farms Producers announces the following prices for 3% milk in the 201 to 210-mile zone:

Class 1	\$2.80
Class 2	2.00
Class 3	1.65

Class 4 prices determined by butter and cheese quotations on the New York market.

Non Pool Cooperative

The Non-Pooling Dairymen's Cooperative announces the following prices for 3% milk in the 201 to 210-mile zone:

Class 1	\$2.70
Class 2	2.00
Class 3A	1.80
Class 3B	1.75

Interstate Producers

The Interstate Milk Producers Association (Philadelphia Price Plan), announce the receiving station prices or the price to the farmer in the 201 to 210-mile zone from Philadelphia for 3% milk is \$2.19. In the 101 to 110 mile-zone, the price is \$2.29.

BUTTER RECOVERS STRENGTH

The butter market has come back to 47c for creamery butter scoring higher than extra, 93 score, while 92 score butter (creamery extras) is worth 46c. This upward turn in price was more or less unexpected. It came on the 17th. The market had been rather unsettled and easy, but with the development of improved demand and with a strong statistical condition in the market, the situation was good enough for operators to take on stocks with the result that the market started to gain. By the 22nd the price had reached 47c on the fanciest marks, a gain of 2 cents in less than a week. Receipts have been lighter than were anticipated and the indications are from advices received that they will continue to be so. This spell of cold weather has slowed up the make. With light receipts and the heavy consumptive demand, which has pulled very heavily on storage stocks below those of last year at the same time it is quite natural that we would see an improved market. Storage stocks have been reduced to a point where many are absolutely forced to buy fresh goods. A lot of the buying is for out of town business. On the 21st the demand absorbed fresh goods as fast as they were received. Many houses did not have enough stock to spare to the outside trade. Therefore at the moment the butter market has turned decidedly in the seller's favor. Marks, extras are worth anywhere from 37c for the lower grades to 45½ for 91 score, indicating that the lower grades are improving with the fancy marks.

FRESH CHEESE LOWER

The make of fresh cheese in northern New York has been increasing to the extent that prices have begun to ease slightly. Our last report stated that 24c was the top price on fancy state fresh flats whereas this week the fanciest marks will not bring more than 23c and a comparatively small amount of business is being done at that figure. The receipts of fresh state flats are increasing gradually and there seems to be a disposition to accept lower prices, thereby extending the outlets. Average run fresh goods are worth from 20½ to 21½c.

Whole cheese maintains its firm position. As a matter of fact most of the stock in storage is in the grinders' hands. There seems to be a shortage of white state flats which are bringing on the inside 26½c. It is only in exceptional cases that fancy colored held flats will bring this money.

EGGS ABOUT THE SAME

There is little or no change in the egg market from what we reported last week. There are very few fancy nearbys coming in good enough to warrant top prices. These are quoted as high as 37 to 38c, but this is very extreme. The bulk of the nearbys are selling at prices ranging from 32 to 34c. A few that are a little better than this are bringing 35c. Nearby eggs are decidedly off as far as quality is concerned and where they are real fancy the price is too high for storage. Nearby gathered whites are worth anywhere from 30 to 34c.

In view of low prices in the New York market, it is up to the producer to study the comparative markets very closely. If a man can get 30c in the country for his eggs as they come from the nest, he had better sit down and consider where he gets off if he ships to New York. By the time he takes out the small and poorly shaped eggs and then candles them for blood stops, there is not a great chance of coming out much ahead when he considers the price he gets for his culls. It is something to watch closely. If a man has got real fancy stock in quantity, then he is justified in shipping. But the market is not strong.

For the small man now is the time to put eggs down in water glass so that next winter he can sell his fresh eggs at more advantageous prices.

LIVE POULTRY MARKET GOOD

The live poultry market is holding up fairly well. Opinions in the market a week ago indicated that fancy fowls would be selling around 32c. However, due to improved conditions fancy fowls are selling for 34c while Leghorns are worth from 32 to 33c. The market on broilers is also very good. Receipts have been light and from all indications the market was going to hold its own for a while. Spring broilers are bringing anywhere from 45 to 65c, depending on the breed and color, fancy colored stock bringing the top of the market.

On May 30 we will celebrate Decoration Day and there is usually a very good demand for fancy broilers at that time. Poultrymen who have large flocks will find that it may pay them to point themselves for that market, when large broilers particularly are most in demand. The market days will be May 26 and 27. By the 28th we may find that prices will be easing off. It is always well to get in early, bearing in mind also that quality products will bring the highest prices.

OLD POTATOES TURN WEAKER

The old potato market has taken a downward turn. States are now selling anywhere from \$1.35 to \$1.65 in 150-pound sacks delivered in New York City. Maines put up in the same size sack are selling for \$1.50 to \$1.90. Long Islands are also moving slowly although very few are being shipped in. The trade has been very dull both at the piers and at 33rd street and values at all places are barely steady. The main reason for the weakening market is that Floridas have again turned downward and the fanciest marks from that state are selling at \$6.75, though most business is being done at \$6.50. With new potatoes selling at these prices both in the regular vegetable stores as well as chain stores, old stocks have very little chance.

Continued reports from the country indicate that the potato acreage is going to be lighter in the East this year, reductions in some sections being as heavy as 15 per cent. This is to be discounted by the fact that some will finally put in more than they originally anticipated.

MAY WHEAT UP SLIGHTLY

The wheat market has been very flighty during the past week. Prices have been up and down over a wide range. It is mainly a speculative market and reports one way or the other are sending prices up or down in sharp curves. On April 21st, May wheat closed at \$1.50, 5 cents lower than it was the week previous. Kansas has been experiencing abnormally high temperatures and this may lead to some crop complaints, which naturally has a decided influence on the market. The

southwest and northwest wheat sections have had rain which has eased the market in those sections.

New York Cash Prices

Following are the prices of cash grains, F O B New York City: WHEAT, No. 1 red, \$1.84 to \$1.86; No. 2 hard winter, \$1.65; No. 2 mixed durum, \$1.63. CORN, No. 2 yellow, \$1.26 to \$1.30. OATS, fancy white clipped 60½ to 61½c; ordinary white clipped, 57 to 59c; No. 2, 54c. RYE, No. 2 western \$1.21. BUCKWHEAT, sound milling, \$2.40 per hundred pounds.

Local Buffalo Feed Prices

Since Buffalo is an important milling center for wheat feeds and linseed oil meals, we are quoting feed prices F O B Buffalo as of April 18, compiled by the New York State Department of Farms and Markets: Ground oats \$37; spring wheat bran \$31; hard wheat bran \$27.50; standard middlings \$36; soft wheat middlings \$34; flour middlings \$42; white hominy \$41.50; yellow hominy \$41.50; corn meal, \$45; gluten feed \$36.75; 36% cotton seed meal \$40.50; 41% cotton seed meal, \$43.50; 43% cotton seed meal \$45; 34% old process linseed oil meal \$39.

HAY MARKET STILL QUIET

With abundant receipts of low grade hay the market still rules weak. Barges bringing hay from the Hudson Valley are unloading a lot of No. 3 and sample hay and with only a quiet market to play to, it is natural that prices have not improved. No. 1 hay is still bringing \$25 but there is only a small amount of that on hand. Where arrivals grade No. 2 they are bringing \$22 to \$24. Lower grades are selling anywhere from \$10 to \$20 per ton.

What You Pay For

(Continued from page 469)

teet the nation's food supply but also to insure the well being of the surplus boys and girls that the farms produce for the cities.

If the farmer is to receive more money then the consumer must pay more. A large percentage increase in the farmer's price need result in only a small percentage increase in the consumer's price. To go back to potatoes again. If Henry should receive 30 cents more per bushel he would receive a 50 per cent increase in price. This 30 cents added to the price of potatoes in the cities is only 10 per cent on the price of \$3.00 per bushel charged by the grocer.

Andrew is not paying for food as the farmer thinks of food. Andrew is paying for services in bringing that food to his table in the particular form and at the particular time that he wants it.

There is no law to prevent Henry from moving to the city and obtaining employment in the factory beside Andrew or as a railroad employee or other workman handling the food which the farmer produces. Henrys by the thousands are doing this. Thousands more should do it until the demand for food catches up with the available supply.

Not until this migration has taken place sufficiently will the farmer begin to receive a price for his food that is on a level with other products. Then Andrew will still pay a small amount for farm food and a large amount for the services of union labor but that small amount for farm food will have increased just a little so that Henry will be receiving a fair return for his labor and capital.

Among the Farmers

League Announces March Pool Price

THE Dairymen's League Cooperative Association announced a net pool price for March of \$2.26 per hundred pounds. This is the base price for 3% milk in the 201-210 mile zone. Prices received by individual farmers will of course vary according to the zone in which they are located.

This is the best pool price for March ever paid by the pooling association, and the League states that with the exception of the three war years, 1918, 1919 and 1920, it is the highest price ever received by dairymen for their March milk. There were no deductions for their certificates of indebtedness this month, and the deductions for expenses were reduced one cent a hundred pounds from the February deduction. Improvement in market conditions for nearly all dairy products is beginning to have its effect on prices received by dairymen for their milk with the result that there is much more optimistic feeling among eastern dairymen than has prevailed before in a long time.

Questions You Will Have To Answer to Get a Junior Operator's License

THE New York State Bureau of Motor Vehicles is making arrangements to issue Junior Operators' licenses in accordance with a law recently signed by Governor Smith. It is believed that application blanks will be ready for the public during the week ending May 2. The new Statute provides that such motor vehicle licenses shall be issued solely by the Commissioner of Motor Vehicles, and Commissioner Charles A. Harnett, in accordance with the provisions of the new law, has prescribed the limitations under which licenses will be issued to minors, between 16 and 18, in rural communities only.

Applications for Junior Operators licenses require answers to the following:

- "Is the community where you reside served by bus, trolley or rail?"
- "Between what hours will vehicle be operated by you?"
- "Between what localities?"
- "Over what roads will it be necessary for you to operate?"
- "If operated in pursuit of Education give (a) name and location of School, and (b) the distance from your home or place of abode."
- "If operated to assist parent or guardian give location of creamery or market."
- "Give reasons why you believe a license is necessary."
- "If motor vehicle is to be operated in connection with duties assigned by parent or guardian state fully the nature of such duties."

The Junior Operators' license will expire on June 30, 1925. It will give the name, address and a general description of the person licensed, and will include this certification:

"This is to certify that the person named and described on the reverse side has been licensed to operate a motor vehicle for the year ending June 30, 1925, in the morning between the hours of and in the afternoon between the hours of and over the following highways for the purpose of"

The license is not transferable and the persons licensed are cautioned to report any accident to the Commissioner.

Persons who intend to fit themselves to drive motor vehicles should file notices of such intention with the county clerk of the county in which their residence is located and not with the Commissioner of Motor Vehicles. Commissioner Charles A. Harnett of the Bureau of Motor Vehicles has received a large number of these misdirected notices.

I. E. Nathan Resigns Secretaryship of Milk Conference Board

I. ELKIN NATHANS, Secretary of the New York Milk Conference Board, Inc., 110 East 42nd Street, New York City, since the organization of the Board in 1917, has resigned to become affiliated with the Brown & Bailey Condensed Milk Company, Brooklyn, N. Y., distributors of

milk, cream and condensed milk, on May 1st.

Mr. Nathans' connection with the Milk Conference Board has brought him in close touch with the milk distributing industry in New York and up-state cities. He was formerly with the Pennsylvania Railroad, his services with that line covering a period of twenty-one years, of which the last five were as Milk Freight Agent. In that capacity he originated the long-haul milk traffic on the Pennsylvania and inaugurated the first all-rail milk movement to Brooklyn via the Pennsylvania's Hudson River tunnels.

The company with which Mr. Nathan will become associated is an old established and well known milk organization headed by Theodore G. Caldwell, one of New York City's most experienced distributors.

Mr. Nathans' successor as Secretary of the New York Milk Conference Board has not yet been selected.

Eastern States Milk Producers Hold Annual Meeting

AT the Annual meeting of the Eastern States Milk Producers, Inc., which was held on April 16, Morgan B. Garlock of Utica, N. Y., was reelected president. The other officers elected are as follows: Charles M. Bull, Poughkeepsie, N. Y., 1st Vice President; B. O. Wales of Middlebury, Vt., 2nd Vice President; Roscoe Sargent of Sandy Creek, N. Y., Secretary and Benjamin G. Van Alstine, of Canajoharie, N. Y., Treasurer.

New York County Notes

Chautauqua County—Agricultural conditions in this section are getting to be serious. About one half of the farm houses are vacant and half the farmers who are living on their farms are working in nearby shops and factories. Many are selling their dairies. During the last week in March several dairies were sold near Dewittville to be resold to parties in other towns or to be shipped away. There are hundreds of tons of hay for sale in this section with no buyers.—P. S. S.

Ontario County—We have been having some excellent spring weather. Some farmers started plowing during the last week in March on high ground. Help is scarce and high, and hard to get at any price.—H. D. S.

Ontario County—We had some very fine weather during the month of March. At times it seemed more like summer. On the 26th the mercury went to 70 degrees in the shade and in the neighborhood of 100 out in the sun. We have paid for it since with freezes, high winds and snow flurries. Very little plowing was done up to the first of April. Many auctions have been held as there are lots of people giving up farming. Prices of potatoes, shortage of help, high taxes, along with the salary grabs at Washington have discouraged farmers. It seems that the one who pays the bill should have something to say in regard to raising of salaries.—E. T. B.

Note from Long Island

Potato growers are in the midst of their planting. Some have the job about completed and are getting land ready for other crops. The old potato deal is about over. There are few scattered sales being made but once the heavy planting season begins there is too much to do to bother with a few tail end sales. The poultry business promises to have a heavy boom on Long Island this year. A number of new farms have started, especially along the more heavily travelled highways to cater to the automobile trade from New York. The market garden business is gradually moving farther east. The farms around Hollis and Queens have all been bought up for real estate development. In fact thousands of homes are now standing where only a few years ago, potatoes, sweet corn and small vegetables of the truck garden type, were growing.

Feed You Can Trust

You can trust Corn Gluten Feed as a faithful friend. It will never go back on you. That's the kind of feed you want.

This pure corn feed has won big records in the feed-lot—in the milk can—and in poultry yards. It is a valuable ingredient in any ration.

All protein is not the same, but you can always be sure of getting highly digestible protein of the right kind in Corn Gluten Feed. It's made entirely from corn.

You would have to feed about 2½ tons of corn meal to get the same amount of protein contained in one ton of Corn Gluten Feed.

Cut down your feed cost. Increase your profit. Use Corn Gluten Feed in your home mixed rations for all livestock and poultry.

If you are feeding a ready-mixed feed be sure to buy from a manufacturer who makes a feed with Corn Gluten Feed in it.

Mail the coupon and we will send you an interesting booklet entitled "Are You Buying Tags or Feed?"

A Successful Farmer Tells You How to Succeed

DAVID STONE KELSEY is a successful farmer who has spent a life time studying every day farm problems. He knows the answers to a thousand live questions about farming and he puts them all in a book that costs no more than the price of a new hoe. There is nothing else like it in print one man says:

"It would have been worth at least a thousand dollars to me through the last three years."

Here is a live, progressive book on real living, rural issues. You won't find it too long or too scientifically worded. Farming as a business is discussed, together with a full study of the leaks and losses which occur where petty details are not fully grasped. And it will cost you only \$1.50! Send for your copy today!

KELSEY'S RURAL GUIDE

A 300 Page Book. Price \$1.50 at all Booksellers or of
Boston LITTLE, BROWN & COMPANY Publishers

POST YOUR FARM---KEEP TRESPASSERS OFF

WE have had a new supply of trespass signs made up. This time they are of extra heavy linen on which the lettering is printed directly. There is no card facing to be water-soaked by the rain and blown away by the wind. We have had these new signs made up of extra heavy material because severe storms will tear and otherwise make useless a lighter constructed material. We unreservedly advise farmers to post their land and the notices we have prepared comply in all respects with the law. The price to subscribers is 95 cents a dozen, the same rate applying to larger quantities.

AMERICAN AGRICULTURIST

Fighting Worms in Sheep

Will Have Less Trouble With Vigorous Stock

A DISCUSSION

By MARK J. SMITH

of the control of stomach worms in sheep is in reality a discussion of methods of management that will tend to maintain flock health. Healthy sheep are of course the profitable ones. It is the nature of sheep to lack the spirit of fight and resistance, but on the other hand, most well-managed sheep are healthy and taken as a class of livestock are exceptionally free from fatal diseases.

used in rotation employed by some of our breeders of purebred mutton sheep.

Change Pasture Often

Then in between these two types we have the vast army of practical farm flock owners who keep their ewes on permanent pasture the greater part of the grazing season but who see to it that the lambs have fresh feed after being weaned in the form of stubble fields, meadows or a patch of rape. These men also see to it that the pasture is changed as often as possible—every two weeks or better every ten days during the summer.

In this connection it is interesting to note a statement made by A. J. Knollin, a man who for many years has been identified with the sheep industry in a large way. He said: "Farmers of the future who will handle sheep successfully will cultivate the lands upon which their sheep pasture and follow a regular rotation, by this soiling process not only can sheep be kept thrifty but the land itself be enriched."

Why Most Treatments Fail

My first experience in treating sheep for stomach worms was about twelve years ago when I helped to drench a barn full of sheep with the old gasoline treatment. The mixture given contained 5 ounces of cow's milk, one tablespoonful of gasoline (or a little more in case of a mature sheep) and one tablespoonful of raw linseed oil. This treatment was given on three successive mornings. One great difficulty encountered in successfully ridding sheep of stomach worms arises from the fact that the worms are located in the fourth stomach and therefore all materials given strength when they reach the location of are apt to be somewhat weakened in the trouble.

The U. S. Government maintains a farm at Vienna, Virginia, which a few years ago when I visited it, was devoted entirely to the study of internal parasites in sheep. When asked by the AMERICAN AGRICULTURIST to discuss this subject I directed a letter to the Bureau of Animal Industry at Washington asking for the latest developments. They have found that routine treatments with copper sulphate, appears to be the best control measure for use in the case of sheep kept under the usual farm conditions.

Copper Sulphate as a Remedy

B. H. Ransom, chief of the Zoological Division of the Bureau of Animal Industry is credited with having done more than any other person in finding out facts regarding the stomach worm, its life, history and so on. In a letter, he says: "While we believe that pasture rotation should be practiced as far as possible, we have not found it feasible to control stomach worms in sheep under ordinary farm conditions by pasture rotation alone, and believe that routine treatments afford a distinctly more satisfactory solution for the problem of stomach worm control."

A one per cent solution of copper sulphate is used. This is made by dissolving one-fourth pound of copper sulphate (using care to use only clear blue crystals) in 1 pint of boiling water, and adding cold water to make a total of 2 gallons. Metal receptacles should not be used for the solution. Earthenware, porcelain or enamelware are used. The Government bulletin states that a dose that has been found satisfactory is about 3 fluid ounces for yearlings and older sheep, and half as much for lambs 3 months old or older. This may be given with a dose syringe or with a tube and funnel.

How to Drench Sheep

In drenching a sheep, it is best to back them up in a corner or against a wall and leave the sheep standing—the head should not be held too high but rather in a normal swallowing position—in this way there is less danger of getting some of the material down the windpipe.

Quoting from Farmer's Bulletin No. 1330 of the U. S. Department of Agriculture: "It has been found highly beneficial to dose sheep with copper sulphate solution once every three or four weeks throughout the year. Sheep thus treated showing no losses from stomach worms and making decided gains in wool and mutton over sheep kept under the same con-

(Continued on page 479)

Prevention is the important thing. Many

MARK J. SMITH

of the sheep that are being dosed for stomach worms are actually sheep with poor constitutions and low vitality,—animals that are hardly worth bothering with. A few years ago I helped to administer the blue vitriol treatment to a flock of dealer's culls owned by a man in eastern New York. The ewes were an unpromising lot either with or without stomach worms and I could not see how they could ever do the owner any good. Within a short time, however, I was pleased to receive a post card, on which there was a verse that in substance said: "My troubles now,—they are all over, for I have found my luck in a four-leaf clover." Added to this verse was the postscript "for I have shipped your old patients to Jersey City."

The Life History of the Worm

In order to understand the methods now used to combat stomach worms, we should know something with regard to the life history of *Haemonchus contortus*, or stomach worms of sheep. The worms of sheep are thread-like and about three quarters of an inch in length, are found in the great numbers in the fourth stomach of the sheep where the female lays thousands of eggs. It is believed that these eggs do not hatch out within the sheep but pass on out through the intestine with the feces. The period of time necessary for the hatching out of these worms, the investigators tell us, varies with the temperature. If the weather is warm, only a few hours are required and a much longer time if dry and cold. Dryness and freezing are both unfavorable for the development of the new worm-moisture and warmth being most favorable. When they arrive at the most infectious stage they have a great resistance to long periods of extreme heat or cold for they develop a coat or sheathlike envelope which surrounds them. When there is sufficient moisture from rain or dew the sheathed larvae is active and crawls up the blades of grass or other vegetation. When it is dry they are inactive. In this manner the young worms get into a position where they are swallowed with the grass by their host the sheep—arriving in the fourth stomach they develop and complete their life cycle.

Develop Fastest in Warm Wet Weather

Obviously, from the above, we would expect more stomach worm trouble during a wet season than during a dry one and we know from experience that this is the case. Well-fed mature sheep are fairly resistant to stomach worm infection. The more serious trouble is with the lambs especially during the hottest summer months after the lambs are weaned. It is then they need fresh feed. Fortunately New York State is far enough north so that stomach worm troubles here with sheep are not so serious as in the case in some other states. Most middle-aged men can remember when stomach worm troubles in sheep were hardly known.

A most important thing is to keep the lamb as free from worms as possible during the first year of their lives—after that, if well fed they are better able to withstand them. As a measure of prevention we have the extensive ranges of the west where one sheep has so much range that the infection is apt to die out before another sheep comes along. The other extreme is the method of seeded forage crops

Why We Stuck To Brown Leghorns

(Continued from page 473)

will develop them when sitting unless precaution is taken.

When our hens wanted to set, we let them set on the nests where they were for 3 or 4 days, until we felt sure they meant business, then we prepared nests in clean (scalded and dried) boxes by themselves away from the henhouses with the nests made of fine hay. They do not scratch that around so badly and then under the hay we had the lox bottoms well covered with freshly slaked lime and over the hay sprinkled a full handful of the flour of sulphur. That does not injure the eggs, but will prevent lice.

Not Much Trouble With Stolen Nests

Mrs. Northrup spoke about her Brown Leghorns, laying promiscuously everywhere and anywhere. Our's never troubled us to any extent, only in early spring, after being confined all winter and when given their liberty would forget to go back into the houses to lay, but scratch and lay right along, wherever they happened to be. But after a week or two, would go back in the houses to find their nests again—few ever making their nests out of doors.

We liked the brown hens and thought them more profitable than their white sisters. There is surely good money in hens and eggs when hens can run at large. But it means a lot of arduous labor to keep henhouses clean and free from mites and lice and if they are not kept thus, no hen can lay very much. They surely cannot lay and be subjected to bloodsucking and irritating marauders. Keep the hens free from lice and mites, feed and care for them well, keep their quarters clean, give them plenty of clean pure water and all the milk they will consume and the egg basket never will be empty.—Clarice Raymond, New York.

Get the Broilers Off Early

REMEMBER that the price of broilers is higher in the early part of the season. Therefore get the cockerels on the market as soon as possible, both to save on feed and to take advantage of the better price. Separate them from the pullets, keep them confined, feed them a fattening ration, and sell them when they weigh from a pound to a pound and a half. Some chicken men plan to have the cockerels pay all costs of growing the pullets up to the time the broilers are sold.

How I Fatten Leghorn Cockerels

DISPOSING of the young Leghorn cockerels is often a problem to those who wish to raise poultry especially for the egg market. At the age when the young cockerels from the larger breeds are bringing fancy prices as fry, the young Leghorn is running his head off in search of food, and is too lean and lank to make delectable eating. Then the owner often begins to wonder what on earth he is good for and what would be the best thing to do with him. Let me tell you of a profitable way I have found of handling these young Leghorns.

Let them run and eat until they would be about as large, if they were fat, as a Plymouth Rock fry. Meanwhile make ready some crates. First nail some boards together so as to make two end pieces 1 foot square. Then take boards either 6, 8 or 10 feet long, according to

FAIR VIEW POULTRY FARM
Gettysburg, Pa.

the size of the place where you will keep the crates, and nail them to the end pieces, thus making the back of the crate. Mark off the back boards into spaces of 1 foot each and nail a partition on each mark, the same size as the end pieces.

Make the front of lath nailed far enough apart so that a chicken can easily thrust his head through. Along the bottom of the front, place a trough divided off in such a way that in front of each compartment there will be a place for food and a place for drink.

The bottom of the crate should also be made of lath nailed about an inch apart so that the crate need not become filthy. On the top should be separate doors for each compartment and they can be fastened on with leather hinges and a piece of leather caught over a nail may be used to fasten them shut.

Now place the crate, or crates into a small shed or any handy building. Set them on a couple of carpenter horses, or brackets or any way so that the bottom is left free for the droppings to fall through.

When the cockerels are large enough, I place one in each compartment and keep a supply of a good fattening ration in the trough all the time. In this way, the young birds are compelled to be perfectly quiet while eating the most fattening food and so cannot run off the fat as fast as it is put on.

In about a week or ten days they will be ready for market and will make the most delicious fry you ever ate, as the meat, when fattened in this way, is much finer grained than that of the larger breeds, also the birds are much fatter and finer than the larger breeds taken directly off the range.

If you have a town near by where you can sell directly to the consumer you should be able to find plenty of customers at good prices because any one who buys them once will buy again.—Mrs. M. Wirth.

Editor's Note: Turn to the Market page and see what broilers are bringing and you will realize that it pays to fatten the broilers early.

Parcel Post Rates on Baby Chicks Increased

THE new postal law which went into effect on April 15, carried with it a provision that parcels entered as fourth class material shall have a payment of 25 cents for special handling charges, receiving the same expeditious handling, transportation and delivery that is accorded first class matter. This 25-cent special handling charge is required on all parcels containing day-old chicks.

In view of the fact that this means a heavy increase in expenses to poultrymen, Harry R. Lewis, President of the National Poultry Council, G. R. Spitzer, President of the International Baby Chick Association and "Vic" Aubry, Managing Director of the Association, together with a number of operators of hatcheries, went to Washington, before the new postal rate went into effect, and held a conference with post office officials. The baby chick men were not opposed to the increase but they did object to its going into effect in the middle of their shipping season.

In spite of many good arguments that the hatchery men placed before the officials, nevertheless the ruling was not changed. The post office officials pointed out that there are literally hundreds of other industries appealing for a delay in the enforcement of new rates and if one is allowed through all the rest would expect the same treatment.

1887 CHIX 1925
BABY

From Hogan tested high flock average parent stock guaranteed in every way.

Anything Less Than the Best is a Poor Investment.

Slow growth and low egg production will soon wipe out ten times the small amount it is possible to save on the purchase price of day-old chix.

Quality breeding is of VAST IMPORTANCE to you. We have that quality and guarantee it.

Fighting Worms In Sheep

(Continued from 476)

ditions but not treated. This appears to be the best control measure for use in the case of sheep kept under the usual farm conditions."

Preventative measures are highly important and many old sheepmen who are good feeders and not over stocked with sheep will belittle the importance of so much fussing. They will say give them a few more oats. It is a fact that a man on one side of the road will be an expert on drenching and various remedies for the ills that beset sheep and investigation will show that his sheep do really have all the symptoms. At the same time a man living on the other side of the road who is little interested in remedies will have an apparently healthy flock of sheep.

Among the preventive measure in addition to feeding the flock well, changing pastures, the growth of forage crops and so on, there are numerous materials fed with the salt such as Tobacco Dust, using 2 parts salt to 1 part tobacco dust. Turpentine is sometimes put in the salt. Harley Sherman says that a few hemlock boughs fed every day in winter will kill the worms. He says also to take equal parts of salt, charcoal and sulphur, mix it on the barn floor, place in boxes and keep before the sheep winter and summer. This winter I mixed up some salt, charcoal and wood ashes and placed it in a box where the sheep could get it.

There are numerous commercial remedies that are very helpful.

A Lamb That "Came Back"

We must not overlook the fact that a vigorous sheep has great resistance to withstand the ravages of stomach worms. A ewe lamb on a stomach worm infested farm was so weakened and run down that she was considered worthless and was given to the boys on the adjoining farm where there had been no sheep for some time. On the fresh pasture the lamb picked up and gained so rapidly that she got with lamb that fall and had a good lamb as a yearling.

Hill pastures are considered less liable to stomach worm infestation than bottom land pastures. As time goes on there will no doubt be more and more interest taken in methods to prevent and rid sheep of stomach worms because the unthrifty sheep even if they do not die are unprofitable.

The Trouble Maker—By E. R. Eastman

"JIMMY," he said, "nothing that I can do would make any start on the debt I owe you for last night, so don't you believe an old man when I tell you that for years I've been thinkin' about this purbred business and sort of hopin' you and me might hit it off sometime. I know you are interested 'cause I've heard you talk about it lots of times. The only reason you didn't do it was you didn't have capital enough to start it. Now let's go to it. We'll get started, and then we'll get some of the best farmers in the neighborhood interested and in a few years, by jiminy crickets, we'll have them comin' from all over the county to buy stock from this here valley."

Once more there was a silence while Jim looked over across the valley and visualized again the old phase:

"The cattle on a thousand hills—"

Only this time, he saw those cattle in the pastures of his own native hills, and they were large and sleek, of straight back and clean limb, with well placed udders big as pails, and in their veins there flowed the blood of generations of breeding.

"It's a go, Johnny," he said simply. "I'll do it."

"Good boy," said the old man, getting briskly to his feet. "And now I must be moscyn' along—"

"Oh, by the way, Jim, Dorothy said to tell you that she was comin' up after a spell."

And with his beard lifted to a cheerful angle, the old man limped down the sidewalk, climbed into his flivver, and drove away.

CHAPTER XXXI

The rural church at North Speedtown had taken on a holiday appearance. In fact, not in the memory of the oldest inhabitants had it been decorated so gayly. Long streamers and brightly colored banners stretched from corner to corner. The old tarnished brass chandelier in the center was so bedecked and beribboned that it could hardly be recognized. Massed in front of the pulpit, around the chancel rail, and in every window were great bunches of flowers, the last wild flowers of the year supplemented by choice house plants from homes in the neighborhood.

Neighbors and country folks for miles around, all dressed in their Sunday best, filled the church to overflowing. While they waited, the women talked in low tones, but there was a joyful lift to their voices. Outside, on the church porch and in the yard, men stood in groups and visited, and laughed and joked with one another.

After a time, the hour for which they had waited approached and they drifted into the church and crowded into the little standing room which still remained.

They had not long to wait before a door that led to the Sunday School room opened and Mrs. Simmons, the organist, came in. It was her pride that for almost half a lifetime she had played the church organ and led the choir without missing a Sunday. Now she went directly to the organ, pulled some stops, and began to play.

Instead of the usual somber hymns, there now came from the old church organ, first softly and then swelling into great tones, a lilting, mysterious melody. It was Mendelssohn's "Wedding March."

As the old melody increased in intensity and filled the church with its volume, the whispering ceased and nothing could be heard in the church except the music, and the shifting of the people in their seats as they turned to look backwards toward the rear of the room with a happy, expectant smile upon their faces.

So, most of them, looking the wrong way, did not see Jim Taylor, accompanied by his friend, Dave Messenger, who entered from the Sunday School Room and walked the few feet across to the chancel rail.

When the people did finally notice Jim

and Dave, they gave them only momentary attention, for a bridegroom never counts in a wedding—and according to Ann Jenkins, not much afterwards!

The door to the little room at the rear of the church opened and a young girl, dressed in pale blue, stepped into the room and started slowly down the aisle. An instant only the eyes of the crowd rested on her, and then shifted to the other girl who was coming back of her—a tall girl, all in white, with a great long veil falling in soft folds to her feet.

The bride was Dorothy Ball. In one arm she carried a bouquet; the other hand grasped tightly the arm of her father. Both of them proudly and joyfully lifted their feet in time to the beat of the march.

Reaching the chancel rail, behind which stood the minister, they came face to face with Jim Taylor, the bridegroom, and his best man, Dave Messenger. John Ball released the hold of his daughter on his arm and stepped back a little, while Dorothy took her place by Jim's side.

It was very still. All that could be heard were the very soft tones of the organ. Then came the calm, cheerful voice of the minister.

What Happened in the Story Last Week

Jim Taylor was confined to his home following his experiences incident to his rescue of Johnny Ball from almost certain death when the latter's barn was struck by lightning and burned. It was with difficulty that Ann Jenkins kept anxious neighbors from visiting Jim. His condition was such that the doctor ordered absolute quiet. However, Bill Mead managed to get by Ann's guard. When he saw Jim, his manners and efforts at conversation showed clearly that he was thoroughly repentant for his actions and statements before and during Jim's trial. Old Johnny Ball also came to visit Jim. He, too, had seen a different on affairs when he looked upon Jim's bandages and thought of what the boy had gone through to get him. He then realized what cooperation meant. During his conversation with Jim he proposed a plan whereby he and Jim were to become partners, combining their farms, going into the pure bred cattle game and expanding their business in general. Jim felt that Ball was making the suggestion and offer out of gratitude for what he had done for him. Jim did not wish to hurt the old man's feelings by refusing, but under the circumstances felt there was no other way out, and said so. Jim's reply was rather unexpected and it was plain to see that "the old man was hurt."

"Dearly beloved, we are assembled here in the presence of God, to join this man and this woman in holy marriage; which is instituted of God, regulated by His commandments, blessed by our Lord Jesus Christ, and to be held in honour among all men. Let us therefore reverently remember that God has established and sanctified marriage, for the welfare and happiness of mankind. Our Saviour has declared that a man shall forsake his father and mother and cleave unto his wife. By His apostles, He has instructed those who enter into this relation to cherish a mutual esteem and love; to bear with each other's infirmities and weaknesses; to comfort each other in sickness, trouble, and sorrow; in honesty and industry to provide for each other, and for their household, in temporal things; to pray for and encourage each other in the things which pertain to God, and to live together as the heirs of the grace of life.

"Forasmuch as these two persons have come hither to be made one in this holy estate, if there be any here present who knows any just cause why they may not lawfully be joined in marriage, I require him now to make it known, or ever after to hold his peace."

The minister paused. Then he lifted his head, and all bowed their heads, while he asked the Guide of all human destinies to watch over this partnership which he was about to sanctify.

"James, wilt thou have this woman to be thy wife, and wilt thou pledge thy troth to her, in all love and honor, in all duty and service, in all faith and tenderness, to live with her, and cherish her, according to the ordinance of God, in the holy bond of marriage?"

Like many another man who has stood in the same place, Jim was nervous; but after a gulp or two, he managed to stut out:

"I will."

"Dorothy, wilt thou have this man to be thy husband, and wilt thou pledge thy troth to him, in all love and honor, in all duty and service, in all faith and tenderness, to live with him, and cherish him, according to the ordinance of God, in the holy bond of marriage?"

The answer was low, but everyone in the church heard the girl when she said: "I will."

Then the minister, looking directly at Ball, said:

"Who giveth this woman to be married to this man?"

The old man reached forward, took his daughter's hand and placed it in the hand of the minister, who then gave it to Jim.

To many of those in the audience who looked on at the simple ceremony, the high point was reached when John Ball gave his daughter to the trouble maker. But they had little time to think of this, for the service was still going forward.

"I, James, take thee, Dorothy, to be my wedded wife; and I do promise and covenant, before God and these witnesses, to be thy loving and faithful husband, in plenty and in want, in joy and in sorrow, in sickness and in health, as long as we

Great joy and great sorrow are closely akin. The high tides in the lives of their friends helped them to live again for a moment their own experiences, and led them to wish that all the ideals, the hopes and aspirations that filled the young hearts at the wedding rail might come true.

Joyous laughter and talk filled the church as the friends crowded forward to congratulate the bride and groom. Among the first of these was Caroline Hicks, and a little ahead of her in line was Ann Jenkins. Caroline waited her chance, and slipped ahead of two or three of the people in front of her to take her place directly behind the broad back of Mrs. Jenkins.

She put a skinny hand on the other woman's arm to attract her attention.

"Say, Ann," she said. "The bride looks pretty nice, don't she? How much do you s'pose that dress cost?"

Mrs. Jenkins did not hear the remark, or else she did not want to. Anyway, she made no reply, and Caroline repeated the last part of her question. Ann turned around surprisingly quick for such a large woman and faced Caroline with a belligerent eye.

"Caroline Hicks!" she said loud enough so that all those nearby could hear, "I don't know what it cost, and what's more, I don't care what it cost, and anyway, it ain't any of your bizness! All I know is that Dorothy's one of the prettiest and nicest girls that's been married in Speedtown in many a long day."

A very tall man, dressed in a swallow-tailed coat, carrying a high silk hat in his hand, turned his kindly smile upon Ann.

"That's right, Mrs. Jenkins," he said, "and the best of it is, the boy she is marrying is just as fine as his bride."

About this time this particular group was near enough to the front so that their remarks were overheard by Dave Messenger, standing in the receiving line not far from the bride and groom.

He reached out a hand and yanked the man with the swallow-tailed coat out of line to a position beside him, and then he addressed himself to the little group within sound of his drawling voice in general, and to Caroline Hicks in particular.

"Perty good testimony, Miss Hicks, perty good testimony. Mrs. Ann Jenkins says the bride is the nicest, and new County Judge Winslow says the groom is the finest. That means that we, the jury, will have to agree."

"Make the sheriff let go of me," appealed Winslow to Mrs. Jenkins. "I want to shake hands with the bride and groom."

Mrs. Jenkins reached out a heavy hand and snapped Winslow back into line. A moment later, he stood in front of Jim and Dorothy.

Jim grasped his hand.

"Judge Winslow," he said somewhat self-consciously, "let me introduce you to my wife."

It was the first time he had used the term.

With all the stately grace of the gentleman he was, the tall man bowed low over Dorothy's extended hand. Then he straightened and with a little whimsical smile and still holding her hand, he said to her:

"My dear, both you and I have acquired new responsibilities. I at the election the other day, and you during this great hour of your life. My wish is that I may be as worthy of my responsibility as I know you are going to be of yours. I do not need to wish that you and Jim will be happy, for I know that you are going to be."

The simple words, brought tears to the eyes of the girl. While she struggled to answer, he turned and bowed formally to Jim. Then with his silk hat carried in one hand, and with the other carried in characteristic manner behind his back, he passed down the aisle, nodding to friends

(Continued on opposite page)

here, and speaking a word there on his way, and out of the church.

Of all those who pressed forward with their best wishes and congratulations that day, only two stood out afterwards in Dorothy's confused memory of the hour. One was of Judge Winslow and his prophesy for her happiness, and the other was of Jim's best man and friend, Dave Messenger.

Dave waited until most of the others except the relatives had gone. Then he moved over to where Dorothy stood by her husband and took her hand. For a little space he stood looking at her. When he finally spoke, there was a little hitch in his drawling voice.

"For quite some spell, little girl," he said, "I've been lookin' for a place where a feller could settle down and take it easy. Been pretty nigh discouraged about ever findin' a peaceful country, but now," and for a moment he paused while the few left in the church suddenly became quiet, and the girl noted that he looked old and tired, "but now mebbe since we have a new county judge and since you have tamed the 'trouble maker', we can all settle down and get to be real nice, quiet, peaceable citizens."

* * * *

That evening, the evening of their wedding day, Jim and Dorothy sat for a little while on Jim's porch—only it was now Dorothy's too. The excitement was over, and their friends had gone. For the first time since they had said the words which had made them husband and wife, they were alone together.

The long spell of Indian summer was drawing to a close, and there was a little warning in the air of cold weather soon to come.

They sat together, with her hand in his, looking at the stars and dreaming the long, long dreams of the road which they would travel together. For some time neither spoke. Their happiness seemed to make words unnecessary.

Suddenly the girl dropped to her knees and put her arms around the man in the chair.

"Oh, my dear, my dear," she whispered, "I am so happy. Why can't all of our days be like this one?"

Jim bent over and put his arms around her and stood up, lifting her up with him.

"So near as it is in my power," he answered her, "to make the days come like this one for you, sweetheart, they shall be," and somehow that promise made to her alone in the darkness seemed more sacred to him and more binding than the marriage vows he had repeated after the minister that day.

Dorothy lifted her hand and put it on his cheek.

"Only one thing I could wish undone tonight, Jim, dear," she whispered. "I would give anything in the world almost if I had not failed in my faith in you this summer."

"In your heart you did not fail," he answered, and Dorothy was comforted for some way she knew that he was right. There had always been something that had held her back from final judgment.

"Anyway, my dear," she said solemnly, "this I know for the truth, that never as long as we both shall live will I fail to

A Riverside Tire put on my Buick one year ago, with Ward's Heavy Duty Tube, still has in it the same air—that's going some!
D. S. Robbins,
Las Cruces, N. Mex.

Riverside

Over-
size
Cord **TIRES** and
TUBES

Quality Equal to the Best
at Prices Very Much Lower

Forget that the price is low. Just consider *quality* alone. Compare service and mileage, and you will find that Riverside Tires give you all you get in any tire—give you just as long mileage, just as satisfactory service.

Riverside Tires are *not made to sell at a low price*. They are made to be as good as any tire. They cost just as much to make, just as much for fabric and rubber, the difference in price is a difference in *profit*. They cost less to sell.

Ward's is the Largest
Retailer of Tires
in the World

Quality equal to the best at a price much lower than even a fairly good tire costs has made Ward's the largest retailers of tires in all the world. We sell 5,000 to 6,000 tires per day. Hundreds

of thousands of people use nothing but Riversides. Why not you too? When a Riverside gives you all you can get in any tire, *why pay more?*

Greater Protection Against
Skidding

Big heavy blocks of live rubber and extra thick side studs and the husky ribs of Riverside Cords grab the slippery roads and are your greatest protection against skidding.

Riverside Cords are thus the safest tire, the most satisfactory tire and the most economical tire you can possibly buy. Why pay more?

For fifty-three years Ward's have sold "Quality" goods only—with a definite "Money Back" guarantee. The reliability of Montgomery Ward & Co. is beyond question. You cannot buy a tire with a better guarantee.

I bought a Riverside Cord tire a year ago and must say I never took it off the rim yet. Used it every day. All my tires from now on will be Riverside Over-size Cords.
Arthur Mueller,
Jacksonport, Wis.

I have had two Riverside Cords on my car for fifteen months and they are still good. I use this car every day in the year over all kinds of roads. I recommend Riversides to everyone who wants the most for their money.
F. B. Pinnell,
Cuba, Mo.

believe in you again, for what you have suffered, I am going to make up to you."

She reached up, put both her arms around his neck and pulled his face down to hers. Clinging to him thus, she kissed him. Then they turned, and with arms around each other, they went in and closed the door.

THE END.

Do You Remember the Chestnut About the Chronic Complaint?

I HAVE been a subscriber to your valued paper, THE AMERICAN AGRICULTURIST, for a number of years, and I can say truthfully that I like it. I read it more than any of my other farm papers and enjoy the Editorial Page very much. I have just read this Saturday night the whole page and enjoyed it very much, especially Eastman's Chestnuts. I was so pleased I had to wake up my good wife and read it to her. You ought to have seen the expression on her face when I told her that was the chronic complaint that I had been suffering with for a good many years.

The Quotations Worthwhile hit the nail right on the head.

That article that you wrote so ably "Should Women Help with Farm Work" was very interesting. My wife always has, for the forty years that we have been married. She is 61 and I am 63 years old and she has always helped me milk the cows and tie up grape vines in the spring. She was always field boss with the grape pickers in the fall and picked nearly as many grapes as the best one of them. Years ago when we had so much hay and help was scarce and we could not get the hay all in our barns, she would rake and bunch hay and help me on the haystack.
J. F. H., New York.

Sneeze into your handkerchief, not into the community; you get just as good a sneeze, and the community may avoid an epidemic.

Summer-Blooming Bulbs

From the Familiar Gladioli to the Magic Lily

FOR the amateur gardener, for those having temporary homes who want quick results and who do not wish to rely entirely upon annuals, and for those having summer homes, the summer flowering bulbs are a great boon. The flowers are in the bulbs and all that one has to do is to get them into the ground properly to be sure of having an abundance of blossoms. They come into bloom so quickly after being planted that even if one does not get them into the ground until late in the season, they will yet afford much pleasure.

Of all such bulbs the gladioli are the most popular and satisfactory. There is a wealth of color and form to choose from. The hybridists have developed some wonderful types in recent years, including the plain, orchid flowered, giant and ruffled varieties. The colors are exquisite and if one's purse will permit he may have great masses of separ-

from April to July a succession of blossoms is assured. Frequent waterings with liquid manure, being careful not to use it too strong, and an occasional light top dressing of nitrate of soda will prove beneficial. When in blossom the flower stalks should be supported by light stakes to keep them from blowing over.

For decorating the house they are wonderfully satisfactory. When the first buds are bursting into bloom, cut the spikes with a sharp knife to avoid bruising the stems; put them into water and they will bloom in the house. Each morning remove the wilted flowers and cut the ends of the stems on a slant and replace in fresh water. In this way they will bloom clear to the end of the spikes. In the fall they should be dug, dried off and allowed to thoroughly cure, and then be stored in shallow boxes in a cool place but where they will not

Flaring Lines Add Grace and Comfort

This one-piece dress with modified front flare introduces a new note to the silhouette. Blonde colored crepe satin with a brown flower as the only trimming would be very chic. Crepe de chine, printed silk, georgette or crepe faille would also be suitable materials. The pattern No. 2424 cuts in sizes 14, 16 years, 36, 38, 40 and 42 inches bust measure. Size 36 requires 3 1/4 yards 36-inch material. Price 13c.

The costume slip pattern may be useful not only for making underwear, but may provide a base for tunic blouses by having the upper part of a lining silk or of satine or cotton goods, and the lower part of material to match or harmonize with the tunic. No. 2385 comes in sizes 16 years, 36, 38, 40, 42, 44 and 46 inches bust measure, so that you may choose from them according to the length of the tunic you will wear with it. For the 36-inch size, 2 3/8 yards of 32- or 36-inch material with 3/4 yard of 32-inch contrasting, are required. Price 13c.

The new expression provided by a straight back and circular flare in front, may be carried out in crepe satin, crepe de chine, flannel or linen. No. 2419 comes in sizes 16 years, 36, 38, 40 and 42 inches bust measure. Size 36 requires 3 3/8 yards of 36-inch material. Price 13c. Hot iron transfer, No. 700 (blue only) 15c extra.

TO ORDER: Write name, address, pattern numbers and sizes clearly and correctly and enclose correct remittance in stamps or coin (coin sent at own risk) and mail to Pattern Department, AMERICAN AGRICULTURIST, 461-4th Ave., New York City. Price of patterns now is 13c each.

ate colors in the choicest named varieties. However, most of us have to count the cost of our garden expenditures and so it is well to buy the collections of unnamed gladioli offered by reliable seedsmen. These have an element of surprise when they bloom, and sometimes real treasures are found among them. The gladioli enthusiast will also find great pleasure in growing them from seed. It requires patience, but the delight of having grown something entirely new and "different" will more than repay him for his trouble.

Gladioli are of the easiest culture and they thrive in almost any good garden soil. The ground should be carefully prepared and should be enriched with well rotted manure or some good potato fertilizer. The bulbs should be planted about four inches deep and about eight inches apart. Solid borders of gladioli are effective and they are also charming when planted with shrubbery or mixed with other harmonizing flowers. By planting them at intervals of two weeks

freeze. Before putting them away they should be cleaned and all roots and bulblets removed.

Montbretias are also satisfactory summer flowering bulbs with graceful flowers in shades of red and yellow. The blossoms are similar to those of the gladioli, but are much smaller and are placed on wiry stems about two feet in length. They require about the same culture as the gladioli.

The Ismene or Peruvian Daffodil is a summer flowering bulb that is not so well known as the gladioli, but a few of them will add greatly to the beauty of the garden. They have large, pure white blossoms somewhat resembling amaryllis in form and are deliciously fragrant. The bulbs should be planted in June and taken up in October when they can either be stored for blooming another year, or after a rest can be potted for the window garden.

Another bulb that is not common is the Magic Lily of Japan. Its proper

Neuritis and Its Treatment

It Is Well to Know Its Causes and What Will Relieve It

Neuritis and Its Treatment

NEURITIS, or inflammation of a nerve, must be distinguished from neuralgia or pain in the nerve. Both terms are generic names for several diseases, which people use to express their interpretation of their pain-symptoms of any one of the morbid conditions from which they are suffering and which involve the nerves. Neuritis may be traumatic in its origin, or it may be caused by the absorption of some poison. The resulting inflammation may involve a single or many nerves.

Among the toxic causes of neuritis are chemical poisoning from lead, arsenic, mercury, alcohol. The infective diseases such as diphtheria, measles, chorea, cholera, leprosy, tuberculosis, beri-beri, malaria; also, the septic infectious fevers such as scarlet fever, cerebro-spinal meningitis, puerperal fever; or malnutrition, marasmus, rheumatism, cancer, and senile decay, all are productive causes of neuritis.

Keep the Kidneys Active

Sluggish kidneys over a long period of time, whereby the elimination of poisonous products from the blood-stream by way of the kidneys is reduced considerably below their normal output, diseases of the kidneys, decayed teeth, pyorrhoecia—which is a disease of the gums giving rise to the formation of pus—diseased tonsils, adenoids—with the resultant overgrowth of the bones entering into the formation of the nose and giving rise to a purulent discharge which drops back into the throat and is swallowed—sinus infections, antrum or mastoid disease, chronic constipation, chronic appendicitis, or other intestinal derangements whereby the poisonous by-products of digestion are retained in the body—anyone of these conditions may so seriously undermine the health as ultimately to result in neuritis.

Sudden Climatic Changes Are Bad

Prolonged exposure to damp cold, sudden and extreme changes in temperature, injury to nerves by sudden violence, or from persistent pressure as when one sleeps one the arm night after night, or from exhaustion from over-use of a set of muscles and nerves, as in writing con-

tinuously followed by a writer's cramp, or from the protracted pressure due to tumor growths, may cause neuritis.

Obesity, too, may produce neuritis either by crowding the tissues over sensitive nerves, or more probably because the excessive fat interferes with a normal oxidation of the blood, causing a defective sequence in the chemical changes within the body with the resultant formation of noxious poisons within the tissues and fluids of the body and, by absorption, to bring about inflammation of the nerves.

The characteristic symptoms of neuritis are boring, or stabbing pain along the

teeth have been thoroughly cleansed—which should be done after each meal—the teeth and gums may be painted with tincture of Iodine, care being taken not to use it often enough to blister. Any excess of Iodine may be removed by rinsing the mouth with water. Much stress thus is laid on the care of the teeth and gums, since they are among the most prolific sources of neuritis.

Treatment For Neuritis

The home medication of patients suffering with neuritis should be simple—something that will be safe to take without medical supervision, but under no circumstances should these cases be neglected, and the severe forms should have the best medical care available.

Narcotics are strictly taboo in the treatment of these patients, because the treatment would need to be so long continued that the formation of the habit would be almost inevitable. Where the heart is in good condition, and the patient is overweight, or plethoric, the saline (alkaline) laxatives should be taken in sufficient quantities to insure a loose movement of the bowels each day and to keep the kidneys active; in addition to this treatment, ten to twenty grains of baking soda dissolved in a glass of cold water may be taken between meals and at bed-time. If the patient is anaemic and under-weight, with a weak condition of the heart, only a gentle vegetable laxative should be used.

Briefly and concisely, the treatment is this: Remove the cause where it is possible to do so. Relieve pain with hot packs or dry heat. Take the necessary rest until the nerve has had time to recover its function wholly or for most part. Avoid sudden changes of temperature and undue exposure. Dress warmly just short of inducing perspiration. Sleep in dry, warm, well-ventilated bed-rooms. In severe cases, secure the best available medical aid. See that the general health, adequate elimination by way of the bowels and kidneys, and adequate rest are maintained at all times. Remember that neuritis is prone to recur and may be attended by disastrous results, if neglected.

—ALICE M. SMITH, M.D.

Summer-Blooming Bulbs

(Continued from opposite page)

name is *Lycoris Squamigera*, which is enough to kill any flower and perhaps is one reason that it is not better known. However, anyone who has once seen this lovely flower will want to add it to his collection. Early in the spring it throws up attractive green foliage which grows until July when it ripens and disappears. Those not familiar with its habits would think that the bulb had died, but about a month later, as if by magic, the flower stalks two to three feet high appear, each crowned with from eight to twelve beautiful lilac-pink flowers three to four inches across. It is entirely hardy and will bloom for years. It should be planted about four inches deep and in a place where it will not be disturbed. It is especially effective with a background of shrubs or with plants with a delicate foliage.—Adelaide Utter.

Did You Know That—

YOU can cut tomatoes more quickly and in much thinner slices by using the bread knife with saw teeth.

One housekeeper saves all her small pieces of soap. She puts them into a small salt bag, stitches across the top and uses it as a dish cloth.

A few drops of commercial ammonia on a dry cloth will do much to remove "water spots" from polished floors or furniture. If the surface is waxed the spots should be rubbed with a mixture of equal parts of turpentine and linseed oil.

Why work harder than necessary in washing clothes? *Naptha*—the great, safe cleaner—and splendid soap combined in Fels-Naptha, loosen dirt easier than just soap in any form. Safely, too!

Send 2c in stamps for sample Fels-Naptha, Philadelphia

No. 376-5. A sofa pillow slip cover of black satine, embroidered with pink, lavender, and blue flowers, in a basket of light golden brown. The bow is lavender with dots of pink. Flowers are single stitch, that is, each petal is a single long stitch, and the basket is done in outline. Use all six strands of cotton for the flowers. Black satine pillow cover made up and hemstitched at both ends, 75c. Floss 25c extra. The cover is open at both ends and can be slipped on over a foundation pillow of pink, blue, or lavender if more color is desired; or over a black foundation like the cover.

course and distribution of the nerves involved. They will be found sensitive to pressure, and motion is painful. The inflammation of the nerve may spread up or down, but usually it goes upward and involves the larger trunks of the nerves. Paralysis followed by atrophy, or wasting of the muscles may ultimately occur.

With so many factors entering into the development of a case of neuritis, the most rational thing to do for a person suffering from this trouble would be to go to a competent physician for a thorough physical examination and diagnosis of all the physical defects and diseased conditions to be found in the body; not neglecting to have the teeth and gums examined and an X-ray of them taken, if there be unsound teeth in the mouth, or pyorrhoecia present. When such an examination has established the probable causes of the neuritis, the logical procedure would be to remove them and to institute such treatment as shall relieve the pain and restore the function of the nerves involved and to establish a practical system of personal hygiene to the end that there shall be no recurrence of the trouble.

Bad Teeth May Cause Neuritis

If the X-ray films show the teeth to be at fault, no time should be wasted in having the diseased teeth removed and, if pyorrhoecia be present, have the gums treated until they are well, or if treatments prove unsatisfactory, have the teeth extracted, the gums scraped clean of diseased tissue, and in due course of time, be fitted to an artificial set of teeth. Where the gums are red and swollen and bleed easily, a good home treatment is to clean the teeth with common table salt. A good strong tooth-pick wound with absorbent cotton and used instead of a tooth brush is far more sanitary than to use a tooth brush, unless the brush has been sterilized each time before using. The carefully covered point of the stick may be pushed well down on the roots of the teeth and the gums be more thoroughly cleansed than is possible with a brush. Once daily, or several times a week after

Working a Farm on Shares---New Seed Law

"What are the general rules for working a farm on shares? If the owner furnishes everything to work with, cattle, horses, and even the household furnishings all in first class condition, what would be a fair share for the owner? When a person works or rents a farm on shares, does the owner ever pay for transportation of the farm produce to market if the renter draws the milk, etc., himself? Would it be usual, or seem fair when furnishing everything as before stated, to have half the income from the products and pay half of the farm expenses? In this case, wouldn't it also be right for the renter to pay half the taxes and half of the telephone bill? Some around here say they never heard of the renter paying half the taxes, but neither is it usual, I believe, for everything to be furnished on the farm. What is the usual way and what do you think would be the fair way in this case?"—C. E. D., New York.

FARM rental contracts vary so widely from region to region and from farm to farm that it is very difficult to give any general rules that apply to all conditions. The usual supposition underlying the share rental contracts is that the rental of the farm is approximately equal to the contribution of the tenant. Ordinarily, the landlord furnishes the farm while the tenant furnishes all man labor, horses and farm equipment. The common system is for the landlord to pay taxes, insurance, upkeep of buildings, while the tenant pays for all man labor, horseshoeing and machinery upkeep. Other expenses such as feed, fertilizer, threshing and other general expenses are shared equally. If cows are kept they may be furnished half by the tenant and half by the landlord, or in some cases, all furnished by the landlord.

Labor Shortage Has Its Effect

Under present conditions, the scarcity of labor on farms enables tenants to get much better than ordinary terms. The difficulty with the usual share rental contract is that it is very rough approximation at best. Since the tenant furnishes all of the labor and gets only half of the returns he is interested primarily in growing extensive crops such as hay, of which the labor cost is a relatively unimportant part.

On the other hand the landlord is interested in getting as large an acreage as possible of intensive crops such as potatoes and cabbage. The result is that the tenant and landlord too often higgie in order to get the advantage of the other and sometimes sacrifice their own returns in order to beat the other fellow. The proper point of view seems to me to be what sort of farm organization will be best for the farm and then arrange a lease that will divide these returns fairly between landlord and tenant. Neither can prosper long at the expense of the other and both will be better off under a fair division of returns under a system of farming arranged to give a maximum profit for the farm as a whole.

Ways That It May Be Done

The writer would suggest an agreement in which the tenant and landlord share all receipts and expenses. This is an excellent plan if both of them are the type of men whom one would wish to have as a partner. The usual procedure in this plan is to put a fair valuation on the contribution of the landlord and a fair valuation upon the contribution of the tenant. All farm expenses are then paid from the undivided farm receipts, after which the tenant is paid a specified wage for his labor. The landlord is then paid a fair rental for the farm and any surplus remaining is divided equally. Under this agreement taxes, insurance, buildings, upkeep, all hired labor and all expenses would be paid out of the undivided farm income. This has the advantage of taking the guess out of the division of income, making sure that if any income is received, it will be divided fairly between landlord and tenant.

When the landlord furnishes everything—farm, horses, cattle and household furnishings, the more usual system would be to hire the tenant outright. All returns would go then to the landlord. If it were advantageous to both, the land-

lord might give the tenant a third of the farm receipts.

But one can scarcely be called a tenant unless he contributes something more than his own labor. In the latter case, he is merely a hired man who would get either a cash wage or a share of the crops. The share rental agreement usually provides that the tenant shall deliver the landlord's share of the crops to market without compensation. A tenant who got half of the income from a farm, the owner of which furnished everything, would certainly be fortunate, if the farm were a good one. About the only suggestion I can give is to figure out as closely as possible what the expenses and receipts would be under the most desirable system of farming and attempt to divide these receipts fairly between landlord and tenant.—W. I. MYERS.

New Seed Law in New York

GOVERNOR SMITH has signed the amended seed law which provides for State inspection of vegetable seeds in addition to the inspection of farm crop seeds as at present. Under the provision of the new seed law, all vegetable seeds, whether sold in packets or in bulk must bear a label showing the kind and variety of seed, the year in which it was put up and the name and address of the person or firm who put up the seed.

The law provides for publication by the proper authority of the results of analysis of vegetable seeds collected by the state inspectors in the open market. The purchaser may then learn which seedsmen are consistently putting out high-grade goods and which low-grade. All reputable seedmen have already endorsed the provision of the new law which goes into effect on September 1, 1925.

"Bankers Shares" Restrained

THE Better Business Bureau of New York City, which works constantly to prevent fraud, states that dealers in "Bankers Shares," represented by stock of the Ford Motor Company of Canada, Ltd., have been enjoined "from further perpetrating a fraud upon the people of the community," by Supreme Court Justice Stephen Callaghan of Brooklyn. This decision was rendered an April 1st, and applied to Philip L. Wing, operating under the name, "The Continental Company," and to Arthur and Virginia Marshall, operating under the name, "Marshall & Company," both of New York City.

This decision was the result of proceedings instituted by Attorney General Albert Ottinger, through his deputy William H. Milholland. In his injunction the Justice said:

"The whole scheme indicates a desire to trap the unwary or those who have not had an opportunity fully to analyze the meaning and effect of the misleading literature issued by these defendants."

The Court pointed out features of the scheme, including the prominence given in circulars to the name of the Ford Motor Company of Canada, use of the term "subscription privilege," and the claims of large returns to be realized from the investment of a sum of \$100.

Likes the Service Bureau

"I received my pay for the turkeys. They gave me \$48.85 and I am certainly very thankful to you for getting it for me. Surely every farmer should take your paper. The Service Bureau alone, is more than worth the price of the paper."—G. A. F., New York.

Collected Fifty Dollars

"I am writing to tell you how thankful we are for your collecting our debt of \$50.00. He claims it was a mistake but I had written him so I can't see how it was. I had read so many times about your collecting for people in the paper so I thought I would write you about it. If there are any charges please let me know about it."—C. D., New York.

A Carrier for all the nation

One out of seven car loads of freight shipped in this country moves over the New York Central Lines.

This twelve thousand mile railroad system, in addition to serving thousands of communities on its own rails in the rich, industrial territory between the Mississippi Valley and the North Atlantic ports, is a carrier of products from every section of the country.

Forty percent of the freight carried by the system comes to it from other railroads. New York Central service thus links the commerce of every state with this great market of the Northeast, where live half the people of the country, and where are produced two-thirds of the country's manufactures.

Because of this national character of New York Central service, the growth of this transportation system keeps pace with the growth of the country, and New York Central's future is bound up with that of the whole country.

On Rendering Service

Making Labor Pay and Other Plowhandle Subjects

By H. E. COOK

ONE very outstanding demand is coming to all men to give service,—merchants, professional men and last but not least farmers. The “public be —” idea has gone never to return and the sooner you and I accept the

situation, and place as article one in our business creed a desire to give customers our first thought and practice at every turn the things they want, the sooner we shall be satisfied with our farm as a business, as a home and the best place on earth to teach young folks the real fundamental truths of citizenship and morality.

Now that looks like preaching, doesn't it? But it is not. It's the outpouring of a quality conscience, for whatever I am practicing has not come from a natural inclination to do right. I was born to do things hurriedly in more than average quantity and you know what that means. I have had to be kicked into an understanding that the first essential was to do our work thoroughly, which in modern parlance has come to be understood as service. Thinking alone of treating our customers courteously deals superficially with the case. This thought must enter alike into every movement. A bottle cannot be made clean enough to offset the effect of musty hay and foul air in the stable. These things are not easily appreciated unless the producer comes into direct contact with the ultimate consumer. Only a few can possibly be so fortunate and so maybe we must be content with a comparatively small number doing the choicest work.

I have so often taken complaints as destructive criticisms, and sometimes they are, but as a rule people do not complain unless there is some cause. Anyhow no complaint should be ignored without a careful investigation whether the complaint comes from a dealer or from the consumer direct. Most of us lack a working knowledge of just what the final user wants largely because we do

not see or know this final arbiter. I have no sympathy with the everlasting cry against the middleman. Why bless us, he is our only salvation. He does his best to keep us on the track and we should fall flat without him.

Improving quality, including grading and packing is the biggest farm problem in this country today. Cooperation in so far as it does these things is important. But cooperative marketing which chiefly concerns the selling of lower qualities always has been and always will be a failure.

* * *

Few men have sounder ideas of working economics than Secretary Hoover. He believes that we should conserve our capital and labor by so adjusting them that extreme overproduction and under-production shall be avoided.

In a weak way we try to do jobs in slack times. To illustrate I am writing April 18 and today we have not had weather for soil work and yet we have been rebuilding some sewage and drainage systems and no finer weather could have

been found. Now I do not want to say that there has been no labor cost but one could easily have so managed a half dozen out of doors workers as to have made their time of small net value. As I have said before, we have not a single person who is not paid monthly for his or her service during the previous month and our failure would come quickly unless every person showed up some earning at the close of each day. Those who work with cows and milk, have their jobs ever before them.

I realize that a discussion of this sort directly effects only a small percentage, because farm and dairy work is generally a family affair, and really I sometimes envy the family plan, the most perfect piece of business co-operation known, which does not feel the sting of adverse periods.

Washing, repairing and oiling harness is another job that comes in at this season of catch-weather work. Does it pay? One of our successful farmers once said that it did not because he once bought two new harnesses the same day and during the life of them he washed and oiled one and the other he did not and the oiled harness lasted one day longer than the unwashed one and he made up his mind it did not pay. Maybe that is so and I know of harness that are never oiled and repairs are made with rivets after the strap breaks, but I do not know how to get value received from labor at \$100 a month with that kind of harness or from any other motive power. This same plea holds good for an endless number of farm jobs of the improvement kind, to do the work when it does not interfere with seasonable jobs that are necessarily rush ones.

Our seasons are pretty short and the number of open available days cut down our time still more. Personally I like, if possible, to meet the expense involved and to keep up repair work each year rather than to let it go as long as possible and then do a big job all in a hurry. That may be all right for a

farmer who gets his income in lump sums, but dairy-men get their returns periodical-ly and repair costs should be budgeted with other overhead

“Washing, repairing and oiling harness is another job that comes in at this season of catch-weather work. Does it pay?”

Bad light costs more than good

YOU PAY for poor light in the extra hours of labor in the early morning and evening. You pay in the added weariness of your wife when her kitchen workshop is poorly lighted. You pay in the ruined eyes of your children. The least of these is more expensive than Colt Light.

Colt Light costs comparatively little to install and little to operate. With it, you can light not only your house, but the barn and poultry buildings.

And the Colt hot plate is always ready for immediate

use for breakfast or an emergency when the kitchen range is out.

The Colt Light plant has nothing to wear out and no expensive parts to replace. All you need to do is fill the generator with 200 pounds of Union Carbide and water an average of two or three times a year.

Union Carbide for use in the Colt Light plant is sold direct to the consumer at factory prices. One of the 175 Union Carbide Sales Company's warehouses is located near you. Union Carbide is always uniform. World's best quality. Highest gas yield. It is always packed in the blue-and-gray drums.

Cut Milk Production Costs with a New Harder Silo

Twelve ordinary grade cows at the Illinois Experiment Station averaged 8,313 lbs. milk in one year, without grain. They were fed on silage and alfalfa. Prof. Savage advises Eastern dairy-men to cut production costs by growing more silage and legumes and buying fewer concentrates.

In order to help carry out this money-saving, profit-making plan, we offer the improved Harder Silo with the patented Harder-Victor Front on very easy terms. After a small first payment, your cows will take care of the remaining payments through greater production and lower feed cost. You simply cannot afford to go without a silo when you can get a genuine Harder on such easy terms. Even if you have one silo, you probably need another.

Let Us Send You "Saving with Silos"

We haven't room here to explain all the good points of this strictly high-grade Silo, but we'll gladly send you "Saving with Silos", free. It explains the scientific principles of silage making and illustrates the details of Harder construction. Ask also for particulars of our easy-payment plan that makes a Harder pay for itself.

Are Easier to Buy

What Readers Want to Know

Growing High Quality Beets--Other Questions

BEETS to be of fine quality must be grown quickly and pulled while young and tender; likewise the right varieties must be selected. Early varieties should be sown thinly, about an inch deep, and as early as weather and soil conditions will permit. Every so-called beet seed is a fruit containing within itself several seeds which make plants. If planted too thickly the young plant will make a spindling growth and develop into big tops to the detriment of the root. A plan that has given me the best results is to allow the plants to grow until they are four or five inches high before thinning and then leave the plants standing four to six inches apart in the rows. A few of the thinned plants may be reset in rows, and also in rows where early radishes have been grown, and the balance used for boiled beets or beet greens. Winter varieties are sown in the same manner, but late in June or early in July.

A rich loamy soil is best for beets, and should be well prepared and well fertilized to grow a fine crop. Early varieties develop quickly in a sandy loam or soil of a fertile character, and the roots are smoother and have a better appearance, but beets grown in a heavier soil have superior qualities for the family table. Good and thorough cultivation is an important factor in producing quality beets.

Medium Sizes Best

The medium sized varieties, as a rule, possess superior quality. The flat turnip-shaped beets are the earliest. By making several sowings of an extra early variety it is possible to have excellent young and tender beets for several weeks during the season. For later sowings many prefer a variety which matures a few days later. For a winter supply the late varieties produce beets of a more firm texture and are uniformly better keepers than the early, quick forming ones. The Eclipse dark red has been my favorite for years. For tenderness, fine flavor and good keeping qualities I have found none better.

Late beets should be harvested before freezing weather comes, though a few light frosts seldom injure them. In gathering, the leaves should be twisted off a couple of inches from the root, pack in sand and place in the cellar or store in pits in the open ground. In case the storing facilities are not good the late varieties may be placed in fruit cans and kept until needed for table use. —V. M. Couch.

More About Pasture Improvement

What is the best time of the year to improve the pasture? Do you advise sowing seed or is it enough to add lime and phosphate? How much of this should be broadcast?—M. B. A., Pennsylvania.

IT is a little late now to start pasture improvement especially if you have a good sized herd that will soon start grazing. Nevertheless it may be best for you to so manage that the pasture can be grazed lightly until the new plants get a good start. Pasture improvement can be done either in the fall or in the spring. As a matter of fact it takes about a year before the effects really show up.

The easiest way to improve the pasture is to broadcast from 200 to 400 pounds of acid phosphate and 1000 pounds to a ton of good ground limestone to the acre. When these materials have been added, pasture grass will easily come in and will replace many of the common weeds that you are now troubled with. It is an excellent idea to sow a grass mixture to fill up some of the poor stops. A good mixture should contain approximately 2 pounds each of alsike clover, Kentucky blue

grass, orchard grass and red top. Many men find this a particularly good mixture and get satisfactory results where the land is too rough to plow.

A Crop to Follow Early Potatoes

We are located near one of the big cities in the Mohawk Valley and market most of our crops there. We have planted most of our early potatoes for the early market. They will be harvested in time to allow a second crop. What would you suggest?—E. B. S., New York.

A great deal depends on the likes and dislikes of your customers and it would not be a bad idea to consult them to see what they prefer. It is always easier to sell something that is wanted. A very fine late vegetable and one that you can market during the winter, especially after frost, is kale. The plants are started in the early part of the summer and transplanted in the field after the early potatoes are out. The crop is not harvested until it has experienced at least one freeze. It is easily cooked with smoked ham. You also have the choice of late cabbage, late tomatoes or rutabagas turnips. Of course a great deal depends on your land whether it is fit to stand double cropping. That is the question that only a man can answer who is able to survey the field in question. Down on Long Island, they use sweet corn, spinach and other vegetables, besides those mentioned above as second crops. The best man for you to consult is your County Farm manager. He will tell you what other farmers are doing and have a suggestion that will be really worth while. We would suggest that you get in touch with him.

Preparing Oil Emulsion

In the American Agriculturist of February 21st, I find directions for killing insects on house plants. Please tell me how to prepare the oil emulsion mentioned; also tobacco extract.—Subscriber, New York.

THERE are several kinds of oil emulsions. The one most commonly used for killing insects on plant foliage is made up in the following proportions: Hard, soft, or whale-oil soap, 1 ounce; water, 1 quart and crude oil 2 quarts. This as a base mixture is diluted from 10 to 15 parts of water when used. The soap is dissolved in hot water. Remove from the fire and while still hot the crude oil is added. The liquid is pumped back into itself for 5 or 10 minutes with a little pump or other device which stirs it into a creamy mass. If properly made the oil will not separate on cooling.

In order to get a 10% emulsion, 4½ gallons of water are added to slightly less than 3 quarts of the stock emulsion. To get as strong as a 15% emulsion, add 2½ gallons of water to slightly less than 3 quarts of the stock emulsion. If you do not care to make the oil emulsion, no doubt your local dealer can give you the commercial oil preparations as a stock solution.

Black Leaf 40 is unquestionably the tobacco compound referred to in the article you mention, which gives directions for the killing of pests on house plants. This is a commercial nicotine sulphate compound which can be secured from the local supply dealer. It is well regarded by farmers and others throughout the country.

Controlling Hen Lice

Is it possible to control hen lice by putting chemicals in the water fountains? —J. B. K., New Jersey

There is no substance which can be added to the food or drink of poultry which will control the lice without having an unfavorable effect on the fowls. The surest method of control is the application of louse powder on the hens and disinfectants about the house.

The Agriculture of Eastern Long Island

An Intensely Cultivated Section That Is Little Known By Most Farmers

The following article is from an address delivered by Mr. E. R. Lupton of Mattituck, L. I., at a recent conference of teachers of agriculture held at the New York State Institute of Applied Agriculture at Farmingdale, L. I. Mr. Lupton is one of Long Island's most prominent and successful farmers and is widely known for his part in the building up of the Suffolk County Farm Bureau as well as his activities in the New York Federation of Farm Bureaus. Mr. Lupton was formerly president of the Suffolk County Farm Bureau. At present he is President of the Board of Trustees of the School at Farmingdale.

—The Editors.

By E. R. LUPTON

President of the Board of Trustees of the New York State Institute of Applied Agriculture at Farmingdale, Long Island

The distinctly agricultural section of Long Island consists of a strip of land from Wading River to Orient Point about fifty miles long averaging less than three miles wide together with limited areas from Southampton to East Hampton on the south side. In this statement I do not in any way wish to minimize the importance of the farming areas in Western Suffolk and Nassau Counties, which operate on the same plan with some variation in crops grown.

I call this section the distinctly agricultural section of Long Island, because here land is sold on the basis of its agricultural productivity, all of the arable land is intensively farmed and agriculture is the principal and almost the sole busi-

ness of the people. The village people in this territory live mainly on service industries to agriculture. The only exceptions are summer resorts and fisheries.

responds quickly and effectively to applications of fertilizer and manure. The east end of the Island particularly, being narrow and close to deep water has a high degree of frost protection. Damage to crops from late frosts in the spring with short distances of deep water are almost unheard of. The deep water likewise holds back the frost in the autumn allowing the production of late warm weather crops such as beans, tomatoes and cucumbers ordinarily until the latter part of October when most other near by producing sections are eliminated by frost. The production of these crops at this season of the year is consequently one of the specialties of this region.

The area of effective frost protection is limited and is rapidly reduced in short distances from deep water. My own residence is located on the shore of Long Island Sound and my farm buildings are a half mile from the Sound. I have

often left my house at six o'clock on a frosty morning in the fall and have seen no evidence of frost while a quarter of a mile beyond the farm buildings the fields of late crops of cabbage and cauliflower were completely whitened with frost.

Within this area there are three types of farm management. On the south side, farming is practically restricted to a single crop. Most of the farmers raise little or nothing besides potatoes and nearly all of their crop consists of the

Green Mountain variety. This is not usually rated sound farm management but in this case the burden of proof that it is not sound rests with the people who make that contention. The soil in this territory is somewhat superior in the production of potatoes to that of the north fork of the Island. Crop failures are practically unknown and the potatoes from this section generally command a slight premium in price over those of the North Fork and are therefore the highest priced potatoes sold in a wholesale way in the United States.

The farmers of this region consider that other crops do not do well in their territory on account of the prevalence of ocean fogs. There is one draw back to this plan of operation, the necessity of securing large amounts of extra labor at harvest time. It seems probable that this region will in time develop some other crops to go with their potatoes and thereby help to solve their labor problem. A typical farm in this territory consists of forty acres, of which thirty to thirty-five are planted annually with Green Mountain potatoes. There is probably along with this three to five acres of corn grown on land which is not considered suitable for potatoes and perhaps three to five acres of hay as a soil improver primarily on some of the potato land.

(Continued on page 493)

ness of the people. The village people in this territory live mainly on service industries to agriculture. The only exceptions are summer resorts and fisheries.

THE agriculture of Long Island is divided into two general types—market gardening which is conducted in Queens and Nassau Counties within the limits or in the vicinity of Greater New York, and specialized vegetable farming which occupies by far the greatest part of the agricultural area of Long Island, outside of twenty-five miles of Manhattan Island and furnishes the greater quantities of agricultural produce from the Island. In addition to these two principal types of agriculture there are scattering areas in which there is considerable development of fruit and dairy farming. There is an extensive poultry industry distributed through the Island but mainly on the soils which are less productive agriculturally. Furthermore, there is a large duck producing industry along the streams on the south side of the Island and in the vicinity of Riverhead.

The market garden area near New York produces annually with the aid of hot beds and greenhouses, tremendous quantities of bulky, quickly growing crops, such as spinach, lettuce, beets and cabbage suitable to production as succession crop and to keep the trucks rolling into market frequently. This type of vegetable production has existed for years in the neighborhoods of all large cities. Its value to the city dweller in the days preceding long distance transportation of fresh vegetables could not be underestimated. At the present time, however, the production of vegetables on this type of farm is rapidly losing ground in competition with specialized vegetable farming and efficient modern transportation of fresh vegetables from long distances.

The consumer in the city, owing to this development throughout the United States, now has the opportunity to supply his table with almost all vegetables practically through the year. Transportation has been so well developed that all vegetables may be produced at each season in the year at the point where they grow to greatest advantage.

The main crop of the Long Island farmer is potatoes and in growing this crop he is a specialist.

In this limited territory last year were grown and shipped about 7000 cars of potatoes, half million crates of cauliflower and many thousand packages of green lima beans, string beans, tomatoes, cucumbers, brussels sprouts, asparagus and strawberries. The farmers raise these crops on high priced land at large expense, meet the competition of the vegetable growers of the entire United States, Bermuda and Canada and are as uniformly prosperous as any agricultural section in the world.

Protected from Late and Early Frosts

The physical characteristics that particularly influence and determine the character of agricultural production on Eastern Long Island are—first its readily workable soil and secondly its marine climate with the advantage of frost protection. The soil is classed as a sandy or gravelly loam. It is level, practically free from stone and is most readily workable with farm machinery. It dries and warms early in the spring and has a very excellent drainage in the shape of subsoil of sand and gravel. It is not naturally a highly fertile soil but from its physical characteristics

VOL. 115 May 9, 1925 No. 19

Lime And More Lime

WE are just back from a trip, of several days with old farmer friends in some of the Southern Tier counties of New York. Perhaps the most outstanding impression of the whole trip is the results that thousands of farmers are now getting from a plentiful use of lime combined with good clover or alfalfa seed.

A couple of years ago a man with a large dairy near Ithaca made up his mind that the cost of labor was too great to grow a very large acreage of cultivated crops. With the exception of a little ground saved for silage corn and the pasture, he seeded the whole farm to alfalfa. One of the happiest moments we have had in quite a spell was walking over this farm with its owner to look at the great fields stretching away in every direction covered with as fine a growth of green alfalfa as we have ever seen. By this practice, this man has been able to cut his labor bills in half, reduce his feed bills, and give his cattle all that they can eat of the best roughage in the world.

A day or two later we were talking with another man and he said: "Come with me a minute." We went down across the road to look at as fine a growth of newly seeded clover as man could wish for. It was growing as thick as it could stand, already two or three inches high, on a field so stony that it was difficult to see how anything could grow. And it had attained this growth in spite of the fact that it had been recently set back by a heavy frost.

"Lime did it," said our friend, "Lime and northern grown clover seed, and nothing else. It is the secret of successful farming in this poor valley."

And if we doubted his word, all we had to do was to look at other fields on exactly the same kind of ground where clover had been seeded, probably with poor seed, certainly without lime, with the result that there was very little to be seen.

While we are talking about clover, there is another point for all of us to be thinking about. There was a time when timothy hay was in great demand. Today, the barns are filled with it, and there is little market for it at any price. Practically all of the great trucking business in New York City is now done with motor trucks. The horses have gone. This means that the demand for timothy hay is probably not coming back; certainly not as it once was. We all know that timothy is no good to feed to cows. It seems to

us, therefore, that we can no longer depend upon any market for timothy hay. As it is not much good for consumption on the farm, except possibly for horses, we will have to give more attention to increasing the clover and other legume acreage; and we repeat, this is not difficult if a combination of lime and good seed is used.

Get Out the Ice Cream Freezer

MAYBE a lot of people do not like ice cream the way we do, especially the home made variety, the kind that can be made on every farm with fresh milk and cream and eggs; but it has always seemed strange to us that the consumption of ice cream is greater in the villages and cities where it has to be bought at high retail prices than it is right on the farms where all of the ingredients can be had at first cost and where the quality is better because it is absolutely pure and home made.

Every dairyman who ships milk must now have ice. Therefore, the materials are at hand to make one of the best tasting and most nutritious foods in the world, ice cream. On Page 502, there are some good recipes. Maybe you have your own recipe that is better. Anyway, let us help to increase the consumption of milk and decrease the supply on the market by having this fine food as a regular part of the diet.

What Of The Future?

A HUNDRED years is not so long as history measures time, and yet it was only a little over a hundred years ago that President Thomas Jefferson was bitterly criticized for buying the Louisiana Territory for fifteen million dollars. This great territory makes up today about fourteen states and covers practically all of that great expanse between the Mississippi River and the Rocky Mountains. One of the chief arguments of Jefferson's opponents was that Louisiana was so far removed from Washington that it never could be administered. The same argument was used when the Oregon Territory was acquired. There was much sense to the argument, too, for less than a hundred years ago it was a matter of many long months of bitter and dangerous travel to cross this country from one coast to another. Lewis and Clark required two and a half years (1804-06) to go from the Mississippi River to the Pacific Coast and return. Those iron-souled men and women who crossed the plains in their slow moving covered wagons to settle the West well knew it was good-bye forever for friends and kin left behind. The early Western pioneers were almost as far removed from the East as they would have been had they gone to another planet. Distance was insurmountable.

Truly we have come a long ways in a brief century. In the Year of Our Lord, nineteen hundred and twenty-four, a great airman travelled from the Atlantic to the Pacific Coast from the dawn to dusk of one day! And more than this, on March 4th, 1925, the voice of the President of these United States was heard over the radio giving his inaugural address by more than ten million of his people on farm and in city, in every walk of life, and in nearly every community from Boston Harbor to the Golden Gate and from the snow-clad lands of the North to the sun-kissed blossoms of the South.

The progress that has been made in conquering the unknown in the last hundred years is beyond the ability of any man to comprehend. So fast do the new wonders come that most of us just take them for granted. When we know that what has been done is but a drop in the sea compared to what we humans may do, we can catch a glimpse of the bright future ahead of the race. The time, for instance, is not far distant when by turning a

little screw we may tune in not only to hear the President's inaugural address, but also actually to see him across the limitless miles. Already photographs are being sent by telegraph. All travel will be by air. The cities will return to the country. Work will be done by machinery. There will be a more even distribution of wealth. Standards of living will continue to improve. Goodness will become a common virtue and happiness shall dwell with all.

No one knows or can prophesy what lies ahead any more than our fathers could know what we know now. All that we are sure of is that the race is going forward, lifting the veil a little here and a little there, and gradually clearing the mists away. Who knows, who can say, but that it is God's great purpose to continue to vouchsafe unto us as we become wiser and worthy of it, a little knowledge at a time until at last in the dim and distant future all things shall be made plain and all the universe shall be harnessed for our welfare, and in that attainment and realization we shall have reached the millennium.

Read "The One Horse Fiddler."

ALL of my life I have been particularly interested in the old songs and ballads. Always when I went to hear a band or an orchestra or a quartet, I would wait in great anticipation for them to sing or play some of the old ballads. Perhaps my taste in music is not high enough, but I must confess that I am always more entertained with one of these old pieces than I am either with the high-toned operas, the foreign singing, or the modern jazz.

For a long time I have been going to write something to pay my respects to my favorite songs and, as I told you last week, I have tried to do this in the little story called "The One-horse Fiddler." You will find it on Page 500. I wonder if your favorite song is in the list.—E. R. Eastman.

Partners

"James Churning of Phillips County, Colorado, owns a team of horses that are 20 and 21 years old and have never spent a night off of the home place where they were born. They have always worked in the same harness and Mr. Churning says that when the team is too old to do any work on the farm, he will quit farming."—Nebraska Farmer.

HORSES are often cantankerous and irritating beasts, but just the same, there is something fine in long association between a man and his team who have followed the furrows of many seasons together.

Eastman's Chestnuts

WHEN I was a youngster, I worked one winter after school and on Saturdays in a shop that manufactured manure spreaders. In the force there was a half-witted fellow on whom the other men were always playing practical jokes. I remember that he kept the whole force amused one day by trying to locate a LEFT-HANDED monkey-wrench. Some one would send him to a department where the foreman or one of the men informed him that he did not have the wrench, but so-and-so in some other department had it and so they kept the poor fellow going until he had made the rounds of the whole shop.

I was reminded of this incident when a subscriber sent in the following story:

An Easterner was traveling through the West when his car broke down. He could not find a monkey-wrench in his tool box, so he went to the nearest farmhouse and asked for a monkey wrench.

"Sorry, sir," said the farmer, who happened to be a Swede, "I've got a cattle ranch, my neighbor over here he got a sheep ranch, and my other neighbor he got a hog ranch. BUT I DON'T KNOW ANYBODY ROUND HERE WHO'S GOT A MONKEY RANCH!"

Who Should Grow Potatoes?

Straight Common Sense From A Long Island Grower

By H. R. TALMAGE

A NEIGHBOR on the farm adjoining ours has just finished (April 8) planting 80 acres of potatoes in eleven days work with three men. The owner did all the plowing with a two-plow tractor but did nothing else. His two hired men did all the rest of the work, except cutting the potatoes. The cutting is done by women who get 15c per bushel for cutting the seed into two-ounce pieces.

These two men handled all of the fertilizer, 80 tons, about 30 tons of seed, and drove the machinery to put the crop into the ground in good shape. This is equivalent to two and one-half acres per day per man.

My earliest recollection of work on my father's farm was dropping potatoes. They were placed on the side of every third furrow and "plowed in." The fertilizer used "Peruvian Guano" was applied by hand in the row out of a half bushel measure. Potato planters had never been heard of, and planting two or 3 acres was a big task. A man who raised five acres was a very large grower. Forty-two years ago my father bought this place where I now live and planted four acres of potatoes the first season. By some lucky combination of conditions the yield was very good, three hundred bushels per acre.

Our neighbors came from all around to see this enormous crop and asked "what will you ever do with so many potatoes?" At that time no potato digger had ever been seen on Long Island. All digging was done by using a five or six-tine manure fork. A story was told far and wide of a man who once, all alone, dug and picked up 40 bushels in a day.

That fall my father saw a potato digger advertised, and sent to Iowa for one. On his promise to exhibit it at the County Fair he was given a reduction in the price. It attracted much attention at the Fair and a local implement maker

started to manufacture an improved model the next season. A few years later when potato growing increased, twelve acres was all the potatoes a three man farm could handle.

"There are still thousands of acres of potatoes grown in New York State, planted by hand and dug with a fork, following methods of fifty years ago."

Note the difference now. On this farm next to ours there will be 110 acres in crops; this season; 80 of potatoes, eight of corn, eight of cauliflower and fourteen in hay and small grain.

These will all be taken good care of throughout the season, except for cutting the potatoes in the Spring and picking up the potatoes in the fall, by the owner and two hired men.

Not taking into consideration the 30 acres of other crops on this farm, each man will produce and place at the shipping point, with average yields, from 5000 to 7000 bushels of potatoes. Under the old methods a thousand bushels per man was fully as hard a task.

Probably efficiency of production in many other lines of agriculture has made similar progress, yet we are told by many of our "arm chair" advisers that "inefficient production" is one of the chief causes of the poverty of our farmers. Even with the admitted fact that there is a greatly reduced number of workers on our farms, is not the cause of the inadequate returns to our farmers due to over production? If, with a large decrease in the people on the farms, there is still such an overproduction that prices received for farm crops on the average the county over will not pay cost of production, and in face of a greatly increased population, is there any justification for the oft repeated slur that "farmers are inefficient producers?"

It is true that there are many inefficient producers on the farms, and these are rapidly being forced into the cities, where it does not require anywhere near as much ability to earn a living. Will not some of the "economists" who have the facts and figures, tell us the percentage of failures in industry and business as compared with farming, and tell us who really are the inefficient?

What has this to do with potato growing? We know that the poor manager and high cost producer on the farm will have to quit, the same as the poor merchant. He will be forced out by keen competition.

Lone Scouts of America

American Agriculturist Tribe

THE Lone Scouts of America are a branch of the Boy Scouts which has been formed to meet the conditions surrounding boys on farms. Because of a firm belief that this organization offers something of great value to all farm boys, both in self training for reliance, and in giving them an opportunity to

have some of the best fun in the world, the AMERICAN AGRICULTURIST is forming the AMERICAN AGRICULTURIST Lone Scout Troop. If it looks good to you, cut out and fill in the coupon at the bottom of this page and send it, with fifteen cents to The Lone Scout Editor, AMERICAN AGRICULTURIST, 461 Fourth Avenue, New York City.

The picture of the Indian on this page shows a member of the first great tribe of lone scouts. He looks physically fit, doesn't he? It was neces-

sary that he should be because he was obliged to be self-reliant, enduring and quick-thinking. He knew how to find his way through the forest, how to light a fire without matches, how to trap animals, and how to cook his food over a camp fire. The lone scout, the man who can meet all emergencies, is an ideal that we can all try to reach.

Real American boys have always trapped, hunted and made camps in the woods, but now the boys who live on the farms of this country can belong to an organization of boys who are training themselves to be self-reliant in a systematic way.

The "Boy Scouts" as an organization was started in England, several years ago. Boys belonged to troops, with a Scoutmaster to

Left—The membership badge.

Right—The First degree badge.

help them. They learned many things and had a lot of fun. In a few years, the idea was brought to this country, and we have the Boy Scouts of America. Boy Scout troops were started in villages and cities, but very few among boys on farms, because they were too few boys living near together to form a troop.

In order that farm boys might have the fun of being a scout, Mr. W. D. Boyce started the Lone Scouts in 1915. A lone scout has no scoutmaster to help him. He must be self-reliant, but he does the same things that a boy scout does,

and where several lone scouts live near each other, they can work together, either as individuals or better, by forming a "tribe" of at least five scouts.

About a year ago the Boy Scouts and the Lone Scouts were united into the same organization. Each group has its own program, but the same men act as officials for both groups. Mr. Calvin Coolidge, President of our country is the Honorary President. Mr. William Howard Taft, Mr. Daniel Carter Beard, and Mr. William G. McAdoo are Honorary Vice Presidents.

In order to encourage boys to become lone scouts we are presenting the first one hundred boys who join with a membership pin. The cost of becoming a lone scout is ordinarily thirty cents to cover the cost of membership pin, a handbook, and a membership card. By presenting the membership pin, we reduce the cost of joining to fifteen cents. The only further costs will be for five pins at various times which are to show how far you have advanced as a scout, and the degree books, of which there are seven and which cost fifteen cents each. The first three pins cost 15c each, the fourth one 35c, the fifth one costs 50c.

Why You Should Be A Lone Scout

Where is the boy who doesn't like to have friends? A Lone Scout, not only has the friendship of the scouts near him, but through the Lone Scout column in the AMERICAN AGRICULTURIST, he

(Continued on page 492)

Use This Blank and Become a Lone Scout

We believe many of our boy readers desire to join the Lone Scouts of America. Here is the application blank. Remember, the fee is only 15 cents for the first 100 applications. This is forwarded by us to national headquarters. The AMERICAN AGRICULTURIST to help the work along will send one hundred new members the badge free. After the first 100 applications the fee will be 30 cents.

Date

I have, with the consent of my parents or guardian, taken the following pledge of the Lone Scouts of America, which I have read and understand:
 "I pledge my allegiance to my flag and the nation for which it stands, with liberty and justice for all. I will 'Do a Useful Thing Each Day' and be worthy of the name Lone Scout."
 Enclosed find 15 cents to cover the cost of enrolling me as a member. I understand that AMERICAN AGRICULTURIST is furnishing the Lone Scout badge free of charge to one hundred members. This membership fee entitles me to a membership card, the badge, a handbook, and all the privileges of the order.

SOLVAY

Pulverized LIMESTONE

Restores Your Land Economically

Every harvest removes from 50 lbs. to 100 lbs. of lime from the soil per acre. Large quantities are also lost through drainage. Plants require lime for growth and soil must have lime or turn sour and unproductive. The slight cost of liming is the most economical and profitable investment you can make. The Solvay Booklet tells all about lime. Write to-day for FREE copy.

THE SOLVAY PROCESS COMPANY
Syracuse, New York

Sold by LOCAL DEALERS

FARQUHAR THRESHERS

Do fast, Clean Threshing. Now is the time to plan for the busy threshing season. Farquhar Threshers are designed and constructed in full accord with the best experience of thousands of threshermen who have made money operating a threshing rig. With this thresher you too can make good money. Built in eight sizes.

Send for catalogs of Threshers and Engines and determine for yourself which will meet the needs in your community.

May be equipped with straw cutting and bruising attachment

Leaky Roofs

Made
Water-tight
at
Small Cost

Guaranteed
To Wear
10 Years

an amazingly simple way to make your leaky roofs watertight and last 10 years longer at one-fifth the cost of a new roof. 20 years use on industrial buildings all over the world prove what it will do for you.

SEAL-TITE

THICK LIQUID
ASBESTOS ROOFING

You pour it on right over the old roof and spread it out with a roofer's brush. You do it yourself in a few hours—no labor cost—you end your roof worries for 10 years to come. Remember, Seal-Tite is not a paint.

**Don't Pay for
4 Months!**

We ask no pay till 4 months of sun and rain have proved all our claims. **SEAL-TITE** must do what we say it will or it costs you nothing. Could you make a fairer offer if you wrote it yourself?

WRITE NOW!

Our big, illustrated circular tells all about how you can turn an old, leaky roof into a new, watertight roof, at a small fraction of the cost of a new roof. What a wonderful chance to save! Don't wait for the next rain to remind you that your roof leaks. Look into this thing right now. Seal-Tite carries a positive 10-year guarantee. Send today for full details of our amazing offer. The Sprayers Have Started

A Farm and Home Talk by M. C. Burritt

MORE moisture fell in the rain and snow of last Sunday than most of us realized at the time. The surface soil was saturated and it has taken all the week for the land to dry. It is only the last day or two that we have been able to get on the land again, and then only for plowing in most cases. Oat seeding has been suspended a whole week for those who didn't get it done before the rain. It has been so cold and wet for several days that the oats in the ground have hardly sprouted yet. The week has practically set our early spring back to a normal one.

Trying Inoculation for Peas

We sowed the peas, early and late, for canning factory this week and they went in in fine shape. Inoculation for peas has been so generally recommended by the college that we are testing it out this year. Two-thirds of the early peas and one-third of the late peas were thoroughly inoculated with bacteria put out by the college. Thus we have a check of uninoculated peas on both early and late varieties, and a good chance to see any benefit which there may be. Otherwise the treatment is the same; four bushels of seed and 300 pounds of acid phosphate to the acre on land cultivated last season and plowed this spring.

Spraying Is On

Yesterday the chug-chug of the motors on spraying outfits could be heard on all sides and the yellow spray fogs and the smelly odor of lime-sulphur were everywhere evident. Early varieties like Dutchess and Twenty-Ounce were ready the middle of the week. The warmest weather since March, on the 25th and 26th, is fast bringing out the later varieties. Baldwins are ready now but Spys

will require almost another week yet. We are using eleven gallons of lime sulphur with two and a half to three pounds of arsenate of lead, three-quarters of a pint of nicotine and water to make one hundred gallons. The lime-sulphur should control early infections of scab. Arsenate of lead will provide a poison meal for bud moth, case bearers and other chewers of buds. Aphis which are out in force, are particularly susceptible to this spray because they have little or no cover from curled leaves but only the lee side of the branches. Careful and thorough work is required now as at all times. So far the weather has been almost ideal for spraying with light winds from both east and west through prevailingly northeast. The end of the month ought to see the completion of the delayed dormant spray on all varieties of apples.

Blooming Prospects Good

The prospect for bloom continues excellent. Pears, both Bartlett and Kieffer will bloom very full. Most varieties of apples except in cases of very heavy crop last year will bloom well. Plums are full again. Even peaches look better than they did a while ago. As soon as the bloom is out a fuller report will be made.

Spring has come on so fast this season that there are many little jobs usually the work of April, that didn't get done and that must go over to rainy periods and odd times in May and June—splitting and piling limb wood from pruning, repairing fences, repair and clean up jobs, etc., all of which had to give way to pruning while this could be done, then too spring seeding and now to spraying. We did get about thirty-five trees of Ben Davis and Winesap apples top-worked to Baldwin and Greening thus disposing of two odd varieties and getting these trees into more valuable sorts.—M. C. BURRITT.

Who Should Grow Potatoes

(Continued from page 491)

In view of the facts stated above, does it look as if we farmers could afford to grow potatoes with the methods of forty years ago? Yet that is just what is being done by a surprisingly large number of farmers. If we could have the census figures before us and see what part of our four million acres of potatoes are grown in less than ten acre lots it would give us a key very largely to the cause of agricultural depression. Can the man growing five acres of potatoes afford the machinery necessary for economical production, even if he has the right kind of level, easily worked land? There are still thousands of acres of potatoes grown in New York State, planted by hand and dug with a fork, following methods of fifty years ago. When the crop is harvested, in too many instances, it is of inferior quality, perhaps both in appearance and eating quality, and with a long costly haul to market. It is such growers who not only lose money in growing potatoes, but cause the regular large potato growers to also work for nothing or less.

Results from Specializing

I have no sympathy with this "arm chair" advise to "diversify." Everybody knows, who thinks at all, that in these days it is only the specialist who makes the greatest success. We do not see any of our free advisers telling the Standard Oil to go into apple growing because the oil industry may not pay for a year or two or do we see them advising Woolworth and Co. to go to growing oysters. It would be just as sensible as it would for a Long Island potato grower to go raising apples. With the product from a short row of potatoes I can buy all the apples our family needs, and far better apples than I could grow. So many of our free advisers seem to assume that all farmers know how to grow all kinds of crops. It would be just as reasonable to advise a carpenter to secure tools for carpentering, plumbing, bricklaying and

painting, so he could do something else if carpentering was dull. If a mechanic followed such advice, he would be called "A jack of all trades" and no one would expect him to get very far ahead.

All my life we have had from two to four cows on our farm, and some apple trees, yet I feel that I do not know the A B C's of dairying or apple growing. For forty years I have helped grow apples, but believe that during the past ten years I have learned more about the industry than in the previous thirty, and still have much to learn.

Good business methods on farms is just as important, even more so, than in other lines. Do not try to be an expert in many lines. Few men can be. I do not advocate a "one crop" system of farming, but plan your farming business so there will be a good distribution of labor. Go into those lines that you are familiar with and for which your locality is adapted and then study those crops you grow to the fullest extent and have the necessary equipment to carry on the work most efficiently.

Most of our potato growers in the United States have been growing potatoes at a loss for the past several years and have indicated their good sense by stating their intention to plant 4% less than last season.

Much good printer's ink has been used to try to induce those growers of an unprofitable crop to continue their losing game. Will they be foolish enough to do it?

Lone Scouts of America

comes to know lone scouts in other places. He can write to them and he can contribute to the many amateur papers that are printed by Lone Scout tribes.

By following through the degree work, a Lone Scout becomes self-reliant. The first degree tells you about the care of your body. You must pass certain

(Continued on page 499)

When writing to advertisers be sure to mention the American Agriculturist.

(Continued from page 489)

If the owner happens to own along with his agricultural land some wet or rough land suitable for pasturage or if he is naturally possessed of the sterling qualities required to attend a herd of dairy cows twice daily, 365 days a year, there may be a dairy herd, a larger acreage of corn and a silo. The summer resorts and villages provide a market for milk at double or thrice the price that the up-State dairy-men receive.

The north side may be divided into two regions according to its agricultural practice, the western one from Wading River east to Southold and the second from Southold east to Orient Point. The western section is the principal region of cauliflower production. The Green Mountain potato is still the mainstay and in the largest acreage but these are combined with large acreages of cauliflower and a limited degree of diversification with other crops necessitating a larger proportion of early potatoes which permit double cropping. Here the average farm again is about forty acres, with probably thirty acres of potatoes, of which from three to fifteen acres may be Cobblers or early potatoes. The farm will probably carry also from five to ten acres of cauliflower and Brussel sprouts—partly grown on ground saved for the purpose, plowed early in May and carefully tilled at frequent intervals to preserve moisture in case of a dry summer and partly planted after early potatoes. In addition there will be from three to ten acres of lima beans, corn, cucumbers, or other vegetable crops and about three acres of grass used to feed working stock, but mainly grown for benefit of the soil.

The Orient Point section, due to its longer season, double crops its land very extensively. Consequently practically all of the potatoes grown are Cobblers or early potatoes. These are followed by crops of cucumbers, lima beans, string beans, tomatoes, cauliflower and Brussels sprouts in great profusion.

The average farm in this vicinity is somewhat smaller, consisting of about twenty-four acres, probably all suitable to intensive cropping. In the spring this farm will be planted with twenty acres of early potatoes, the Irish Cobbler variety and two acres of onions from sets. The other two acres will be left to grow a fine cover crop in the early spring to be plowed to give the farmer a start in planting his fall crops a little earlier.

In the early part of July, when his potato vines are still completely green and at the very height of their growth, he must start to dig and ship, whatever the yield and the market may be in order to plant his second crop. Probably half of the twenty-two acres in onions and potatoes is planted with a second crop of cucumbers, lima beans, Brussels sprouts or cauliflower as fast as the potatoes can be dug. The other half is sowed with oats or rye or the two in combination to keep up the humus supply. In some cases oats are sowed in August and are plowed under when knee high in October and followed by rye. The land on Orient point probably sells higher on strictly agricultural value than any other in this territory.

Heavy Buyers of Seed

It takes probably four hundred ears of seed potatoes brought in from the seed producing region in the north annually to plant the Suffolk County crop of potatoes. The farmers of the county make annually a cash investment of about \$2,000,000 in seed, fertilizer and labor in growing this crop. The diseases which afflict the potato and cause absolute loss to the grower are largely carried in the seed. It will then be seen how absolutely essential it is that the seed purchased for the potato crop should be carefully bred for freedom from disease and high productivity.

Ten years ago these diseases were not generally understood and the purchase of seed potatoes was very much of a gamble. The improvement and certification of seed

UNITED STATES TIRES ARE GOOD TIRES

It is a common saying among men familiar with all makes of tires that "a Royal Cord never wears shabby"

Trade Mark

EVEN after it has given far longer service than is expected of a high grade tire, a Royal Cord looks good—and is good—for many more miles.

This graceful ageing, this exceptional wear, is due to three great improvements in tire making:—

Sprayed Rubber.

Latex-treated Web-Cord.

Flat Band Method of Building.

These inventions are the exclusive properties of the makers of U. S. Royal Cord Tires.

United States Rubber Company

U.S. Royal Cords

Built of Latex-treated Web-Cord

potatoes by the various state colleges in the producing states has been consequently of tremendous importance to the Suffolk County potato farmer. The Suffolk Farm Bureau has for the past six years conducted in various places in the county tests and demonstrations of large numbers of strains of seed potatoes and have brought the differences between disease free productive seed and ordinary stock so forcibly to the attention of the farmer and dealer that the great majority of the seed now used is certified seed. The result of this has been the practical elimination of really poor potatoes and a uniformly high standard of quality in our production.

The Labor Problem a Great One

One drawback in our plan of farm management is the fact that about double the labor is required in the harvest season

On Rendering Service (Continued from first page)

charges like labor, feed, tools, etc. Some one has said that the secret of success is to do the thing we know ought to be done at the time we know it ought to be done. Again this is open confession because by nature I am a sort of a "tomorrow feller." A lot of this so-called conservation time-saving I am talking about these days goes into jacking up rubber tire machines.

From an old fashioned viewpoint it looks like we were headed pell mell for destruction, but we do not seem to have hit the rocks. Maybe when this country has reached the point of automobile saturation we shall have net incomes large enough to repair some of our lazy non-producing soils and at least we can begin the growing of concentrated cow feed and legumes which will make of us real farmers instead of manufacturers of milk from materials, grown by other men—an actual day of farm regeneration in the East.

How To Prevent Losses from White Diarrhea

SOME flocks will no doubt suffer large losses from the disease known as Bacillary White Diarrhea or White Diarrhea. These losses come at a particularly discouraging time, usually when the chicks are from three days to two weeks of age. Chicks which are not properly fed may suffer from simple diarrhea, but where they are well fed, where they stand around with drooping wings, and where the droppings are slimy and white in color, one may be fairly sure that they have white diarrhea, if they are the age when the disease is likely to attack them.

The surest way to prevent losses from this disease is to incubate eggs from hens that are not infected with the disease. It has been established that the bacteria causing the disease are actually passed from the hen to the chick through the egg.

If this is not done, the surest way to prevent losses seems to be to prevent the spreading of the disease from chick to chick in the brooder, and to so care for the chicks that they will have vitality enough to throw off the disease and recover from it. The spread of the disease can be prevented by having sand on the brooder floor, which will prevent the droppings from contaminating the food.

They can be made strong to resist the disease by feeding a ration high in vitamins. The best food seems to be cod liver oil. Other foods that are good for this purpose are milk, and green feed.

What Becomes of the Cream?

Should Standardization Be Made Legal

RECORDS taken over a term of years show that the average butterfat content in milk for the New York State market, as produced by the farmers, is about 3.6%. This will run a little higher in winter and a little lower in summer. On the other hand, milk inspectors find that milk taken from the dealers' carts in the city will average only 3.3. to 3.4%.

In an effort to find out, AMERICAN AGRICULTURIST has been conducting a little investigation. In answer to our question, the New York City Health Department claims that this difference in the butterfat between the producer and consumer is caused through loss in handling. It is claimed by the Department that the cream sticks to the cans, vats, bottles, etc., and that it is therefore lost in that way.

On the other hand, a milk handling expert, to whom we referred the same question, replied as follows:

"The loss of butterfat from the time of receipt from the farmer to the time of delivery to the consumer is so negligible as to be entirely unimportant."

If this statement is true, there can be but one conclusion, and that is, that somebody is taking out some cream between the time when the milk leaves the producer and before it gets to the consumer's table. In other words, if these facts are right, standardization is being used, and standardization is against the law. Many of those who have studied the subject believe that the standardization of milk to equalize butterfat is a good thing.

One public official to whom we wrote on this subject answered as follows:

"It is true that the laws of the State of New York and of this city prohibit the standardization of milk. However, as a matter of fact, milk is standardized as soon as the product of a dairy of several cows is mixed together, and further standardization occurs at the milk plants where the milk from many farmers is mixed together prior to pasteurization. Before the figures which you quoted in your letter could be construed as deliberate standardization of milk, a thorough investigation would have to be made, figures carefully checked, milk followed through from the time of its shipment to the time of its sale, and attention given to the natural loss of butterfat in milk, such as adhering to the farmers' forty-quart cans, mixing vats, pasteurizing tanks, bottle fillers, etc."

It is true that the butterfat content varies greatly according to the dairy and according to the section from which the milk comes. Perhaps the right kind of standardization laws giving the dealers a legal right to equalize the butterfat would help both consumers and producers.

What do you farmers think about it?

Try Small Top Milk Pails

A GOOD many dairymen have hesitated to use the small top milk pails because they think it is much harder to milk in them than in the old-fashioned open pail. However, those that use them say that there is no difference, that it is just a matter of habit.

The large number of dairymen who are now using the small top milk pail know that there is a big difference in the two kinds of pails when it comes to the production of clean milk. There is a large amount of hair and dirt that collects on the cover of a small top pail during milking, even when the cow's body, udder and teats are comparatively clean. Without the production of the hood this material would fall directly into the milk.

The influence of the small top pail on the number of bacteria that fall into the milk at milking time has been shown by experiment to be as follows: When the cows were dirty and only sterilized utensils used, an open pail gave milk containing 86,000 bacteria in every twenty-five drops of milk; while a covered pail under the same conditions gave milk containing only 24,000 bacteria in that quantity of milk. It is said that the hooded pail can generally be expected to keep out at least 60% of the dirt and bacteria that would otherwise fall into the milk.

In selecting such a pail, one should consider the ease of cleaning, the ease of

using, and the smallness of the opening. All seams of the pail should be soldered flush to make cleaning easy. The interior should be free from angles and from inaccessible crevices which harbor bacteria.

Cure For Scours

I saw an inquiry in an issue of AMERICAN AGRICULTURIST for a cure for white scours for calves. I am 81 years old and will give my experience. One dose of dry beef bones burned and ground to a powder will generally effect a cure, using one tablespoonful in luke warm water, or milk. Seldom will it be necessary to repeat. The same will cure a cow given under similar conditions for scours.—W. M. P., New York.

How Milk Is Used

TWENTY cents out of every food dollar is spent for dairy products. Milk or milk products are used in almost every dish included in the daily meal, according to the Blue Valley Creamery Institute.

Latest statistics prepared by the Bureau of Dairying of the Department of Agriculture show that 45.5 per cent of the American milk production, or almost one hundred billion pounds, is used directly in the form of milk. It is estimated that every man, woman, and child, consume on the average of 50 gallons of milk each year. This is an increase of eight gallons over the 1917 per capita consumption figures.

The nation is eating more butter as well as drinking more milk. Per capita consumption of butter averages around 16.5 pounds, while in 1918 the average was but 14.6 pounds. More than one-fourth of the yearly milk supply is made into butter, 23.6 per cent of this is turned out as a commercial product.

Home-made butter is being relegated to the past. Since 1917 the output of farm-made butter during the same period has decreased 27 per cent. During 1923 only of milk produced was turned into yellow butter pats in country kitchens. Twenty-five years ago farm women were making on an average of 1,071,745,127 pounds. During 1923 they made less than 600,000,000 pounds, or 44 per cent less. During the same period the production of manufactured butter increased from 420,954,061 pounds in 1899 to 1,200,000,000 pounds in 1923, an increase of 185 per cent.

Americans are not big cheese eaters. The average consumption is less than 3.7 pounds per capita. This is a decrease of 0.1 per cent since 1909. Only 3.7 per cent of the annual milk production is made into cheese. Condensed milk consumption has more than doubled since 1920 when the average consumption was six pounds per capita. Today the average consumption is 12.69 per capita.

Condensed milk plants last year absorbed 3.5 per cent of the milk produced. Ice cream takes about the same amount. Calves drink around 4.2 per cent. Less than 2 per cent of the year's milk supply is used for such miscellaneous products as powdered milk and cream, malted and canned milk and milk chocolate. It is estimated that around 3 per cent is wasted or lost.

De Laval Milker Outfits Now Sold for

\$175.00

and up - depending
on the number of
cows to be milked

The Most Economical As Well As the Best of All Milkers

After nine years, and with more than 25,000 in use, it is an established fact that the De Laval Milker is not only the best but also the most economical of all milkers. This is especially true in view of the recent price reduction and the addition of the De Laval Junior Milker Outfit, for milking small herds, to the line of De Laval Milkers.

Whether you have 5 or 500 cows there is a De Laval Milker Outfit exactly suited for your needs, which will pay for itself in saving time and labor and increasing the quantity and quality of milk, and by making dairying more pleasant and profitable.

It is possible to get mechanical milkers for less than the first cost of a De Laval—but you can't possibly get the same results. During the time that De Laval Milkers have been on the market and with the large number in use, the following facts have been established:

- we have never known of one to injure a cow;
- the action of the De Laval is so pleasing and stimulating that cows almost invariably produce more milk;
- the De Laval is practically fool-proof and does not require a skilled operator;
- it not only milks better but faster, thus saving more time;
- it is easy to wash and keep in a sanitary condition.

Therefore, the De Laval is by far the cheapest in the end. In addition, it is sold on such easy terms that you can have the use of it while it pays for itself.

Reviewing the Latest Eastern Markets

MILK PRICES

THE Dairymen's League Cooperative Association announces the following prices that dealers will pay the League during the first half of May for milk testing 3% in the basic zone or 201 to 210 miles of New York City. It is understood of course that the prices mentioned below are not received by the farmer but go into the pool. They are prices dealers pay the League.

Class 1 Fluid Milk	\$2.80
Class 2A Fluid Cream	1.90
Class 2B Ice Cream	2.05
Class 2C Soft Cheese	2.00
Class 3A Evaporated whole milk	
Cond. whole milk	1.80
Class 3B Whole milk powder ...	1.80
Class 3C Hard cheese other than	
American	1.70

Class 4 prices will be based on butter and American cheese quotations on the New York market.

Sheffield Producers

The Sheffield Farms Producers announces the following prices for 3% milk in the 201 to 210-mile zone:

Class 1	\$2.80
Class 2	2.00
Class 3	1.65

Class 4 prices determined by butter and cheese quotations on the New York market.

Non Pool Cooperative

The Non-Pooling Dairymen's Cooperative announces the following prices for 3% milk in the 201 to 210-mile zone:

Class 1	\$2.70
---------------	--------

Class 2	2.00
Class 3A	1.70
Class 3B	1.65

Interstate Producers

The Interstate Milk Producers Association (Philadelphia Price Plan), announce the receiving station prices or the price to the farmer in the 201 to 210-mile zone from Philadelphia for 3% milk is \$2.19. In the 101 to 110 mile-zone, the price is \$2.29.

BUTTER MARKET STEADY

Although the price of fanciest marks of creamery butter is a half a cent below the price at the same time last week, nevertheless the market is in a relatively firm and stable condition. In the first place storage holdings are something like half a million pounds less than what they were a year ago. This is remarkable in view of the fact that during the early winter storage holdings in the country ran something like 50 million pounds over the figures of the previous year. This heavy absorption of stock by consumers was hardly looked for by most of the operators. The present situation gives the trade greater confidence as we go into the flush period when storage activities will be resumed.

Another factor that indicates the healthy condition of the market may be found in a comparison with the price of butter a year ago. In our issue of May 10, 1924 we reported that fanciest marks of butter were bringing 38c and 92 score was bringing 37c. At the present time the fanciest marks of creamery butter are worth from 46 to 46½ with 92 score at 45½. Lower grades are holding up very well. The bottom of the market is 37c which is 2c better than it was several weeks ago. In our issue of May 12, 1923 we reported the fanciest marks of butter at 44 to 44½c, 92 score at 43½.

The reason for the half cent reduction on the 28th was the fact that a considerable amount of stock came in late in the afternoon of the 27th after trading was over, and this had to be carried over.

FRESH CHEESE WEAKER

The fresh cheese market is rapidly taking on a weaker tone with the heavy increase in make in producing sections. There is an absence of buying interest in fresh whole milk State flats, resulting in considerable accumulation. The price for real fancy marks has been lowered from .23c which was reported last week, to .21c. As a matter of fact this price is extreme and .20c would be a more accurate interpretation of the present market. Average run fresh flats are generally quoted at 19½c. The cheese market has not gone to pieces altogether. Wisconsin prices are above those of New York which condition will naturally keep much of the western cheese out of our market. If the west were to flood us at this time we would undoubtedly see lower prices.

It is interesting to compare prices at the present time with those of last year. In our issue of May 10th a year ago we quoted 17c as being the extreme price for fancy fresh flats with most of the offerings at 16 to 16½c.

EGG PRICES WEAKER

The egg market has fallen off. Storage stocks are considerably heavier than they were a year ago and this is having a very decided influence on the speculative sentiment. At this time of the year this speculative sentiment does much to keep the market up or down. So many eggs have been placed in the freezers this spring at what is considered a price that is too high for safety, speculators are not inclined to take any changes on what will happen next winter. The cost of holding eggs in cold storage from now until next winter adds considerably to the price per dozen. Producers are bending every effort to have their hens laying heavily during the late fall and early winter months, and naturally this is going to hurt the trading in storage eggs. This relegates storage eggs to a lower market which hovers around a price that hardly makes it worth while to put eggs in the freezer and pay storage charges. That is why at the present time speculators are cautious in putting down stock when they consider the "into storage" price too high. Already freezers are pretty well filled up, a situation that is being closely watched.

There is a little better movement in nearbys than during the previous week. For a while it was very difficult for operators to get 37c for the very fanciest marks,

very few of which have been arriving. On the 28th the market strengthened up a bit so that the outside quotation was a little more easily realized in the various grades. It is only rare even at that, that we hear of many deals being made at 36 or 37c, which is the accepted figure for the fanciest and most closely selected whites; 32 to 34c representing more closely the actual condition of the market. Nearly gathered whites are bringing anywhere from 30 to 33c.

LIVE POULTRY MARKET EASIER

Supplies of live poultry have knocked the props from under the market. To get an idea of the amount of poultry that came to New York for the week ending May 2nd, advices at the middle of the week indicated that there would be 170 car loads of live poultry. By the time the week is up we may see a larger figure than that. This has had a weakening effect on the fowl market which has become very irregular and uncertain. The demand for live fowls has been fairly active and in spite of heavy receipts slaughter house clearances are reported as having been satisfactory. There is no telling what will happen in view of advices that indicate such heavy stocks are rolling to the city. Heavy fowls are dragging. The top of the fowl market is somewhere between 30 to 32c. Condition are in favor of the buyer and under those circumstances it is hard to establish a definite figure. Real fancy express broilers may bring 33c at the moment but that would not represent the true state of the market in view of the fact that freight arrivals are dictating terms. Express broilers are arriving more freely and it is therefore to be expected that prices will ease off to some extent. Fancy colored well-filled broilers will bring as much as 55c although the general market is 50c a pound. Leghorn or "pigeon" broilers are getting more numerous and these light birds are worth only 45c. Long Island spring ducks have been working out fairly well at 30c.

HAY MARKET SLIGHTLY BETTER

The market on hay has improved during the past week. Trading is not over heavy but receipts have been a little more reasonable. This has brought a steadier tone to the market especially on top grades. As usual, undergrades are slow. On the 28th of April the Brooklyn market was a dollar higher than New York, No. 1 timothy going at \$27, \$26 representing the top of the Manhattan market. No. 2 timothy has been worth \$23 to \$25. Sample hay is down to \$10. Light clover mixed has been worth from \$23 to \$25 for No. 1, \$20 to \$21 for No. 2. Second cutting alfalfa is worth all the way from \$23 to \$31 depending on grade.

GRAIN'S AND FEEDS

The "future" wheat market continues to be more or less of a speculative affair. Cable advices and weather reports have apparently more effect on the market than actual transactions. The west has been experiencing satisfactory weather in the form of much needed rain. This has been offset however by cold weather and frost in other parts. Another factor that had a very decided benefit and effect on the future wheat market was the establishment in this country by Great Britain of a large trading credit. Futures in corn and oats have reacted higher. On April 28th wheat closed at \$1.49¾. A year ago at the same time it closed at \$1.03¾.

New York Cash Grain Prices

The following prices are quoted for cash grains F O B New York City: WHEAT, No. 2 red \$1.83¾; No. 2 hard winter \$1.64¾; No. 2 mixed durum \$1.61¼. CORN, No. 2 yellow \$1.27½; No. 2 mixed \$1.26¾; OATS, fancy white clipped 59½ to 60½c; ordinary white clipped 56 to 57c; No. 2 53½c.

Local Buffalo Feed Prices

Buffalo is an important milling center for wheat feeds and linseed oil meal and quotations are therefore given for this point as reported by the New York State Department of Farms and Markets on April 25. Ground oats \$36.50; spring wheat bran \$30; hard wheat-bran \$31.50; standard middlings \$30; soft wheat middlings \$36; flour middlings \$35; red dog flour \$43; white hominy \$42; yellow hominy \$42; corn meal \$45; gluten feed \$38.75; 3% cotton seed meal \$41.50; 41% cotton seed meal \$44.50; 43% cotton seed meal \$46.50; 34% old process linseed oil meal \$41.

The Agriculture of Eastern Long Island

(Continued from page 493)

The Long Island potato in the territory which we are discussing is sold almost from July to November that is required during the balance of the year. This necessitates the payment of high piece rates in the harvest season in picking up potatoes and picking beans, in order to get the crop harvested. At present most of the steady labor supply is brought up from the South in the spring but it is not practical to secure extra labor for the harvest work in the fall in this way. Wages generally in this locality are higher than in most other distinctly agricultural sections but I believe the higher wages are compensated for by our ability to keep the labor steadily occupied with field work on the crops that we grow.

I believe that the solution of the labor problem toward which many of our progressive farmers are working requires a greater diversification of crops not to reduce the amount of labor, but to spread out its season. My own cropping scheme consists of potatoes, asparagus, strawberries and peas, cucumber pickles, beans, tomatoes, cauliflower and sprouts. The harvest of the asparagus begins immediately after the planting of the potatoes and this is followed by the strawberries and peas then by the cauliflower and sprouts. A plan of this sort properly worked out will keep a force of men busy from spring until fall and I believe that much better results can be obtained with steady labor of this sort than with casual piece workers.

A complete cropping scheme of this sort provides for three factors which are highly desirable in our agricultural practice. It evens up the labor requirements, provides income throughout practically the entire year and therefore helps greatly in financing crop production and allows for the rotation of crops and an increase of cover crops to maintain humus.

News from Among the Farmers

New Jersey's Secretary of Agriculture Resigns--Other News Notes

ALVA Agee, Secretary of Agriculture of the State of New Jersey has resigned, according to an announcement issued by the State Board of Agriculture. His resignation takes effect on June 30. This comes as a distinct shock to farmers of New Jersey. Mr. Agee has been a most popular secretary and he has made thousands of personal friendships among New Jersey farmers during the years that he has been Secretary of Agriculture, which has been for 9 years. Secretary Agee has directed the activities of the State Department of Agriculture since its organization nine years ago, during which period it has developed into one of the most important State institutions.

On Saturday, May 23, the members of the State Board of Agriculture and the staff of the State Department of Agriculture will hold a farewell reception in honor of Secretary Agee at the farm home of former Senator Joseph F. T. Angluysen at Somerville. It is expected that many of Mr. Agee's farmer friends will join with these two bodies in this event. This will be the summer final meeting of the board to which every one is invited, the occasion being followed with a basket picnic, music and addresses.

do not believe that any administrative officer ever had a more helpful and loyal Board under which he could serve with a sense of mutual understanding," said Secretary Agee, in his letter of resignation. "I have worked pretty hard all my life and from now on my health will be better if I have more time for rest and recreation. In discussing the matter with you in the last year, your suggestion that I solve the problem by leading more work to others has been kind, but responsibility goes along with any task. I think our organization is soundly based, and that makes it easier to ask for acceptance of my resignation. The hardest part of it to me is the severance of official relations and the loss of personal touch with so many people whom I number among my friends. The support of the farmers, in their organizations and individually, has made possible whatever we have accomplished. The industry and loyalty of your staff of workers have been admirable.

"I appreciate your kindness in placing the administrative work of the Department in my hands nine years ago, and now I shall appreciate your kindness in acceptance of this resignation."

Secretary and Mrs. Agee will take up their residence early this summer at San Diego, California.

At the same meeting at which the resignation of Secretary Agee was acted upon, the Board chose William B. Durjee, of Plainsboro, as his successor.

Licenses Necessary on Wallabout and Gansevoort

ON and after May 1, 1925, all farmers, market gardeners and dealers in farmers' produce who wish to use the

farm market square in Wallabout market or in Gansevoort (West Washington) market must be licensed by the Department of Public Markets.

Applicants for such licenses must fill out a questionnaire, and show that they own or operate a farm, and are, in fact, bona fide farmers. The licenses may be obtained from the market collector of the Department of Public Markets, or in the office of the Department, Municipal Building, New York City. The fee is \$1.00 for the plates and license, and \$1.00 for each additional set of plates for each wagon or truck.

No one will be allowed in the market after May 1, 1925, who does not have a license and plates on their trucks to correspond. All others will be turned away.

This is done for the purpose of protecting the honest farmer. Heretofore it has been impossible to distinguish the farmer or market gardener from the farmers' produce dealer, and much discontent has prevailed; but when these licenses are issued those entitled to them will be furnished with a numbered plate, printed to show whether they are licensed farmers or farmers' produce dealers.

Dealers in farmers' produce will be especially provided for immediately adjoining the farmers' market square.

A comfort station has been installed in each market, and hot and cold water furnished, both for drinking purposes as well as for the supply of auto truck radiators, all for the convenience of the farmers who come there.

(Signed) **EDWIN J. O'MALLEY**,
Commissioner.

Hotel Pennsylvania Selected for League Annual Meeting in New York City

DIRECTORS and county presidents of the Dairyman's League Co-Operative Association meeting at their regular monthly session in New York last week announced that the Hotel Pennsylvania had been selected for the annual meeting which is to be held in New York on June 18th next. Many League districts are already reporting that their delegates and farmers are planning automobile caravans to attend the annual meeting. In some sections preparations have already begun to plan for decorations on automobiles for the purpose of properly advertising the event along the route.

The program of speakers for the annual meeting will be announced in the near future. One of the important items of business will be the announcement of the election of the successors to the eight directors of the Association whose terms expire this year. The Association has 24 districts, one-third of whom are elected each year to serve for a term of three years.

New York County Notes

Jefferson County—On April 19, we had over a foot of snow. It did not last very long. Up to that time very little ground had been worked, though a few farmers whose land is situated high and whose soil is gravelly, had sown their oats, a few early potatoes and garden peas. Everything seems to point to late spring work and a big hay crop. Although hay has been hard to sell this year, it is moving a little better now with \$8 to \$9 a ton representing the top price offered by dealers. Loose hay is selling from \$8 to \$11 in small quantities. The F. X. Baumert Company paid \$2.40 for March milk. New milk cows are selling well and bringing from \$75 to \$90 each. Veal is worth 11c live weight. Eggs have dropped to 26c to 30c. Butter is 52c a pound. Fowls are worth anywhere from 25c to 30c a pound live weight. Farm help is a little more plentiful, wages ranging from \$25 to \$50 a month with 32

board, and from \$50 to \$60 a month with house, feed, garden and milk. More farmers seem to be going into the poultry business since eggs brought such a good price during last winter. Pure-bred flocks are becoming more common and noticeable on general farms. Also it seems that turkeys are on the increase. —Mrs. C. J. D.

Chautauqua County—Maple syrup sold this spring from \$2.25 to \$3 a gallon and sugar from 30c to 50c a pound. Eggs have been bringing as much as 30c a dozen. Hens are 28c a pound live weight; butter 50c to 55c, hay \$12 to \$15 a ton. There is not much call for hay.

planting peas as early as the second week in April. Good farm help is scarce and those who want work ask city prices which the farmer cannot afford to pay. —C. L. B.

News Notes From the Granges

The Tompkins County Pomona Grange will meet at Dryden, N. Y., on Saturday, June 16.

The Forest City Grange has purchased a lot on North Cayuga St., Ithaca, New York, to be used as a site for a Grange Hall.

BABY

CHICKS

LAWRENCE P. UHL

THE OLDEST AND LARGEST INDIVIDUALLY OWNED AND OPERATED HATCHERY IN OHIO. I am a PIONEER in the Baby Chick business. For 20 odd years I have been producing high class Baby Chicks which have gone out to thousands of Poultry people of America and proven highly satisfactory. For years previous to 1919, (when he retired), I was associated

with M. Uhl, New Washington, Ohio, who was Father and originator of the Baby Chick business in Ohio, making the first shipment of Baby Chicks 25 or more years ago. Since 1919 my output has been entirely taken by dealers who supplied a long line of year after year customers. I have now decided to give the GENERAL PUBLIC an opportunity to buy my high class Chicks direct from the Hatchery here at New Washington and I am in a position to furnish these excellent Chicks in almost any quantity and on short notice at the following prices:

100% Live Delivery Postpaid. Prices on	50	100	500	1000
White, Brown and Buff Leghorns	\$7.00	\$13.00	\$62.00	\$120.00
Sheppard Anconas, R. C. Brown Leghorns	7.50	14.00	68.00	130.00
Barred and White Rocks, Black Minorcas	8.00	15.00	72.00	140.00

AMERICAN CHICKERIES

Box 214, Grampian, Pa.

The Agriculture of Eastern Long Island

(Continued from page 496)

entirely at the county depot to truck buyers. The vegetable crops with the exception of the cauliflower are almost all shipped to commission houses in New York and other cities. The cauliflower from the Riverhead and Calverton sections is largely sold on the auction blocks at those depots.

The auctions are held by the Long Island Cauliflower Association, a growers' organization which has been functioning effectively for about thirty years. The association manager likewise receives orders to buy carloads of cauliflower for produce houses in various cities and at any time that competition is not effective on the block he can come in and make it effective. Thus the farmer who drives up to the auction block with a load of cauliflower has a number of produce buyers competing for his load and his own association to support him. If he is not satisfied with the price offered him he still has the option of refusing it and shipping his load to a commission house in New York. The result of this plan has been to distribute the cauliflower crop widely and prevent the glutting of New York market with consignment shipments, a great benefit to the cauliflower grower.

The whole reliance consequently of our Long Island growers is upon market competition to make a market for their products and because these products are of exceptionally high quality and bear a reputation for quality in the markets, the grower secures this competition.

Our Long Island potatoes ordinarily sell for 75c to \$1.25 a sack more than our nearest competitor on the wholesale market. Our cauliflower likewise brings a premium over most other flowers that come in competition with it. This is likewise true of many of our other products which come into market fresh and reasonably well graded.

The widespread development of co-operative marketing has not yet taken hold of the Long Island grower because he is finding already a good outlet for his produce at profitable prices. The Cauliflower Association is the only existing growers' marketing organization at the present time. The association last year sold the growers about 350,000 crates and sold on it auction blocks about \$400,000 worth of cauliflower. It has a paid up capital stock of \$6,090 and a surplus of about \$50,000 which has been acquired without any thought on the part of the growers that the association is operated except in the interest of the cauliflower grower. Under such a condition it is evident that the form of organization is not the determining factor as to whether an association is truly co-operative.

In conclusion I believe that Long Island agriculture is established on a sound and prosperous basis and that it is destined to continue prosperous in the future. It has the greatest market in the world closely accessible. Its practice is sound and properly adjusted to its physical and market conditions. Its farmers have courage and energy and a progressive spirit. They have shown it in their willingness to work together in many ways through the Farm Bureau, and if the time comes that co-operation in marketing is needed, they will work together in it also. They have come through the trying period of readjustment since the war, when failures have been numerous in other agricultural communities, without failures and without reduction in land values. There are no better communities in which to make a living on the farm and no better conditions of rural life than in agricultural communities of Long Island.

J. N. NACE, RICHFIELD, PA., BOX 161

Lone Scouts of America

(Continued from page 492)

tests in order to go on to the second degree, which teaches you woodcraft. The third degree tells you about the respect due to the flag, about camping, first aid, and about identifying trees, and plants. The fourth degree is concerned with camp cooking, signalling, recognizing birds, and bandaging. The fifth is about splicing ropes, building a long cabin, how to tell poisonous mushrooms, and how to revive a drowning person.

By the time you have passed these degrees, you are ready for something more difficult. Tracking and trapping animals, swimming, building bridges, and using tools. The seventh degree, teaches you woodcraft, pioneering and camping.

There is nothing easy about completing the work of these seven degrees, but who wants to do the easy things? They are interesting things, and will give you something to do all the year, winter and summer.

How to Become a Lone Scout

Cut out the coupon on this page, read it over, fill in the blank spaces, carefully so we will be able to address your mail correctly, and send it with fifteen cents to the Lone Scout Editor, AMERICAN AGRICULTURIST, 461 Fourth Avenue, New York City.

We will forward your application to the Lone House at Chicago, and will send you a membership card, a pin, and a handbook. Read the handbook, and then send for the first degree book. Begin at once to study the tests and pass them as soon as you can.

The One-Horse Fiddler—By E. R. Eastman

ONCE upon a time, there was a little boy who loved music. Most little boys do, but this one liked it so well that his heart got all trembly and his eyes all misty whenever he heard any. But this was very seldom, for he was a little hill farm boy back in the days before folks had learned to preserve music in the phonograph or gather it from the air with the radio. Even if there had been such inventions then, this boy would probably not have had them in his home for his father worked a hill dairy farm on shares.

However, he did have some music, for Mother liked it too, and had toilfully gathered and sold blackberries enough to purchase a bright new melodeon. And when his mother played on the melodeon, the boy was carried away in spirit to another world where everything was fine and right and beautiful.

As the years came along and the boy grew larger, he managed to save a few dollars to buy a cheap violin, and on it he taught himself to play all the old airs and ballads that have lived and come down to us through the years. But there was not much time for "fiddling" in the hard and monotonous drudgery of hand work that too often was the lot of farm boys of the past generation. So this boy—did I tell you his name was David?—grew to young manhood without knowing that God had given him a great natural musical talent and that he could make the cheap fiddle vibrate to the touch of a master. To be sure, his mother and father sometimes paused in their work to have their hearts lighten and their spirits lift for a moment as they hearkened to David's playing. But to David and to David's folks, his "fiddling" was but a pleasant way of passing a lonesome hour and they thought no more of it. David's father and mother were more concerned because the boy seemed to be a strange and difficult mixture of laughter and tears, with no liking and little ability for the rough work of the farm.

"Full many a flower is born to blush unseen
And waste its sweetness on the desert air"

Even if they had known that David could play, it would have made no difference, for as I have said, David's father worked a hill dairy farm on shares and there was little time or money for anything but labor.

* * *

The time finally came—as it does with so many boys and girls on the farms—when David could stand it no longer, and in spite of lonesome heartache, he crept down the stairs one night with his shoes in his hand and his fiddle under his arm, and went down the valley and over the mountain to join up with the circus that was passing through the county seat.

After some preliminary years, which we will pass over lightly, David became a circus clown. Not a very exalted calling, say you? I am not so sure, for I have a sort of notion that making people laugh away their troubles by harmless foolishness will count quite considerable in the final reckoning. Anyway, David could make folks laugh and when his show came to the country and the "big top", filled with eager boys and girls and with the tired men and women from the farm country, David, the Clown, seemed particularly inspired so that the folks went back to their homes in the hills and valleys to laugh in lonesome days when they thought of David, the Clown, and his foolishness.

More years came and went, until David became famous among those who have charge of the people's amusements, and he left the sawdust ring of the circus to become a great clown comedian in vaudeville. With success came money, some of which went back to make easier and pleasant the declining years of Father and Mother. Some, too, went

into the bank, for the boy never forgot the bitter poverty of his childhood. His wants were few and simple, and outside of his work he was quiet and retiring almost to the point of timidity.

David's associates often wondered what he did with his hours of leisure; only one or two knew that his only luxury was a violin purchased while he was still a circus clown, and to pay for which he had mortgaged his wages for many a long month. Only one or two of his friends knew also that David's constant companion when he was alone was his beloved fiddle. During the circus and vaudeville years, David, the Clown, carried a fiddle in his act, but it was a cheap thing with one string on which he was always just on the point of playing. Many were the jokes he cracked about his one-horse fiddle with its lonesome string, and how, sometime he was going to get mad and really make it play.

But that time never came, and none of his audiences had ever heard him touch bow to string. It was as though his great talent was a secret, personal thing, never to be profaned in public by the hands of a foolish clown. In the

school themselves into thinking that there are things more important in the world than love and home and babies.

To be fair, though, it must be said for Helen that she had some reason for so thinking, for God had given her a voice with the power to charm and hold enthralled the great audiences to whom she sung nightly; and when David heard her sing, his soul vibrated in sympathy like the strings of his own violin.

* * *

Time went on, as time has a habit of doing, and Helen continued to fight off her growing interest in David, until there came a night just before David's number on the program when the two accidentally met back of the big stage. There is a point in all of our emotions beyond which the control, no matter how strong, will break. David, watching the beautiful face of the girl that he had loved from afar, for so many long months, forgot for a moment that Helen was a great Artist and that he was only a Clown, forgot that the paint was even then upon his face and that he was dressed in the absurd rags of his costume.

BEGINNING NEXT WEEK

"The Valley of Voices" By George Marsh

In the issue of May 16 will begin our new serial—a story of the frozen north, of trap lines and trappers, of a mysterious monster whose call or howl strikes fear into the heart of the listener, of a young American explorer who sets out to unravel the mystery that has given the name to the Valley of Voices.

later years on the vaudeville stage, David had a way of convulsing his audience with mirth at the end of his act by expostulating for a long time with his fiddle for its worthlessness and general cantankerousness, and then ending the act by crashing the fiddle in a thousand peaces over the back of a chair. As he did it, he would always say:

"And now you and I never will play together again."

So David, the Clown, came to be a man of thirty with no interests in life except to make folks laugh with his work and to make himself laugh and cry with his violin. Then one night, he suddenly knew that he had a new interest in life. He loved a girl with a love greater even than his love for his violin, and that was exceedingly great indeed. But the lady was a great and famous singer, and David was only the Painted Clown.

On the few occasions when David, the Clown, dared some little attentions to Helen, the Artist, she laughed and thought it only another way the clown had of being funny. David, bitterly hurt at the laughter, reflected as other humorists had before him, that one of the tragedies of the funmaker is that no one ever takes him seriously.

However, David was very much in love, and after a time Helen came to know that he was. Far be it from me to state what women really think and feel, but it is said that no woman can ever have a man in love with her without its arousing at least her interest. However this may be, it is certain that Helen began to take more notice of David as she occasionally met him in the same theater where both were playing. Being a girl of fine judgment and perceptions, she caught occasionally behind the painted face a glimpse of the fine and beautiful soul of the man.

So Helen, the Woman, began to respond to what she saw in the soul of David, the Clown. The trouble was that Helen, the Artist, was in conflict with Helen, the Woman, for she was one of the many young women who try to

He remembered only that Helen was a Woman and that he loved her. With phrases broken with emotion, he took the girl's hand and tried to tell her of his love, but she, fighting herself to remember that she was Helen, the Artist, and aided a little perhaps by the incongruity of a lover pleading his case in the habiliments of a clown, pushed David gently from her and said:

"I am sorry, David, but it never can be. I must think of my singing."

Hurt to the soul, and with the exaltation of his love ashes within him, David turned away to answer his call to the stage, saying bitterly to himself:

"Fool, fool, that I am! Her singing was but a kind excuse. She remembered that she was Helen, the Artist, and that I am only David, David, the Painted Clown."

His call to the stage was becoming insistent, but before he responded, he went to his dressing room. When he appeared before the thousands who packed the house, his "one-horse fiddle" with its lonesome string was missing. Instead, he carried in its silken case the violin that for many years no one but he had seen and on which not even his closest friend had ever heard him play.

Few, if any, noticed the change, for he immediately started off with his usual line of funmaking, which had made him the famous comedian. In the same way as on other nights, he built up the expectancy and the hope of his audience that he really would make his one-horse fiddle "earn its salt."

Then, suddenly, their hopes were realized. David began to play. Almost with the first strokes of the bow across the beautiful instrument, David, the Clown, faded out of the consciousness of his audience and he became instead, David, the Artist. Those who had come to that theater that night heard a man's soul talking to them, a man's soul unfettered by the clumsy limitations of ordinary language, and as they listened, they were transported to the land of spirit, the land of music, where all things are fine, and right, and beautiful.

In accord with the mood of the Clown, the first pieces were just flashes and touches of the light and rapid fantasies, the hornpipes, gallops and quick steps, which are always to be found in the repertoire of the country fiddler; Money Musk, Dan Tucker, Old Rosin, the Beau, The Fisher's Hornpipe, all played with a swing and a beat that put the audience unconsciously to tapping its feet.

There was only just enough of these to set his hearers to longing for more, when the mood changed and the violin began to talk to them of War, of beating drums, the shrill call of the fife, the sound of marching feet, followed by the suggestions of the farewells, the sacrifice and the tears that God of Wars always brings. Came first that rallying call of the Scottish clans:

I look'd down to Bonnie Lochleven,
And heard three Bonnie pipers play.
The Campbells are comin', O ho, O ho,
The Campbells are comin', O ho, O ho!

Then with notes beginning far away and increasing in crescendo, one heard the approach of marching army, an army of the blue-coated farm boys of '61.

Marching along, we are marching along,
Gird on the armor and be marching along;
McClelland's our leader, he's gallant and strong,
For God and our country we are marching along.

As if in answer to this, there came loudly, boisterously, confidently, the ringing, challenging notes of old "Dixie":

In Dixie Land I'll take my stand,
To lib and die in Dixie.

The mood changed, and the violin began to whisper to them so softly that the notes could just be heard in the almost breathless silence:

My brave lad sleeps in his faded coat of blue;
In a lonely grave unknown lies the heart that beat so true.
He sank faint and hungry among the famish'd brave,
And they laid him sad and lonely within his nameless grave.
No more the bugle calls the weary one,
Rest, noble spirit, in thy grave unknown!
I'll find you, and know you, among the good and true,
When a robe of white is giv'n for the faded coat of blue.

And then David and his violin took them to a great war camp, with its gleaming campfires and its lonesome boys, putting their longing for peace into the words of the song:

Many are the hearts that are weary to-night,
Wishing for the war to cease;
Many are the hearts looking for the right,
To see the dawn of peace.
Tenting tonight, tenting tonight, tenting on the old camp ground.

Now came that battle hymn of the soldier, that expression of his faith that God is still on his throne:

He has sounded forth the trumpet that shall never call retreat,
He is sifting out the hearts of men before his judgment seat,
O, be swift, my soul, to answer Him! be jubilant my feet:
Our God is marching on.

The music ceased. David's allotted time on the program was up long before, but no one had noticed. His fellow players, the orchestra, the manager of the stage, even the stage hands themselves, had gathered in the wings, all as completely enthralled by the singing violin as was the audience out in front.

The player wavered uncertainly on his feet for a moment, evidently recalled to time and place, then the spell was on him again and the violin began to speak once more.

This time, the theme was of Peace, of home and friends; the folk songs of the race, beloved of long generations. As the audience listened, they were carried back again to the land of childhood, to early home and friends, to Mother singing to them in the early twilight—Swanee River, My Old Kentucky Home, Old Black Joe, and

Carry me back to old Virginny,
There's where the cotton and the corn
and tatoes grow,
There's where the birds warble sweet in the springtime,
There's where this old darkey's heart has long'd to go.

(Continued on opposite page)

Again the scene changed. Now the violin talked to them of Englis' farms and meadows and gardens, green hedges and little brooks, the land where The Last Rose of Summer has been sung these hundred years.

Then came Robert Burns' song of farewell, that song of eternal friendship:

And here's a hand, my trusty frien';
And gie's a hand o' thine;
We'll tak' a cup o' kindness yet,
For auld lang syne.

The bow stopped. The player stood with bowed head. Slowly, softly, he began again with that song of the home, known and sung wherever people have gone, a song that mothers sang to their children in the frontier cabins as they thought of their own homes and people across the wilderness miles, a song that has eased the pain of many a lonesome and homesick boy working or wandering on the edges of the world:

An exile from home, splendor dazzles in vain;
Oh! give me my lowly thatch'd cottage again;
The birds singing gaily, that come at my call;
Give me them with that peace of mind, dearer than all.
Home! home! sweet, sweet home,
There's no place like home, there's no place like home!

Again there was a pause. The crowd relaxed a little. Here and there a woman wept. Then David turned a little toward the wings of the stage and once more the Language of Music filled the theater.

But now there was a new Something, indefinite, elusive, indefinable, something that had not been in the earlier songs. What was it? A few of David's hearers with souls in sympathetic accord from their own experience understood. The master violinist was talking to them of that greatest and worst of human emotions—Love—and talking with the power and appeal that no tongue or words could ever approach. But, stay, it was not to the audience that the violin now spoke; it was to the weeping girl who stood in the wings of the stage, to the girl who had forgotten that she was Artist, and knew only that she was Woman.

Like dew on th' gowan lying
Is th' fa' o' her fairy feet,
And like winds in summer sighing,
Her voice is low and sweet.
Her voice is low and sweet,
And she's a' the world to me,
And for bonnie Annie Laurie,
I'd lay me doon and dee.

A few soft chords, followed, and the violin took up that other Scotch 'love song of farewell:

The wee birdies sing, and the wild flowers spring,
An' in the sunshine the waters are sleepin';
But the broken heart it kens nae second spring,
Tho's the waefu' may cease frae' their greetin'.

O, you'll tak' the high road, and I'll tak' the low,
An' I'll be in Scotland afore ye.
But I and my true love will never meet again,
On the bonnie, bonnie banks of Loch Lomon'.

The highland scene faded, and it is twilight, twilight in any land where the language of Love is spoken.

Just a song at twilight, when the lights are low,
And the flick'ring shadows softly come and go,
Tho' the heart be weary, sad the day and long,
Still to us at twilight comes Love's old song,
Comes Love's old, sweet song.

Again the singing violin took its wrapt audience back to our own South, and spoke to them in all the tones and overtones, the trills and the variations possible only to a violin in the hands of a master when it plays The Mocking Bird. I'm dreaming now of Hally, sweet Hally, I'm dreaming now of Hally,
For the tho't of her is one that never dies;
She's sleeping in the valley, the valley, the valley,
She's sleeping in the valley,
And the mocking bird is singing where she lies.

The movement changed and slowed, and they listened to that beautiful pledge of Ben Jonson:

Drink to me only with thine eyes, and I will pledge with mine,
Or leave a kiss within the cup, and I'll not ask for wine;
The thirst that from the soul doth rise, doth ask a drink divine,
But might I of Love's nectar sip, I would not change for thine, for thine.

Now came the song of the lovers whose affection has endured through the years.

Let's go to the Movies!

THE Paramount magician waves his wand and you are off on your travels into the land of laughter and tears, sighs and gasps, love and adventure—something different to chores!

See the better motion pictures regularly—it's a deep and thrilling experience you need.

You can do this at some theatre near you. Paramount Pictures are scheduled there now! The kind of films that make any community a better place to live, and a better place for young folks to stay!

Satisfy your curiosity about the modern life of the great outside world this way. Taxes and work seem lighter when good entertainment sparkles in the evening!

Enjoy Paramount's art in such pictures as The Alaskan, Peter Pan, The Light that Failed, The Spanish Dancer and dozens of others, all representing screen entertainment of the better kind.

Whether you want a great drama of youth's struggle for success in the metropolis, or a breath-taking mystery play or a picturesque story filmed in foreign lands, or a thrilling Zane Grey production of life in the open, depend on it, Paramount makes it best, because leadership draws the best talent.

Follow that Paramount name and trademark. It represents the highest ideals of wholesome entertainment. The people who appear in pictures come and go, live and die, but Paramount ideals live for ever.

Make Paramount the entertainment side of your life, and watch the difference!

Just as any town's a better town with the better pictures, so any farm's a happier farm with Paramount a habit.

Get the habit. We're doing the rest!

Go by this name and trademark
and you'll go right!

Paramount Pictures

"If it's a Paramount Picture it's the best show in town!"

thine own,
And thy cheeks unprofan'd by a tear,
That the fervor and faith of a soul can be known,
To which time will but make thee more dear.
Oh! the heart that has truly lov'd never forgets,
But as truly loves on to the close,
As the sunflower turns on her god, when he sets,
The same look which she turn'd when he rose!

And then after a little pause, the audience knew that they were listening to something not meant for them.

Last night the nightingale woke me,
Last night when all was still,
It sang in the golden moonlight,
From out the woodland hill.
I open'd my window so gently;
I look'd on the dreaming dew,
And oh! the bird, my darling,
Was singing, singing of you, of you.
O think not I can forget you;
I could not, tho' I would!
I see you in all around me,
The stream, the night, the wood,

The flow'rs that slumber so gently,
The stars above the blue,
Oh, heav'n itself, my darling,
Is praying praying for you, for you.

Slowly as if in a dream, the man lowered violin and bow, and with unseeing eyes, looked out over the audience beyond the footlights. Not a sound could be heard except the occasional sob of a woman. With a wistful little smile, David began again, and this time, the theme was not of war or country or home, or even of love between man and woman.

Lead, kindly Light, amid th' encircling Gloom,
Lead thou me on;
The night is dark, and I am far from home,
Lead thou me on;
Keep thou my feet; I do not ask to see
The distant scene; one step enough for me.

The notes grew softer, stopped. Then

the shocked audience looked into the vacuous face of the clown, a clown holding a fiddle awkwardly in his hand and grinning foolishly at it, as he concluded his act in due and ancient form.

"Pore little old one-horse fiddle, ain't ye? Pretty generally worthless, too."

But for once the usual words failed to get a laugh or even a smile from the audience. The transition from the sublime to the ridiculous was too great. The clown stood looking at them as if wondering why they did not laugh and then the grin left his own face and he looked at the instrument in his hand as if lost in thought. After a moment he continued, but not in the words or with the gestures of a clown.

"Still and altogether, old fiddle, you
(Continued on next page)

The Rugs Must Look Fresh

The Appearance Of The Floor May Make or Mar The Room

IN sweeping a rug or carpet, hairs and bits of thread can be easily removed if a circular instead of direct back and forward movement of the broom is used. The threads form in a ball and can be easily taken up.

Wet salt thrown over a rug and immediately swept up will remove dust and sometimes brighten the colors.

Sprinkling a carpet with corn meal and then sweeping, following the way of the nap will give better results than when some dust downs are used, and tea leaves squeezed dry are excellent for us in sweeping a dark carpet or rug.

Various colors seem to require varied treatment in brightening. Clean a rug and then go over it with a cloth wrung out of water to which a cupful of vinegar and a tablespoonful of ammonia have been added. For the vinegar water substitute a water which two scraped raw potatoes have been added. For a woolen carpet, add three gills of ox-gall to a pail of water and wipe the carpet with this. Tobacco will also work wonders in brightening some carpets. Steep a fourth of a pound of smoking tobacco, or three broken cigars in a gallon of water for several hours. Let stand until the following day, strain, add a little ammonia and go over the carpet with a cloth wrung out of this solution.

Mixture for Scrubbing Carpets

For scrubbing carpets that are badly soiled, use a mixture made by adding yellow soap to boiling water and boiling

liquid dye applied with a clean white-wash or paint brush. Put the rug over the line to dry. The work of dyeing may be done on the floor, by first putting at least a dozen thicknesses of newspapers under it to absorb moisture.

No. 345-5—On these kitchen curtains of cross-barred voile, prim blossoms are embroidered in two shades of rose, blue or yellow, as you prefer. Each petal is a lazy daisy stitch. Use several strands of cotton for the blossoms. The leaves are pale moss green. Edges of the curtains may be hemmed or edged with lace. They would also look well plaited and crocheted around with a narrow filet edge. Heavy cross-barred voile 39 by 45 inches, stamped for curtains, \$1.00. Floss for embroidery, 40c.

In a sunny room the rug may be allowed to dry on the floor.

Strips of stiff buckram sewed along the ends of a rug on the under side will keep them from curling.—L. M.

The One Horse Fiddler

Continued from page 501

and I have played some lonesome roads together. Pretty good friends we've been," and then as if ashamed of his sentiment, he brought the grin—or shall we call it a cynical grimace—back to his face as he said:

"Pore, little, old, worthless, one-horse fiddle, ain't ye?" Then with a voice that fairly thundered, he shouted: "But you and I will never laugh or cry together again!" and with these words, the man raised the violin over his head and with a great downward stroke, crashed it into a thousand pieces over the back of the chair.

In the stunned silence which followed, David turned and stumbled blindly off of the stage and to his dressing room. There, grabbing hat and coat, and still dressed in the paint and costume of the clown, he started to make his way to the street.

"David, ah, David, where are you going? Wait!" and with a little dash Helen had caught him by the arm. "Don't go, David. — I — I — don't want you — to go."

The man paused and looked at the girl with bloodshot and unseeing eyes. He shook off the little detaining hand and started on.

"I'm only David—the Clown—" he muttered.

But Helen, the Woman, had seen a great light. She loved this strange man with his contradictions of laughter and tears, with a very great love indeed, and with that love had come understanding.

She caught up with David again, and this time her arms went around his neck. Holding him thus, and looking up with tear-stained face, she said:

"Listen, my David. I love David the Man; I love David the One-horse Fid-

ler; but best of all, I think I love David the Painted Clown, who brings happiness into the world by making folks laugh!"

Ice Cream Is a Wholesome Dessert

THESE are some of the simplest ice cream recipes. Desserts made by these recipes are good, wholesome food and not mere luxuries.

Neapolitan Ice Cream

2 cupfuls milk 6 egg yolks
1 cupful cream 1 cupful sugar
¼ teaspoonful salt 1 tablespoonful vanilla

Scald the milk, pour slowly on the egg yolks which have been beaten with the sugar and stir constantly so the eggs will not cook, but blend with the hot milk. Place in a double boiler and cook until the mixture coats the back of a silver spoon. Strain through a sieve into a bowl, add the vanilla and cream and freeze.

Philadelphia Ice Cream

4 cupfuls cream 1 tablespoonful vanilla
1 cupful sugar ½ teaspoonful salt
Mix all the ingredients and freeze.

THE FARMER'S FRIEND

Cooking Stove, Fuel and Extinguisher Complete 25c

For a piping hot breakfast early in the morning; for hot drinks and food when you're too far from the house to get back for lunch, this Sterno Stove Outfit proves a friend in need to the farmer. Once you've cooked the Sterno way you won't bother with the big stove for light cooking.

Boils, broils, fries perfectly. Folds flat so is easy to carry. Strongly built but weighs only 8 ounces.

Sold by dealers or direct. Send this Ad and 25c to Sterno Corp., 9 E. 37th St., New York City, Dept. 279. We will send, prepaid, stove, can of Sterno and extinguisher. Satisfaction guaranteed or money back.

Healthy, Wealthy and Wise

Wise Feeding Aids Health and Health is a Precious Asset

RECENTLY I read a statement by a health specialist which said "Nature after a certain point seems to say, 'Now, I've done all I can do to build a good body; the rest is up to you.'" He went on to say that at the age of 30 years, all individuals should have established a health program of some sort. The body should be kept clean within and without, and each organ should function properly so that the body machine is not being continually clogged with waste which sooner or later means hindrance or a break in its operation.

Most people at the age of 30 constitute a part of the world's workers, whether of the city or of the rural districts, whether man or woman, whether on salary or belonging to the great body of unsalaried—yet earning nevertheless—the home-makers of our land. Health to the worker is a real asset and the lack of it a decided liability. Sickness is bad for the family pocketbook to say nothing of the human suffering it entails. Mediocre or "tolerably good" health is only one step removed from sickness and every effort should be made to promote it to the stage of positive good health.

We can do much as adults to improve our health habits, but the foundation for our health was laid for us by our ancestors and by our mothers, especially, before we were born. But, granting even that, sometimes a child that gets off to a poor start can be developed physically to overcome many weaknesses. Many a girl who is delicate may grow into healthy womanhood by having the right sort of care, regular hours, plenty of fresh air, physical exercise suited to her strength, nutritious foods, and medical or dental attention when needed.

This is said to be the "age of the child" much as last century was said to be an "age of invention." Never has there been so much thought given to the needs of the child's body or of his mind. Our Puritan ancestors were much concerned for the spiritual welfare of their children, and Heaven forbid that we should ever become careless in that respect! But many could live on a higher spiritual plane if they were not so harassed by bodily ills.

The time to develop a strong physical frame is at the time when the body is growing and its functions becoming a matter of habit.

Realizing this fact to be fundamental to the welfare of our nation, the Bureau of Home Economics of the U. S. D. A. and the American Child Health Association are concentrating their efforts during the week beginning May 1st to emphasize Child Health and ways in which health may be promoted. They are stressing particularly the close relation between food and health in growing children.

We should know what to look for as the signs of good health and be uneasy if these signs are negative; an erect, sturdy, well-developed body with straight legs, flat shoulder blades, full rounded chest, strong white teeth, firm rosy flesh, mind keen and happy, and vigor of movement without undue nervousness. We are told also that temper tantrums may indicate undernourishment.

"A quart of milk a day for every child," has long been the slogan of nutrition workers. A pint a day is allowed by some provided all other foods are right. If the mother has hard work getting "down" the quart a day, it may be used in puddings, custards, cocoa, milk soups, creamed dishes, or by resorting to a "straw" for drinking it plain. Then too the elders of the family should set an example by drinking milk, or at least refrain from expressing distaste for it. "Less talking about what a child should eat and better example set by parents are more effective."

The often joked-about bow-legs or knock-knees become a matter for serious

thought when it is known that they are an indication of the lack of calcium and phosphorus in the food of their unfortunate owner. At least a pint of milk a day with such vegetables as spinach, dandelion greens, celery and carrots in addition to potatoes, besides one egg a day, would aid materially in furnishing the necessary minerals. Fruits, too, are important sources of calcium and phosphorus. Whole-grain cereals, used as oatmeal and in graham bread help to furnish these desired elements.

The coddled egg is more easily digested than a boiled one since the latter process toughens the albumen. Drop the egg into boiling water, remove from the heat and let stand about 8 minutes; a tender jelly-like white, and a yolk sufficiently cooked should result.

Sometimes children unfortunately are deprived of eggs as a food because the quantity first fed has been too great. Just whisking a fork dipped in egg yolk through baby's orange juice or cereal gruel is recommended by some doctors. When the child becomes accustomed to taking care of this concentrated food, then the quality can be increased until at 1½ yrs. he is taking a whole egg yolk and occasionally a whole egg.

The dietaries suggested by the Bureau of Home Economics and the American Child Health Organization are briefly as follows:

Suggested Bill of Fare for a Child of Two

Breakfast: Juice of ½ orange, whole-grain cereal mush; milk, 2-3 cup, or more if wanted; toast; butter.

Dinner: Coddled egg, baked potato; spinach; bread, butter; pulp of cooked prunes; cookie.

Supper: Milk, 1 1-3 cups, or more if wanted; whole-wheat bread; butter.

Suggested Bill of Fare for a Child of Five

Breakfast: Baked apple; whole-grain cereal mush; milk, ½ pint or more if wanted; bread; butter.

Dinner: Boiled potato; creamed codfish; string beans; bread; butter; cup custard; cookie.

Supper: Milk ½ pint, or more if wanted; whole wheat bread; date marmalade.

Suggested Bill of Fare for a Child from 8 to 10

Breakfast: Berries; whole-grain cereal mush; milk, 2-3 pint, or more if wanted; bread; butter; sugar; 1 level tablespoon.

Dinner: Beef stew with potatoes and carrots or tomato; bread; butter; tapioca cream; ginger snaps.

Supper: Cream of lettuce soup; graham bread toasted; butter; honey; or syrup; milk if wanted.

Generally speaking, a child's diet should contain each day, milk, eggs, vegetables, fruits, whole-grain cereals, and butter or cream.

More specifically we should include daily a pint of milk, an egg or meat or fish (depending upon the Child's age), fruit in two meals, (if dried fruit is used, supplement with tomato juice or raw green vegetable), roughage of some kind in each meal (potatoes, whole-wheat products or other vegetables or fruit) and a little butter or cream in every meal.

This does not necessarily mean that many strange and unusual foods must be bought, but if we plan at the right time, we can have most of the foods in the garden or in the cellar. Even if we do have to buy some of them at certain seasons, it is better to have proper foods than to have some other things which may not be so important.

The body cannot build and repair itself if the material is not furnished it, and as was said in the beginning, it means health, and consequently wealth (whether much or little) to have the right habits of living become perfectly and easily a part

of our routine. In so doing, we add to our store of wisdom and give the younger generation a better start than most of us had.

We Respectfully Request Your Attention

Owing to the advance in postal rates, it has been necessary for us to advance our prices on patterns to 13c and our pattern catalogues to 14c.

We are making a special request to our readers who order embroidery or dress patterns, or stamped material for embroidery, to notify us within a reasonable time if they do not receive their order. We make every effort to have the orders filled promptly, but if for any reason, they are not received we should know it at once. It is too late to adjust matters if the order is several weeks old, or, as in some cases, even months old.

Saving Eggs

IN the spring I "put down" three jars of eggs when eggs are plenty and cheap. I use water glass and in three years I have only found one egg that was not perfectly all right.—E. M. F.

Cleaner clothes! Safe cleansing! Easier washday! That's what Fels-Naptha brings. Splendid soap and dirt-loosening naptha working together make it different from any other soap. Isn't this extra help worth a penny more a week?

or will get it for you

KEEP YOUR SCALP
Clean and Healthy
WITH CUTICURA

Saves many lives and lights hundreds of thousands of farm homes

UNION CARBIDE GAS assures comfort and safety to millions of people. It serves several hundred thousand rural home owners, as a satisfying low-cost illuminating and cooking gas. It saves many lives. Its dependability is recognized in scores of uses.

ON THE FARM. The gas is made in an easily understood generator which automatically drops Carbide into water. Small iron pipe, installed without disfiguring walls, floors or ceilings, carries the gas throughout homes, barns and poultry houses. Burners with automatic igniters can be placed wherever desired.

LIGHTHOUSES AND BUOYS. Union Carbide Gas light penetrates

heavy atmospheres better than any other light. Carbide Gas lighthouses and buoys make ocean highways safe. The light—more like sunlight than any other light—can be seen for miles.

COAST GUARD—LIFE-SAVING EQUIPMENT. Small cylinders charged with Union Carbide are hurled into the water to aid in rescues. Novel devices ignite the gas when the cylinders strike the water. Ocean liners are provided with these cylinders.

FIRE DEPARTMENTS, WITH CARBIDE GAS LIGHTS, SAVE MANY LIVES. Firemen can move about with speed and safety; can see far ahead, and locate seat of fire quickly. Many lives and much property are saved.

EVERY FARM OWNER should investigate Carbide Gas for lighting and cooking.

Send for free loom book, it tells all about the weaving business and our wonderful \$9.00, and other looms. UNION LOOM WORKS, 332 Factory St., Boonville, N. Y.

Service Department

Some Legal Tangles Unscrambled

"Can I engage in raising locust posts on mortgaged land? I have about 10,000 set now and 3,000 more coming this spring. I have 12 acres set to pine (which will not get large enough to count in the life of mortgage). The locusts are getting crowded so should be thinned. They were set eight years ago, and a few each year since, on good land cultivated a little at first. Since brush and weeds have been grown on as mulch. Now I am informed I cannot cut or thin them. Are such trees a crop or are they forests?" F. L. G., New York.

GROWING trees are considered to be part of the realty, and hence covers the land and everything that constitutes a part of said land. Now, the rule is that the mortgagor, cannot do anything that will impair the value of the land without the consent of the mortgagee. Therefore, if cutting out some of your locust trees will decrease the value of the mortgage security, the mortgagee can enjoin you from so doing. However, we are convinced that if the necessity of such cutting were explained to the mortgagee he would see that the security would not be impaired. If he has not objected, you might start to cut a few and see what happens.

Paying Inheritance Tax

"I wish to ask you can a person draw the money on a check if the person who wrote the check is dead? If the money were still in the bank the check would still be good would it not? In what way and under what circumstances can this State collect Inheritance Tax? Can the State collect Inheritance Tax if there is a will?" C. E. D., New York.

REPLYING to your recent letter we wish to say that while the check of a deceased person cannot be paid by the bank on which it is drawn, it constitutes a valid claim against the decedent's estate, and such claim should be presented to the executor or administrator, who will be compelled to pay it if the estate is solvent.

As to inheritance taxes, it makes no difference whether there is or is not a will. Such taxes are assessed just the same. However, a father, mother, son or daughter can inherit \$5,000 before an inheritance tax will be assessed. Collateral relatives, such as brother, sister, nephew, niece, aunt or uncle must pay such tax on all amounts inherited in excess of five hundred dollars.

When Relatives Can Claim Property

"A distant relative in Chicago died leaving a large estate. He was an unmarried man as we find with no will or direct heirs. The lawyers are looking for relatives around Lockport, N. Y., where the family originally came from. Now it seems that we are third or fourth cousins to this man. My mother is second cousin, I think. Would any of the property fall to my brother and me or would it go to mother, the closest of kin and other second cousins instead of the third generation? We of course, would like our share if we are entitled to it but wouldn't like the expense of a lawyer unless we knew we would be heirs to it."—C. J. S., New York.

REPLYING to your recent letter, it is our opinion that if your mother is the blood relative of the deceased Chicago cousin, she would be entitled to his property before you.

If, however, your father was the blood relative, and your mother related only by marriage, then you would be entitled to the decedent's property. Such property will be distributed according to the Laws of Illinois, and it might be well to have a local attorney look into the matter for you.

Responsibility for Automobile Accidents

"The law places the driver of an automobile liable to any accident that might happen to an invited passenger. Now what I wish to know is whether I could put a notice in the auto stating that all passengers must ride at their own risk or would it be better to have a book headed right and have everyone sign it before riding. Please state the New York State Law on the subject."—P. C. T., New York.

REPLYING to your recent letter, it is our opinion that if passengers are carried in an automobile for hire, one

cannot relieve himself from liability for their safety by posting the notice referred to in your letter.

If, however, no fare is paid for the ride, there is no reason why the risk of injury by accident should not be placed upon the invitee. This can best be done by securing his signature to a release from such liability prior to the beginning of the ride.

Compensation Insurance and Farmers

"How would we be affected by existing New York State Laws governing Compensation in the following case: We are operating a Market Garden with part of the garden on one side of a State Highway and part on the opposite side of the Highway. Should anyone in our employ be injured while crossing said Highway in the regular performance of his duties would we be liable under existing State Laws? Would the Laws demand that we carry Compensation Insurance?"—L. A. Y., New York.

REPLYING to your recent inquiry, it is our opinion that you do not need compensation insurance, as farm laborers are not within the Workman's Compensation Act.

The New York Law on Sheep

"What is the New York State Law on sheep? Suppose I have sheep on my farm and a dog comes on my property and kills some or all of my sheep. Will the town stand the loss and if so, how do they arrive at the amount to be paid for my loss?"

THE answer to question is contained in the following sections of the Law:

Section 117: The owner or possessor of any dog that shall kill, injure or wound any sheep or lambs, or Angora goats or kids, shall be liable for the value of such sheep or lambs, or Angora goat or kid, to the owner thereof, without proving notice to the owner or possessor of such dog, or knowledge by him that his dog was mischievous or disposed to kill or injure sheep or Angora goats. In any action brought against the owner or possessor of a dog for injuring the sheep, lambs, Angora goat or kids, the injury for which a recovery may be had may include the permanent fright of such sheep, lambs, Angora goats or kids, caused by the chasing or worrying thereof by such dog; and if prima facie evidence by adduced by the plaintiff of such worrying or chasing it shall be incumbent on the defendant to prove that the same did not result in the permanent fright of the sheep, lambs, Angora goats or kids alleged to have been injured. The terms "injury" or "injuring," as used in section one hundred and fourteen or in the ensuing sections of this article, in relation to the claims of an owner of any sheep, lambs, Angora goats or kids, against the owner or possessor of the dog or against a town or a town fund, or in relation to the purposes for which taxes, penalties or other moneys, should be applied, shall include injury consisting of permanent fright of sheep, lambs, Angora goats or kids, caused by the worrying or chasing thereof by a dog.

Section 118: The owner of any sheep or lambs, or Angora goats or kids, that may be killed or injured by dogs, may apply to any two fence viewers of the town, village or city where such sheep or lambs, or Angora goats or kids were killed or injured, who shall inquire into the matter, and examine witnesses in relation thereto, and if they shall be satisfied that the same were killed by dogs and in no other way, they shall certify such fact, the number of sheep or Angora goats killed, and the number injured, and the value of the sheep or Angora goats killed or injured immediately previous to such killing or injury, the value of the sheep or Angora goats after being so killed or injured, together with the amount of their fees.

Section 119: Such certificate shall be presumptive evidence of the facts therein contained, in any civil action or proceeding.

Section 120: Such certificate shall be presented to the town board at its second annual meeting for audit; and if such board shall be satisfied by the oath of the person claiming such damages that he has not been able to discover the owner or possessor of the dog or dogs, by which such damage was done, or that he has failed to recover his damage of such owner or possessor, it shall give an order on the supervisor of the town for the amount which it shall allow, who shall pay such order out of the funds arising from the provision of this article.

Town Law. Section 121: Fence Viewers. The assessors and town superintendent of highways elected in every town shall, by virtue of their offices, be fence viewers of their town.

One spin means "Go"!

Popular uses include—

- gas engine ignition
- telephone and telegraph doorbells
- buzzers
- motor boat ignition
- heat regulators
- tractor ignition
- starting Fords
- ringing burglar alarms
- protecting bank vaults
- electric clocks
- calling Pullman porters
- firing blasts
- lighting tents and outbuildings
- running toys
- radio "A"

Eveready Columbia Hot Shot Batteries contain 4, 5 or 6 cells in a neat, water-proof steel case.

BANG! at the first turn—that's the way your engine starts every time, if Eveready Columbia Dry Batteries furnish the ignition. Hissing hot sparks pour into cold cylinders when these batteries go into action. Millions of sparks rarin' to go are locked up inside Eveready Columbia Dry Batteries.

For radio—use the powerful, long-lasting Eveready Columbia Ignitor, 1½ volts. Operates all dry-cell tubes during long hours of happy listening; adopted by radio engineers as the standard radio dry cell.

concrete for the milk house

Clean, sanitary concrete is the outstanding material for your milk house. Dirt, or decaying matter, is easily kept out; vermin or refuse can find no convenient cracks in walls and floors of concrete.

And not only for your milk house, but for cooling tanks, troughs and other improvements you should use concrete made with Atlas Portland Cement. Concrete construction is permanent and economical; it actually costs less in the long run than impermanent construction.

Of course, you do not use concrete for temporary improvements—but since it's worth while to do most jobs permanently, it's worth while to insist on Atlas Portland Cement for the work. Its high quality record during more than thirty years' use on the farm is one of the reasons why Atlas is known as "the Standard by which all other makes are measured."

Send for a free copy of "Concrete on the Farm," the Atlas book about permanent construction. It may help you to save money, to make bigger profits, to add definitely to the value of your property. Use the coupon.

SOCONY asks no favors

You don't have to go easy on the tractor if you have Socony Motor Oil in the crank case. Socony is a stand-up oil, built for heavy-duty usage, designed to meet any power emergency which the job demands.

Socony asks no favors because it is designed to meet the wide range of power and stamina that farm work and the tractor requires.

Whether used with Socony Gasoline or Socony Kerosene, it develops enormous reserves of pulling power. It gives a maximum compression seal. It resists high engine temperatures. It is a he-man's oil, designed for a he-man's tractor.

Consult the Socony lubrication chart below for the proper grade of Socony Motor Oil for your tractor. The nearest Socony dealer will be glad to quote you prices in metal 30 or 50-gallon drums, with faucet. It costs no more, and is mighty convenient.

Remember that SOCONY is "Standard"

Bringing Electricity to the Farm

Why Farmers Want It—What It Will Do

By M. S. SLOAN

President, Brooklyn Edison Company

WHAT has this electrical business done? It's only forty-three years old, mind you, for the furnishing of electrical service as the world knows it today dates from 1882—when Thomas A. Edison worked out the basic principles, applied them through machinery and distribution lines of his own design and opened the first central station for general public service right here in New York City. What is the record? Is it good or bad—and by that I mean good for the public as well as for the business?

M. S. SLOAN

More electricity is used in the United States today than in all the rest of the world put together. Consider what that means in comfort, convenience, safety, labor-saving, increased leisure added beauty in our homes and in greater efficiency, economy and production in our factories. Because of the abundant and certain supply of electricity for power-driven machinery, production in this country so far surpasses production elsewhere that the wages of our workers here in New York—measured in terms of purchasing power—are more than double the wages of their British cousins.

Electrical service in this country is of

higher standard—by which I mean the items of safety, of continuity and of convenience of application by users—than anywhere else in the world. It is more widely used. Last year produced a record of two million new customers. Its convenience is at the disposal of the poor man as well as the rich, and he pays no more for it. It is the one and only item in the federal government's cost-of-living figures which stands lower than before the war. The average price of electricity, the country over, is nearly nine per cent below what it was at the beginning of 1914.

Who Owns The Electrical Companies?

The industry has an investment of between six and seven billion dollars. It is owned by more than two and a half million holders of its securities, ranging from men, women and children who own a few shares of stocks, to banks, savings banks, our great life insurance companies, our universities. It is each year obtaining more and more capital from plain ordinary citizens in moderate circumstances—employees and customers—who are willing to accept the limited return of a state regulated business in consideration of the safety of the investment.

It has put to work the water powers of the country until somewhat more than one-third of the annual production of energy comes from hydroelectric generating plants. It will

develop more of our water powers as soon as political considerations and the economic consideration of cost and markets for the power permit. It has improved the efficiency and economy of its coal-burning plants until now, in a large modern station, a kilowatt of energy can be produced from a pound and a half of coal—or even less in some instances. It has inter-connected coal-burning stations and hydroelectric plants into superpower systems which represent a greater maximum use of generating machinery, more complete utilization of seasonal water powers, greater certainty of electric supply and other economies which are pronounced advance over the day of the isolated plants.

Hitherto central-station electric service has been largely a business of supplying urban homes and factories. It has in the last few years reached out into the villages and hamlets and to an extent not realized to the farms. The business has now reached a stage of development, and public recognition of the benefits of electrical service has grown to a point where farms—not every farm, but the majority of them—are going to have electrical service from central stations available in a few years.

I am not a farmer, I am a city man; the company I represent does a city business. Nevertheless I am concerned in this matter as a citizen, a consumer of goods and a business man anxious to see agriculture as efficient and prosperous as manufacturing.

Stages of Progress—Electric Power and Light on the Farms Come Next

Zinc Insulated**American Anthony Royal
U. S. and National Fences**

The Test of Time

in service on the farm under all kinds of weather conditions is the only true test by which good fence can be measured. Knowing the extra long lasting qualities of Zinc-Insulated American, Anthony, Royal, U. S. and National Fences we give this

GUARANTEE:

Our dealer will hand you with every purchase of fence our written guarantee that it will equal or outlast in actual length of service any other fence now made, of equal size wires and used under the same conditions. Any buyer who can show that it fails to do so will be supplied with an equal amount of new fence free.

Our fences have always given every user the highest degree of satisfactory service. Their quality is the result of more than 25 years of experience, with the most advanced skill of workers and progressive methods of manufacture. Improvements constantly have been added, to make them last longer and give even better service.

When you buy any of our fences from your dealer, your investment is protected with guaranteed fence service. In their making we control every process from selection of ore to the finished product. We know what our fences are and stand back of them with this unqualified guarantee, based on our past record for producing **QUALITY PRODUCTS**.

Plowing in Potatoes

These Men Say It Is Good Practice

I SEE you have asked for practical experience in plowing in potatoes, so I will give mine.

To begin with, I have a seven acre side hill field that lays away from the rest of the farm, so that it never gets much manure, and it got so that it did not produce very good, so I decided to try and increase the fertility.

In the spring of 1923, I plowed down a fairly good sod on this field, and sowed part of the field to buckwheat, and planted the balance of potatoes, dropping the seed potatoes every third furrow, and harrowed them often until the plants get too large.

When the buckwheat was in bloom, I plowed that down and sowed rye. In the spring of 1924 I sowed the potato stubble to buckwheat and harrowed it in without plowing. This crop I plowed down and sowed to rye, which I shall plow down for potatoes this present season, dropping the seed every third furrow.

"Cleanest Piece of Potatoes"

The rye that grew on the other half of the field was plowed down in the spring of 1924 for potatoes, dropping the potatoes every third furrow. This was the cleanest piece of potatoes I ever saw grow as the potatoes were harrowed seven times before they were too large. I used a spring tooth, also a spike tooth harrow, and at the very last went once each way with a weeder.

As to digging, I use the same plow to dig with that I use to plant with, which in this case is a two-way Oliver sulky plow. This turns the potatoes out mostly on top of the ground. I then use a potato hook raking two rows into one, making a double row to pick up, and after they are plowed out I can hook the potatoes out as fast as the boy can pick them up. I can see a great difference in the condition of the soil already, and I expect to continue this treatment on this field right along, year after year, for I can get a crop of potatoes off this field much easier than I can top-heavy loads, like hay or grain, to say nothing of having to run a mower or binder on the steep side hill. Now I for one will vote to plow potatoes in, as in my case it beats any way I have ever tried for side hill land.—S. K., New York.

* * *

"A Good Crop Every Year"

I SAW in AMERICAN AGRICULTURIST of May 2nd, an article "Plowing-in Potatoes" and as you ask for a few letters from the farmers, I will give my experience.

I live in the central part of Sullivan County, and have been a farmer all of my life. I am now fifty-five years of age. I have been plowing in my potatoes for the past fourteen years, and have had a good crop every year. In other words, I have had the nicest and most bushels per acre of any farmer in this section and also have a good crop free from blight when my neighbors failed to have any crop worth digging.

It appears in your paper that the digging is the objection to plowing them in. The following is my way of planting and digging:

Plows Deeper at Digging Time

I take a piece of ground that is drained or sloping, not too stony, and plow as shallow as I can, and turn the furrow over nice and smoothly, planting in every third furrow. When it comes time to dig them, I set my plow one notch deeper than when planting and plow them out. I do not cut or bruise but a very few of them. In dropping the potatoes, I put them about 18 inches apart in the row and then drive along with a load of good rotted cow manure and put about one-half of a fork full in between each piece. After I am through planting, I set my harrow very light so as not to turn the sod over, as I always plant on sod ground, and harrow every four or five days until they begin to come up, setting the harrow a little deeper

each time I go over them. Then I cultivate them as often as needed to keep the grass and weeds out. Until they get in blossom, do not hoe them at all.

My neighbors are now following my system and each year more of them fall in line.—A. D. L., New York.

* * *

Believes in Plenty of Cultivation

IN your issue of May 2nd, I noticed an article "Plowing-in Potatoes." We have done this for some time with good success, with yields running as high as 16 bushels to one bushel planted. The way we plant and cut our potatoes, it takes from 14 to 15 bushels to plant an acre. Here's how we do it: We take a good piece of sod, cover same with barnyard manure in February or March, February being the better month. From May 15 to June 1, we plant every third furrow and from 15 to 18 inches apart in rows, one piece to the hill. As soon as planted, harrow same and roll to cover up and fill air spaces that might be left. Either drop the potato against the furrow turned up or against the land. Then we harrow them and harrow from time to time.

"Cannot Harrow Too Much"

Here's the point: You cannot harrow too much. I have harrowed them with a spike tooth harrow when they were six inches high. You then get all your weeds. Using barnyard manure encourages the weeds. We only cultivate about twice after we quit harrowing.

The reason we plant this way is that we get just as many potatoes as putting them in and caring for them the other way, and the cost of planting and cultivating is cut in two. We plow them in not deeper than 6 inches, and get them to one side of the furrow, either plowed side or land side. Our experience has been that they are no harder to dig than when planted the other way.—R. H. W., Pennsylvania.

Planting Between the Berry Rows

BERTHA ALZADA

BY planting garden crops between the berry rows, planting the berries much farther apart than usual we make the picking and cultivating easier and with no loss of ground. With strawberries we can leave a matted row ten inches wide and leave full three feet of space between the rows, and this will enable us to pick the fruit easy and after this is done we can give a good cultivation, working the finer mulch into the surface soil and plant a row of sweet corn, snap beans, dwarf lima beans, or any other garden vegetable that does not make a tall spreading dense shade that would injure the growth of the strawberry plants. With the raspberries we can plant ten feet apart and grow two rows between, and with an eight foot disc we can stir the soil between such wide rows without trouble for the horses. How much nicer to pick where we have plenty of room, and the crops planted after the fruit is picked will still come off in time to sow buckwheat for a cover crop after we have mowed down all surplus sprouts, which is an easy job with free room to swing the scythe well under the rows. Golden Bantam sweet corn is one of the very best crops for such purposes as the stalks grow low and it matures quickly, and if you have any surplus it is very salable. Blackberries may be treated the same way but will need more room. Red raspberries and blackberries sprout but black raspberries and dewberries root from tips and must be kept pinched back for best results, though the lack of suckers is a great help in keeping to their rows. Mowing the sprouts will generally keep the sprouts of the others down and they weaken and die out pretty well.—B. Alzada.

What About G. L. F. Exchange?

How It Came Into Being---What It Has Done---Will It Last?

By E. R. EASTMAN

THIS article is in line with the policy of AMERICAN AGRICULTURIST to give farm people the impartial, unbiased and unprejudiced facts regarding their cooperative associations. Perhaps we should add that the facts are impartial and unprejudiced so far as it is humanly possible to make them so, for it is difficult for anyone, no matter how hard he may try, to collect all of the facts on these organizations which touch the lives and fortunes of so many people, or to pass on those facts without having his own opinions creep in. I believe that the policy of AMERICAN AGRICULTURIST under its present management has the confidence of its readers so that they know that while some of our suggestions may not be the right ones, yet they are backed by a sincere desire to be constructive and to aid farmers in this great modern problem of solving their marketing troubles through cooperation.

We believe in cooperation; but we do not think it is any panacea or cure-all. We expect that mistakes will be made, but we believe these mistakes should be given careful constructive consideration that they may not occur again and that they may serve as steps upon which the organization can build further service and progress.

It Is Your Action That Counts

Whatever suggestions are made on the Cooperative G. L. F., or any other of the organizations, are set forth only after much deliberation and close association and study with the problem, and after taking counsel with men who also have given thought and years to furthering cooperative work. Even at that, these suggestions may be wrong. All cooperative work is fairly new. What we write today may be changed tomorrow. There are no precedents or experience on which to build future work and it is therefore very hard to say what is right and what is wrong. Anyway, what you find in this article and what you read in the articles on the Dairymen's League Cooperative Association, the Canning Crops Association, and the Western New York Fruit Growers Cooperative Packing Association are just the facts as we saw them, and suggestions for you to think about as you go about your work. The cooperative problem is after all your problem and it must be your thought and especially your action that finally solve it.

How It Came Into Being

Now, what is the G. L. F.? Briefly, the Cooperative Grange-League-Federation Exchange is an organized movement of eastern farmers, chiefly in New York, Pennsylvania and New Jersey, to try to solve the problem of buying supplies with better service and for lower prices. It is an outgrowth of the old Grange Exchange. It was the New York State Grange, noted for the many lines of work which it has originated and started to serve farmers, that first organized in 1918 the Grange Exchange. For a generation, farmers, whether justified or not, had been dissatisfied with the service that they received in buying many farm supplies, especially dairy feeds. After the big revival in the cooperative movement for the sale of farm products was started in 1916, some prominent Grangers of New York State got together and said that it was not possible to

sell farm products through organization, but it ought to be possible to buy farm supplies in the same way.

On this principle, they organized the Grange Exchange for handling cooperatively feed and other supplies. But while the Grange Exchange had done hard preliminary work and had no doubt brought some immediate results in savings to farmers, yet there were many who felt that it was not properly financed or supported to be of greatest service to farmers. The Grange itself acknowledged this, and some of its leaders took the initiative in proposing to the Dairymen's League and to the State Federation of Farm Bureaus that the Grange Exchange be reorganized on a larger basis and that it have at least the moral support of the League and the Farm Bureau Federation as well as the Grange.

WARNING!

MATERIAL in American Agriculturist is fully protected by copyright and warning is hereby given that no part of this article shall be copied except by written permission from American Agriculturist. This article, treating as it does upon conditions which affect thousands of farmers, cannot be safely read or repeated in part. We have no desire to review mistakes without commenting at the same time upon results, or vice versa. The situation must be considered as a whole.

This suggestion followed and the Cooperative Grange-League-Federation Exchange, or, as it is commonly known, the G. L. F., was organized in 1920.

It was made a stock organization and a campaign was put on to sell stock to farmers not only to get the necessary money with which to do business, but what is just as important, to get the interest from the members which followed their financial investment. As a result of this financial campaign, and some selling of stock since, the Cooperative G. L. F. now has 34,000 stockholders and \$772,905 of stock has been sold and fully paid for. The Exchange is capitalized at a million dollars consisting of 200,000 shares of common stock at the par value of \$5.00 each. There is no preferred stock, so you will note that about three-fourths of the stock has been sold

and paid for.

The management of the Cooperative Grange-League-Federation Exchange is vested in a Board of nine directors. Three of these are nominated by the Dairymen's League Cooperative Association, three by the New York State Federation of Farm Bureaus and three by the New York State Grange. The directors are elected at the annual meeting of stockholders of the G. L. F. held on the day preceding the annual meeting of the State Grange. The officers consist of president, vice-president, secretary-treasurer, and comptroller, and are elected by the board of directors.

How the G. L. F. Works

The organization is divided into seven working departments as follows: dairy feed service, assorted car and poultry feed service, seed service, fertilizer service, mail order service, field service and information service. Each of these departments has a manager and over all and directly responsible to the board of directors there is a general manager.

This brief outline indicates the way in which the Cooperative G. L. F. is organized. How does it operate?

During the first years of its operations, the G. L. F. was handicapped by being unable to control quality. It was merely a broker buying from manufacturers, or a buyer's agent buying through a broker. As one of its friendly critics put it: "It required some time and experience for G. L. F. directors and management to find out that its hands were tied on quality and price on manufactured goods, that it could not hope to be more than another middleman unless it followed the supplies back through to the manufacturer. With seeds it was different. These could be purchased directly from growers although even here seed tended to get into the hands of large cleaners and blenders. G. L. F. now cleans its own seed.

Not Easy to Buy Plants

"One might think it easy to buy manufacturing plants, but to purchase up-to-date plants in good locations and with modern machinery—and to buy any other kind in these days of rapid change and improvement would be foolhardy—would require the doubling and tripling of G. L. F. Capital. This is impractical in the farmers' present financial condition. Moreover, such a course would undoubtedly have involved capital losses through inexperience. With the heavy non-paying investment in the Buffalo plant in mind, it therefore seemed advisable to enter into partnership relations with reliable manufacturers on a rental basis and under proper safeguards."

This has been done and the management feels that with both feed and fertilizer they have quality under control, with also a share in savings in manufacture which the farmer will get in lower prices.

To summarize then, this is the way the G. L. F. gets the supplies. Its seed department actually inspects, while they are growing, the sources of seed and follows this seed right through until it is sold and delivered by the G. L. F. to the consuming farmers, and as stated above, its fertilizer and feed are obtained by partnership re-

The Appearance of Prosperity

"THE big fields of alfalfa or clover look like prosperity," said a farmer to us recently.

As we stood looking off across the fields showing the dark green of these legumes before any of the other grasses had started, we agreed emphatically with the above remark. Alfalfa or clover is the basis of good farming. Where you see them growing you may know that they are not only keeping the farmer's feed costs down but they are adding greatly to the fertility of the soil. Every farmer knows what it means to plant a crop on clover sod. How quickly you can tell the difference in the color and growth of the crop on a clover sod from one that does not have that advantage!

Professor Gustafson of Cornell recently completed some very interesting experiments on the gain of nitrogen in the soil caused by growing clover and alfalfa. He says:

"The grain after alfalfa shows a rich green color and makes a much larger total growth than that which comes after timothy. This indicates that the grain crop gets more nitrogen from the alfalfa soil than from the timothy soil. The effect of red clover on corn, oats, wheat and grass following it is very similar to that of alfalfa. In one instance, oats made twice the total yield of grain and straw after clover as after timothy. Wheat made ten bushels more grain after clover than after timothy when all other conditions were identical. Alfalfa and the biennials such as red, alsike, and sweet clover have a decidedly beneficial effect. The annual legumes, such as peas, beans and vetch, have much less effect."

We have heard many farmers complain that they could not get a stand of clover that would live and flourish the way it did in the early days when the land was new. But we have seen enough clover successfully grown with almost every variety of soil and climate conditions possible to eastern farms so that we know that clover can be grown SUCCESSFULLY if just three things are done. First, the land must be ORDINARILY FERTILE, made so with either manure or acid phosphate. Second, care must be taken to get NORTHERN GROWN SEED, with very high germination power. Third, PLENTY OF LIME MUST BE USED. If these precautions are taken, the clover will succeed even on heaving ground and will come on again even after it is frozen back.

For Farm Boys

FOR a long time we have been studying to find something that AMERICAN AGRICULTURIST might do that would interest and help the farm boys. We wanted it to be something in particular that would interest the boy in country life and show him what a wonderful place the country is in which to work and play and live.

Now we think we have found a plan. We are asking the help of you parents to get the boys organized with the LONE SCOUTS OF AMERICA. Full details were announced in our May 9th issue. More information will be furnished by mail on request.

The Lone Scouts of America are a branch of the Boy Scouts, formed to meet the conditions surrounding the boys on the farms. President Coolidge is the honorary president of the movement. William Howard Taft, William G. McAdoo, and hundreds of others are among those interested.

* This is not a profit-making enterprise, in any way, shape or manner. It is just another kind of service that AMERICAN AGRICULTURIST is trying to help along.

We know from our own experience how hard it is to keep boys interested in right things. You cannot hold their interest if they have to work all of the time, with no other diversions. On Page 513 there is a further explanation about the Lone Scouts of America and a blank form for the boy to sign. Look over this explanation and the one in our May 9th issue and then join with us in encouraging your boy to become one of the AMERICAN AGRICULTURIST tribe of Lone Scouts of America.

The Next Step in Country Progress

THE address started on our first page was given recently by Mr. M. S. Sloan at a meeting of a group of business men in New York. Mr. Sloan is president of the Brooklyn Edison Company, one of the largest power and light companies in America, and The Empire State Gas and Electric Association. In introducing the speaker, Mr. Henry Morgenthau, Jr., publisher of AMERICAN AGRICULTURIST, who acted as chairman of the meeting, said:

"When the railroads, the improved highways, the automobiles and the motor trucks came, the farmer solved to a very great extent his *transportation problem*. With the coming of the R. F. D., the telephone, the radio, the lonesome distances of the country were cut down and the farmers' problem of *communication* was solved. The invention and application of farm machinery have at least partly solved the *drudgery of farm hand work*. It seems to me that the next great step in farm development is the *application of electricity*, for lightening and brightening the life of our farm people."

AMERICAN AGRICULTURIST is greatly interested in helping along the work of bringing electrical power and light to farmers at a price within their reach. Because of this, we printed in a recent issue a speech of Mr. Owen D. Young, chairman of the Board of Directors of the General Electric Company at Schenectady, on the subject of electricity on the farm. And now we commend to your reading Mr. Sloan's address on this page on the same subject.

The first step always in any great movement is to study and think about it. The power companies are already giving much thought and attention on how to extend electrical power and light to country users. We will continue to print all the facts that we can get so that farmers may study and think about it also.

Better Homes An American Ideal

ALTHOUGH the practice of promoting "weeks" of one kind or other has grown to such proportions as to court public indifference to them all, the subject of BETTER HOMES strikes close home for all of us.

Home as a place of spiritual and mental stimulation as well as of bodily comfort to those sheltered within its walls is the ideal of American family life. To bring out the best in every member of the family, to help in controlling the unworthy impulses, to bring to a healthy and useful citizenship the youth of the home is an ideal worthy of the best father and mother and can be accomplished in even the humblest home.

In these days of unrest and desire for excitement on the part of our young folks, the home

which has the atmosphere of sympathetic understanding will have the better chance of directing into right channels that restlessness.

While much of the emphasis is being placed upon the mechanical and artistic aspects of BETTER HOMES, we consider those as means to the desired end of more satisfying family life.

Increased knowledge of these aspects, however, leads towards realization of these ends, and each woman should study her end of the business—the home-making—with an eye to making it most effective, just as the farmer attempts to do with his fields or orchards; this includes better equipment and arrangement, a definite plan of work, careful buying, and constant adjusting of the social demands of the family and community.

The less money one has, the more necessary it is to know how it can be spent to the best advantage, but money or lack of it need not determine the successful family life, which is a thing of the spirit rather than of the material things which enter into it.

—GRACE WATKINS HUCKETT

Charles R. Mellen

WE are sorry to have to report the passing of our friend, Charles R. Mellen, of Geneva, who died on April 29th after a long illness. For many years Mr. Mellen owned the famous John Johnson place in Seneca County and until comparatively recently he made this farm his home. Our readers will remember that the John Johnson farm was the first in this country to be tile drained with tile brought from Scotland.

Mr. Mellen fully lived up to the progressive history of his farm. He was instrumental in starting the Seneca County Farm Bureau and served on the Executive Committee. For a number of years he was a member of the governing board of the New York State Experiment Station at Geneva. Best of all, Mr. Mellen was a splendid citizen and a man who was greatly respected and loved by all who knew him.

It Starts in This Issue

THE "Valley of Voices" starts in this issue. It is a good story for every member of the family and is alone well worth the subscription price of AMERICAN AGRICULTURIST. If you do not believe it, turn back and read the opening instalment.

To Prevent Sale of Poor Fertilizers

PENNSYLVANIA has a new fertilizer law. It provides that Pennsylvania fertilizer must hereafter contain at least 14 per cent of plant food. Already the great majority of dealers have improved the standards of the business and need no regulation law. They welcome, however, as do all farmers, a statute which will make it difficult for the small minority to sell farmers fertilizer of little value.

The Pennsylvania legislature also passed a new insecticide act and a new paint bill, providing for proper brands, rulings and regulations which will help to insure farmers against fraud in these products.

Eastman's Chestnuts

I HAVE heard a good many stories about the partnership that is supposed to exist between the doctor and the undertaker, but the doctor in the following story, that somebody sent me, seemed to be a little shy on this sort of cooperation.

The story goes that he was traveling by a graveyard one day and he noticed the grave-digger lying in the cemetery badly intoxicated. So the doctor said to him:

"John, John, this is very bad. I must certainly report your intoxicated condition to the minister."

"Aw, come off, Doc," replied the grave-digger, "I'VE COVERED UP MANY A MISTAKE OF YOURN. CAN'T YOU OVERLOOK ONE OF MINE?"

Our Worst Problem

How the Standard Farm Papers Are Fighting the Farmers' Tax Battle

By C. V. GREGORY

Editor of the *Prairie Farmer*

Of all the vexing questions with which the farmer has to deal, taxation is probably the worst. The cost of government is steadily increasing, payrolls become longer year by year, and the scope of government activity is constantly broadened. Real estate, and especially farm real estate, which lies out of doors where it cannot be missed by the assessor, bears the heavy end of the tax burden. Farm taxes have increased at an alarming rate, until in some cases the annual tax bill is almost as great as the rental value of the land.

C. V. GREGORY

What is to be done about it?

Farmers and farm organizations all over the country are analyzing the problem and trying to find methods of lightening the burden.

The first suggestion usually made is to reduce the expense of government. Experience does not lead us to hope for much relief in that direction, however. We may check increases, but to curtail government activities sufficiently to bring back the good old tax bills of years ago does not seem possible.

Farmers pay little federal taxes directly. The federal income tax law is the least of their worries. What they pay indirectly in increased prices due to the tariff and in other ways is another story. The farmer's chief complaint does not lie there, however, but in the tax bills for state and local expenses, which come with the first robin in the springtime.

Even state taxes are guilty only in small degree. On a typical 320-acre farm in Knox county, Illinois, for instance, the tax bill is \$440.19. Of that amount \$229.39 goes for schools, \$74.58 for roads, and \$135.22 for state, county and township government. A considerable part of the state tax is used for educational and road building purposes. More than 75 per cent of this farmer's tax bill is chargeable to schools and roads.

The annual direct tax in a typical farming county in Central Illinois is \$1,060,031.74. Of this amount \$412,293.04 goes for schools and \$232,201.45 for roads. The road tax is more than the entire cost of township, county and state government, and the school tax is nearly twice as much.

We cannot abolish roads and schools. We want to make them better instead of poorer. The solution seems to be to enlarge the sources of revenue and place assessments on a more equitable basis. A number of states are trying to accomplish the first purpose by income taxes, severance taxes, gasoline taxes, etc. Further movement in this direction seems to be desirable.

Considerable progress is being made in securing fairer assessment of farm land. The most extensive work along this line has been in Illinois, where John C. Watson, tax expert of the Illinois Agricultural Association, has done notable work.

Mr. Watson's method is to check up actual sales of farm and city property for a year, and compare sale and assessed valuations. Almost invariably he has found that farm land is assessed at a higher percentage of its actual sale value than is city real estate. This evidence presented to boards of review has resulted in reduced farm assessments in a number of Illinois counties.

Sangamon county furnishes a typical instance. Reduction in farm land assessments in 1923 cut the tax paid in the spring of 1924 about 25 cents an acre. The total tax saving to Illinois farmers

as a result of Mr. Watson's work is about two million dollars a year.

Mr. Watson's department is also investigating county finance in a number of Illinois counties. In Cass county, Illinois, it was found that taxes were being levied above the legal limit, money was being borrowed illegally on the notes of the county commissioners, records required by law were missing from the files, and large amounts of money had been paid out without proper ex-

render well-nigh impossible the reduction of taxes in times of stress." Nebraska is prohibited by the constitution from issuing state bonds. In 1922, Mr. McKelvie, then governor, called a special session of the legislature and reduced state taxes one-third, which would not have been possible had the state been in debt. This is in marked contrast to conditions in Illinois, where state bond issues to the total of 235 million dollars have been authorized within the past 10 years, and where the state tax rate has increased from 45 cents to 65 cents on each \$100 of assessed valuation within the past five years. The latest bond issue was for \$100,000,000 for road building. These bonds run for 30 years. It will take \$175,000,000 to pay the principal and interest. Bond issues cannot be eliminated entirely, nowever, especially for building school houses and other public buildings.

No matter how greatly we may economize in public expenditures, the burden will be exclusively heavy as long as real estate continues to bear the brunt of the load. The tendency in many states is for costs of road building to be paid by motor vehicle license fees and in many cases by a gasoline tax. So far this has not decreased the burden on real estate, however, as this money has been chiefly used for building state roads. Farmers might as well direct their efforts toward a policy of assessing the bulk of all road costs against motor vehicles and reducing the burden on real estate to that extent. A move in that direction has been started in Illinois, where it is proposed to make a two-cent gasoline tax replace a 25-cent direct county tax for road building and maintenance.

The cost of schools will increase rather than decrease. At present real estate bears practically all this expense. The thrifty person who accumulates property pays for educating the children of the less thrifty class who spend as they go.

The remedy for this is a state income tax, properly distributed to the school districts and other taxing bodies. Such a tax might well take the place of the unenforceable tax on intangible property. In fact, many tax authorities believe that with the establishment of a state income tax, all personal property taxes should be abolished. A state income tax should also contain an offset feature. That is, if the income derived from property, as in the case of a farmer, the taxpayer should not pay both a property tax and an income tax, but only the higher of the two.

The soundest measure of taxation is the ability to pay. Income is the true measure of that ability. Until the income tax is made to share with real estate the cost of local and state governments, lower taxes are an idle dream.

Government economy will help some, but if we hope for great relief, we are sure to be disappointed. Fairer assessments will help some. But the real solution is to collect taxes from the great mass of people who own little property but who have substantial incomes. When that is done, through a fair state income tax, real tax relief for agriculture will follow.

What we need most in this Republic is not special genius, not unusual brilliancy, but the honest and upright adherence on the part of the mass of the citizens and of their representatives to the fundamental laws of private and public morality—which are now what they have been during recorded history.—Theodore Roosevelt.

planation. This investigation resulted in court action and a political upheaval in the county.

In New York a notable piece of tax reduction work was accomplished by the AMERICAN AGRICULTURIST. Following the collection of a great amount of evidence of unjust taxation from the readers of that paper, Governor Al Smith called the editor and publisher into conference. As a result, the governor sent a special message to the legislature asking for a reduction of one half-mill in the direct property tax. Such a measure was passed, saving property owners approximately eight million dollars.

This publication is now advancing a budget system for every tax levying body, and tax statements showing in detail just how the money is spent. The budget system is just as valuable in school districts and other local taxing units as it is in state and federal governments. It leads to more careful expenditures and consequently to lower taxes.

S. R. McKelvie of Nebraska, publisher of the Nebraska Farmer and former governor of that state, calls attention to the influence of bond issues on taxation. "It encourages extravagance," he says, "enables the small or non-taxpayer to impose enormous burdens on those who, by industry and thrift, accumulate property, and

THE LONG-LIFE BATTERY FOR YOUR CAR

Take out battery insurance ~

THE one way to get battery insurance is to buy the right battery—the battery that gives longest service and needs fewest repairs.

Since the day of the first electrically started car, Exide has been proving itself the long-lived, economical battery. Exide was standard equipment on that car. Today, more new cars leave the factories equipped with the product of the Exide plant than with any other battery.

Take out battery insurance by putting an Exide in your car. The first cost of an Exide is low, the last cost lowest. You can also get Exide Radio Batteries at our service stations and at radio dealers.

THE ELECTRIC STORAGE BATTERY CO.
Philadelphia

Exide Batteries of Canada, Limited, 153 Dufferin St., Toronto

BRIGHT LIGHTS ON THE FARM

A great majority of all the individual electric light and power plants in rural homes get their current from Exide Batteries. Exides are made for every purpose by the largest storage battery manufacturers in the world.

Do Plans Pay?

A Farm And Home Talk

By M. C. BURRITT

"PLAN your work; work

your plan" is an old motto which is written in one of my earliest diaries and which has almost become a habitual effort with me. Applied to farm work it, of course, has its limitations. However, I feel that a carefully made plan for each week's work is much more likely to produce desired results than no plan at all, even if it does have to be changed somewhat. It is not necessary that such a plan

be put on paper although I personally feel that writing down the jobs helps to visualize them, and anyhow crossing them off when completed is a satisfaction.

To show how this works out, last week I listed ten jobs which ought to be done and which I planned to do. We

M. C. BURRITT

got five of them done, with parts of two others, and in addition two jobs which we hadn't planned at all, but undertook because of rain. Unexpected things always occur to change plans although I suppose it is good management to reduce these to an absolute minimum by anticipating as many of them as possible. Things worked right on schedule the first three days of the week. Then a valve burned out on the tractor and we had to lay off three-quarters of a day to take the Fordson down, replace the valve, and while we were at it grind all the valves. We had been going only a half day again when it began to rain and we were kept inside for twenty-four hours. At that we had a batting average of about 60 per cent.

A Heavy Schedule Ahead

For this coming week I have twelve major jobs laid out on my note pad. These include putting on the pink spray which will take one man four days at least, and keeping the tractor plowing and disking as much of the time as possible. The work planned will take at least 140 hours but we will have about 160 hours available, so that there is a margin for rain, underestimating, and new jobs equal to more than 10 per cent. I think we have anticipated all the eventualities we can control. For the rest we are in the hands of Providence. I think it is better even to have planned and not worked the plan one hundred per cent than not to have planned at

all. Few farmers make such paper plans ahead but many good farmers I know do have a well planned schedule in their minds not only one week but several weeks ahead.

We have alfalfa sowed three different ways this spring, all on tile drained land in the same field, all inoculated. Four acres was sown with oats on April 17, being broadcast ahead of the drill. Oats were seeded at the rate of only five pecks per acre. Three acres were sown on April 25 with canning factory peas in the same manner. Five acres were seeded with fall sown wheat which was late sown last fall but which is a good though not a very advanced stand. In this case the seed was dragged in April 28 first lengthwise and then crosswise of the wheat rows with a spike-tooth drag. I anticipate the best seeding with peas and the next best with oats but time will tell just what the results will be. Although I didn't plan it as an experiment, I am glad that I shall have this opportunity to determine the best method of seeding this important legume.

Weather Man Was With Us

The dormant spray was finished in this section the early part of last week. The wind conveniently shifted East and West through prevailing North and generally a thorough application was made from both sides. There was no rain throughout the entire spray period and practically no scab now appears to have developed. Two days later we had a 36-hour rain but the protection was there. Now the weather has cleared and the early varieties are almost ready for the pink application. Temperatures have been low during the week with two or three sharp white frosts. Injury to buds is not now apparent but some is likely to be evidenced later in failure of the blossoms to set. With warm weather, apples will be in full bloom by May 10. Cherries are in bloom now (May 2) and peaches, pears and plums are all ready to burst into bloom now with a real warm day.

Oats were practically all sown before the rain of April 30, although there are a few belated sowings yet to be made. Most fields are just coming up. Some plowing for corn and beans and other hoed crops has been done but most of this work is ahead. Spraying, cultivating orchards, hauling manure and plowing will be the order of the day during the coming week of May 4th. The rain came just right. The ground was dry for this time of the year and the water is already pretty well absorbed.—M. C. BURRITT.

Bringing Electricity to the Farm

(Continued from first page)

There are two reasons why the farmer wants electricity and the electrical industry wants to furnish it to him. The first is social. The second is business.

I don't need to stress the basic importance of agriculture in our national life and the desirability of anything which will make farmers and their families more comfortable and happy and farming easier, more productive, more profitable. Electricity will do all of this, if the farmer can get it and can afford to use it. This has been proved on scientifically electrified experimental farms and on a diversity of plain, practical farms in many sections of the country where electricity is already being supplied by the extension of central lines on a sound commercial basis. To take part in any movement which will better the farmer is a social service of prime importance, and the electrical industry is well aware of its privilege and its duty is that respect.

Hard Job to Get It to the Farms

Moreover, it is good business to furnish electricity to the farmers who can use

it to their advantage. The extension of distribution lines to rural territory where there may be only three or four or half a dozen customers to the mile instead of forty or four hundred, as in a city, brings in problems of engineering, cost and financing which are intricate and perplexing. Obviously the farmer can't use electricity if it is too costly; equally obviously the utility cannot furnish it way below cost or on a rate system which would penalize existing city customers in their rates. Yet these matters can be worked out—they are in process of being worked out in this State; and when they have been, the sale of electricity to farms for home use and farm power is going to be a desirable item in the general business of furnishing electrical service.

This opens a vista of the farmer as a more economical producer, a larger purchaser, the importance of which your trained economic vision will perceive at once. The social benefits resulting from electrified farms will not accrue to the

(Continued on opposite page)

LONE SCOUTS OF AMERICA

American Agriculturist Tribe

what you want.

WHO will be in the first hundred to send in a Lone Scout Application blank. We wish to publish a picture of the first member of the AMERICAN AGRICULTURIST Tribe of the Lone Scouts of America. We want other Lone Scouts to send us pictures and stories. This is your column, and we wish to print

What To Do

First fill and send us the blank at the bottom of this page. We will forward it to the Long House at Chicago, and will send you your membership card, badge and handbook. When you get them, send at once for the first degree book and pass the tests as soon as you can. Begin to interest other boys in becoming Lone Scouts, and as soon as four others have joined, start a tribe. A

Tribe is a group of scouts at least five in number who select a tribe name, elect a Tribe chief, a Scribe and a Wampum Bearer. They hold regular meetings and have fun together. The Tribe chief has a pin which is pictured on this page to show his rank. This pin is the property of the Tribe, and to encourage you to form a Tribe we will give a Tribe Chief Pin to the first Tribe that organizes through us.

When you decide that you wish to form a tribe, send us an application for a charter. This application must give the following facts: The name, address and age of each member. Officers names. Tribe meeting place and meeting dates. The purpose of the organization. The tribe must adopt the official constitution, which is printed in the handbook, and a charter is granted to the tribe by the Long House at Chicago, upon receipt of twenty-five cents to cover costs.

What the First Degree Tests Teach You

Tests one, two and three will teach you to keep yourself physically fit. Tests four, five, six and seven will give you a general knowledge of your body. How you know when your fingers are burned, and how your body grows. Tests eight, nine and ten will teach you to have keen eyes, sharp ears, and a good memory. The tests from eleven to sixteen deal with respect for the flag, courtesy, cheerfulness, and the honor of a Lone Scout, as well as kindness to dumb animals.

Why You Should Be a Lone Scout

You will be a member of a self governed organization and you will take part in the government. You will learn much about outdoor life, and build up a stronger body. You will have an opportunity to see your letters, and stories appear in print either in the AMERICAN AGRICULTURIST, or in Lone Scout Papers. Perhaps the biggest reason for becoming a Lone Scout is that you will make friends of many other Lone Scouts. We will print a list of members as they join, and you will be able to write letters to as many of them as you care to hear from.

If a Lone Scout is interested in radio, in collecting stamps, or in anything that boys are interested in, you may form or join as many mail tribes as you wish. A mail tribe is a group of lone scouts that are interested in the same things. They write to each other, exchange experiences, and gain in friendship.

Come on boys. Let's make the AMERICAN AGRICULTURIST TRIBE of the Lone Scouts of America the best in the country.

Bringing Electricity to the Farm

(Continued from opposite page)

farmers alone; neither will the material benefits.

There are two ways in which electrical service may be carried to the farms. One is being tried out in Ontario, where there is government ownership and operation of

the electrical system. There the construction of farm service lines is heavily subsidized by the government. I don't believe this is a good and sound way. It introduces too many offsets to the benefits to be derived from farm utilization of electricity. I don't believe the self-respecting farmers of our country would care much for that method, even if it

hastened results somewhat.

The other way is the extension of farm service as a sound business proposition with all elements carefully weighed, which is what we are doing here—the furnishing of service where and when and as it can be made to be mutually advantageous to the farmer and the electrical company.

I was much impressed by the detailed statement of the disadvantages under which farmers of the country are now operating delivered by Governor Lowden a week ago at the dinner of the American Newspaper Publishers' Association. It was a gloomy picture—farmers receiving less return for their bumper crops than for small ones, a large and growing disparity between the prices of the things they sell and the things they buy, an increasing number of abandoned farms.

Electricity in Place of the Hired Man

Governor Lowden declares the main trouble in the farmers' situation today is that the tiller of the soil is not applying modern business methods. He advocates organization, for marketing. Not being a farmer, I cannot discuss that phase of

Time Tested Windmill

The Auto-Oiled Aermotor has behind it a record of 10 years of successful operation. In all climates and under the severest conditions it has proven itself to be a real self-oiling windmill and a most reliable pumping machine.

An **Auto-Oiled Aermotor**, when once properly erected, needs no further attention except the annual oiling. There are no bolts or nuts to work loose and no delicate parts to get out of order.

There are no untried features in the **Auto-Oiled Aermotor**. The gears run in oil in the oil-tight, storm-proof gear case just as they did 10 years ago. Some refinements have been made, as experience has shown the possibility of improvement, but the original simplicity of design has been retained while greater perfection of operation has been achieved. The **Aermotor** is wonderfully efficient in the light winds, which are the prevailing ones. The self-oiled motor works with practically no friction, and the wind-wheel of the Aermotor is made to run in the lightest breeze. It is also amply strong to

run safely in the strongest winds. In any condition of wind or weather you may be sure that the **Auto-Oiled Aermotor** will give you the best of service. It is made by the company which established the steel windmill business 38 years ago.

Famous Swedish Treatment Prevents Abortion

Foreign Treatment Now Giving Amazing Results in Herds Considered Incurable. Easy and Safe to Use.

Chicago, Ill., — Complete freedom from the ravages of the disease contagious abortion that costs American farmers over twenty million dollars yearly is now possible through the use of an old Swedish abortion treatment, according to statements from thousands of American users. They say the treatment completely stops even the worst cases and has saved entire herds through its remarkable powers.

John W. Froberg, a native of Sweden, introduced the treatment in this country 9 years ago when he used it to cure his herd after all domestic treatments had failed. Its fame spread by word of mouth and wherever used proved practically 100 per cent successful. The treatment is easy to give, gets quick results and cannot harm the animals.

Cow, Calf, Control (C. C. C.), the American name of this treatment is now available for farmers everywhere and is distributed under the absolute binding guarantee that it will stop any case of abortion and that every otherwise normal cow will deliver a healthy calf or the treatment cost is refunded.

Any reader of this paper having abortion in his herd can receive free of charge and without obligation full information about this treatment by sending a postal to the Froberg Remedy Company 14 Lincoln Street, Valparaiso, Indiana.

"Holy Cow!"

Sandy the Dairyman's Favorite Expression

AN unpretentious village near the

By G. D. HART

and re-assembled into one individual cow.

northern boundary of that far famed state, "Where the Tall Corn Grows," is the domicile of a congenial young man known to his intimate friends by the more or less colorful cognomen—Sandy.

Sandy has been associated with the purchase and sale of cattle and hogs since he was knee high to a Poland China porker and knows the game from box car to bank balance. As a matter of fact he has become so proficient in the art of "sizing up" animals that when folks in the neighborhood wish to test a platform scale they simply have Sandy guess the weight of a steer, drive the animal on the platform, and adjust the mechanism accordingly.

I said a moment ago that Sandy is a congenial lad but that doesn't half enumerate the spontaneous good-fellowship of his personality. Why Sandy owns a laugh that takes the blue ribbon as a gloom chaser. It originates somewhere in the region of his shoestrings, gurgles up through his abdominal roundness with ever increasing intensity and booms forth from his larynx like a veritable Vesuvian deluge of contagious mirth. The most chronic of blues turns about and "high tails" to the farthest corner of the pasture when Sandy's laugh is in evidence.

A "Sub" for Cuss Words

Most folks, when they are rudely alarmed or mentally agitated, relieve the strain by some such exclamation as "Holy Gee," "Be the Powers of Moll Kelly," or "Well I'll be —(deleted)." Not so Sandy. His favorite ejaculatory vent is, "Holy Cow!"

We have all heard more or less about the Sacred Bull that occupies a prominent place in the Pagan ritual. Most of us are fairly familiar with another kind of bull, not so sacred, that is used quite extensively by certain persons who aspire to political favor. But Holy Cow seems to be of new and entirely original coinage.

Recently, however, the writer had occasion to examine a year book of the U. S. Department of Agriculture and since perusing its pages feels more qualified to appreciate the significance of Sandy's bovine exclamation.

Holy Cow! Believe you me! She sure is some "koaw" when viewed collectively. To be exact there were, according to the U. S. census of nineteen twenty-two, just twenty-five million two hundred eighty-seven thousand of those somber eyed females of the bovine species, familiarly known as milch cows.

The Story in Another Way

"Statistics," says Uncle Calvin Corn-tassel, "are dryer than a Minnesota Swede crossing the great Volstedian Sahara," so perhaps the mere figures mentioned above will awaken no particular thrill within the mentality of the average reader.

To be more spectacular suppose we go back to boyhood days and recall the old dairy herd meandering homeward, nose to tail along the old cow-path, at milking time. Arranged in like manner our national herd would make a continuous line extending one and one-third times around the world. Assembled in one vast herd and massed as closely as possible they would occupy eight thousand one hundred twenty-five acres of space. In order to corral the entire herd it would be necessary to extend the famous Chicago stock yards to more than twenty-five times their present capacity. Allowing fifty thousand head as the daily capacity it would require five hundred working days—practically nineteen months—to market this number of cattle through the present Chicago yards.

Suppose again, that all the milch cows in the United States could be collected

If all the milk produced in one year in the U.S. were put in one gigantic can and placed alongside the great monument the President sees each morning this is how it would look.

If all the milk in the United States last year was put into one gigantic can a thousand feet in diameter, it would reach almost half a mile into the clouds, being more than four times the height of the Washington Monument at the national capital, according to the Blue Valley Creamery Institute. The can would tower 2,009 feet in height, while the Washington Monument is only 500 feet high but 55 inches square.

Into the American milk can annually goes 11,925,252,411 gallons of white gold, valued at \$2,566,000,000, the daily milking of 24,675,000 cows. If the can was emptied, it would make a river five feet deep and twenty feet wide, extending 3,775 miles in length.

Cow?" Were she equus instead of bovine we should harbor little doubt as to the efficacy of Samson's famed weapon of defense.

What It Would Take to Feed Her

Now that we have acquired possession of this gigantic bovine we must concern ourselves in the matter of her gastronomic welfare; for, to secure the best results, good milch cows like good husbands must be well and judiciously provisioned. Here we encounter a real difficulty for our composite cow, being gigantic in stature, also possesses a tremendous appetite. Based on the average ration for dairy cows she will require one hundred fifty-one thousand six hundred tons of hay, four hundred forty-two thousand two hundred tons of silage, thirty-seven thousand nine hundred tons of corn and cob meal and twelve thousand six hundred tons of cottonseed meal for daily consumption.

To perform the simple little chore of conveying this feed to her manger we shall need a fleet of twelve thousand nine hundred five-ton trucks, each truck making an average of ten trips daily.

The average Iowa corn crop would just about supply the corn and cob meal necessary to maintain our cow in perpetuity but the average hay crop of Iowa, Minnesota, Wisconsin and Illinois would be entirely consumed in twenty-one weeks. Texas, Mississippi and Arkansas—our largest cottonseed producing states—could furnish the cottonseed meal content for her daily ration for only two days more than twenty weeks. The entire silage supply of the

(Continued on opposite page)

Brentwood Holstein Sale Indicates Live Stock Comeback

The Brentwood National, held at Brentwood Farm, Abington, Pa., on April 30 and May 1, was a very successful affair and if it may be considered as a barometer, it indicates that the pure bred live stock game is surely on the up grade. Speaking to several in the "know," it is very evident that better days are ahead. This was the fourth Brentwood National and the fact alone that the average price per head came to \$729 is proof enough of the tone of the trading.

One hundred twenty-nine individuals were brought into the ring. Sir Inka May, consigned by the Minnesota Holstein Association, topped the sale at \$12,000, which was bid by the Carnation Stock Farms of Oconomowoc, Wis. Sir Inka May is a son of the U. S. champion butter producer, May Walker Ollie Homestead. He was the all-American Junior Yearling in 1924.

There were several other individuals that brought prices in four figures. Buyers were present from Cuba and China. It was estimated that something like 500 people attended the sale. George W. Baxter of Elmira, N. Y., and George A. Gue were the auctioneers. S. T. Wood was in the box and W. S. Moscrip was judge of the Show which was held previous to the sale.

"Holy Cow!"

(Continued from opposite page)

great corn state (Iowa) would be completely exhausted after eight good meals.

The second, and perhaps the greatest, inconvenience incident to the ownership of our great cow is the milking operation. We have grave fears that even the most courageous veteran of Chateau-Thierry or Belleau Wood would ever tackle a lactice protuberance twenty-four feet in diameter and one hundred twenty feet in length. Moreover, it is no small chore to relieve "old bossie" of fifteen billion seven hundred forty-seven million gallons of milk twice each day, three hundred sixty-five days per annum.

However, we are reminded that all up-to-the-minute dairy operators have dispensed with the old hand labor method and now employ milking machines. In casting about for a mechanical device that we might employ, in like manner, to our composite creature we chanced to come into contact with one of our modern fire engines, such as manufactured by American La France. Watching one of these babies in operation one is readily convinced that they are "some pumpers."

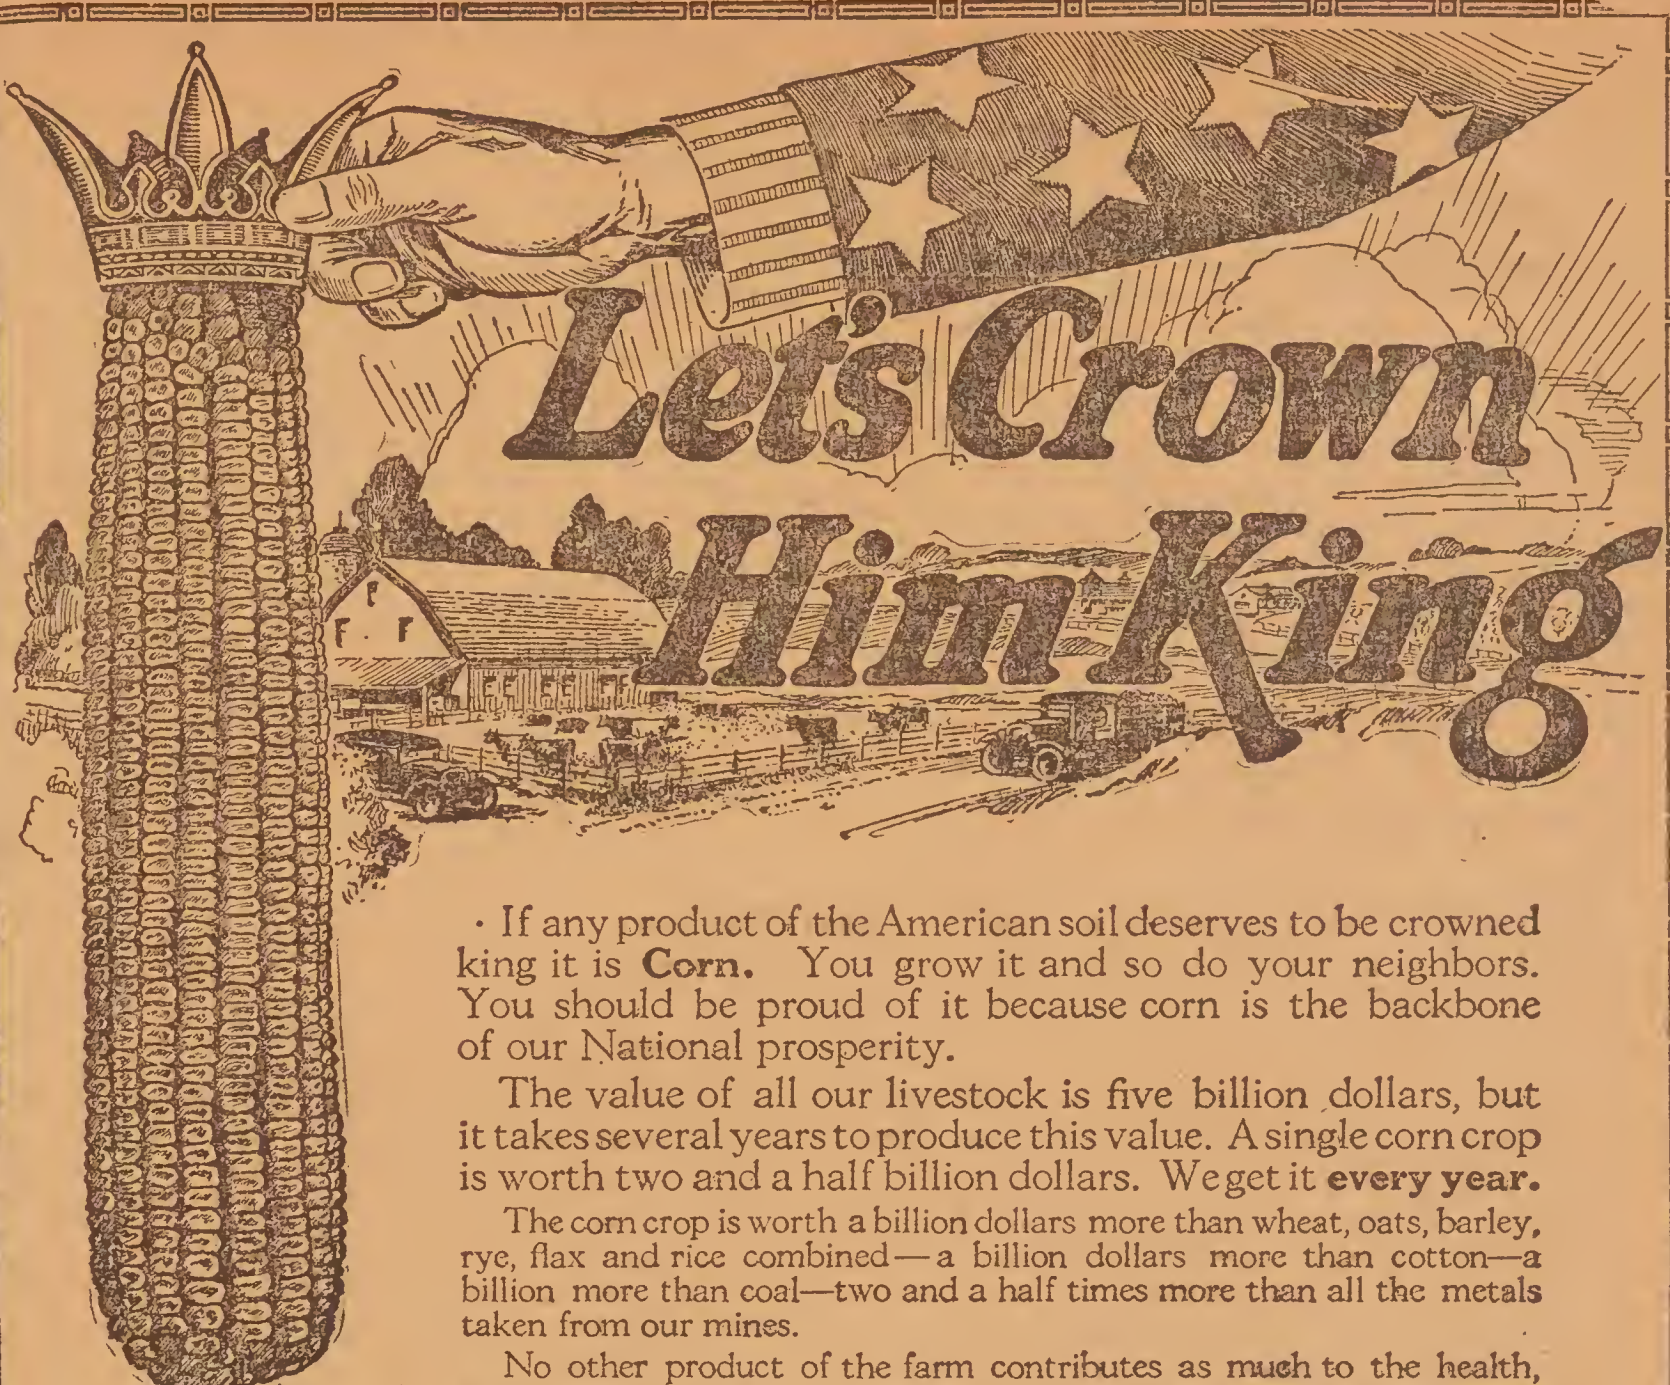

Accordingly we have decided to cash a few cream checks and buy a battery of twenty such machines, five for each teat, and thereby reduce the duration of our milking periods to five hours each or ten hours for the entire day.

Where to Put the Milk

Now that we have decided on a method of milking our composite cow the next thing in order will be a series of suitable receptacles in which to place the milk. For this purpose we shall borrow, provided our old friend John D. will be kind enough to loan them, a few ten thousand gallon tank cars. We shall only need one thousand five hundred seventy-five such cars together with twenty-five modern locomotives to haul them about at milking time.

Quite some supply of milk when viewed in this manner—Eh, Vat? Now let us try to imagine what the result would be if the entire annual milk supply—seven hundred thirty times the above amount—could be collected into one vast container. Too big for the average conception to encompass. However, careful calculation discloses the fact that could the annual milk supply be properly arranged and discharged into the Des Moines river, at Des Moines, Iowa, there would be an amount sufficient to maintain that stream

(Continued on page 11)

Let's Crown Him King

• If any product of the American soil deserves to be crowned king it is **Corn**. You grow it and so do your neighbors. You should be proud of it because corn is the backbone of our National prosperity.

The value of all our livestock is five billion dollars, but it takes several years to produce this value. A single corn crop is worth two and a half billion dollars. We get it **every year**.

The corn crop is worth a billion dollars more than wheat, oats, barley, rye, flax and rice combined—a billion dollars more than cotton—a billion more than coal—two and a half times more than all the metals taken from our mines.

No other product of the farm contributes as much to the health, wealth and happiness of all the people as corn does. Without corn we would soon starve for want of meat, milk, butter and eggs. The great packing houses would soon disappear.

This marvelous plant gives you the best of all feeds for your livestock. The finest flavored hams, bacon, milk and butter are produced with a ration in which corn and its products form the largest part.

The Part That Pays Feeders

The best part of corn for feeding is the **gluten** of the grain—**Corn Gluten Feed**. A single ton contains the gluten—the concentrated meat, milk and egg-making material—of two and a half tons of the whole grain.

When you feed Corn Gluten Feed you encourage the consumption of all products made from corn. You help yourself by earning a larger net profit on your feeding operation, and also by increasing the demand for good corn.

Corn Gluten Feed has been the standard high protein feed for thirty years. The most important feeding tests have been made with rations containing Corn Gluten Feed. It is safe—economical—digestible. The most highly convertible feed you can buy.

This great King of the American Farm deserves your loyal support. Grow better corn. Serve more corn foods on your table. Feed more Corn Gluten Feed to your livestock. You can get it from your feed dealer or any manufacturer.

If you buy a mixed feed be sure it contains the right amount of Corn Gluten Feed. The balanced ration which contains one-fourth to one-third of this famous feed, with other good materials, is always a money-maker for the man who feeds it.

What About the G. L. F?

(Continued from page 3)

lations including a voice in the control of manufacturing plants.

So much for sources of G. L. F. supplies. How about distribution and service? So far the organization depends mostly upon local voluntary distributors to whom the business is a secondary interest and who, as a rule, are inadequately paid. There are many places where there are no suitable local agents. While there are some exceptions, as the plan works now, G. L. F. is handled usually from the car door, and for cash, and only when there is enough business either from one man or from several men cooperating to insure carlot transactions.

This, in brief, is an outline of the G. L. F. organizations, its methods of management, and policies of purchasing and distributing supplies. We have not gone into greater detail because we believe that farmers are pretty well informed as to what the G. L. F. is and how it works.

Some of the Problems

Now let us discuss briefly some of the problems.

Just as a general comment, not only applying somewhat to the G. L. F. organization, but to many other cooperatives, I am coming more and more to the belief that indirect elections are a mistake. In many ways, the President of the United States is the most powerful ruler in the world, but his power is greatly safeguarded by the fact that he is elected by the people. This is not a critical remark, nor even a definite suggestion. It is perhaps something that we ought to think about with all of our cooperatives. Of course with an organization involving large numbers, it is impossible to have the democracy of the old New England town meeting. But I believe that we can get more of that fine system of democratic government into our organizations than we now have.

Has Good Leadership

It is certain that the present personnel of the Cooperative G. L. F. is most excellent. It has had its internal problems common to all organizations and there has been some small amount of difficulty in problems that result when any body of men try to work together. These have been more among the employees and among the department heads than among the board of directors.

There has been little or no politics, and in the board of directors there are several men who have had long and successful experience in cooperative enterprise, men who have also good business judgement and who above all know the problems and viewpoints of the farm people themselves. I know of no finer example of sincere and able farm leadership anywhere than N. F. Webb, the president of the Exchange. He has been a good farmer, a good business man, and above all, he is the sort of a man whom anyone can be proud to call a friend.

H. E. Babcock, the present general manager, is so well known and liked by thousands of farmers that no comment on his business ability and integrity is needed. He is the greatest insurance that G. L. F. has for success.

So much for the management. Much of the future success of the organization depends upon the ability of the members to maintain the same high grade leaders that it now has.

Too Much in Fixed Assets

One probable financial mistake that the G. L. F. has made was that approximately 70% of all the money paid in for stock was invested in the Producers Warehouse and Elevator Company, a subsidiary concern that owns the warehouses at Buffalo and Syracuse, appraised at \$540,704. It will be noted from this that the G. L. F. has a large percentage of its capital on fixed assets on which it must not only earn the normal six per cent interest due to stockholders, but pay heavy taxes and depreciation. To date, it has failed to earn its interest, taxes and therefore it has bur-

dened the company's earning power to that extent and has handicapped the company through a lack of sufficient operating capital. No doubt the Exchange could have rented adequate warehouse facilities at a lower rate, leaving its capital free for operation. However, public accountants have placed the present value of the assets of the company at more than \$100,000 above the price which was paid for them.

But tying up the capital of the company was a natural mistake, even if it may be called a mistake, and is not particularly serious, for after all the Exchange has this property standing for its investment and so far it has been able to borrow sufficient money to carry on its operations.

Too Little Capital

The whole question of the G. L. F. financing should be discussed more as a question of a problem rather than a mistake. The annual business makes a turnover of about eight million dollars. It will therefore be seen at a glance that the need for working capital is tremendous. Even if it had a working capital of \$800,000, it would have to be turned ten times a year to handle the business. A million dollars in capital is really needed to take care of the present business and for expansion. To get this additional capital it will be necessary to sell more stock and enlarge the membership.

Whether or not the Exchange will be able to get this extra capital and expand its business will depend upon its ability to obtain definite results and to demonstrate those results to farmers. *The day of farmers' support of cooperative organizations for sentimental reasons is passed.* Farm people in the past ten years have demonstrated that they are perfectly willing to wait a reasonable length of time for their cooperatives to demonstrate their success, but after this reasonable time, they see no moral obligation for continuing to belong to and to support an organization unless that organization can show direct results including especially financial returns.

Results From G. L. F.

Possibly it is too early yet to Judge G. L. F. results. There can be no argument about the fact that the organization has already brought some results to farmers but there has also been considerable criticism and disappointment on the part of farmers with the amount of tangible, definite things that the G. L. F. has so far accomplished. Some of this criticism is fair; some of it is not. We have already pointed out that it would be difficult for farm people to get together a better board of directors or set of officers and machinery than they have in the G. L. F. This is a definite result. It is remarkable, too, that there has been so little personal politics played.

I think there is no doubt also that the Cooperative G. L. F. has raised the quality of several of the farm supplies that farmers buy. This is particularly true of seed. The organization has led the movement, definitely supported by many of the better dealers, to educate farmers to the use of better seeds so that the farmers themselves are taking the initiative in demanding high quality seed. On other supplies also the Exchange has had its part in the general increasing desire of farmers to buy feed and fertilizer and seeds from which they can get the best returns.

Some Farmers Question Price Results

But of course the chief thing the farmers have looked to this cooperative buying organization for is lower prices of farm supplies. On this point, many farmers question the results obtained so far. There are claims that the G. L. F. goods have been disappointingly high in price. It is very difficult to get accurate information on this subject because conditions vary so much throughout the territory. There is no doubt but that there are many local dealers who have been able for the greater part of the time to undersell the G. L. F. goods.

American Agriculturist, May 16, 1925

In fairness, however, it ought to be stated that there are many exceptions to this and that the G. L. F. competition has without doubt had its effect in bringing down the general level of prices. It must be said too that there has been less of this high price criticism from farmers during the past year than formerly. There is always a speculation element in the purchase of farm supplies and in particular in feed purchases. It is a question of good judgment and particularly of good guessing as to the time of buying. If a local dealer makes a pretty good guess on the market, and buys heavily, he may be able to outsell all competition of others who were not fortunate enough to guess the future of the market rightly.

No Adequate Distribution Service

Then, too, there is another class of dealers who are good business men, render good service, and who are willing and able to take a small margin of profit. This class of dealers will always be able to furnish real competition to any other dealer or cooperative organization.

One of the big problems of the Exchange is the fact that it has at present no adequate distribution service. Under the present system it skims the cream of the farmers' trade in the community in which it operates. That is, it helps only the man who is able to pay cash and take his goods from the car. It does not serve the man who does not have the cash, or who needs the advantages of the service of the local warehouse system. Because the G. L. F. does this, it has been criticized for being unfair.

I do not think this is a fair criticism because it is equally as unfair for the farmer who has cash or who is able to buy in quantity to have to pay the same price for his supplies as the man who gets the additional service of long credit and small volume.

In other words, there are two kinds of service which farmers need in buying their supplies in every community. To date, the G. L. F. has been furnishing much of the cash and the car door delivery service, leaving it to the local dealers to furnish the credit and the warehouse service.

The question is, can and should this dual service remain as it is now practiced. If not, what change is going to take place in the future?

Who Will Furnish Credit?

Into this question comes the problem of credit, a problem which is worthy of a whole discussion in itself. More and more those who study the question say that the present system whereby the local dealer furnishes the credit is inefficient and does not work to the benefit of either the dealer or the farmer. The dealer is obliged to charge enough for the use of the credit to make sure that he will have no loss, and anyway he is not equipped as is a bank for granting credit. The results is that the dealer credit costs the farmer sometimes two and three times as much as it would at the bank without any benefit to the dealer.

Banks Will Not Help All Farmers

On the other hand, there are times when a certain class of poorer farmers just simply do not have the cash with which to buy feed, and then they are up against the proposition of either selling out or starving their cows, or getting credit, and say what you will, most of the country banks have not yet come to a policy of making loans to this class of farmers. Of course, many of the poorer farmers are to blame for not even making the attempt to get money at their local banks. But whatever the fault, the fact remains that local bank credit to farmers has not yet been established on a practical working basis and until it is, there is no use to theorize, for the local dealers are rendering a credit service, no matter how expensive, that no one else has seen his way clear to handle.

While there is some question about the credit service furnished by local dealers, there is none at all about his warehouse service, and we really think it is unfair

White Diarrhea

Remarkable Experience of Mrs. C. M. Bradshaw in Preventing White Diarrhea

The following letter will no doubt be of utmost interest to poultry raisers who have had serious losses from White Diarrhea. We will let Mrs. Bradshaw tell of her experience in her own words:

"Gentlemen: I see reports of so many losing their little chicks with White Diarrhea, so thought I would tell my experience. I used to lose a great many from this cause, tried many remedies and was about discouraged. As a last resort I sent to the Walker Remedy Co., Dept. 437, Waterloo, Iowa, for their Walko White Diarrhea Remedy. I used two 50c packages, raised 300 White Wyandottes and never lost one or had one sick after giving the medicine and my chickens are larger and healthier than ever before. I have found this company thoroughly reliable and always get the remedy by return mail.—Mrs. C. M. Bradshaw, Beaconsfield, Iowa."

Cause of White Diarrhea

White Diarrhea is caused by the *Bacillus Bacterium Pullorum*. This germ is transmitted to the baby chick through the yolk of the newly hatched egg. Readers are warned to beware of White Diarrhea. Don't wait until it kills half your chicks. Take the "stitch in time that saves nine." Remember, there is scarcely a hatch without some infected chicks. Don't let these few infect your entire flock. Prevent it. Give Walko in all drinking water for the first two weeks and you won't lose one chick where you lost hundreds before. These letters prove it:

Never Lost a Single Chick

Mrs. L. I. Tam, Burnetts Creek, Ind., writes: "I have lost my share of chicks from White Diarrhea. Finally I sent for two packages of Walko. I raised over 500 chicks and I never lost a single chick from White Diarrhea. Walko not only prevents White Diarrhea, but it gives the chicks strength and vigor; they develop quicker and feather earlier."

Never Lost One After First Dose

Mrs. Ethel Rhoades, Shenandoah, Iowa, writes: "My first incubator chicks, when but a few days old, began to die by the dozens with White Diarrhea. I tried different remedies and was about discouraged with the chicken business. Finally, I sent to the Walker Remedy Co., Waterloo, Iowa, for a box of their Walko White Diarrhea Remedy. It's just the only thing for this terrible disease. We raised 700 thrifty, healthy chicks and never lost a single chick after the first dose."

You Run No Risk

We will send WALKO White Diarrhea Remedy entirely at our risk—postage prepaid—so you can see for yourself what a wonder-working remedy it is for White Diarrhea in baby chicks. So you can prove—as thousands have proven—that it will stop your losses and double, treble, even quadruple your profits. Send 50c for package of WALKO (or \$1.00 for extra large box)—give it in all drinking water and watch results. You'll find you won't lose one chick where you lost dozens before. It's a positive fact. You run no risk. We guarantee to refund your money promptly if you don't find it the greatest little chick saver you ever used. The Leavitt & Johnson National Bank, the oldest and strongest bank in Waterloo, Iowa, stands back of our guarantee.

WALKER REMEDY CO., Dept. 437, Waterloo, Iowa.

Send me the () 50c regular size (or () \$1 economical large size) package of Walko White Diarrhea Remedy to try at your risk. Send it on your positive guarantee to promptly refund my money if not satisfied in every way. I am enclosing 50c (or \$1.00). (P. O. money order, check or currency acceptable.)

"Holy Cow!"

(Continued from page 9)

at its average stage for just a few hours less than seven days.

It is reported, in sacred history, that returning scouts electrified Moses and his Hebrew entourage with visions of a land flowing with milk and honey. The above data is prima facie evidence that we have the milk. Now if the bee men will just step on the accelerator we may soon be able to qualify as the Land of Promise.

If our annual supply of milk were distributed as a per capita ration, to our entire population, each would receive one hundred five gallons or two and one-third pints daily. As a matter of fact U. S. statisticians estimate the daily per capita consumption of whole milk to be only one and eight one-hundredths pints.

A Pyramid of Butter

From the amount not used at the family table our frugal manufacturers manage to salvage such items as hereinafter enumerated; One billion fifty-four million nine hundred thirty-eight thousand pounds of creamery butter, one billion seven hundred five million four hundred thirty-eight thousand pounds of farm and factory butter, three hundred fifty-five million eight hundred thirty-eight thousand pounds of cheese, one billion four hundred sixty-four million one hundred sixty-three thousand pounds of condensed and evaporated milk and two hundred forty-four million gallons of ice cream.

Butter enough, if it could all be collected and consolidated into one mass, to build a pyramid whose base would cover ten acres of terra firma and whose apex would reach an elevation of three hundred ten feet—one-half of the volume occupied by the mighty Cheops of Egypt. If this same butyric mass were spread evenly over the average central states' farm—one hundred sixty acres—it would form a golden dressing six and one-half feet deep. Sounds like an old resident's tale of the unprecedented snow fall, "Durin' the winter of sixty-five by Heck!"

Some Cheese Sandwich

And while we are supposing, suppose we suppose that we collect the annual supply of cheese, add nearly ten inches of depth to the above golden deluge, superimpose thereon another farm and call the whole a relator's sandwich. Wonder how long it would have taken General Jaek's gang of American doughboys to devour the thing after having tried to keep up with the Bosch during their famed "Return to Berlin" in nineteen eighteen!

As to the condensed and evaporated milk we Iowa "Dirt Farmers" might be able to store it in our twenty-six thousand eight hundred silos but we don't "hanker after the job" because our milk man keeps a cow and therefore we haven't any special need for the "pet" variety of milk.

A Small Boy's Idea of Heaven

Last, but not least, consider that delicious and cooling concoction ice cream. Two hundred forty-four million gallons of it. Better than two gallons for every individual who enjoys life and liberty under the old Stars and Stripes. Boy, Oh Boy! Page the drugstore cow boy and his bobette queen.

A local drug store dispensed sixteen hundred gallons of ice cream in a single season. At that rate it would require three thousand one hundred-eighty fountains in each of our forty-eight states to handle the annual output of ice cream and the merry tinkle of dimes over the marble bar would sound like John Wainmaker playing "It Ain't Gon'na Rain No Mo'" on a National cash register.

The intrinsic value of milk and butter to the agricultural world is beyond estimate, especially during this period of depressed farm product values and deflated rural pocket books. Many a farm has been saved from the auctioneer's hammer by the old brindled cow and her running mate the cackling barnyard biddie.

As a cold monetary consideration the

Reviewing the Latest Eastern Markets

MILK PRICES

THE Dairymen's League Cooperative Association announces the following prices that dealers will pay the League during the month of May for milk testing 3% in the basic zone of 201 to 210 miles of New York City. It is understood of course that the prices mentioned below are not received by the farmer but go into the pool. They are prices dealers pay the League.

Class 1 Fluid Milk	\$2.80
Class 2A Fluid Cream	1.90
Class 2B Ice Cream	2.05
Class 2C Soft Cheese	2.00
Class 3A Evaporated whole milk	
Cond. whole milk	1.80
Class 3B Whole milk powder ...	1.80
Class 3C Hard cheese other than	
American	1.70

Class 4 prices will be based on butter and American cheese quotations on the New York market.

Sheffield Producers

The Sheffield Farms Producers announces the following prices for 3% milk in the 201 to 210-mile zone:

Class 1	\$2.80
Class 2	2.00
Class 3	1.65

Class 4 prices determined by butter and cheese quotations on the New York market.

Non Pool Cooperative

The Non-Pooling Dairymen's Cooperative announces the following prices for 3% milk in the 201 to 210-mile zone:

Class 1	\$2.70
Class 2	2.00
Class 3A	1.70
Class 3B	1.65

Interstate Producers

The Interstate Milk Producers Association (Philadelphia Price Plan), announce the receiving station prices or the price to the farmer in the 201 to 210-mile zone from Philadelphia for 3% milk is \$2.19. In the 101 to 110 mile-zone, the price is \$2.29.

BUTTER MARKET BREAKS

The break that has been expected for some time arrived during the latter part of the week ending May 2. The Chicago market experienced a heavy tumble and that naturally had a decided effect upon the situation in New York. As a result at the present time 92 score butter is selling for 42c. Fancier marks are worth

from 42½ to 43c. As yet the break in the market has not affected lower grades for the inside figure on creameries of under grades is 37½c which is 2½c higher than the figure at these same grades sold for when the fancier marks were selling for 45 and 46c.

From now on it will be almost impossible to make any surmise as to the movement of the price curve in the butter market. Storage butter is no longer a factor. There is comparatively little of it on hand, mostly for the out of town trade. Although prices broke sharply, nevertheless the tone of the market has held up remarkably well. Business is very good and stocks are passing out of first hands as fast as it gets to the stores. The tone of the market is so strong that buyers are not as discriminating as they were. There is no shortage of butter but stocks are being absorbed very rapidly. From now on the supply of butter and the demand will have an immediate bearing on the prices of each day. The cut in values has put the market in a much healthier and safer position. Heavier supplies are close by and these will tend to discourage any advance in the market. Buyers are reluctant to take on heavy stocks when such a condition exists, especially in the speculative market. Buyers are taking on only immediate needs. One outstanding feature is that the consumptive demand is very good. In spite of the fact that market has suffered a decided break, nevertheless prices compare very favorably with those of a year ago. In our issue of May 17, 1924, 92 score butter was quoted at 38c. In 1923 prices were about the same as they are at the present time.

FRESH CHEESE LOWER

A quiet market and an increase in the make of cheese, both east and west, are factors that are working against prices in the cheese market. The price of fancy, fresh whole milk State flats, varies from 19 to 19½c and not many sales are being made at that figure. Stocks are increasing in the local market and the situation is not quite as firm. Average run fresh flats can be picked up easily at 18c. In spite of that our market is from 2 to 3c better this year than it was a year ago. Prices at the same time in 1923 were a shade better. The New York cold storage figures show that stocks on hand are below 1924 however, cold storage figures for the four largest cities indicate that cold storage holdings were a little higher than they were at the same time a year ago.

EGG PRICES THE SAME

There is practically no change in prices of nearby eggs. The top of the market is 38c for the fanciest nearby closely selected extras. Average nearby will bring anywhere from 31 to 35c. Gathered whites are worth from 30 to 34c. At the moment slightly more stock is arriving than the market will absorb readily. Nevertheless the situation is in hand and is generally considered steady. Fine to fancy stock is moving fairly well and whatever surplus there is, is going into storage.

There is one feature at the present time that is encouraging and if it holds out may save the situation. Receipts are apparently falling off. Many receivers report a decided shrinkage. Total receipts show considerable decrease from last week and the corresponding week a year ago. If this keeps up it certainly bears out the early belief that the spring flush would be over earlier than usual. On May 4, approximately 62,000 cases of eggs were received, over 2,000 less than the week before. On the next day 65,000 cases were received while the previous Tuesday showed total receipts of over 73,000 cases. If this shrinkage continued it is going to help out the storage situation which is not grave at the moment but giving many something to worry about. Cold storage figures indicate that stock on hand is about 50% heavier than compared with last year. Much of this stock has been put into storage at figures which are considered too high to warrant their withdrawal and sale at a profit later. This does not materially affect farmers now, but it may have an effect on the market for fresh stock later on. If this shrinkage keeps up and a consequent lighter storage operates, we may find ourselves in a relatively better condition. As we said last week, the situation at the present time is ideal for storing next winter's supply of eggs, especially those grades that are not wanted on the New York market.

NO CHANGE IN POULTRY

The live poultry market is not vastly different from what it was last week, both as to condition and price. Supplies have been heavy enough to turn the market slightly in the buyer's favor. Live fowls are more in demand at the present time and the result is that stock that is heavy is dragging 2 to 3 cents behind light stock. Fancy light fowls are bringing 32 to 33c. Spring broilers are becoming more plentiful and in the face of a slower market are not bringing the price they were a week ago. Yellow skinned birds have got to be extra fancy to reach 55c. The general market is nearer 50c and small colored broilers are worth only 45c. Fancy Leghorns that will weigh over a pound and a half will bring as high as 50c per pound if they are fancy. Those weighing a pound or under are worth no more than 40 on the outside.

May 29, is the Jewish holiday, Feast of Pentecost. The best market days for the holiday will be the 26th and 27th. However, there is usually little extra demand for this holiday.

OLD POTATOES NEGLECTED

The old potato market is apparently closing out rapidly. States are bringing anywhere from \$1.15 to \$1.35 delivered in 150 pound sacks and at that there is very little trade. Maines are facing a situation that is almost as bad. Long Islands' are done. We have been asked what we think of the prospects for the 1925 crop. That is a risky subject to discuss. There are too many factors that can function to alter the situation. The weather man for one thing will have his say, to say nothing of insects and disease. The way some figure we may see a lot of inferior potatoes on the market next fall where growers have skimped on fertilizer, leaving the market in better shape for the regular potato growers. It looks as though the acreage throughout the East will be somewhat less than last year. It is by far too early to begin estimating what the harvesting will be when we consider that the planting is not completed.

BEANS CONTINUE TO DRAG

being offered freely at \$6.00 and occasionally from \$8.00 to \$8.50 for common to choice

GRAINS AND FEEDS

May wheat went to \$1.61 on May 5, which is a considerable jump since the report a week ago. Speculative activity is more responsible for rises and declines than anything else. There is some report of damage by Russian fly in Kansas. Other grains have been moving in sympathy with wheat.

New York Cash Grain Prices

Following grains were reported on May 5, F O B New York City: No. 2 hard winter \$1.76½; No. 2 red, \$2.04; No. 2 mixed durum \$1.69. CORN, No. 2 yellow, \$1.28½; No. 2 mixed \$1.27½. OATS, fancy white clipped 60¾ to 61¾; ordinary white clipped 56¾ to 58¾c; No. 2, 54¾c. RYE, \$1.31½.

Local Buffalo Feed Prices

The following feed prices are issued under date of May 2 by the New York State Department of Farms and Markets.

It must be born in mind that THESE PRICES MAY NOT BE IN EFFECT BY READER. They must not be taken as an indication of the immediate market but are quoted to serve more as an indication of the rise and fall of the feed market. It is impossible to quote current prices in view of the fact that quotations may change materially from one day to another. Furthermore these prices are quoted F O B Buffalo.

Ground oats 37; spring wheat bran \$30; hard wheat bran \$31.50; standard middlings \$30.50; soft wheat middlings \$36; flour middlings \$36.50; red dog flour \$44; white hominy \$42; yellow hominy \$42; corn meal \$45c 36% cotton seed meal \$41.50; 41% cotton seed meal \$44; 43% cotton seed meal \$46; 34% old process linseed oil meal \$42.

PLENTY OF HAY HERE

At the present moment the New York market is well supplied with hay. Receipts have been liberal and with only a moderate demand prices are back to \$26 for top notch stuff. In fact this is the outside figure. Some good hay is turning for a little less. Light clover mixed is worth anywhere from \$15 to \$25, depending on grade and quality. Second cutting alfalfa is still worth from \$29 to \$31 depending on size of bale for No. 1, while No. 2 and 3 varies from \$22 to \$26.

Bringing Electricity to the Farm

(Continued from page 7)

the matter, although I know that through marketing organizations many groups of farmers have materially bettered their condition. There is another angle, however, which I think is pertinent to the matter we are now discussing. If the farmer by modernization of his processes can reduce his labor costs—if he can by application of more scientific methods decrease the cost of production of what he has to offer in his market, he assuredly will be better off than he now is. That is where the use of electricity on the farm comes in.

The alert and sagacious business organization strives for two things—to reduce its production costs and to improve its merchandising. Success at either end of the scale represents a sounder business and larger profits. The farmer is beginning to pay attention to the advantages of electricity for the farm uses—to figure on it as an agency in reducing his production costs as a business man would figure on the advantages of installing more efficient machinery or more modern manufacturing processes.

The part the electrical industry has to perform in this situation is to aid the farmer in ascertaining the most advantageous applications of electricity to his work, and to get the electricity to him, so he can use it. We are undertaking that, not from a spirit of altruism, and yet not for profits alone. We are cooperating with farmers' representatives to solve the technical problems of engineering, of financing, of rates, because we know we have imposed on us the duty of making electrical service as widely available as is economically possible.

SWINE BREEDERS

150--Pigs For Sale--150

Chester and Yorkshire cross and Berkshire and Chester cross, all weaned and good blocky pigs, no runts. Pigs 6 to 7 weeks old \$6 each, and 8 to 9 weeks old \$6.50 each. News From Among the Farmers

Butter Tariff Increase Asked by Farm Organizations---Other Farm News

Representatives from the American Farm Bureau Federation and several cooperative dairy organizations attended a recent hearing of the tariff commission on the question of raising the tariff on butter from 8 to 12 cents a pound.

A recent study of comparative costs in this country and in Denmark showed that in the Middle West last year the cost of producing butter fat averaged 61.5 cents per pound. In Denmark the price paid for butter fat was 43.7 cents a pound, a figure very close to the cost of production in that country.

The farm bureau representative said that the tariff should be based on the cost of producing butter fat in this country rather than on the price paid for butter here as compared with Denmark. He also called attention to the increasing imports of butter from New Zealand, a country where because of mild climate good rainfall, and good soil the cows can be pastured 12 months of the year bringing the producing cost of butter fat to a much lower figure than that which obtains in Wisconsin and other butter producing states.

The Tariff Commission found that it costs about as much for transporting butter from our middle western states to New York as it does from Denmark, another reason why costs of production should be the basis on which tariff is figured.

The farm bureau asked that a tariff wall be set up sufficiently high to bar Denmark and New Zealand from dumping their surplus in this country, and destroying the market for the American dairyman.

Early Spring in East-Central Ohio

THIS has been the most nearly ideal spring known here for a quarter century. Beginning in March it bids fair to remain pleasant. Only a shortage of warm rainfall marred its being perfect. Practically all plowing was done in April. More plowing was done in March this year than last year up to middle of June. Wheat shows up badly due to the zero snap in March and the continued dry weather since which dried off much of the heaved wheat plants. Oats was about all sowed in first half of April, and some in March. It is slowly coming up, ground being too dry to make rapid growth. Indications point to early corn planting. Pastures have been slow. Acreages of corn and oats about normal. Fruit prospects good if no late freeze occurs. Cherries and peaches and some apples in bloom. Markets are steady and pretty good. Good horses and cows are selling high. Sheep selling exceptionally high here this spring. Pigs easily sell for five dollars apiece. Eggs around the quarter mark and better. Poultry has been high for a month—light stuff bringing 22 cents this week, heavies having been around 28 cents. Brooder houses running overtime. Prospects for bumper crop of young poultry. Considerable trouble reported with white diarrhea and high mortality rate in many flocks. Farm sales over but too numerous to mention while they lasted. Farm Bureau active and doing good work along all lines under new organization and membership.—W. E. FARVER.

New York State Grange Committees Appointed

SINCE the annual meeting of the New York State Grange in February the executive committee has made the following appointment of standing committees:

Auditing committee: F. R. Gibbs, Alleghany county; L. J. Swezy, Wayne county.

Mileage committee: James Pringle, Chautauqua county; C. R. White, Ontario county.

Legislative committee: S. L. Striv-

ings, Wyoming county; F. J. Riley, Cayuga county.

Geneva Experiment Station: Murray Clemmons, Livingston county.

Trustee Cornell University: W. F. Pratt, Genesee county.

State Press Correspondent and Historian: L. L. Allen, Jefferson county.

Rural Health: Edson J. Walrath, Jefferson county.

Taxation: H. C. McKenzie, Delaware county; William Whittaker, Sullivan county.

Member Home Economics Committee: Mrs. Ralph Wing, St. Lawrence county.

Dairymen's League to Buy Certificates

The Dairymen's League Co-operative Association Inc., has announced that they will purchase all series A certificates whose numbers end with the figure 7. The purchase of these certificates will take place between May 11 and May 30.

The Certificates must be endorsed on the back, with the owner's full name, and the Association requests that the members be sure they have done this to avoid the expense and trouble of returning them to the owners for indorsement.

News From Long Island

Farmers are pretty well along with potato planting. A few still have small acreage to plant but the majority of the crop is in. All things taken into consideration, the acreage will be about the same as it was last year. The weather this year was ideal for planting. Showers came at the right time not holding up the work to any great extent. Tractors are busy getting land ready for corn but the weather has been too cool to permit planting. It has got to be a lot warmer or much seed will rot in the ground. It has been uncommonly cool.

Spinach is being cut by the fellows on the west end of the Island and as fast as they cut it they are getting the ground ready for the second crop. A real estate boom has hit the South shore of Long Island between Jamaica and Babylon. Although farming as a business is not so common in that section, nevertheless, what few farms still remain are being sold at fabulously high prices for building-lot purposes. Some land is being held at \$5,000 an acre. The reason for the boom is the electrification of the railroad as far as Babylon and the announcement that a new boulevard will be built by the County and State along the South shore to take care of the rapidly increasing motor traffic. This is going to open up a good local market for small gardeners and poultrymen.

Central Pennsylvania Notes

OATS are still being sown on a few farms in this section, while on many farms they are up nicely. Most of the sod has been turned and it is being harrowed for corn planting which has begun on a few farms already. Wheat is growing well and is a good stand on most fields.

The stand of grass for hay is nearly perfect on many fields, but pasture meadows have not made the growth they should, due, likely to continued dry weather during April. Some cattle have been turned out to pasture which is too short and too young to do stock much good.

Potatoes are being planted, mostly of certified seed, of which several carloads have been shipped into central Pennsylvania. Apple trees are being sprayed for the second time. Baldwin apple trees have not blossomed much this season, but other varieties show plenty of blossoms which do not seem to be effected by freezing.

Newly sown clover seed has not made much of a start, though one can see tiny stalks in the cracks of the soil. The Union County potato growers are planning to be incorporated.

Dr. J. George Becht, Superintendent of Public Instruction, was buried from the Central-Covenant Presbyterian church of Williamsport on April 29. His funeral was attended by many noted educators of this state. He was born on a farm near Halls Station and his love for the country and the rural schools never left him. How many leaders in all lines and walks of life were country born and reared!—J. N. Glover.

New York County Notes

Ontario County—April was a cold wet month. During the middle of the month we had a downpour of rain which washed land badly and hindered the sowing of oats. Thunder showers have been unusually common for this time of the year and especially since it has been so cold. Oats have been pretty well sown. Farmers are now generally busy with barley and corn plowing. On the average wheat and grass are looking well. Some wheat that was sown rather late is poor. The lamb crop was a good one and stock is doing well. Most farmers have turned out their stock on pasture. Dormant and pink sprays are now in operation. Indications are that the fruit bloom this year will be high.—E. T. B.

Franklin County—Farmers started work about 2 weeks earlier than last year. Nothing was put into the ground up to the first of May. The potato acreage will be much smaller than last year which is at present around 25c a bushel at shipping points. This means a big loss to farmers. Up to the first of May cattle were still in the barn with no feeding pastures up to that time. Many farmers bought hay, prices ranging up as high as \$15 to \$18 a ton. Feed prices are high with milk about the same price. Clover is the highest in years. Many will use alsike instead, which is considerably cheaper. There are a good many farmers in Franklin County using lime this year.—H. T. J.

Dutchess County—Oats are coming up. About the first of May most corn ground was plowed and ready. Few potatoes are being planted on account of prices being so low of late. Eggs are selling at 35c and butter at 49c. Grass is forward for this time of the year. Farmers are buying more machinery and labor saving devices thereby keep less help.—H. J. H.

Along the Southern Tier

Tioga County—Farmers very busy with spring work. Many oats and much spring wheat sown. Grass looking fine and trees leafing out and the scene is beautiful. Spring seems to me the most lovely season of the year, as the dead bare branches put on new life and all vegetation springs into prominence.

Gardens are being made. Road making and road rejuvenation is in progress and roads are being prepared for reoil-ing in many places. Some new sections of road will be built into State Roads this season.

Automobiles and auto trucks, fill the roads and if as prophesied "the annual increase in autos", what will the outcome be; for they are as numerous now as fleas on a dog and in many cases as infectious. The way of many drivers make one tremble and "why" there are not more accidents I fail to see. Careful drivers have no chance for the reckless ones do not give "half the road, nor turn out at all unless they turn into the others". Some few licenses for driving have been revoked. There should be more such.

Traction Sprayer

Does the biggest, most necessary job in crop raising. Insures investment in crops and increases yield from 50 to 200 per cent. Eliminates bugs, mold and blight. Quickly sprays potatoes, tomatoes, garden truck, cabbage, cucumbers, pickles, tobacco, beans, sugar beets, celery, etc.

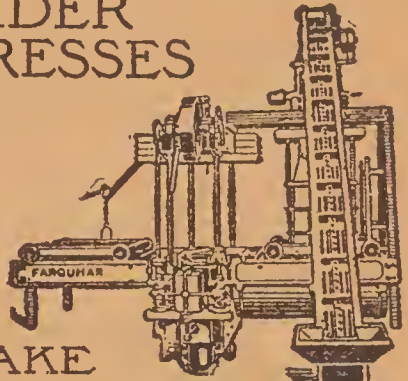

The Eureka has 1, 2 or 3 nozzles per row and 4, 6 or more rows per boom. Wheels adjustable to various width rows. 60 to 100 gal. tanks with double or triple action pumps. May be equipped for spraying orchards and bushes.

In stock near you. Write today for catalogue on Eureka Sprayers and Potato Machines

Keep Trespassers Off

We have had a new supply of trespass signs made up. This time they are made of extra heavy linen on which the lettering is printed directly. There is no card facing to be water-soaked by the rain and blown away by the wind. We have had these new signs made up of extra heavy material because severe storms will tear and otherwise make useless a lighter constructed material. We unreservedly advise farmers to post their land and the notices we have prepared comply in all respects with the New York law. The price to subscribers is 95 cents a dozen, the same rate applying to larger quantities.

What About the G. L. F?

(Continued from page 516)

for a farmer to take car door service when he has the cash and buys a large quantity, and then turn to the dealer through the greater part of the year for his smaller volume supplies which he can get from the dealer because the dealer keeps those supplies on hand and ready for service in his mill or warehouse.

What About the Future?

Now as to the future of the Co-operative G. L. F. it seems to me that it will have to follow deliberately one of two distribution policies.

One may be the present one, with some changes and improvements, by which it will deliberately recognize that there are two classes of farmers to serve in every community, first the man with the cash who buys fairly large amounts, usually in carload lots; or who will co-operate with his neighbors the year around in purchasing by the carload.

Troubles With Present System

The Exchange has already found that this plan has its disadvantages. One is, it will be difficult to get good local agents who will continue to serve year after year as voluntary agents. Perhaps the greatest drawback to this plan is that it will always mean a comparatively small volume of business for the G. L. F. Such a plan cannot serve a majority of farmers in the majority of communities. As I stated above, this plan gets the cream of the local trade. If the G. L. F. continues to use it, the majority of business on a year's basis in many, and perhaps a majority, of the communities will still go to the local dealers who are able to furnish warehouse and credit service.

The other plan is for the G. L. F. to build a real local distribution service. This might be done by organizing a local G. L.

F. service agency in every community, provided with capital and credit and a local warehouse, which agency would work very closely with the G. L. F. headquarters. Or the local distributing service might be built by an adaptation of the chain store idea in which supplies could be stocked and retailed.

Distribution Service Increases Expenses

Building a large local distribution service has many dangers and disadvantages. Four of the leading ways in saving in the cost of farm supplies are: First, a large volume; second, voluntary orders; third, cash purchases; and fourth, taking goods at the car door.

The Exchange has made progress so far because it did not spend money on getting business, that is, in increasing volume. It used three of the above ways of saving costs. Nearly all of its orders came voluntarily from the farmers on the cash and car door system. What it has not had yet is a large enough volume, but just the moment it begins to go after volume, its sales costs will so greatly increase that it is doubtful if it can give farmers any cheaper or better service than that already furnished by the dealers.

The Chain Store Plan

If the difficulty of poor farmers getting credit and cash can be overcome, it is possible that the G. L. F. Exchange might get a larger volume through the establishment of local chain stores. But it must be remembered that when it comes to buying or renting warehouses and stores in every community, and hiring capable men to run these stores and warehouses, and making the necessary investments to carry a stock of feed and other supplies, then the G. L. F. will be on exactly the same basis as are the other local dealers and it would be only by using exceptionally good business methods that it would be able to render any better service to farmers than that rendered by dealers. It would

American Agriculturist, May 16, 1925

have the advantage, however, that when there were any profits that came through handling a large volume of the big G. L. F. service, extending over such a wide territory, and through better business methods, the farmer membership of the organization would get the benefit of these profits in the form of profit sharing dividends.

So closing this part of my subject, I repeat that in spite of the fact that the G. L. F. has a comparatively small volume, yet this volume is voluntarily contributed by farmers and costs little in sales methods to obtain. If the volume is to be greatly enlarged, then the expense of obtaining it are also likely to increase.

In the establishment of any big service such as the Cooperative G. L. F. Exchange, there are four fundamental problems to be solved. First, financing; second, manufacturing ownership or control; third, economical operation and administration; and fourth, adequate and permanent distribution system.

Of these four problems, the G. L. F. has done remarkably well in solving, or at least partially solving, the first three. Natural mistakes have been made but they have not been serious ones. As it develops its business, more finances will become necessary, but if it keeps the confidence of its farmers, these will be forthcoming. It has succeeded in making some good manufacturing connections so that it can insure quality goods. And from what we know of the facts, the operations and administration have been reasonably economical.

It has not solved, or at least gotten down to a settled policy on its permanent distribution system. And of course all of the rest depends upon the contact it has made with the farmers in distribution. In the end, there will be just one test which will determine which, the dealer system or the cooperative system, will prevail; that is, the test of real service. The organization or the dealer who in the long run, year after year, furnishes the farmer the highest quality goods at the lowest price, will be the one that gets the farmers' business.

Many Good Dealers

A good dealer has many advantages. He is apt to have grown up in the business and knows it thoroughly, although we have known several who seemed extremely short-sighted in their business methods. He has something also that unfortunately the average co-operative employee does not have, that is, a financial interest in his own business. Those dealers who stay on the job year after year have learned that they best serve themselves by real service to their patrons. Such men are hard to beat. In fact, if they were all that way, there would be no need of farmers' buying organizations. There are more such men because of the G. L. F. competition. Fair competition keeps both dealers and the Exchange on their tiptoes with farmers getting the benefit.

So, in my opinion, there is room for both dealer service and Cooperative G. L. F. service, and the one that gets the most of the business in any particular community will be the one that is most worthy of it.

Holy Cow!"

(Continued from page 11)

value, in hard cash, of the annual milk production is such an enormous sum as to beggar any attempt at intelligible enumeration. It may be said, in full truth however, that a mere tithe of this valuable product would erect, free of any encumbrance, one hundred thirty-seven houses of worship like St. Patrick's Cathedral, (Cost four million Dollars) New York City, and leave three million seven hundred ninety thousand Dollars to apply on the salary of the pastor.

Holy Cow!

A Damp Hen House

Why is it that our hen house is damp even though we have the required amount of cloth curtains for ventilation. We have a cement floor, but the litter soon gets damp.—H. B. W., Pennsylvania.

THERE are a dozen different ways in which moisture gets into a hen house. From the hens breath, through the floor or walls, through the roof or windows, or from the water fountains. The hen gives off little moisture with the droppings, therefore must give off large amounts in the breath. Properly arranged cloth curtains should remove this moisture, unless it is entering your house in other ways. The curtains should be opened on all pleasant days during the winter.

We have found that moisture frequently finds entrance through the floor or walls. In the first place the floor should be above the ground level at all places. Do not dig into a bank under any circumstances. We have also found that some moisture will rise through a concrete floor, unless a layer of tar paper or asphalt is laid under the floor, or between two layers of the floor. The Cornell plans for a laying house provides for ventilation at both the front and back, directly under the eaves. Little doors are provided which can be opened or closed. The advantage of this is that there is no dead air pocket under the roof. There is no more important factor in housing hens than to have the house dry. If the moisture comes through the floor, you may be able to put tar paper over it, and another layer of concrete over that.

Ways to Improve Whitewash

"I have noticed some directions for making whitewash in which various substances such as molasses, flour or salt are used. Tell me why these substances are added and what amounts are used."—W. E. B., New York.

AS you know, whitewash made of quicklime or hydrated lime and water rubs off very easily and does not penetrate into the wood. Whitewash is a mild disinfectant, but by adding 1 gallon of crude carbolic acid to 10 gallons of whitewash the disinfecting power is much greater. Rye flour about 1½ pounds for each sack of lime, common glue at the rate of 4 pounds to a sack of lime; or casein, about 4 pounds to a sack of lime; or 2 gallons of skim milk to a sack of lime will increase the sticking qualities of your whitewash. Molasses is also sometimes added, 1 pint to 5 gallons of whitewash. This causes the whitewash to penetrate into the wood. A pound of laundry soap, dissolved in a gallon of boiling water, added to each 5 gallons of whitewash, will give it a gloss somewhat similar to oil paint. Common salt at the rate of 2 pounds for a sack of lime increase the solubility of the lime. Waterglass, one part to 10 parts of whitewash, makes it fireproof.

A good whitewash for inside use can be made by mixing 40 pounds of hydrated lime to enough water to make a paste. Mix 1 pound of rye flour with 1 quart of cold water then add 1 gallon of boiling

water. Dissolve 1 pound of salt in a gallon of hot water, mix salt solution and the flour, then add the mixture to the lime and stir thoroughly. If this is to be applied with a brush it should be about the thickness of paint. Where it is to be applied with a spray pump, it needs to be strained carefully and diluted so it will pass through the spray pump.

Rose Bugs and Young Chicks Do Not Mix

OF all the insect pests that make life miserable for folks who have gardens, fruit patches or a flock of hens, I think the rose chafer is about the most disgusting. Their very appearance is about as repulsive as a scrawny rat. On top of that the damage they do is about as wide spread, if not more so, than any other insect. From their name one would judge they only feed on roses, but their range of action is not limited to this one beautiful flower by any means. They are not particular what they attack. Usually it seems they take delight in creating enough destruction here and there and everywhere to make themselves a thorough pest.

Several years ago a friend of ours had a very fine flock of ducks. There must have been a hundred or so in the lot. They had ideal range and were growing fine. One morning the major portion of the flock was found dead or in a dying condition. There was not a trace of violence nor a sign to indicate what had caused the death of those ducks. An examination of the crop of the very first one that was opened was sufficient evidence. There was a mass of rose bugs stuffed in the crop. They had killed the ducks from the inside.

Remove the Host

One look around the range was sufficient. Daisies were in bloom and there were lots of them in the part of the field where the ducks roamed. Every daisy head seemed to have at least 2 or 3 rose bugs on them. We drove those ducks that remained into a small enclosure, got out the mowing machine, cut down the daisies and raked them up. There was no trouble after that.

This was our first experience with rose bugs. After that we heard of other folks having the same kind of trouble. Not all of the complaints came from duck men. Poultrymen said their chicks were affected the same way, and that rose chafers were responsible.

Young chicks from 2 to 10 weeks of age are susceptible to attacks by rose bugs, if the young birds eat them in any quantity at all. One of the failings of chickens is to get into the grape arbor or under rose bushes and scratch in the soil, which is the very best place where they usually find plenty of rose bugs. A chicken does not stop long to consider what kind of bug it is after, it eats first and thinks after. In view of its natural lack of brains a chicken does not stop to consider what and how much it is eating. The safest thing to do is to remove the temptation.

Destroy All Things Good

One year we had some particularly fine Spanish cherries. We were anxiously waiting the time they would be fit to pick; but the rose bugs beat us to it. They just took enough out of each cherry to destroy its value. From the cherries they went to the grapes and from the grapes to other things in the garden.

We tried to control them with arsenical sprays but it was useless. It seems they get fat on poison. Later we learned that ordinary netting over the top of the grape vines saved that crop.

It is fairly easy to tell when chicks are suffering from the effects of having eaten rose bugs. They become listless and soon

BABY

die. Some claim that the bugs are poison to the chicks. Others express the opinion that the chafers sting the crop wall of the chick. Whatever they do they kill them.

About the only precaution you can follow is to keep the ranged mowed and free from daisies and to keep the chicks away from grape vines and the rose garden. Chicks hatched in May usually suffer the most. Another year it would be a better plan to have early chicks so that by the time the rose bugs appear they will have attained an age when they are not quite so susceptible to an attack of the rose bugs.

—F. W. OHM.

How We Saved Our Hen House

THE hen house was there when we moved on the place. Outwardly there was nothing wrong with it. It had size, location and was apparently of materials about which no man could kick. But the fellow who built it had a great idea about design. It was a wonderful home for rats. Around the whole house was a sill, a box-sill, made of 3/8-inch material about 6 inches wide. I imagine the rats must have had a fine time in there and under the board floor. They must have lived

in there for years and years for when we ripped the floor and that box-sill out, we drove out what must have been the grandfather of all the previous rat generations. He was enormous. It was all the old black tom cat "Smoke" and our terrier could do to finish him, as he made a run for his life. Our terrier was the original "rought on rat" medicine.

Concrete for Permanent Foundation

Some folks would have torn down the old house and rebuilt it. That was an expensive proposition. Instead, we shored up the roof, tore out the box sill and replaced it with a concrete foundation. No rats could get through that and there were no floor drafts. While we were at it we thought it best to put in a concrete floor—a coarse mixture sufficed in this case because we covered it with sand and a litter. When we finished that part of the job, the house was as sound as a rock.

The next job was to get more ventilation. Two small windows must have made the previous occupants of the house think they were in a city flat. We opened up things in general and let real sunlight in. Next we went at the roof. We used a good grade of roofing paper and soon had matters downstairs as dry as possible. Our problem there was not serious. One end of the house—a part that was much older than the main building, had a shingle roof. We had heard of applying roofing cement right over the shingles and we tried it. It worked very well.

Get After the Lice

Our inside job was more serious. Apparently the house had never been cleaned for dust stood on the rafters as deep as it could without rolling off and lice and mites were everywhere. We rearranged the rafter and uprights in the center of the house to make it look less like a woodlot, swept the old place down. We put in a new set of dropping boards that were easier to clean and then gave the whole thing a thorough dose of kerosene. On top of the kerosene we applied drained engine oil to the roosts and dropping boards. The walls and ceiling received a thorough application of a whitewash disinfectant.

We did not spend a whole lot of money. It did not take a lot of time but it paid. The house is as good today as it was 15 years ago when we did the job. The foundation most likely will last forever. It was an amazed bunch of hens that went back into the house when we finished it. It was really a case of new quarters for them, but the house was sound and dry and the hens soon paid the bill.

—FRED WILLIAMS.

The Construction of Cloth Curtains

What is the advantage of having cloth curtains in hen houses slide up and down on the outside of the building instead of swinging in from the top, and buttoning to the rafters. I see that the sliding arrangement is advised in some of the new plans. It seems to me that the frame would stick during a sleet storm in the winter.

WE know of one poultry house built last summer that had the cloth curtains made to slide up and down. They were put on a frame with a cord running over a pulley so they could be opened or closed from inside. We had a severe sleet storm during the winter, but it did not interfere with the operation of the windows. The chief advantage is the fact that the window can be opened as much or as little as one may wish, and the opening is always at the top.

Where curtains swing in from the top, it is difficult to keep leghorns from flying up to lay their eggs on the curtains. If you are building a house we would surely advise to have the curtains slide rather than swing.

The Valley of Voices—By George Marsh

CHAPTER I

STEELE stopped in his tracks. With his right hand he freed his ear from the head-piece of his tump-line and stood listening. Surely, he thought, those were the unmistakable notes of a violin, clear above the noise of the rapids. Curious, he continued up the steep portage; now convinced that faintly through the beat of broken waters, which the trail paralleled, floated eerie music, now doubting his senses. At length his alert ears failed to capture the strains of the magic violin and he dismissed his illusion as the vagary of nerves over-tense from the toil of the trail over which he had come.

For a space he went on, engrossed in other thoughts, when through the roar of the waters a violin sobbed up to a wild crescendo . . . then ceased.

Easing the top bag to the ground, Steele swung the lower pack, with its attached tump-line, beside it, and waited. These were no fancied melodies of summer white waters. It was no wraith music which a shift in the August breeze had brought him—this mad playing.

Again the notes of the violin were audible; clearer now. Some magician out there on the neighboring shore was baring his soul. It was unbelievable—here, in the lost valley of the north—pure wizardry. Enchanted, Steele listened as the violin sang of yearning and despair, unutterable, which genius has voiced to the world through the magic of its strings. And as he listened he wondered what tragedy lay behind that playing, what trick of fate had buried this master of the bow in the furpost on the Wailing River.

"What you hear, de Windigo seeng in de strong-water?"

Turning, Steele smiled at the blocky figure of the speaker standing in the trail, his head and shoulders bent under a Peterboro canoe.

"No, David, but I've been listening to the violin of a shaman—a medicine man conjuring up the spirits of the rapids. Someone at this French post is a sorcerer."

"Maybe you hear Windigo all de same," drily suggested the half-breed, easing the stern of the canoe to the trail to uncover a broad, swart face wrinkled with amusement. "Up at Fort Hope de peopl' scared of dis river for sure. Dey tell me de strong-water by de French Post bad place for de devils an' de Windigo."

"Yes, I heard that too, the valley has a bad name on the Albany. Francois, at Martin's Falls, says it was called the Wailing River because of the moaning of the rapids here in winter. I told him it was only the wind, but he wouldn't have it—insisted that the place was 'bad country,' bewitched."

"Dey say plenty peopl' drown there, long tam ago," gravely added David.

"So old Pierre once told me, down at Henley House. He was traveling from Ogoke to the Albany one winter and struck this gorge about sunset. But the spirits scared him so with their wailing that he drove his dogs ten miles before he dared to make camp. I can't understand why the French built a place on a tabooed river. They must have known its reputation."

"Wal," replied David with a grimace, "I nevaire hear of dese Windigo howl een de night, but eef I see heem now I eat heem for sure. I call dis de Starvin' Riviere."

Steele laughed loudly at the remark of his hardheaded companion, whose legacy of superstition from an Ojibway mother had been heavily diluted by the blood of a Scotch father.

"I could eat a caribou myself," he said, "but we'll have a big feed at the post to-night. You take the canoe over while I find out who's playing that violin. Who could guess that there was a man within a thousand miles of these bad-lands who could play like that?"

The half-breed started over the portage while Steele turned into the thick scrub toward the river. From the foot of the rapids the trail had swung away from the

broken flanks of the gorge, but shortly Steele saw patches of foam through the spruce. He stopped to listen, and again the notes of the violin shrilled above the monotone of the broken waters. Slowly he worked his way along the shoulder of the shore, then, forced back to circle a gash in the eroded cliff, stumbled upon a trail, and following it a short distance, suddenly stiffened.

The path led to a huge, flat-topped boulder thrusting out into the stream. On the rock, her dark head nestling a violin to her cheek, stood a woman.

Surprise held the man motionless. To eyes which for months had not looked upon a comely white woman, the picture of the lithe figure of the musician, a crown of dusky hair half masking the face turned to the river, was a delight he hesitated to cut short by a betrayal of his presence.

From the passionate hopelessness of Massenet's *Elegie* the violin swung into a deathless lament of Grieg, grim with the eternal tragedy of his own gray north sea. As she played, the girl turned, exposing her face. On her cheeks were tears. But she did not see the listener for her eyes were closed.

man; for him it is so lonely here."

"But surely," he protested, "it is more lonely for a woman." So she was the daughter of the French factor, and he wondered what force of circumstances had driven the father of this talented girl into the fur trade as an employee of the French Company; this girl with the sombre eyes who came to the white-waters with her violin—and her grief. Was it tragedy he had chanced upon, or mere loneliness?

"Lonely here for a woman? Surely, Monsieur, you speak as a man of the world—with understanding." The sensitive mouth of the girl shaped a faint smile but the dark eyes did not change as she continued: "Yet I have my father and my violin, while he—he has only his memories."

Turning her head, her gaze followed the white ribbon of wild water to a shoulder of rock which shut it from sight, while Steele's eyes swept her from trim beaded moccasins to the coiled masses of her black hair.

"But," he gallantly protested, "your father, Mademoiselle, has the companionship of a very"—he hesitated and finished

What eyes and hair, he mused, and what playing! It was clear she was breaking her heart over something; the look in her eyes proved that. To think of such a glorious creature buried in this country! Her father probably was a retired French officer. Heaps of them marooned between Labrador and the Peace! But why, he asked himself, didn't they mention her over at Hope—this charming daughter of the factor at Wailing River?

It couldn't be pure loneliness that drove a girl out there on that rock to play her heart out—not loneliness. And the heart-ache behind it all—those dirges of Massenet, Grieg, and the Russians! What could it be, he wondered.

"Well, I'm going to find out," he said aloud as he reached his packs, and filling and lighting his pipe, sat down to think it over.

Yes, he decided, she certainly had been frightened at his appearance—had looked him over as if he were a ghost. Then she had seemed superstitious; but she couldn't really believe in this tradition of the valley—this Windigo and spirit stuff. That was inconceivable. She was not afraid to come here alone and yet she called the river terrible. What had happened here anyway? Whom could she fear, and why?

Thus speculated the intrigued Steele. Then swinging his bags to his back, he started for the post known as Wailing River.

A third of a mile above, the trail entered a clearing at the farther end of which huddled a group of log buildings from which straggled, along the river shore, a row of Indian shacks. At the edge of this clearing the packer stopped.

"Looks like any one of a hundred trading outfits between Nichicun and the Mackenzie," he thought, "but how do they get the Ojibways to bring their fur here if they think the valley is haunted by Windigo?"

As Steele left the forest to cross the clearing the dogs of the post started the usual uproar. Half way to the group of log buildings he was met by an Indian, sent by the factor, and relieved of his packs.

In front of the trade-house, in conversation with David, stood a tall, military-looking man, with iron gray hair and mustache. Around the door lounged a group of curious company Indians. Advancing and gripping the newcomer's hand, the factor of Wailing River exclaimed:

"Bon jour, Monsieur Steele! Welcome to Wailing River! My daughter and David have told me of our good fortune."

As the old soldier continued, with a slight French accent, Steele was aware of being secretly appraised by the keen eyes of the other.

"You are to be our guest for as long as you will honor us. In this valley, for a man of science, there is much of interest."

"You are very good to a stranger, sir. David and I have been out from Nepigon since May. We need supplies and my stuff should also be overhauled. Some of it got wet bucking this river of yours."

"Too bad! You found it a hard river to pole and track?"

"We certainly did. David has a nose for quick water as keen as a mink's for fish, but we took too long a chance in the big white-water."

At the mention of the rapid the face of St. Onge hardened. He leaned eagerly toward the speaker.

"The Devil's Mile! It got you too?"

"Oh, we pulled out of it with a wetting. You see, I was with the best bow-man on the Nepigon, so we saved the canoe and our own skins as well."

Slowly the Frenchman shook his head; then suddenly asked:

"You saw nothing on your way up-river—nothing peculiar, no signs of a canoe?"

Steele wondered at the question as he answered:

"No, we met no one. I imagine the Indians don't travel it, too much strong—"

(Continued on page 525)

Do Not Miss This Story

ON this page starts our new serial story, "The Valley of Voices". It is a story of the great Canadian Northwest, an outdoors entirely different from the milder climate of our own land. It is a mystery story and yet, unlike many poorly written mystery stories, it is logical and reasonable, and entirely possible. The young folks, particularly the boys, will enjoy this story, and in addition to their enjoyment, it will increase their appreciation of good writing and of literary values.

"The Valley of Voices" has been selected by the staff of *American Agriculturist* after many weeks of reading a large number of stories. If you start it and read it faithfully, I can almost guarantee that you will like it and that it will give you many pleasant hours.—E. R. Eastman.

She ceased playing. With a sense of awe at having heard the cry of stark despair, the trespasser, conscious of sacrilege, had turned to retreat when he was stopped by:

"Qui vient la? Who is there?"

Caught, the eavesdropper faced about, hat in hand.

"Mademoiselle," he began, reddening under the questioning gaze which swept him from moccasins to tattered shirt, then fearfully searched his eyes as if seeking a sinister meaning in his sudden appearance. "I am packing up the carry to the post. I—I heard your marvelous playing—and came. You will pardon my listening?"

The dark face of the girl in turn flushed. The guilty man humbly awaited the revelation of her just anger. That meant for the forest and waters only—the naked anguish of a soul—a stranger had heard. It was right that he should pay.

"I come here to play—Monsieur—often," she replied in a tense, uneven voice. "I was startled! We see no more—but the Indians. There is nothing—to pardon."

She spoke in English, with a flavor of accent which Steele had heard before, but not in French Canada.

Relieved at his reprieve, he hastened to explain his presence on that bush-grown portage of the Wailing River.

"My man David and I are bound from the Albany to Ogoke Lake and the Nepigon. We've been in the bush since May," he laughed, painfully aware of a three-days' worth of beard, with a deprecatory gesture toward his frayed clothes, "and have some trading to do at the post, as you see. Is it far?"

Gradually, as the man spoke, the look of fear had faded from her eyes. She drew a deep breath, as though of relief, and the tense pose she had held, grasping violin and bow, relaxed, as she joined him on the trail.

"Only a short distance, Monsieur. My father will welcome the sight of a white

weakly—"his daughter."

She laughed in his face. "Ah Monsieur, you have French blood in your veins. But the very—his daughter," she mocked, "is a dull substitute for a 'world of men,' as your Browning says. My father will be much pleased at the coming to Wailing River of Monsieur—"

"Steele," he prompted, "my name is Brent Steele. I am in the field for the American Museum of Natural History."

She bowed low with mock gravity. "Monsieur Steele, my father, Colonel Hilaire St. Onge, will be honored in offering the poor hospitality of Wailing River to a learned American scientist."

Smilingly Steele raised protesting hands at her characterization. How charmingly, he thought, this strange girl, whose violin had sung so poignantly of despair, whose face had reflected fear of the stranger, now lapsed into raillery.

"Oh, pardon, Monsieur," she went on, "I forget myself; I am Denise St. Onge. Now that the conventions have been satisfied, will you follow me to our chateau—of logs?"

"Thank you!"

Her simple muslin gown and beaded moccasins seemed but to authenticate the stamp of race in the figure and carriage of the girl who led the curious man over the river trail to the carry. At the portage she stopped.

"My packs are below here, where I left them to follow the Lorelei of the Wailing," he said smiling.

Her face swiftly sobered.

"Ah, Monsieur," she replied almost inaudibly, "do not make jest of this terrible river." Then, with a shrug, as if ridding her mind of an oppressing weight, added, "I shall not wait for you, the post is very near," and walked swiftly up the portage followed by the quizzled eyes of the man.

He stood in the trail watching the retreating figure of the girl until a bend shut it from sight.

Mother's Day

IT was Mother's Day when you and I were brought, helpless and alone into the world.

By REV. J. W. HOLLAND

varied life, your First Friend has

Those were Mother's Days—long, long days they were, too—as we were nourished and brought through our infancy into the days of happy childhood.

Rev. J. W. Holland

Sickness came to you. The Doctor was called. How quiet the household became. Far into the lonely nights She sat with her hand upon your brow, and praying for your recovery. That was Mother's Day.

You toddled off to school. She stood in the doorway, and watched you go, waving her apron to you as you passed out of sight. When she went back into the house the rooms grew larger and stiller without your noise and prattle. Amid her work she often sat down and cried. It was Her Day.

You grew up, fell in love, and came to your wedding day. Mother was there, her face a shifting landscape of gladness and sadness. She kissed you and your mate, whispering something that sounded like, "God bless you," as she hurried past. That was also Mother's Day.

The miracle of life and birth was re-enacted in your home. Who should be there but Her, to receive her honors as grand-mother, and sweeten with her presence your joy at parenthood. It was Mother's Day.

Through the joys and sorrows of your

proven to be your Best Friend.

Did death come to your home, and claim one of your little flock, filling your home with the black gloom of an unending farewell? She came again. With the old witchery by which she soothed your childhood troubles, she silvered the lining of your cloud, and you took heart again. It was Mother's Day.

Did you work hard till some well earned honor came to you? Did some wreath of honest victory rest upon your brow? Be assured that Her heart wore your honor with unsullied pride. It was Her Day.

Or, were you weak enough to forget for a moment, or for years, perhaps, Her pure teaching and example, till some disgrace fell upon you? Well, there was one head that was bowed lower with your shame than any other. Night on night sleep did not come to her brain because of what you did. It was Mother's Day.

Inter-woven into the fabric of our lives from birth to death are the golden strands of the love and devotion of our honored Mothers. Every day since we were born has been Mother's Day.

"We are not worth, e'en at our best,
One half we cost of sad unrest,
Yet, in the temple of her breast
We are enshrined."

Do you recall that fine line in the Gospel story of where Jesus was hanging upon His cross, when he beheld His Mother. Thinking of her helplessness, He said to John, "Behold thy Mother." John took Mary to his own house. It is fitting that He whose life has ever meant the freedom and uplift of women, should have given almost His last thought to His Mother.

It was Mother's Day!

The Valley of Voices

(Continued from opposite page)

water, and then there's the taboo—they're shy of the lower river, aren't they?"

At the words, the narrowed eyes of St. Onge shifted to the ground. He made no answer to the man who watched his set face, wondering, as it vitally affected the trade, why the factor avoided this subject of the Indians' fear of the Windigo. Presently St. Onge broke his silence.

"You will pardon me, Monsieur Steele, I am a poor host. If you were in the water you spoiled your flour—you are hungry?"

Steele glanced at the grinning David who plaintively placed a sinewy hand on his stomach.

"Yes, we lost our flour and we saw no game, had to fish our way up the river—so, Colonel, we are a bit hungry."

Snapping his fingers with impatience at his seeming lack of hospitality, the factor called to the loungers at the trade-house door:

"Michel! Tete-Boule! Bring up Monsieur Steele's stuff from the foot of the portage; and, Michel, David here will eat with you. See that there's plenty of caribou stew for supper. He's starved out." Turning to Steele, the factor added: "My daughter is now overseeing the cooking of our dinner, Monsieur. I trust you will find it to your taste."

"You are mighty kind to a couple of bush-battered strangers, Colonel St. Onge. We are not exactly starved, you know. We travel with a net, but a straight diet of pike and trout grows a bit tiresome. You can sell us supplies to take us through to Nepigon?"

"You will not need to outfit for Nepigon," the factor's eyes grew bitter, "You will pass Laflamme's post at Lake Ogoké."

"Monsieur Steele will desire to be shown his room, father, before we dine," called a woman's voice. Turning, Steele saw, opening the gate in the dog-stockade surrounding the factor's quarters, Denise St. Onge, trim in white serge. Casting an embarrassed look at his frayed jeans, his hand sought his unshaven chin as she joined them.

"Welcome, again, to Wailing River, Monsieur," she said cordially, giving him her hand.

"My daughter seems to need no introduction. She has told me of your meeting at the river. Denise, Monsieur Steele is bound for the Nepigon by the Ogoké trail." The eyes of father and daughter met in a significant look. "Laflamme, Monsieur, can give you anything you wish—including Scotch whiskey."

The girl's dark eyebrows contracted at the mention of the Ogoké trader's name.

"So he's giving the Indians whiskey, is he?" said Steele.

"You are surprised?" laughed the factor bitterly. "For Monsieur Laflamme it seems that Canadian law does not exist. With his whiskey he will soon have the fur trade of the whole district."

"They said as much at Fort Hope. But the authorities—why don't they act?"

St. Onge shrugged eloquently. "I do not know. He is running things with a high hand—has support of the strongest at Ottawa."

Steele turned with a smile to David who had been an interested listener to the conversation.

"I think that we shall have to pay Monsieur Laflamme a visit, David."

St. Onge and his daughter exchanged glances.

"Dawed like to shake de han' of Mister Laflamme," replied the Ojibway, drily.

"I pity Laflamme when you do. He'll carry his arm in a sling for a month if he ever falls into that wolf-trap of yours."

"You see, Colonel, David is under the impression that Laflamme is an old friend," Steele enlightened his host, whose face reflected acute interest. "Sometimes in meeting old friends he forgets in his joy that his hand-shake is famous from Nepigon to Norway House. In this case, David," he added grimly, "you'll have to remember that we're not on the Nepigon and must not mistake Monsieur Laflamme's throat for his hand."

(To be continued)

A two-tone figured finish, one of many obtainable with white-lead and flatting oil. A ground coat of one color and a finishing coat of another color are applied. By rolling a crumpled newspaper over the second coat while still wet, you get a design that you can be sure is distinctive.

INTERIOR FINISHES

once found only in the houses of the rich—now made available for every farm-house by white-lead and flatting oil

WHEN great-grandfather was a boy, the interior beauty and charm of American homes were due in large measure to the beautiful and artistic woodwork finishes. You may have seen and admired these handsome finishes, built up with as many as five or six coats of paint, in reproductions of Colonial houses and in the finest modern homes.

Up to a short time ago such interior paint finishes were a luxury that only the wealthy could afford. But there is available today for interiors of homes everywhere a flat paint finish that is similar in beauty and durability to the old rubbed-down finish. This flat finish is easier to apply than the rubbed-down finish, much more economical (because fewer coats and less labor are required) and very durable. Not only for woodwork but for the painting of walls this finish is ideal. With it many very beautiful and distinctive effects can easily be obtained, among them two-tone figured finishes, like the one shown above.

What paint to use

Dutch Boy white-lead and Dutch Boy flatting oil make this new flat paint. The pigment ingredient is Dutch Boy white-lead, made from the metal and lead. Because it is the highest grade white-lead obtainable, Dutch Boy white-lead is preferred by professional painters and home-owners everywhere. Mixed in the right proportions with

Dutch Boy flatting oil, it makes a paint that can be quickly applied, that produces a finish free from brush marks, laps and streaks and that can be tinted to any desired color.

Send for Samples and Booklet

We will be pleased to send you actual painted samples of the two-toned figured finish accompanied by a new booklet, "Painting—Protective and Decorative." This booklet tells what paint is, what paint does and why paint protects the surface. It contains color plates of house interiors and exteriors and also of interesting and unusual artistic wall finishes that can be obtained with paint. Both the booklet and the samples sent free on request.

Advisory Service

We maintain a Department of Decoration made up of experts who will gladly advise on the proper selection of colors for interiors of new houses or old. These men can also tell you about distinctive finishes and give you formulas for obtaining these finishes.

Address your inquiries to the Department of Decoration in care of the nearest of the branch offices listed below.

Mother Nature's Garden

Will Later Be Supplemented By Our Own

AT THE time when our gardens are not yet furnishing green things, or these highly desirable and appetizing foods are expensive to buy because they must be shipped great distances, we can provide many delicacies for our winter-worn family if we only know where to find the wealth of food materials which Mother Nature, the good old nurse, provides for us.

Picking the greens can be made a matter of pleasure, for often they are to be found in most attractive places along the hedgerows or beside the streams or in the marshy places. In such spots we are sure to see birds and flowers, or the hint of them coming. It is a real joy to get out-doors and roam about after being shut in so long and we can turn it to practical advantage at the same time.

Some greens are better cooked while others are also delectable used raw in salads. Here is a list of "greens" that ranges from the time snow melts to late May: it has dictary possibilities of

dearest ones, spinach, purslane, pigweed, etc., are often steamed or cooked in their own juice, having a very little water starting. A few of the wild greens should have the first cooking water discarded, for instance, dandelion and pokeweed. This process, however, loses for us some of the mineral salts and should not be practiced except where flavor demands it. As a rule, the cooking is done by covering with boiling water and salting when the greens are almost done.

At first we are satisfied to have the greens just boiled or in salads, but interest can be maintained by varying their uses. The following recipes by Mrs. R. C. DeLyne sound appetizing:

Creamed Spinach.—Drain one can of spinach, or an equal amount of fresh; pour into a dish and cook until dry. Stir occasionally, when the moisture is cooked out, combine one half cup of cream or rich milk and two beaten eggs, add to the spinach, cook until it thickens. Season with butter, salt and pepper.

Spinach Omelet.—Stir four egg yolks

No. 3196-5—Gold, brown, green and black are combined with delightful effect on this scarf of tan linen. The material is a fascinating art crash that takes the embroidery in rope cotton so well. The two outer flowers are outlined and worked in basket stitch with yellow. The cross stitches and overwhipping of the outline are done with brown, the color scheme is reversed for the central flower. To fill in the petals, lay strands of cotton across the space about three-eighths of an inch apart, then across the opposite way at right angles to the first row. A cross stitch in contrasting shade is tacked over both strands, at the point of intersection. Edges of the petals are outlined with one shade in darning stitches, and then overwhipped with the other shade, taking a stitch under each darning stitch, and not into the fabric. The vase is black, and the filling in is done in a slightly different way. The first row of strands is taken in the same manner, but in working the cross strands, a tiny back stitch is taken into the lower row at each intersection. Put the point of the needle into the centre of the strand, and take the smallest possible stitch into the material. The calyx of the tulips is filled in with green French knots, at spaced intervals. The band around the edge is made up of a double row of black French knots, with a yellow satin stitch dot and a brown French knot, on either side worked at intervals in the space between the lines of black dots. Light tan art linen for scarf 17½ by 45 inches stamped,—\$1.00; or 17½ by 52,—\$1.15. Cream art crash can be had at the same price. Floss for working 45c extra.

which some of us never dreamed. (Those marked with the asterisk [*] can be used for green salad or for pot herbs): *watercress, *wintercress, *garlic or wild onion, *dandelion, dock (narrow-leaved, curled or yellow), *sorrel, live-forever, horseradish, marsh marigold, (cowslip), chicory, samphire or glasswort, fonds of bracken before it uncurls, fonds of cimmamon fern (eaten raw) pokeweed, nettle, *burdock, common milkweed, *mustard, bellwort (stalks), false Solomon's seal (stalks), *pigweed, (lamb's quarters), *purslane (pussley).

The greens from our own garden can be greatly varied by taking advantage of thinning time for various vegetables, as well as by planting greater variety for greens. Radish tops, beet tops, turnip tops, spinach, and Swiss chard are more or less familiar to us all.

Greens are valuable appetizers besides furnishing us much needed mineral material and vitamins. In addition to these advantages they provide roughage and we are constantly being told by the experts that we should allow for plenty of roughage daily in our diet if we wish to avoid constipation and its consequent ills.

As for cooking greens the very ten-

into two tablespoons of cooked spinach, add the beaten whites. Stir with a small chopped onion and pepper and salt. Mix well together. Place in oven in buttered dish.

Spinach Salad.—Cook spinach until tender, drain and chop fine, season to taste. Press into a square mold and chill, then cut into little squares. Place a slice of hard boiled egg on top of each square, then a spoonful of mayonnaise and serve on lettuce leaf.

Dandelion.—Cook dandelions until tender, add salt and pepper. Place butter in a spider add flour to thicken and brown slightly. Then stir in dandelions. The quantity of butter and flour depends on the quantity of dandelions.

Creamed Cowslips, and Poached Egg.—Cook cowslips, add salt and drain well, chop fine. Put a tablespoon of butter into a saucepan, stir in a tablespoon of flour with salt and pepper to taste; add greens and one half cup of cream or rich milk. Stir until well mixed. Serve on a platter and place poached eggs on top. This makes an appetizing dish.

Remembering the lean days that come in winter, we might provide against them by canning the greens when they are plentiful.

How Do You Take Your Rhubarb?

Suggestions for Making It Easy To Take and Easy To Look At

TIME was when the usual spring routine called for a course of medicine for almost every member of the family. One of the remedies used at that time was rhubarb—dark and bitter in powdered form. We have learned to take our rhubarb in a more palatable and inviting form—fresh from the row in our garden. I think results are just as good, if not better than the old time method and I am quite sure the taking is not so unpleasant.

The first tender pink-and-green stalks that reach the size of my finger and the length of a new pencil are apt to be made into a dish of sauce. We may eat it plain as an accompaniment to the hearty part of the meal or we may have it with plain or whipped cream and a cookie or slice of cake as dessert. Take the stalks and trim off the leaves and the part about the root that is not edible, cut in short lengths, put enough sugar over it to sweeten to suit the family taste, allow to set for a little while to draw out some of the juice and cook gently, so as not to make it mushy, until tender. Do not cook too long or the beautiful tints will disappear and the flavor will be impaired.

Then After That Comes an Army of Dishes

There are rhubarb pies with two crusts made just as you would apple pies; rhubarb-raisin pies made by adding half a cup of raisins to the sauce for each pie; rhubarb custard made by adding a cup of sauce, well sweetened, to the custard filling you like best; and dumplings, steamed or baked, made like apple dumplings.

Shortcake made with rhubarb is not to be despised. Use rich biscuit dough, bake in large or individual rounds, pull apart and spread with sauce sweetened to taste. Top with some of the sauce and whipped cream, if you want something both good to eat and to behold. Coming before strawberry time this will prove quite welcome.

Rhubarb Pudding

Rhubarb pudding may be made of stale bread or biscuit, hence it is an economy. Butter a baking dish and put in alternate layers of rhubarb and the bread cut in thin slices. Dot the layers with tiny bits of butter, making the top layer of the bread. Bake in a moderate oven for twenty minutes. The rhubarb may be just cut in short lengths and sugar mixed in, about half a cup to a cup of rhubarb, and the layers alternate with bread as with sauce. Of course the time for baking will be lengthened to about half an hour in this case. Serve the pudding with your favorite sauce. I use a tablespoonful flour, three tablespoonfuls sugar and a cup and a half of boiling water. Add a little vanilla or use fruit juice instead of boiling water for sauce if desired.

Baked Rhubarb

Baked rhubarb is very good. Cut the stalks in short lengths, about an inch long, allow half a cup of sugar to a cup of fruit, if fruit you call it, dot with butter and bake about twenty-five minutes. Marshmallows placed over the top a few minutes before the dish is taken from the oven makes it quite festive.

Rhubarb fluff may be made by beating the whites of two eggs to a froth, then beat these into two cups of rhubarb sauce into which has been stirred while still hot a tablespoonful of cornstarch well mixed with three-fourths of a cup of sugar—you may want a little more sugar if you prefer things very sweet. Serve very cold with cookies or some simple cake.

Frappe may be made from stewed rhubarb, sliced bananas and strawberries with the desired quantity of sugar and ice water.

In order to conserve more of the rhubarb and to be able to enjoy it the year round here are some recipes you may use.

Canning by the cold pack method is quite successful. The rule is to blanch the stalks for one minute and to cook 16 minutes in the water bath. If the

added a few minutes before the product is done if desired.—LENNIE HOLLON LAND.

Leave One Bud on the Peony Stems

IF you want large flowers you should remove all the buds from the clusters on your peony stems for that will throw all the strength of the stem into the one bloom and make it very large. Not only that, but the removal of so many buds will help the whole plant to throw additional strength into the new growth and make for a more liberal supply of flower stems the next year. This with proper feeding will insure flowers that will command a good price if you are where you can send them to a flower store or can sell them yourself direct to hotels, restaurants, or other places where flowers are used regularly. Around Decoration day there is always a big call for peony blooms and if you have them of the late varieties and grown large you can usually find a good market for them.—L. H. Cobb.

Good Luck to the Winner

IT is human nature to want to win prizes, sometimes given as a mere matter of chance without having the merits of the case considered; but here is a case where the best fellow wins.

Now that the pageant and the play are being given in even the tiniest rural neighborhoods, the great need is for the right sort of plays to be acted. It is only natural to turn for such material, to those who know at first hand rural life in its different aspects, and the following rules of the contest for country life plays are submitted:

First Prize \$100; Second Prize \$50; Third Prize \$30; Fourth Prize \$20.

Prizes offered by joint contribution of The New York State Grange, New York Federation of County Farm Bureau Associations, New York State Home Bureau Federation, and the G-L-F Exchange.

Plays submitted are to deal sympathetically with some phase of country life. They may be tragedy, drama, comedy or farce. Knowledge, accurate observation, and keen interpretation of the country and its folks will be counted heavily in awarding prizes.

Plays may be long or short. One-act plays should play in 30 to 45 minutes. Full-length plays in three to five acts should play not more than two hours.

Suitability for production by amateur clubs should be considered.—simplicity and ease of staging,—characters not too difficult for amateurs,—avoidance of unduly "disagreeable" situations,—etc. Plays with action and plot are desired. "Talky" plays are boresome.

Plays are to be typewritten or written in ink on one side of paper, approximately 8 x 10 inches in size.

The writer should sign a fictitious name to the manuscript of the play and should attach an envelope bearing outside the fictitious name and title of the play, and inside on a card the writer's real name and address. Plays not sent will not be accepted.

A writer may submit as many as three plays, but may win only one prize. The competition is open to any resident of the United States or Canada who has not had a play professionally produced or published in book form. No play which has won a prize in another competition may be submitted.

A. M. Drummond, Professor of Public Speaking in Cornell University, and recently Director of the N. Y. State Fair County Theater, will be chairman of a committee, which will judge the plays and award the prizes. The organization contributing the prizes will each cooperate with Professor Drummond in selecting the judges.

Plays submitted may be printed or published by the New York State College of Agriculture or its agent and may be played without royalty by amateurs within New York State. The author retains the right of simultaneous or subsequent publication elsewhere.

The competition will close November 1, 1925. Plays are to be mailed to Department of Rural Social Organization, New York State College of Agriculture, Cornell University, Ithaca, New York.

In making sheets that are to be used on children's bed, allow ten inches extra length and turn this back over the blanket or comfortable when the bed is made. This protection keeps the top of blanket clean and makes frequent washing unnecessary.—L. M. T.

For Cool Days of Spring or Summer

The straight, long lines of this tunic dress are especially good for the woman who wants to conceal the too-full figure rather than emphasize the fact that she is not as slender as she used to be. This pattern is also kind to the slender figures. Kasha or fine twill with, perhaps, the slip of black satin lend themselves to a pattern of this sort.

Pattern 2402 comes in sizes 16 years, 36, 38, 40, 42 and 44 inches bust measure, a straight slip and overdress are included. For the 36-inch size, 3 3/4 yards of 40-inch material for dress with 2 1/2 yards of 36-inch material for slip. Price 13c. Hot iron transfer pattern number 708 blue and yellow costs 15c extra.

Our spring and summer catalogue (price 14c) is just what you need for selecting patterns for different members of the family and for almost any occasion. Send your order to Pattern Department AMERICAN AGRICULTURIST, 461-4th Ave., New York City.

open kettle method is used I prefer to use half as much sugar by weight as I have cut up stalks. Allow to set for an hour or more to draw out the juice and the resulting product will look much nicer than if the sugar is not used as the shape and color are not lost as it so often is if sugar is not used.

Marmalade may be made by using equal weights of sugar and rhubarb, add the juice and rind of a lemon and cook until thick.

To make a conserve use one pound chopped rhubarb, 1 pound sugar, pulp and grated rind of an orange, 1 cup raisins. Cook all together until thick. A cup of chopped walnut meats may be

The Building of the Nest.

By E. H. Pitcher.

They'll come again to the old apple tree—

Gay oriole and all the rest;
Where the orchard branches are fair to see,

In the snow of the blossoms dressed.
And the dearest things in the world will be

The wee ones in the sweet home nest.

Weaving it well so careful and trim,
Making it fast with care,
Nothing to fetch too distant for him;
Nothing for her too fair.
Hanging it safe from the topmost limb—
Their castle in the air.

WOMEN'S WANTS

WOOLENS. Materials for ladies' wear direct from factory. Write for samples and mention garment planned. F. A. PACKARD, Box A, Camden, Me.

Do Not Confuse Bonds and Stocks

Please let me know whether it is safe to invest in Southern Pacific R. R. I asked my banker one time and he told me they yielded about 6%, then when I wanted to do business, he asked me whether I would be satisfied with 5%.—G. A. K., Pennsylvania.

YOU are confusing bonds and stocks. All Southern Pacific bonds are high grade investments. They are entirely secure as far as anything in the way of a railroad bond can be secure. They do not, however, yield quite 5 per cent at present market prices. You will make no mistake in buying them but you must be content with the comparatively small yield although the return is higher than the savings bank gives. Generally this is wise conservatism.

Southern Pacific stock which sells just below par pays dividends of \$6 annually is a reasonable good investment for one able to take the business risk that goes with stock ownership. You must remember a stockholder is a partner not a creditor. Just now the railroad earnings are satisfactory and the outlook is favorable. Some day there will come a time when the opposite may be true. A stockholder has to take his chances. In compensation for this risk he is entitled to a higher return on his stock than would be possible on a bond. Whether you should buy the stock or the bonds depends in large measure on your total capital resources.

Service Department

Let the Service Bureau Sign Be Your Watchdog

WE want every reader of AMERICAN AGRICULTURIST to think of the paper as something more than a mere publication. The publisher and the whole staff are working constantly to make the "Old Reliable" a real service institution for farmers. The increasing number of calls we receive from our people for this service shows that more and more are using it and are appreciating it.

When you buy the AMERICAN AGRICULTURIST, you buy the services of the best experts that we can hire to work for you on the many different problems that constantly trouble farmers. In addition to the trained men who contribute to our column on the crop, animal, fruit, farm machinery and other problems of the everyday work, we have a regular marketing expert who spends much time studying farm markets and writing the information so that it can be used by practical farmers. We have a lawyer who is constantly at your service, insofar as your local problems can be handled at long distance. Our investment expert is one of the best in the country. The same is true of our veterinary advisor.

"Hired Man" At Our Call

All of these trained "hired men" of yours work in our SERVICE BUREAU. It would do your heart good if you could sit at our desk for a day and read the mail that comes to our hand in connection with the work of the Service Bureau. Almost every problem of farm life, including many of the intimate problems of the farm home, is referred to us. When we take these claims up with the various concerns, they receive for the most part prompt and courteous attention because of the power and the influence of the great publication asking for the service.

We are constantly thinking and working to make the Service Department of even more value to all of our readers. And now we can announce that we have found another way by which we can help you. We are going to give every subscriber of AMERICAN AGRICULTURIST a Service Bureau Membership protection sign. Although these signs will cost AMERICAN AGRICULTURIST a good many thousand dollars, they will be entirely free to every subscriber. A picture showing the sign in reduced size is given on this page. AMERICAN AGRICULTURIST salesmen will carry this sign and when you subscribe, he will be glad to put it up for you. If you are already a subscriber, send four cents to the AMERICAN AGRICULTURIST, 461 Fourth Avenue, New York City, and a sign will be mailed to you postpaid, and you can put it up yourself. Although this policy of giving the sign free to everybody has only recently been established, yet the demand for them has rapidly increased.

Why You Should Put Up a Sign

Why should you put up a sign? Because, it will show that you are a member of a great and powerful service organization known as the AMERICAN AGRICULTURIST Service Bureau. Such a sign will serve as a watch-dog in the same way that the detective signs posted by jewelry houses, banks, and other business firms help to keep away criminals and near-criminals who are selling worthless stocks or putting across other questionable schemes. There has not been a time in many years when there have been so many such persons trying to do business as there are now.

The posted sign is a proof of your right at any time to call upon the many different expert services of AMERICAN AGRICULTURIST for help on any of your problems without cost.

Send four cents in stamps and get the attractive Service Bureau sign and post it immediately. We feel that with these signs up on more than 85,000 farms in New York State, the Service Bureau will

be able, with this great organization back of it, to help you even more than it has in the past.

Worthless Fire Extinguishers

"I bought three fire extinguishers from an agent claiming to represent the Hanks Fire Extinguisher Company of Augusta, Maine. They guaranteed them to put out any fire. My chimney burned out and I used one in the furnace and three I poured down the chimney. It didn't do any good and I had to use salt to put out the fire. I built a fire in the yard and I could not put it out with the extinguishers. What can you do about it?"

THIS is only one of many similar complaints which we have had from Long Island regarding this worthless fire extinguisher. We put the matter up to the Hanks Fire Extinguisher Company at Augusta, Me., and the reply from a representative of the company, stated that they were temporarily out of business and that anyway the extinguisher sold on Long Island was a fake and was not the true Hanks Fire Extinguisher.

A part of the letter from the company read as follows:

"We have had many complaints from Long Island where a man has represented himself as our agent. The Hanks Extinguisher is 100% efficient for all gasoline and similar fires. If the extinguisher purchased by your subscriber is made of tin containers they are not ours. The Hanks Extinguishers are put up in fibre cases."

Following this letter we made further investigation on Long Island and obtained one of the extinguishers. It was made of tin and therefore, was probably not the regular Hanks Fire Extinguisher. Anyway, it was no good. Hundreds of them and probably thousands of them, were sold on the Island. This will serve as a warning to our readers if the same agent turns up anywhere else in our territory.

Financial Wolves Turn Attention to Land Selling Schemes

INVESTIGATION by E. A. Schwab, Special Representative of the National Vigilance Committee, who has just returned from a five weeks' trip through Florida, disclose that professional promoters in all walks of life are beginning to infest various sections of that state. The public and honest business should STOP, LOOK and LISTEN before doling out their hard earned savings to fanciful promoters whose only stock in trade is exaggerated promises which are seldom, if ever, fulfilled.

The honest element of business, which includes the legitimate realtors of the city of St. Petersburg, Florida, were far-sighted enough to request the organization of a Better Business Bureau in that city, so that the public might be protected and the reputations of honest business men guarded against the misrepresentations of land sharks.

Before the Bureau was a month old it was instrumental in ferreting out and causing the arrest of one of these purveyors of blasted hopes, in addition to adjusting numerous cases in which, to say

the least, there was misunderstanding in connection with certain transactions. The Bureau has also developed evidence of an extremely important nature on other land projects.

Questions About Investments

I would like a little advice. I am enclosing some advertising of the U. S. National Loan Assn. of Philadelphia, Pa. They have sent circulars to my wife several times which have promises which look pretty large for safety. Will you look them over and tell me what you think of it as an investment of about \$600. There are some people here that want to invest in the G. L. Miller Company of New York City. There was an agent from Rochester up here trying to get my wife to invest in the Industrial Investment Co., of New York. My personal advice was to invest what she has in Federal Land Bank Bonds. Also give me the standing of the Affiliated Acceptance Corporation of West 49th St., New York City.—T. R. W., New York.

In the first place you will make no mistake by taking Federal Land Bank bonds. In the second place Miller Company bonds are sound as far as we know although not generally marketable. We know nothing about the investment company you name but it is foolish to buy stocks in the general run of finance companies. As to the building and loan proposition our advice is you take out shares in an association operating under the New York State laws and preferably one in your immediate vicinity. There is no use in going to Philadelphia for that purpose.

* * *

Would you please advise me whether it would be a safe investment to buy bonds of the Securities Guaranteed Company of Cleveland, Ohio. Attached circulars.—G. H. B., New York.

The circulars you enclose are the only information we have about this concern. As a rule, however, the safe thing to do is to buy bonds on their own merit and not on any one's guarantee. In this instance we should want to know what property the bond is secured upon before we made a purchase regardless of the guarantee. You know these real estate mortgage bonds, while many of them are high grade investments, are not ordinarily marketable.

* * *

Can you please give me information about safe investment or buying shares, common stock, in the Huntington Mortgage Corporation. They were selling shares at \$22.50 during March. This month the price is \$25 a share. This corporation has been (supposed) incorporated in the State of Delaware. Agents are selling shares on Long Island now with an office in Huntington, L. I. Dividends or interest are supposed to be paid quarterly. Kindly let me know if this is a safe concern.—Mrs. M. M., Long Island.

Financial Manuals do not describe this mortgage company. In any case if you buy common stock in such an enterprise you are taking a speculative risk which we would not advise you to assume unless you have special information about the business this company conducts. It is rarely advisable to buy stock of agents and when they raise the price arbitrarily it is generally a sign of danger.

I wish to thank you for helping me get the money on the goods I ordered from the Chicago company. If our subscription was not paid until 1935, I would feel like extending our subscription. Mrs. B. E. B., Cortland Co., N. Y.

No Pumping—
Just turn the faucet

There is no need for you or anyone on your farm to work a pump handle. A Delco-Light pump will supply every drop of water needed, both in the house and barn. It is automatic in operation, simple, efficient, economical. Gear-driven—no belt to slip or break. Requires attention only once in six months.

Models for Every Need There are Delco-Light pumps for deep wells and shallow wells and for direct current or alternating current, as supplied either by a farm electric plant or a central station. Ask the Delco-Light dealer about the low cost of Delco-Light electric pumps and the Delco-Light plan of easy payments.

One look picks the *profit-maker*

But appearance is a dangerous guide in choosing oil

ONE look may be enough to tell a skillful farmer the hogs that are easiest to fatten, or the poultry that brings the greatest profits.

But there is one place on the farm where the eye fails, where looks mean nothing. Two oils, may look as much alike as two prize Durocs, but differ as widely as a pure-bred and a runt.

Appearance won't tell you that one oil will distribute perfectly in your motor and that another may not.

From appearance, there isn't any way of judging that one oil will break down and another stand up under the heat of your motor, that one will burn clean and another produce soot and carbon, and that one will seal pistons and give power and smooth running, while another will let power "blow by" the piston rings.

*For operating economy,
follow this guide*

When the eye fails as a guide, isn't it reasonable to get the most expert advice you can find?

Near your farm is a Mobiloil dealer who gives advisory service in lubrication. He runs an established business year after year and is more interested in keeping you for a steady customer than in making an occasional sale at fancy profits. On his wall, he has the Gargoyl Mobiloil Chart of Recommendations because he knows it puts oil-selling on the only sound basis—

Branches in principal cities. Address:
New York, Chicago, or Kansas City.

the use of this Chart means that every purchaser gets oil which engineers agree is perfectly suited to the requirements of his motor.

The dealer's judgment is backed by the combined judgment of motorists who call for Mobiloil more than for any five other brands combined, and by practically all manufacturers of automobiles, trucks, tractors and motors who have placed their okays on the recommendations listed in the Mobiloil Chart.

*Where you can secure
advisory lubrication service*

It is easy to find the dealer who gives this advisory service. On the outside of his building, he prominently displays a metal Mobiloil sign with the red Gargoyl. Inside, you will find the complete Chart. Make it your guide and you will always be certain of getting oil designed for duty in your motor.

Mobiloil is made from crude stocks chosen only for their lubricating qualities and not for high gasoline yield. Every batch, every can, every quart of Mobiloil is "true to type."

It is made by the Vacuum Oil Company which has specialized solely in lubrication for 59 years.

Tractor Lubrication

The correct engine lubrication for the Fordson Tractor is Gargoyl Mobiloil "BB" in summer and Gargoyl Mobiloil "A" in winter. The correct oil for all other tractors is specified in our Chart. Ask for it at your dealer's.

MAKE THIS CHART YOUR GUIDE

THE correct grades of Gargoyl Mobiloil for engine lubrication of prominent passenger cars and motor trucks are specified below. If your car is not listed here, see the complete Chart at your dealer's.

The grades of Gargoyl Mobiloil are indicated by the letters shown below. "Arc" means Gargoyl Mobiloil Arctic.

Follow winter recommendations when temperatures from 32° F. (freezing) to 0° F. (zero) prevail. Below zero use Gargoyl Mobiloil Arctic (except Ford cars, use Gargoyl Mobiloil "E").

The Blue and the Gray

BY FRANCIS MILES FINCH

*By the flow of the inland river,
Where the fleets of iron have fled,
Where the blades of grave grass
quiver,
'Asleep are the ranks of the dead;
Under the sod and the dew,
Waiting the judgment day—
Under the one, the blue;
Under the other, the gray.*

*These in the robings of glory,
Those in the gloom of defeat,
All, with the battle blood gory,
In the dusk of eternity meet;
Under the sod and the dew,
Waiting the judgment day—
Under the laurel, the blue;
Under the willow, the gray.*

*From the silence of sorrowful hours
The desolate mourners go,
Lovingly laden with flowers
Alike for the friend and the foe;
Under the sod and the dew,
Waiting the judgment day—
Under the roses, the blue;
Under the lilies, the gray.*

*So, with an equal splendor
The morning sun-rays fall,
With a touch impartially tender,
On the blossoms blooming for all;
Under the sod and the dew,
Waiting the judgment day—
'Broidered with gold, the blue;
Mellowed with gold, the gray.*

*So, when the summer calleth
On forest and field of grain,
With an equal murmur falleth
The cooling drip of the rain;
Under the sod and the dew,
Waiting the judgment day—
Wet with the rain, the blue;
Wet with the rain, the gray.*

*Sadly, but not with upbraiding,
The generous deed was done;
In the storm of the years that are
fading,
No braver battle was won;
Under the sod and the dew,
Waiting the judgment day—
Under the blossoms, the blue;
Under the garlands, the gray.*

*No more shall the war-cry sever,
Or the winding rivers be red;
They banish our anger forever
When they laurel the graves of our
dead!
Under the sod and the dew,
Waiting the judgment day—
Love and tears for the blue;
Tears and love for the gray.*

OLD HOMES MADE NEW

THERE are 15 million houses in the United States from 15 to 100 years old. Most of these houses were built before much attention had been given to house planning. They provide shelter, but that is about all.

The rooms are small, many of them lack sufficient light and ventilation. Modern adjuncts of the comfortable home, such as large porches, sun parlors, sleeping porches, large living rooms, etc., are lacking.

The majority of these houses are too good to scrap, even if the owner found that financially possible. They were built in days when good material was plentiful and cheap. They are good for many more years of service.

The solution is to make these old homes new by remodeling them. At moderate cost the living room can be enlarged, a concrete floor put in the basement, the kitchen more conveniently arranged, and porches and a sun parlor added. The result is almost unbelievable, as the pictures on this page show.

The American Lumberman of Chicago, which furnished us these pictures, has agreed to cooperate with AMERICAN AGRICULTURIST and other Standard Farm Papers in helping our readers to make their homes more modern and comfortable.

Write us about your home, enclosing a rough sketch of the floor plan and a picture if you have one. We will suggest changes that will make it a more comfortable place to live in, a more efficient workshop for the farm wife as well as a house that is much improved from the standpoint of appearance. We cannot undertake to furnish detailed plans or blueprints for remodeling, but we can give you many practical suggestions that will help you to work out detailed plans with your local architect, carpenter and lumber dealer or supply house.

Instead of getting along with your old home until you can afford a new one, solve the problem now by making your old home new.

Enameling Furniture

To enamel chairs and other furniture which have been varnished or enameled previously, the entire surface should first be gone over with a rag on which have been put a few drops of benzine or gasoline to remove the grease, then rubbed down with fine sand paper or steel wool to remove the gloss, then washed with soap and water and allowed to dry. One coat of good enamel thinned with a pint of turpentine to the gallon should then be applied, allowed to dry for 48 hours, and then rubbed down again with the fine sandpaper and brushed off carefully after which the second coat should be applied just as the enamel comes from the can.

Enamel should be spread on in rather thick coats, with just enough brushing to prevent marks and lumping or running. Enamel dries quickly.

White Favorite Color

White seems to be the farmer's favorite color for houses. In a recent survey of many farm districts 78.7 per cent of farmers expressed a preference for that color. Red is nearly as strong a favorite for barns and is well in the lead for out-buildings and machinery. Gray, cream, brown, green, yellow, slate and blue come next in order in which they are given.

There seems to be no special reason for these choices of color, merely a question of preference.

Did You Ever Try?

To two cups of grapes add four cups of finely chopped apples, let stand about an hour and serve with a topping of whipped cream and jello or both?—Mrs. L. E. G.

There are many farm homes like this—or almost as plain. They were built years ago, when the chief thought was protection from the weather at the lowest possible cost. Little or no thought was given to comfort, convenience or appearance. Most of these houses are well built and are made of good material. At moderate cost they can be transformed into modern, comfortable, slightly houses. That was actually done in the case of this particular house. Carefully cut out the picture below, place it over this picture in its proper position, and you will see how the remodeled house now looks. The chimney of the cut below is placed about even with the top line of the upper illustration so the roof lines coincide. Isn't this a wonderful transformation? Why not try something of the kind yourself?

Farm Sleeping Porches

By I. W. DICKERSON

NO PART of the home is of greater comfort or convenience, especially in hot weather, than a good roomy sleeping porch. City folks have been building them for several years and now a sleeping porch is incorporated in nearly every new city home. Occasionally one is seen in the country, but so far country people have made but little use of this modern convenience.

The sleeping porch should not be too small, one eight by ten feet being about the minimum size to take a bed and a chair or two, and still have room to get around the bed to close the windows. Ten by twelve is still better.

I have used sleeping porches on the northeast, southeast, south, and southwest. I prefer the southwest or south, especially if there is some shade from the afternoon sun. The northeast is shaded and cool during the day, but usually gets very little breeze during the summer and becomes rather chilly during the winter. Also the early morning sun is likely to disturb one's slumber or Sunday mornings, when even the farmer feels like sleeping a little late. The southwest is likely to get the best breezes in the summer, but unless the porch is well shaded from the afternoon sun, the bedding will become so hot that it will hardly be comfortable by bed time. The southeast will get the morning sun, but usually not the rising sun. The afternoon sun can be shut off and the porch

will be reasonably cool by evening. Usually a good breeze can be secured from a south-east room if there is any breeze going, especially if the windows can be opened on three sides. The south or southwest is perhaps the best location is thoroughly shaded from the afternoon sun, as most breezes in hot weather come from the west, southwest, or south.

The sleeping porch may be either upstairs or down. Better breezes are usually found in an upstairs porch, while shade is easier to get in a downstairs location. If possible, the sleeping porch should open off from a hall or a stairway landing rather than from a bedroom or bathroom, as this will allow more flexibility in the way in which it can be used, especially if visitors are being entertained in the home.

Now as to construction. The principal purpose is, of course, coolness in summer for sleeping purposes. This means that the sides must be open so far as possible for free passage of whatever breeze may be moving, at least as far down as the height of an ordinary bed, at least two and preferably three sides should be open in this way. These openings must be covered with screening, 16 meshes to the inch being preferable to the usual 13 or 14 mesh.

Also something must be provided as a protection against rains and strong winds. I have tried canvas stretched on rods and heavy wire, but such curtains are more or less of a nuisance in stormy weather, as it

is almost impossible to keep them from whipping and snapping to such an extent as to make sleep almost impossible. I have also tried curtains made of heavy denim tacked to wooden frames which could be folded up out of the way when not needed. These work better, but are far from perfect, as they still make considerable noise, and rain will often blow through the joints. Any kind of a curtain is more or less of a make-shift, and much less satisfactory than strong, well-fitting windows which can be folded together or lifted out of the way. In some cases the screens are on the outside and the windows fold in or lift up and hook; while in many cases the screens are on the inside and the windows are hinged at the sides and opened out by means of rods through the casings, or are hinged at the top and lift up by means of similar rods. Unless the porch is shaded, shades of some sort must be provided to keep out the sun.

Another great advantage of the windows is that with reasonably tight wall construction such as a porch makes a very good winter bedroom. Even if it is not heated, the afternoon sun will come in strong and warm up the room and the bedding, making a healthful and pleasant place to sleep. For this reason and because it also makes it cooler in summer, the porch should be made with a double roof and tight floor and walls up to and above the window frames. If funds will not admit of such complete construction at the start, the complete porch should be planned, and nothing built which will not work into the completed plan.

Fixing Firebox in Range

Kindly tell me what to use and how to mix some kind of cement to lime a firebox of range, also heating stove. I have seen this done but do not know what to use to do it.—G. W. B., New York.

BUY some fire clay at your local hardware store, mix it with water and plaster it in the range. The fire will bake it hard. At first, if the fire is of wood, care should be taken not to knock off the clay when putting in wood and if the fire is a coal fire, not to knock off the clay with the poker.

If the clay is baked hard, we have known it to last for several years. This treatment is inexpensive and should the clay be knocked off in places, these places can be replastered.

Shade the Perennial Bed

HARDY perennial, planted in May in a bed outside or even in June will make fine plants for setting out the next year to bloom in the border, but to make them do their best they need a partial shade in the bed during the summer. If you use a frame from a cold frame or hotbed that is covered with cloth that is ideal for this purpose. I have used a frame of laths set apart the width of one lath thus giving shade half of the time and found this very effective. The shade should be raised a foot or eighteen inches above the bed to admit air freely, and secure a more rapid shifting of the shade if laths are used. The frame should be arranged to be removed when watering the beds or during cloudy weather or in rains. It is not a good plan to plant the perennials in a bed under a tree for the tree roots will sap the moisture and plant food they need so badly to make strong roots. Neither is a bed beside a house a good place for the dry soil under the building draws moisture and the walls reflect light and heat over the plants, thus when the sun does shine on the bed causing the very opposite of what we are seeking.—L. H. Cobb.

Cut out this picture, following the outline carefully. Place it in its proper position over the picture above. Note the wonderful change. Any old house can be similarly remodeled at moderate expense.

The Job of Selling Milk

Hind and Foresights Upon the Biggest Task the Dairyman Has

WHEN I was a little boy more than—let's see, can it be possible—yes, sir, more than thirty years ago, Father kept some twenty-five cows, miles back on a hill farm in a southern tier county of New York. As the cows were milked, the milk was carried in pails across the barnyard over a fence stile and into the outside door of the cool cellar and "set" in long vats and tin pans for the cream to rise.

E. R. EASTMAN

My memories of that old stile that led over the barnyard fence are particularly vivid for I got licked and sent to bed once for tripping the hired girl (yes, sir, they really used to have them) as she went

up the steps of the stile carrying two brimming pails of milk.

Years later, I came to know how Mother slaved to skim that milk and to make it into butter. But the thing that most impressed itself then upon my childish mind was going with Mother to sell the butter. We took the big tubs in the old "democrat" to the station agent to the town in the valley and he would take a long rod, run it way to the bottom of each tub and when it came out covered with golden butter, with much rolling of eyes and smacking of lips, he would taste of it to test its quality at various places along the rod.

"Silver Threads Among the Gold"

I also remember how I was impressed with the station agent's long gray whiskers, particularly after he had sunk them into the golden rod of butter several times and then put the butter back into the tub! Anyway, Mother's butter must have passed the station agent's test, for he always accepted it.

The farm women used to make good butter in the old days; but now, judging by the stuff on sale at most country stores, home butter making has almost become a lost art.

"The Good Old Days"?

Such was the beginning of my experience with the dairy marketing problem. The farm women—your mother and mine—broke their health and possibly injured that of their children by the back and heart-breaking work with primitive methods in taking care of the milk of large dairies—and all for what? Butter sold as low as ten cents a pound, and in the beginning of marketing milk in fluid form, milk in the flush season, often sold from fifty to seventy-five cents a hundred. The result was that many of the farm people on the dairy farms of a previous generation went without all of the luxuries and often some of the necessities of life.

Our problems as farm people are hard enough now, but whether we are able to see it or not, the standard of farm life has steadily risen during the past half century. We talk about the "good old times", but few of us would enjoy them very long if we had to return to them. Life on the farm today is a different proposition. To be sure, we are still a long ways, as the crow flies, from the

By E. R. EASTMAN

Editor, AMERICAN AGRICULTURIST

land of the millennium in the dairy marketing business, but also by the same token we are quite a little spell from the rude marketing methods that were in vogue when I dumped the hired girl, milk and all, over the barnyard fence.

Three Causes of Good Markets

To what do we owe the progress in marketing that has been made? Many things, of course, have contributed, but if I were to choose three factors that have helped put dairying on a business basis and brought better conditions to dairy farms, they would be: first, the improved quality of our product; second, the development of the demand for fluid milk and the generally increasing consumption of dairy products; and third, the organization of dairymen.

"Chocolate Colored" Milk Must Go

Speaking first of the improved quality of milk, some of us have been forced by stringent health regulations to improve the sanitary conditions under which our milk was produced. Some of these regulations have been arbitrary and unreasonable, but most good dairymen have come to agree that in the main it was a good thing for the industry that we had to clean up.

I am personally very fond of milk and my family has been taught to use it in large quantities. But I know that it is the most susceptible food in the world to taint, dirt and infection. In spite of the fact that I like it and I know it is a good food when clean, my family would go milk hungry many a long day if it were produced under the conditions that generally prevailed no longer than twenty years ago. Every farmer knows what I mean. There were more than several dairies in every community where the product was more or less "chocolate colored" before it reached the house.

I think one of the most wonderful achieve-

ments that have been made in the commercial world in the last quarter century is the development of the sanitary care and transportation of milk that puts it on the consumer's table, often three or four hundred miles from where it was produced, pure and sweet, with its original high quality unimpaired. The point of it is that this high quality product has been a large factor in the constantly increasing per capita consumption of milk and dairy products, and this increased demand has made it possible to pay farmers better prices and has improved from the dairymen's standpoint the whole marketing situation.

I have heard farmers say before now, "Give us good prices for our milk; then, and not until then, we will improve the quality." But economic law does not work that way. Quality must precede price.

Consumption Is Increasing

The second great cause of improved dairy markets is the increasing consumption. An interesting book could be written on this subject alone. It is not so many years since the consumers, even in quite large cities, took their own pitchers or pails and went to nearby dairies for their milk supply, and even more recently, dairymen were both producers and distributors. This latter practice, of course prevails to a considerable extent yet. But with the larger cities, it soon became impracticable for producers to do their own marketing, and they began reaching out farther and farther for their supply until now the great city of New York draws its supply from several states over a radius of several hundred miles. And the end is not yet. Each city's milk zone is getting wider every year.

In addition to the great increase of population in the cities, which naturally results in a larger demand for milk, there has been in recent years a tremendous awakening of the public to the value of milk and dairy products as food. The industry itself has done comparatively little advertising, altogether too little in my opinion; but it has been fortunate in having about all the private and public health agencies, including institutions and individuals interested in improving the diet, working constantly to increase the consumption of dairy products. The result has been an increase of per capita consumption—according to the United States Department of Agriculture—from 43 gallons in 1918 to 54.75 gallons in 1924. I do not have figures for earlier years, but the increase for those years is greater still. The consumption of ice cream has more than doubled since 1910; in 1910, it was 1.04 gallons per capita while in 1924, it was 2.43 gallons. The consumption of condensed milk is also constantly increasing. On the other hand, however, there has been very little increased per capita consumption in butter and cheese since 1910.

This growth of city population plus increased per capita demand have saved the dairy industry and made it one of the fundamental occupations of the land. Without it, it is unpleasant to think what might have happened to dairymen, for production of milk and its products has increased by leaps and bounds, always

(Continued on page 537)

STANDARD FARM PAPER EDITORIAL SERVICE

This is one of a series of special articles by the members of the standard Farm Paper Editorial Board. The members of this board are as follows:

H. A. Wallace Wallaces' Farmer, Des Moines, Iowa.
C. V. Gregory Prairie Farmer, Chicago, Illinois
D. A. Wallace The Farmer, St. Paul, Minnesota
Clarence Poe Progressive Farmer, Birmingham, Alabama
Donald Kiefer Pacific Rural Press, San Francisco, California
E. R. Eastman American Agriculturist, New York City
T. A. Leadley Nebraska Farmer, Lincoln, Nebraska
John Cunningham .. Wisconsin Agriculturist, Racine, Wisconsin
A. J. Glover Hoard's Dairyman, Fort Atkinson, Wisconsin
DeWitt C. King Breeder's Gazette, Chicago, Illinois

E. R. Eastman, editor of American Agriculturist brings out some undeniable facts about the milk business in its national scope which have a direct bearing on the relationship to the welfare of every dairyman. Mr. Eastman was in the thick of the fight back in 1916 when the dairy farmers of New York and adjacent states made their first successful stand. Through his associations before and since he has had unusual opportunities to get a true insight into the great business of making and selling milk.

OUR ADVERTISEMENTS GUARANTEED

The AMERICAN AGRICULTURIST accepts only advertising which it believes to be thorough, honest.

We positively guarantee to our readers fair and honest treatment in dealing with our advertisers.

We guarantee to refund the price of goods purchased by our subscribers from any advertiser who fails to make good when the article purchased is found not to be as advertised.

To benefit by this guarantee subscribers must say: "I saw your ad in the AMERICAN AGRICULTURIST" when ordering from our advertisers.

Correspondence for editorial, advertising or subscription departments may be addressed to either

425 Carroll Street, Elmira, N. Y., or
461 Fourth Avenue, New York, N. Y.

Entered as Second-Class Matter, December 6, 1924, at the Post Office at Elmira, N. Y., under the Act of March 6, 1879.

Subscription price, payable in advance, \$1 a year, three years for \$2, five years for \$3. Canadian and foreign, \$2 a year.

VOL. 115 May 23, 1925 No. 21

Let Us Hear From You

MAY we remind you of the AMERICAN AGRICULTURIST contests. In recent issues we stated that we would pay \$10, \$5 and \$3 for the first three prizes for the best letters with pictures on roadside markets. We have concluded from the pictures already submitted that it is practically impossible to get a good picture that does justice to a roadside market. Therefore, we are going to cut out the pictures and make the awards entirely on the letters describing the markets without reference to the pictures. So if you have not already contributed to this contest and have had successful roadside marketing experience, tell us about it. These letters should be from three to five hundred words in length. The contest closes June 1st. We hope to publish a large number of letters on roadside markets in addition to the prize-winning letters in order to help this work along.

Our contest entitled "The Worst Mistake I Ever Made" is certainly arousing interest. Every mail brings some intensely interesting letters. Prizes are \$5 for the first, \$3 for the second, and \$2 for the third, and \$1 for all the other good letters we can find room to publish. We do not care whether you write about a personal mistake or some business venture. The letters should not be more than three hundred words in length. All names will be considered strictly confidential but the letter must be signed. This contest also closes June 1st.

Then on the opposite page is the opening announcement of our contest for Grange lecturers and members.

The object of all these contests is to encourage you to send in your experiences that they may be passed on for the benefit of others.

A Real Friend to the Farmer

THE Honorable D. P. Witter of Berkshire, Tioga County, New York, has the honor of having the most years of experience in the New York State Assembly. Better than this, in his long term of service to the New York Legislature, he has been faithful to agriculture. During the session just closed, Mr. Witter introduced sixteen agricultural bills. Every one of them passed and received the Governor's signature. Not for a long period of years has a single bill introduced by him been subjected to the ordeal of the "long"

roll call. He occupies a place of honor just in front of the majority leader in the Assembly Chamber and his vote with that of the majority leader and minority leader constitute the "short" roll call vote, which determines the fate of a very high per cent of all the legislation, city as well as rural, passed at each session. To the good work of Mr. Witter the farmers of New York owe much of the farm legislation that has been passed in the last ten years.

Mr. Witter is talking of retiring. We can appreciate that he feels that he has rendered full service and that he has earned a rest. But we hope for the sake of agriculture that the farmers of Tioga County will prevail upon him to remain at least a little longer in the service.

In a recent speech, Mr. Witter said: "The new rural school law is the best law I ever helped to pass. It will never be repealed. Four of the five sections of the bill are already effective. I regret that the added state money will not be available until next year."

Let the Waste Land Waste

WE have often been taken to task because of our belief, which we have not hesitated to state emphatically, that one of the farmers' greatest problems is and has always been over-production. There are a good many people in the world that are worried about what future generations are going to do for food. It seems to us that such talk is nonsense. When the American wheat farmer was paid a fair price for his products during the War, he produced enough of it to feed America and to make a good start toward feeding the population of Europe. In fact, not only our wheat farmers, but all American farmers, learned to produce so much during the War that when it stopped, and the markets fell off, they could not or did not stop producing, with the result that over-production more than anything else brought on one of the greatest agricultural depressions in years.

We made some such statement as this today to Dr. Hagedorn, Secretary of Agriculture of Germany, and he said that the problem was not that of over-production, but rather of distribution, and that if all of the people of the world had all that they wanted to eat, at a reasonable price, there never would be any over-production of any one food product. We agree with the statement, but until that day of perfection comes, when we will have completely solved our marketing and distribution problems, farmers will face great losses from over-production.

Perhaps there is no remedy for this problem and therefore no use to talk about it, but we do believe that there is at least some help for forward-looking individual farmers; and that is, to constantly weed out, or cut out, that part of the livestock or crops which is kept or raised at a loss.

Another and more general remedy is to step on with considerable emphasis these "would-be" friends of ours, who are constantly urging us to produce more and more, and those who are constantly urging the government to spend millions in reclaiming waste land.

A Bank Account for Boys

THERE has been a splendid response from boys who wish to join the AMERICAN AGRICULTURIST tribe of the Lone Scouts. The regular membership charge for joining and for the manuals of the Lone Scout organization is thirty cents, but in order to start the movement going, AMERICAN AGRICULTURIST paid one-half of this charge for boys who applied during the first week for membership. Most of the letters from the boys contained fifteen cents in cash, but we were very much pleased and interested to receive from W. J. Eckler, West Winfield, New York and Harry Osborn, Nichols, New York, personal bank checks for fifteen cents.

These boys have the makings of business men, and they have MONEY IN THE BANK. No one little thing that we know can give a boy any

more independence and a better knowledge of how to do business than a bank and checking account. Every month the bank will return to him his cancelled vouchers and in going over them and balancing them with his check book, he will get a practical knowledge of elementary bookkeeping and he will have a chance also to see each month just where his money went and whether value was received for each check.

The Germans Will Come Back

WE have just returned to our desk after a luncheon with Dr. Frederick Hagedorn, Secretary of Agriculture for Germany, who is visiting America, accompanied by a commission, to study our farming methods, our cooperative organizations, and our other problems that bear upon agriculture.

We were very much interested in Dr. Hagedorn's description of farm conditions in Germany since the War. But the outstanding impression that he left with us is that of the determination of the German people to "come back," and the decision reached by the German farmer to use every modern device and scientific knowledge to make his farm succeed. One evidence of this is the very fact that Dr. Hagedorn and his associates are in this country to learn our best practices that they may be applied later in Germany.

One good effect of the War is this interchange of knowledge, particularly of farming and farm methods, between the different countries that will aid all of us to better farming practices and to do better marketing of farm products. Our readers will recall that Dean A. R. Mann has been for the past several months traveling in the different European countries studying their agricultural methods and problems. At our State Colleges of Agriculture and traveling in this country at the present time there are several eminent Europeans gathering knowledge and information that will help to perfect the agriculture of their own countries. This interchange of knowledge, while it may increase competition and some of our other problems temporarily, will in the long run advance the cause of civilization. The practice of good methods over bad which lightens the burden and increases the interest of producers, and the triumph of education over ignorance, always in the end marks the onward progress of the race.

Eastman's Chestnuts

DO you remember the story that I told a spell ago about dreaming of climbing the Golden Stairs and meeting my friend Charlie Taylor of Ithaca coming down the stairs to get some more chalk? The chalk was required at the head of the stairs to write down all of his sins before he could get through the Golden Gate, and Charlie found that the ordinary average supply was not enough for him.

If you do not believe this story, you surely will after you read the following chestnut which Charlie just sent me.

Pat owed a bill for thirty dollars at the hardware store. It was long overdue. The merchant, despairing of ever being able to collect the bill by the gentle art of persuasion, finally put it in the hands of the town's newest acquisition, a recently graduated lawyer, whose "shingle" was so new that it still smelled of paint.

The young attorney-at-law visited Pat's farm and finding nothing else of suitable prospect, levied on Pat's potato hole. The potato hole contained some seventy bushels of potatoes.

Some weeks later the attorney received a letter from Pat:

"I HEV SOLD ME PETATIES OUT NOW SO YOU CAN COME AND GET YOUR PETATIE HOLE. I MAY WANT TO PLOW."

Roosevelt Said—

A life of slothful ease, a life of that peace which merely springs from lack either of desire or of power to strive after great things, is as little worthy of a nation as an individual.

A Contest for Granges and Grangers

One Hundred Dollars In Prizes For The Best Lecturers' Programs

NO organization has done more to help both the economic and social life of farmers than the Grange. It has a long and enviable history, extending back for many years. There are many reasons for its success; it is conservative and yet progressive, and it was one of the first organizations to take women in on an equal basis with men, thus recognizing that she has an equal interest in the public as well as the private work of farmers. Another reason for the Grange success is the regularity of its meetings. Much more can be accomplished when people come together at stated intervals for the transaction of social and economic business.

Perhaps one of the most important reasons for Grange success has been the provision for a Lecturer, who must provide a regular program for nearly every meeting. The success of any particular Grange depends to a very high degree, upon the ability of the Lecturer to insure a good program. The right kind of a Grange program brings out a good attendance, and it helps the Grange to accomplish its objects. Every Lecturer knows also, what a difficult task it is not only to outline a good program, but to get the members to do their part in carrying it out.

Henry Morgenthau, Jr., Publisher of AMERICAN AGRICULTURIST has, for sometime, given considerable thought as to how he and the AMERICAN AGRICULTURIST might be of more service to the Grange. He has concluded that nothing would help more than some cooperation with Grange Lecturers to help them raise the already high quality of Grange programs. With this thought in mind, Mr. Morgenthau is offering through the AMERICAN AGRICULTURIST, to Granges and to fellow Grange members, a first prize of \$50, a second prize of \$30, and a third prize of \$20 for the best suggestions for Lecturers' programs in Subordinate Granges for a series of three meetings. These programs can be those which have already been used or they can be made up entirely new. By asking for three programs instead of one, those who enter the contest will have an opportunity to use all the varied talent of the Grange and to provide for both entertainment and instruction as all good Grange programs should.

We hope that these prizes will stimulate thought in all the Granges and will lead to better programs. We suggest that the matter be brought up in your Subordinate Grange and that the members begin to think about it immediately. The sooner you get in your suggested programs the better. This contest has the approval of Brother S. L. Strivings, Master of the New York State Grange. The rules for the contest and conditions under which these prizes will be given are as follows:

1. Any Grange member in New York State, whether a lecturer or not, may take part.
2. One-half of the prizes will be paid to the individual winner, and the other half will go to his or her Grange.
3. Suggested programs must be practical for use of any subordinate Grange and they can either be a list of programs that have been successfully used or they may be entirely new.
4. Programs must be both instructive and entertaining, with appeal for both young and old members.
5. Programs should be made up so as to use all the varied talent of the membership.
6. Programs should be stated in sufficient detail so that they may be easily followed by any Grange,

and each program may be accompanied by a brief description, not to exceed one hundred words.

7. Each of the three programs should be written on a separate sheet of paper, on one side of the paper only; typewritten copy is preferred, but not required. In any case, write very plainly.

8. Contest will close September 1, 1925, and winning programs will be published in the early fall in both the American Agriculturist and the National Grange Monthly. Other good programs not among the winners may also be published.

9. The judges will be S. L. Strivings, master of the N. Y. S. Grange, Henry Morgenthau, Jr., publisher of American Agriculturist, Raymond Cooper, lecturer of the N. Y. S. Grange, E. R. Eastman, editor of Ameri-

Farm Labor in Pennsylvania

THE labor situation in Lehigh County, Pennsylvania, is a bad one. Rich farmers can get help—they pay the price. Poor farmers cannot pay the price and have no help. They work beyond their strength, and the result is a large per cent of sickly women in their prime of life and many on the operating table. Plenty of men thirty-five years of age are nearly worn out.

The other class of poor farmers pay the price of labor and one after the other takes the bankruptcy law and quits farming. Labor demands short days and the price is as follows; hired girls \$8 to \$12 per week. Single men from \$35 to \$60 per month and board. Married men from \$50 to \$100 per month with free rent, 3 hogs, ½ slaughtered steer, all potatoes that they need, and vegetables. Some have a cow and several hundred chickens all fed by the landlord. It is a very sad situation when farmers with help are too greedy to help farmers who have no help, and call them bad managers, J. W. B., Jr., Pennsylvania.

A Letter to Mr. Van Wagenen

MAY I take a little of your valuable time to thank you for the pleasure which your article in this week's AMERICAN AGRICULTURIST has given me?

It is nearly a year since I have been "back home" to Canandaigua, (for with two babies under two years, and the farm housework, it is difficult to get away); and the words "Ontario County" on the front page, when the mail was brought in, made me read all about it with one eye on the dinner and the toddler!

Schoharie County is beautiful, and I do appreciate it, but it warms my heart to hear you tell of the beauties of my own dear old home. And I can quote you too, if necessary, when I get teased about "bragging up" my native soil!

It was good to read the familiar names—my Quaker ancestors helped to settle Farmington, and my great great grandfather was one of the early settlers in Bristol. I have taken that ride from Naples to Bristol, and seen the "Sleeping Beauty" stretched before me like a silver ribbon; but the loveliest time to take that ride is in autumn. My father was born on a farm in Victor, ten miles from Canandaigua and not far, of course, from Bloomfield, and my mother lived as a child on a beautiful fruit farm on the shores of the Canandaigua where I, too, have spent many happy months.

Farming was new to me when I came here as a bride, three and a half years ago. I have felt like a "pioneer" in going back to the work of my forebearers, and have learned much by experience.

This probably will not interest you particularly, but your sketch has interested me (as well, I may say, as all of your articles do), and I want to tell you so.

With a hope that we may enjoy many more of your writings, I am.—E. H. W., New York.

She Makes It Sound Attractive

ALTHOUGH for various reasons many of the tasks that usually fall to the woman on a one-man farm, have not fallen to me. I have always had my share of the work in the hayfield.

(Continued on page 540)

Farm Labor Steadily on the Decrease In the South

IN speaking of farm labor help will say that several years ago labor was quite plentiful and could be had at a reasonable price, but now in this section of Virginia (Tidewater), one cannot hire a man for love or money, white or colored. Most of the colored population make their living "bootlegging" corn liquor and I am sorry to say a large majority of the white population do the same thing.

If you can find any help, the average price is about \$25 a month and board, and day help \$1.50 and board, working the ten-hour system. A few years ago the rule was from sun to sun and price per month from \$10 to \$15, with board, and day labor from 50 to 75 cents with board.

Labor is certainly now scarce and high-priced in this section of the state; and I must say, that I finally believe it is principally due to the so-called "prohibition law" which has certainly been a ruination in more ways than one to this community and state at large—WM. HARRISON, Virginia.

SOLVAY BRINGS GREATER CROPS

Make the soil sweet and release all the fertility to hasten growing crops to full and profitable maturity with Solvay Pulverized Limestone. Guaranteed high test, non-caustic and furnace-dried. Because it is finely ground and readily absorbed, it will produce results the first year. Every farmer will be interested in the Solvay Booklet on Liming—sent FREE on request. Write!

A Feed or a Fight

They Draw the Voters--A Farm and Home Talk

YESTERDAY

By M. C. BURRITT

morning at five-thirty my telephone began to ring with the sharp, insistent and repeated calls which I knew meant "Central" and not some of the neighbors. On the wire I found Assistant County Agent Coombes, in charge of our Farm Bureau Spray Service.

"Time to put on the pink pre-blossom spray on all varieties up to and including Greenings," he announced.

"The bud clusters are not opened very much yet," I told him.

"It looks like rain," Coombes replied. "I was up until one o'clock last night to get the latest special weather forecasts and while we are not sure, there are so many indications of rain that we think it best to put on

the protection. Pass on the word."

Before six o'clock I had given the message to three growers, key men on the 1-F, the 48-F and the 26-F lines of the local telephone company. If the men were out doing chores, the women took the message. These growers each repeated the message to three more men, each one of whom in turn passed it on to three others. A few of these still had one or two to call to reach the 45 growers on this relay. At 6:30 I called one of the last men on the list to check and he had received the message O. K. The system was working 100 per cent. Similar messages were transmitted through other relays from Farm Bureau offices not only in this but other counties throughout the fruit belt, at the same time literally reaching thousands of farmers with this important message within an hour.

Old Growers Need Spray Service

Previously each fruit grower member of the Farm Bureau had had a letter with full instructions on this spray and emphasizing especially certain vital points. "This spray is primarily to control apple scab, though also to combat leaf rollers, bud moth and case bearers. Scab spores winter over in scabby leaves that dropped last season. Rain causes the seed spores to be discharged in the air and they are blown to the leaves. Infection on the blossom stems may cause the young fruit to drop. Spray from the ground as well as the tank." Other good points are included. Of course, one might say that the well informed experienced grower doesn't need this service. This may be true, but most farmers have the farm managers point of view. They plan certain work today and other work tomorrow. Spraying is apt to be planned for with the rest and has to take its turn. In spraying fruit, the time of application is vital. A telephone message, and especially the knowledge that rain

is probable puts the spray rigs to work when they ought to be regardless of other work. Spray service is in my opinion, an essential service.

It has been a cold, backward week—north winds, cloudy, rainy days, though not much actual rainfall. One or two white frosts have occurred. The result has been to delay bloom, as well as the drying of wet fields. After plowing twenty-five acres this spring—mostly tilled land to be sure—I was surprised to get stuck in the drained land with the tractor, trying to plow for corn. The cluster bud spray for pear psylla, and the pink pre-blossom spray for brown rot of peaches were put on the middle of the week and the pre-blossom spray started on apples. We worked until 7:30 P. M. Saturday night to get this spray on all early varieties with an east wind before a threatened rain. The remainder of the week was used to finish plowing and cultivating the orchards the first time over and to plant garden, with other odd jobs.

A Feed or Fight Brings Out the Voters

Our annual school meeting was held this last week. Out of about 60 persons eligible to vote eleven were present as compared with last year when someone conceived the idea of serving ice cream and cake and we had 32 voters out. We elected our officers for next year and continued the tax rate at five mills. I wonder if this was a typical country school district annual meeting? Our valuation is about \$200,000, making our tax receipts about \$1,000. Our public money amounts to about \$230. Expenditures must be economically made and carefully limited. For instance, only ten dollars was appropriated for books. So long as taxes are not increased and the teacher keeps out of scandals, the majority of the taxpayers in our school districts in general do not seem to care what the annual meeting does. It seems to require a feed or a first class fight to get out a majority of the votes at annual meetings.

Planting End Rows of Corn

SINCE nearly all corn is planted with double row planter these days, and two end rows are not enough between the corn and the fence, and four in one too many, we have solved the problem in this way.

After a field of corn is planted we drive across the field next to the fence and plant two rows, then we plant back, having shoe retrace the second row so as to plant double of corn, so making only three rows of corn at the end.

The gain is that only three rows are planted at the ends, and the middle row is doubled where so much corn is broken off or stalks torn out both by cultivator wheel and by the horses, so that at the end of the cultivating season, there is just about the right amount of corn standing in the second or middle row to make a good crop.—J. N. GLOVER, Pennsylvania.

"Gee, I ain't gainin' on him like I oughta!"—Judge.

HOMESPUN TOBACCO: Chewing five pounds \$1.50; ten \$2.50; smoking five pounds \$1.25; ten \$2.00; pipe free, pay when received. Satisfaction guaranteed. CO-OPERATIVE TOBACCO GROWERS, Maxons Mill, Ky.

(Continued from page 533)

keeping to a greater or lesser extent ahead of the demand. Not only this, but better transportation methods and increased knowledge in handling milk and its products over long distances have constantly enlarged the territory from which the cities have received their supplies.

Look Out for Overproduction

During the War, there was a big demand for condensed and evaporated milk and the better prices resulting led farmers to plan for more cows. The manufacturers of this "canned" milk demanded that it be of high quality, and this resulted in thousands of producers in the "marginal" territory, formerly producers of the so-called "cheese" milk, to so improve their quality that they were able, when the manufacturers closed their factories, to put this increased supply upon the fluid market. I repeat that the result would have been highly disastrous had it not been for the greatly increased consumption.

Then, too, dairying is becoming an increasingly important business in many foreign countries, including our good neighbor, Canada. These countries cannot yet compete with our producers of milk for fluid consumption, but they are a factor to be reckoned with in nearly all of the by-products of milk. Even in the fluid market, it is interesting to wonder what will happen if the time ever comes when fluid milk can be preserved either in its original state or in powdered form without changing or altering its natural taste and goodness, so that it will be possible for Canada, the Argentine, Denmark or even Australia to put milk in fluid form into our great city markets.

Dairying Is A Skilled Trade

Some of the farmers' fool friends, and I sometimes think we have a few more than our rightful share, are responsible for a part of the dairymen's marketing troubles at the present time. When wheat and other grain prices went in the slump after the War, a lot of the farmers' advisors, who did not know what they were talking about, began to urge the grain and cattle farmers to diversify. Dairying was urged upon these discouraged men, and bright pictures painted of the good profits that came every month in the cream or milk checks. Every dairyman knows that dairying is a highly specialized business. A lot of us spend a lifetime at it without learning all of its ups and downs. Every dairyman knows too what profit there is in it comes by very close and business-like figuring. But thousands of farmers did turn to dairying as a relief, with the result that too often they did not get any relief for themselves, but helped instead to over-burden an already over-supplied market.

"There Ain't No Such Animal"

Much might be said also of the effect of substitutes upon the dairy market. I have no objection whatever to oleomargarine, providing it stands entirely on its own merits. But here is the difficulty. Often it is actually sold to consumers, particularly to some ignorant consumers in large cities, as butter. Oleo regulates its own price by the price of butter, following it up and down in the market. It is not butter. It does not contain the vitamins that butter does. It is not a substitute for butter because, as the boys say, "There ain't no such animal" as a real butter substitute. Therefore, it seems unfair to many that dairymen should have to sell their product in competition with it.

It is also an unfortunate fact that farmers themselves are not large enough consumers of their own products. I have had storekeepers tell me that some of the largest dairymen of the community would take their milk to town and deliver it at the station, and then come into their stores and buy oleo in considerable quantity to be consumed on

their own tables. Some of these were evidently ashamed of the practice for they would carry the oleo out under their overcoats, and carefully conceal it under the horse blanket until they got home.

Marketing Organization Good and Bad

The third factor—put it first if you wish—that has brought about improvement in dairy marketing from the farmers' standpoint in the last quarter century is organization. Some of the historians are going to look back upon this period as the era when a great change, almost an upheaval, took place in American farming. Within a period of not much more than ten years, organizations by the literal hundreds have sprung up to handle almost every farm commodity in nearly every farm community in the United States. Fruit producers were the first to see the necessity of getting together. Dairymen came about next.

It is not so many years since a committee representing a group of producers were told by the dealers to whom they had come to ask better prices for their products to "go home and slop the hogs". In other words, until recently

it was the farmers' job to produce, but absolutely no part of his business to sell. I have stood in line with my neighbor farmers waiting for my turn to march up to the little desk in the local milk station to set down my name on a dotted line on a contract for the sale of my milk. I did not have a word to say as to the conditions of that contract, nor the price of the milk, but my neighbor signed that contract and so did I, or we kept our milk home.

In all this mass of cooperative associations, organized because of the dairyman's necessity for better markets, there are many that are founded upon sand. There has been a lot of foolishness preached about organization. The impossible has been promised. The sooner we learn that organization is not a religion, that it is not a panacea, that it cannot be long maintained upon a sentimental basis, that its only excuse for existence is cold, hard results, the sooner is the movement going to make more progress.

Farmers must learn, too, that we have got to give more individual thought and attention to the way these organizations of ours are run. We must attend meetings. We cannot be stampeded into

electing officers and directors who may not be the best leadership material at hand, and we must realize too that the final responsibility for organization success rests squarely upon the membership.

Rocky Going Still

In milk organization particularly the road has been pretty rocky. We have throughout the nation almost every type of dairy organization, from the one that is founded entirely upon local control and management to the other extreme of strong centralized control. We have farmers' organizations in the same territory competing with one another in the same foolish way that individual farmers once competed. We have organizations

Winters Farms,
Albany, N. Y.
Jan. 18th, 1923
Louden,
Fairfield, Iowa
Gentlemen:
I have had experience with many kinds of stalls, stanchions and other barn equipment during the past 20 years.
I believe this is the most practical, simplest and finest barn I ever built for the production of certified milk and I selected Louden Equipment for it because I am convinced it is the best.
Sincerely yours,
Harry B. Winters

Louden Steel Stalls and Stanchions give cows pasturo comfort in the barn. Keep cows healthy—increases their production—save work.

The Louden Line Includes Hay Unloading Tools, Power Hoists, Barn and Garage Door Hangers, Manger Divisions, Cupolas, Hog House Equipment, Bull Staff—

"Everything for the Barn"

Louden Balance Grapple Fork Handles clover, alfalfa or straw as perfectly as timothy—picks up half a ton at a time and grips it tight, drops it exactly where you want it. Perfectly balanced—never fails to register in carrier.

your helper!

Helping you **earn more money** every year. That's what a good, dependable Unadilla Silo means to you.

Year after year it gives you plenty of good, succulent, low cost home grown silage. Silage which loses none of its valuable juices and is protected against frost.

Strong, well built from selected lumber, and produced in large numbers, the Unadilla is a superior silo which you can get at a cost that saves you money!

The Job of Selling Milk

(Continued from previous page)

whose expenses of operation are too high and we have those, unfortunately, where personal politics are played to the detriment of the farmers' business.

From the outside, the dairy organizations have been attacked by sensational newspapers and by public prosecutors. Officers of these cooperatives have even been thrown into jail.

So most of the problems of the organizations are yet to be worked out. Some of the organizations, even in the short time that they have been operating, have not been able to make the grade and have failed. All have made and are making mistakes. None of them are entirely out of the woods yet. The last ten years have been a period of starting the organizations; in the next ten years, we must tighten them up, work the sand out of the gears, improve the leadership, correlate and bring together in some sensible working arrangement competing organizations, and in particular, increase our own sense of responsibility to them.

Organization Has Helped

But in spite of all the mistakes, in spite of the failures, to the cooperative movement must go the greater part of the credit for whatever progress has been made in the dairy marketing business.

Certainly the results from cooperative organizations have been disappointingly small. The results from anything always are under expectations. It is human to expect more than we get. Progress is seldom made in leaps and bounds and can be reckoned only by looking back across a term of years and noting an inch here and a foot there. But that there have been some progress and results from cooperative organization no one can deny. Cooperation has brought some stabilizing of the market, some better prices on the average. It has brought education about our own business. The average farmer knows more about his marketing business than ever before and organization has developed farm leadership, not as rapidly as we could wish, but perhaps as fast as we could expect. As the cooperative movement grows older and both the farmers themselves and their leaders learn more about the business principals of marketing, more progress and more results can be expected.

Then, too, organization has brought about recognition of farmers and their business by the buyers of our products and the public at large that we have never had before. We have as farmers stood up and demanded that we be heard, and we are being heard. No longer are we told to "go home and slop the hogs". Instead, the buyers hold long conferences with the producers, fully recognizing our right and our power. The State legislatures and Congress spend long hours debating the agricultural problems. And more and more real farmers are being appointed to influential positions in public life, much of which has come about because farmers through powerful organizations have de-

manded a place in the sun for agriculture.

Best of all results from cooperation perhaps is the fact that farmers, not all of them but a goodly number, are learning to stand together. We have been accused time and again of not being able to stick. If that were ever true, it certainly is not today. We as farmers perhaps know the great value of individual thought and action better than anyone else, but we have also come to know that under our modern scheme of things united action in marketing and public affairs is absolutely necessary. We have come to understand better and to appreciate the neighbor in the farm business, in the same and in other communities of this great country. We have come to know that he is a pretty good fellow, that we can work with him, and that all of us have many of the same hopes, aspirations and ideals.

Good Prospects Ahead

These are some of the results of cooperation. What about the future? "Where do we go from here" in dairying and in the dairy marketing business?

I believe that dairying has a bright future, but only for those farmers who know their business and who have recognized the handwriting on the wall and put their dairy and their farms on a businesslike basis. The day when "any old fool could farm it" is forever past. Competition in dairying is increasing all of the time and it is bound to starve out the men who will not keep dairy records, who will not get rid of their poor cows, and who will not cooperate with their neighbors in solving the dairy marketing problem.

For the man who prepares to meet this competition by good business methods in keeping his costs of production down and by getting his share of the market price through good marketing methods, there is a bright outlook, for while competition and costs will undoubtedly increase more or less, so will the demand for high quality dairy products. Some experts estimate that there will be at least 150,000,000 people in this country within another quarter century. All of these people are coming to realize that milk and its by-products are the best and the cheapest food in the world. This means that our American dairymen, almost all of whom are comparatively near these great markets and centers of population, will have a constantly increasing demand for their products.

Sheep And Weedy Hills

ALL over the country I have seen weedy hillsides that furnished but very little pasture for cows but would have furnished plenty for a flock of sheep.

Sheep will feed on nearly all weeds and semi-shrubby plants such as cover so many rough pastures. Sweet clover can be scattered some and will help out, and for winter feeding sweet clover hay will give good results as the sheep will not object to the coarseness.—L. H. COBB.

"Which had we better do—just hurry past, or offer them some chocolates?"

NORWALK CHICK HATCHERY

R. E. FADER, PROP.

Box 25 NORWALK, OHIO

1887 BABY CHIX 1925 DUX

Our chix and dux are bred from stock thoroughly hardened and acclimated to our severe and changeable climate. They are hatched on a REAL POULTRY FARM in their natural environment, only a few hours from the nests to the incubators. Less handling of the eggs and stronger chix are the results. We are, and have been for 38 years, a Poultry Farm specializing in the best stock it is possible to produce. We are not a chicken factory; faster growth, earlier maturity and more eggs for our customers are the results.

Keep the Young Birds Growing

We have about 300 baby chicks. Their care has been simple so far, comparatively, but we are not so sure of ourselves from now on. What would you advise us to watch out for mostly. We never raised many chickens before. We used to allow the hens to bring off a few hatches and they took care of the young ones themselves. We never paid much attention to our chickens, feeling satisfied as long as they gave us enough eggs for the table. What is the main thing to watch from now on.—J. L. V., New York.

FROM now on the main thing is to keep the birds growing. That sounds simple but it is a pretty big order. We are taking for granted that you have plenty of range so that the chicks can get all of the green food they wish. But range alone will not make growth and healthy birds. They must have protection and body building foods. Bugs and green grass do not make strong frames. They only help.

In the first place do not let your brooder fires go out too soon. It may seem wasteful to keep heat up during a nice day but bear in mind that night follows and very often the nights are cool and chilly sometimes to the point of actual rawness. Unless the birds have access to heat, they will crowd together and when they crowd you may expect losses.

Dampness the Worst Enemy

As was true when you started, so it is true right through the life of the bird. Make sure that the brooder house is dry and well ventilated. Dampness is possibly the worse enemy that you will have to contend with. With it comes colds and after colds comes roup and then you have got your hands full—full of trouble and empty of chicks. If you keep your brooder fires going you are insuring yourself against dampness for even a little fire will help to keep the house dry.

Where the chicks have plenty of range and can get an abundance of exercise and green food and with good dry quarters with available heat, we will be taking care of such factors as sanitation and health.

With those things in your favor you have the proper background to go ahead. Even then your chicks will not develop unless they get the proper growing rations. They must have additional food to make flesh and bone and those require something beside the ingredients of grass. Your ration must be fairly well balanced and made up of various ingredients. Some foods will contain what others lack so it is necessary to mix them properly and change the mixture from time to time as the demand of the growing bird requires.

Milk in Some Form is Essential

Milk in some form is very essential and it will pay you to insist that this be included in the ration. If you are not making milk on your farm, it is up to you to get it in some form. Fresh milk is not particularly desirable in view of the fact that during warm days it will sour and it is not well to change from sweet to sour within the day. The change is too sudden for the young chick's digestive system. It is better to start them off with sour milk or skim-milk and keep it before them all of the time. Your letter does not specify where you are located or what kind of farming you are following. If you cannot obtain a local supply of milk at a reasonable price, it will certainly pay you to buy semi-solid buttermilk. No matter what you use, insist that the chicks at least get milk.

Feed Scratch Grain in Litter

Of course, they must have grain. Authorities vary slightly in their recommendations as to the final mixing of the scratch grains and mash but they are similar on general principles. We are assuming that your chicks are four weeks old. They should be getting a (Continued on page 546)

When writing advertisers Be sure to say that you saw it in AMERICAN AGRICULTURIST

(Continued from page 535)

While this is not the hardship it may seem, it has its disadvantages, and every year we say "next year we will have a hired man," but "next year" something always turns up. One year we did it in order to make payments on a flyver, another year we had a man engaged but he didn't come. The hardest problem has been the children, when they were too little to "go along," but with a crib in which to sleep and play they have been left pretty much to themselves and are apparently none the worse for it.

It is always pleasant to work on the hill where the breezes nearly always blow and the blue hills across the valley are in view, but in the long meadow by the barn we can get in more hay in less time and with considerable less effort.

One afternoon as we loaded hay in the long meadow, a truck stopped near the house and a neighbor came down to see if our broilers were ready to sell. The truck driver would give "so much." "In a few days they might be down. Would we take it?" We took it. Were not those roosters eating their heads off and where was there time to give them the necessary attention?

As they went to crate and load the chickens, I jumped off the load and sat in the shade to wait and rest. Beyond the meadows at the foot of a steep bank the little brook flowed over the rocks and beyond that rose the wooded hillside. Close at hand along the wall were fire cherries, thorn bushes and birches. Along the wall to the left was a spreading oak while to the right was the fanlike top of an elm. From the bank of the little brook rose the pointed spire of a balsam and near it the dark form of a hemlock. Across the brook I distinguished the trembling dull green leaves of a poplar against the brighter green of the maples and beeches. A locust droned, a little breeze sprang up and stirred the leaves and the little brook murmured over its stony bed. A bluejay flew from bush to bush and a hawk soared above the treetops.

From the direction of the house came the sound of voices and the squawk of chickens and presently the truck rolled away and we resumed our loading.

When the hay was finally in, there was still supper to get and eat, hens to feed, cows to milk, children to tuck into bed before we could rest, weary but withal satisfied for "Something accomplished, something done had earned a night's repose." Next year we'll have a hired man.

E. W. N., Delaware Co., N. Y.

Liked the "Trouble Maker"

FOR some time I have felt I must write you to congratulate you on your success in combatting the blight in your chestnut grove, also to congratulate you on your wonderful story, "The Trouble Maker." It is the best story that has been in the AMERICAN AGRICULTURIST for years. The only fault was that you rang off where it left us in such suspense.

I also like your stand on the milk business and the tax problems, and the occasional rare treats in Mr. Van Wagenen's writings. I wish we might have more of them, as well as Mr. H. E. Cook's wise talks. I don't see how you could better the paper in any way.

—Mrs. S. D. R., Wyoming Co., Pa.

Reviewing the Latest Eastern Markets

MILK PRICES

THE Dairymen's League Cooperative Association announces the following prices that dealers will pay the League during the month of May for milk-testing 3% in the basic zone or 201 to 210 miles of New York City. It is understood of course that the prices mentioned below are not received by the farmer but go into the pool. They are prices dealers pay the League.

Class 1 Fluid Milk	\$2.80
Class 2A Fluid Cream	1.90
Class 2B Ice Cream	2.05
Class 2C Soft Cheese	2.00
Class 3A Evaporated whole milk	
Cond. whole milk	1.80
Class 3B Whole milk powder ...	1.80
Class 3C Hard cheese other than	
American	1.70

Class 4 prices will be based on butter and American cheese quotations on the New York market.

League Announces April Pool Prices

The Dairymen's League Cooperative Assn. announces the April pool price for 3% milk in the basic zone is \$2.20. From this the League deducts .06½ for expenses and ten cents for certificates of indebtedness leaving a NET cash price to farmers of \$2.03½.

The NET cash prices for April, 1924 was \$1.70.

Sheffield Producers

The Sheffield Farms Producers announces the following prices for 3% milk in the 201 to 210-mile zone:

Class 1	\$2.80
Class 2	2.00
Class 3	1.65

Class 4 prices determined by butter and cheese quotations on the New York market.

Non Pool Cooperative

The Non-Pooling Dairymen's Cooperative announces the following prices for 3% milk in the 201 to 210-mile zone:

Class 1	\$2.70
Class 2	2.00
Class 3A	1.70
Class 3B	1.65

Interstate Producers

The Interstate Milk Producers Association (Philadelphia Price Plan), announce the receiving station prices or the price to the farmer in the 201 to 210-mile zone from Philadelphia for 3% milk is \$2.19. In the 101 to 110 mile-zone, the price is \$2.29.

BUTTER PRICES HIGHER

CREAMERY	May 12	May 5	A Year Ago
SALTED			
93 score	45c	43c	41c
92 score	44c	42c	40c
34-91 score	40-43c	39-41c	36-39c
Lower Grades	39-40c	37-38c	34-35c

The market has been short of an adequate supply of butter for the past week. This fact, coupled with a good consumptive demand has kept floors clean and buyers are competing for stocks. It has resulted in a very healthy condition so that since our last report the market has gained 2 cents. Operators are rather reluctant to advance

prices sharply due to expected heavier arrivals but in the meantime whatever butter is coming in is being snapped up so quickly that it is out of the hands of first receivers almost before it finds a place on the floor. Some buyers have had to shop around a great deal to fill pressing orders. Much of the supply is spoken for before it actually leaves the piers. Under existing conditions, it would be normally expected that prices would advance sharply but during the next week or so arrivals will be much heavier and operators are avoiding accumulations that would bring any glut on the market.

Out of town buyers are having trouble supplying their requirements, as the regular trade is absorbing about everything that comes in. One of the reasons for this is that the chain stores are retailing butter on a small margin and turning over an enormous amount of stock. Consumers are paying a reasonable price and are using more butter. As might be expected, buyers are not as critical as when there is more butter available. There is some complaint of grassy odor but this must be expected at this time of the year.

MARKET FIRMER ON FRESH CHEESE

STATE FLATS	May 12	May 5	A Year Ago
Held, fancy	26½c	26½c	25c
Held, med.	25½c	25½c	24c
Fresh, fancy	20½c	19½c	17½c
Fresh, Med.	19½c	18c	16c

The market has turned better on fresh cheese compared with last week. The demand is good for fancy cheese whether it is fresh or held and since receipts of fresh cheese are extremely light the market has strengthened considerably. What few lots are arriving are being readily placed. The make of cheese in Wisconsin has increased slightly but values out in the West are still above a parity with prices of fresh make in New York State. Therefore, very little Wisconsin cheese is moving to seaboard. There is comparatively little movement in held cheese because most of that is in the hands of the grinders.

LIVE POULTRY EASIER

FOWLS	May 12	May 5	A Year Ago
Light	29-30c	32-33c	27c
Heavy	28-29c	30-31c	26c
BOILERS			
Colored	40-50c	45-55c	40-50c
Leghorn	35-40c	40-50c	30-45c

Greatly increased supplies have eased off prices on live poultry to a considerable extent. This has been done with the hope of stimulating every possible outlet. Express broilers are especially in very free supply and top quotations are realized with difficulty. Express fowls have not been over plentiful but they are working out slowly. The freight market is more heavily supplied and this is having a very decided influence on express birds.

May 30th is Decoration Day and we will undoubtedly see some improvement in the market for fancy broilers. It will be better to hit this market a little early because no marketing will be done on the 30th. The 26th and 27th should prove the top days of the week, unless some unforeseen conditions exists in the market to keep prices down, such as bad weather or extra heavy supplies.

NEARBY EGGS FIRMER

NEARBY WHITES	May 12	May 5	A Year Ago
Selected Extras	38-39c	37-38c	34-35c
Av'ge extras	36-37c	36c	32-33c
Extra firsts	35c	33-35c	30-31c
Firsts	33-34c	32-33c	28-29c
Gathered	31-35c	30-34c	26-30c
NEARBY BROWNS			
Fancy	33-38c	34-36c	30-32c

Prices on nearby white eggs have turned firmer and the market is tending slightly in the seller's favor. There are a few sales that have been reported at prices slightly above reported quotations. These cannot be considered any indication of the market, however. Nevertheless the situation at the moment is very favorable. The percentage of real fancy stock is small. These readily command top prices. With this shrinkage in the receipts the storage market is taking on a much better aspect. The cold storage figures for May 11 amounted to slightly over 850,000 cases while the year previous storage holdings were something like 200,000 cases less. Much of the stock that went into storage this year did so at a higher price than a year ago so it is rather speculative as to the outlook for storage eggs. At the pres-

ent time it does not appear as though there were anything to become alarmed about although some feel that eggs went into storage at a price a little too high to realize much of a profit.

The above feed prices are given for the local Buffalo feed market in straight car lots as reported by the New York State Department of Farms and Markets.

MEATS AND LIVE STOCK

Live calves have been meeting a somewhat easier market of late and it is only the very prime marks that will bring from \$12.50 to \$12.75 per 100 pounds. Fair to good calves are being quoted from \$10.50 to \$12 while common to medium stock is worth only from \$8.50 to \$10 and culls as low as \$6.50. Spring lambs are generally worth about \$18.50 a hundred. The demand for live calves have been slow while lambs have been meeting a much better call. The demand for live lambs has been fairly moderate and stock that weighs from 100 to 150 pounds will bring at the moment from 11¼ to 12c per pound while stock running heavier is quoted up to 12½c per pound.

Country dressed veal is showing less strength than it did and 18c is now the top of the market for choice carcasses. Supplies are heavy and the trade is very moderate. While quotations are the same with some difficulty that the outside prices as they have been for the past week, it is realized. Prime marks are worth from 15 to 16c but most business is going on in the neighborhood of 12 to 14c. Heavy hot house lambs that are prime are worth from \$9 to \$10 each, while average stock is worth from \$6 to \$8.

OLD POTATOES ADVANCE

Just about the time the old potato market is ready to die it takes on renewed life, so late in the season that few farmers have been able to hold their potatoes in any condition to make them at all saleable. A week ago, States in 150-pound sacks were selling for \$1.15 to \$1.35 delivered, whereas on May 12th they were worth from \$1.75 to \$2.25. This has been mainly due to the fact that supplies have been light. Maines are also much better off than they were a week ago. At the moment they are worth from \$1.25 to \$1.50 a hundred delivered in New York, whereas a week ago they were worth less than \$1. Maines in 150-pound sacks are now bringing anywhere from \$2 to \$2.60 while a week ago the fanciest were only worth \$1.60. It is questionable if prices would be anything like this if it were not for the fact that there are so few available. Southern potatoes are arriving free enough now to keep the market pretty well supplied although the top of the Florida market has advanced \$1 a barrel over last week's price. There seems to be more activity in the potato market and general conditions seem to be much healthier. South Carolina has started shipping Cobblers.

HAY SLIGHTLY EASIER

With increase receipts and advices indicating that more hay is on its way, the market has turned somewhat easier with the result that \$26 is the top of the market on straight timothy No. 1 grade. At that the market is fairly steady on top grades but undergrades are easier and beginning to drag again. Timothy of No. 2 and No. 3 grades will bring anywhere from \$20 to \$24 in New York depending upon the size of the bale and quality. Light clover mixed is worth anywhere from \$17 to \$24 depending on the grade, and condition in which the hay is while second cutting alfalfa will vary from \$23 to \$30.

This popular wood-block design is Gold-Seal Pattern No. 386. In the 6 x 9-foot size it costs only \$9.40.

Facsimile of Gold Seal that is pasted on the face of every guaranteed Congoleum Gold-Seal Rug.

Drudgery has no place in *a Congoleum* kitchen—

What a lovely rug! And how much its handsome wood-block design and warm, brown tones add to the attractiveness of this cheery farm kitchen! It's one of those popular, easy-to-clean Congoleum *Gold-Seal* Rugs, which have taken the tiresome drudgery out of housekeeping for thousands of women all over the country.

Easily and Quickly Cleaned

Not only easy to clean but easy to keep clean, too! Nothing penetrates or clings to the smooth, waterproof surface. All signs of tracked-in mud and spilled things can be quickly obliterated with a few whisks of a damp mop or cloth.

Then, too, Congoleum Rugs don't have to be tacked down or cemented. Just unroll them as they come from the store, and they cling to the floor, without ever curling up at the corners or ruffling along the edges.

You can easily afford one of these popular rugs in every room in the house.

Popular Sizes—Low Prices

When hot days come - use an oil range that sends its heat into the cooking and not into the kitchen

Focused Heat makes the Florence the cook stove with the hot flame

C This cut-away view shows how the blue flame of the Florence goes straight to the cooking. The heat is focused just where you want it for quick cooking.

HERE'S an oil range that doesn't throw its flame out in all directions—scattering its heat over the kitchen. The Florence is built on the principle of focused heat—it sends its flame, intense and concentrated, right to the bottom of the pot where it is needed.

That feature of the Florence is important all the year round because it makes your cooking quicker, better, cheaper. And it's doubly important in the hot months because it makes your kitchen a cooler place to work in, and your cooking an easier job for you.

You'll be proud of it in your kitchen

The minute you see this handsome stove you admire it and want it in your kitchen. Its sturdy, well proportioned black frame and its gleaming blue or gray enamel make the Florence the range that belongs in a beautifully equipped kitchen.

And the Florence is fully competent for any cooking

or baking or roasting you ever have. For the quick, easy cooking of fresh vegetables, for the long simmering cooking of cereals, for canning, for preserving—the Florence is the stove for every meal every day, every season of the year.

It is easy to operate the Florence. Just a simple turning of a lever, and your flame is burning at any degree of heat you require. No mussy wicks to trim, no priming, no difficulty in lighting or extinguishing the flame. The Florence Leveler on each leg of the stove enables you to set the stove level if the floor is uneven; and a spirit level attached to the feed pipe shows when the adjustment is correct.

And it costs less to cook with the Florence. The heat is not wasted, because the flame is directed right where its job is. This conserves fuel, and you need less oil.

The Florence delivers to the cooking more heat in a given time from a gallon of kerosene than any other oil range.

The oven completes the stove

The Florence portable oven is as excellent as the stove. When you wish to bake or roast, simply put it on the stove, and you have a highly perfected oven for your needs. Thousands of women say that the Florence oven is the best they have ever used.

Go to your dealer, and convince yourself that this is the stove you have been looking for.

This is the Florence Oven, built on the principle of the Dutch oven, with the "baker's arch" to prevent air pockets. The patented heat spreader at the bottom assures even distribution of heat and guards against your roasts and baked things being underdone on top and burnt on the bottom. On the door of the oven there is a heat indicator which shows how much heat there is inside for your baking and roasting.

FLORENCE Oil Range

Find out more about Florence ranges and ovens and the cooking and baking you can do with them by sending for our free booklet, "Get Rid of the 'Cook Look'." This booklet contains much information that will interest you.

Clear Valspar on Linoleum and
Laun-Dry-Ette washing machine

Valspar-Enamel on
woodwork and furniture

Make Your Laundry Cheerful and Waterproof—with Valspar

There are so many things and so many places in the laundry and kitchen that Valspar will beautify and protect: woodwork and metal work, furniture, tubs and washing machines, wooden floors, Linoleum, Congoleum, or Oil Cloth. In fact, there's no limit to Valspar's household uses.

Valspar is heat-proof, waterproof and accident-proof. Washing powders or hot, soapy water will not spot or mar it. Neither acids nor alkalis will spoil its lustre or turn it white.

Unequalled, too, for farm implements and equipment, tools, automobiles, dairy and poultry houses, incubators, brooders, and every varnish use, indoors or out.

Valspar is also made in a variety of beautiful colors—

Valspar Varnish-Stains in transparent wood colors such as Light or Dark Oak, Mahogany, Walnut, Cherry and Moss Green.

Valspar-Enamels in Red—light and deep, Blue—light, medium and deep, Green—medium and deep, Vermilion, Ivory, Bright Yellow, Gray and Brown. Also Black, White, Gold, Bronze, Aluminum and Flat Black.

Valspar, Valspar Varnish-Stains and Valspar-Enamels are easy to apply and dry to a bright, lustrous finish. They may be rubbed to a beautiful dull finish if desired.

THE makers of Laun-Dry-Ette electric washing machine write:

"To coat the polished copper surface of the Laun-Dry-Ette's tub, we required a material that would be transparent, a substance that would resist heat and hot, soapy water. It seemed to us that Valspar was the only answer to the problem.

"Today the tub of every Laun-Dry-Ette that leaves our factory has its outside surface carefully coated with your excellent product. We are delighted with the results and so are our customers."

News From Among the Farmers

Annual Meeting Holstein Breeders In Grand Rapids June 3

THE annual meeting of the Holstein Friesian Association of America will be held during the first week in June in Grand Rapids, Mich. On June 2 the program will be under the auspices of the Michigan Holstein Friesian Association and according to F. L. Houghton, secretary of the national association, all delegates are urged to be present to take part in the discussions on that day. The convention officially opens on June 3rd.

The delegates to the convention have been announced as follows:

New York Delegates

H. H. Wing, Ithaca; Henry Morgenthau, Jr., Hopewell Junction; Wm. D. Robens, Poland; C. F. Bigler, Syracuse; H. A. Moyer, Syracuse; Edward A. Powell, Syracuse; R. E. Chapin, Batavia; A. A. Hartshorn, Hamilton; Ward W. Stevens, Liverpool; Harry Yates, Orchard Park; Eugene M. Hastings, Pulaski; D. B. Armstrong, Watertown; H. V. Noyes, Kenwood; J. M. Howard, Sherburne; Floyd H. Stevens, Lacona; S. T. Wood, Liverpool; Harry B. Winters, Albany; H. C. Wood, Morrisville; C. B. Marshall, Morrisville; H. F. Farrington, Lowville; R. M. Thompson, Heuvelton; F. A. Blewer, Owego; F. H. White, Richfield Springs; and H. D. Seely, Goshen.

Pennsylvania and New Jersey Delegates

The Pennsylvania delegates are: John A. Bell, Jr., Pittsburgh; Abner S. Deysher, Reading; Dr. L. M. Thompson, Montrose; H. E. Robertson, York; John G. Howard, Wyalusing; Frank A. Keen, West Chester; James W. Hunter, Grove City; John H. Shirk, Lancaster; I. V. Otto, Carlisle; W. A. Woods, Hunsdale; Albert B. Craig, Sewickley and James M. Paxton, Houston.

The New Jersey delegates are: G. D. Brill, Jamesburg; Samuel W. Ridgway, Salem; and M. J. Sheridan, Jr., Lebanon.

New York State Holstein Sale Averages \$142

"Old Man Weather" turned traitor against the New York Holstein Men when he sent some of his worst wares on the days of the annual spring sale of the New York State Holstein Friesian Association, which was held at the Coliseum on the New York State Fair Grounds at Syracuse on May 7 and 8. One hundred and five head changed hands at an average of \$142 a head. The top price of the sale was \$355 which R. C. Melvin of Liverpool, bid for K. P. B. K. Anne Pieterje Pohlerest, consigned by D. C. Middleton of Black River, Jefferson Co. N. Y.

There was only a small crowd on hand and the bidding was not spirited. The results of the sale were disappointing compared to the Brentwood National which was held the previous week. Only five other individuals brought over \$300 and only six brought between \$200 and \$300. Twenty head brought less than \$100.

Farm News From Central New York

THERE is no doubt but that cows are selling better than for quite a considerable time. This means better prices and better demand for cows. It is better milk prices that make this of course. It comes in spite of the fact that feeds are high. Feeds are dropping mostly, but they are not down to a year ago. We have been accustomed to say that it will pay to feed grain feeds if they do not cost more than milk brings by the hundred. Right now they cost no more than the price of milk but that comparison is made on the basis of March milk. April may not do quite as well in comparison. For that matter April milk never did bring the same comparative price. Cows may be said to bring from sixty to a hundred dollars with a few selling for more.

Farms in Better Demand

Yes, and farms are certainly in better demand. The price is low but occasionally a farm sells even with voluntary sale. Right now I think of three of these within a short distance from me. A really good hill farm of about 150 acres with very good buildings and well stocked sold, it is reported, for \$8,500. It is too cheap yet one would have been likely to guess that it could not be sold at all now. A farm of 80 acres in a creek valley, good land, easily worked, but without much in the building line went for a thousand dollars. To go with another farm it is an excellent buy it would seem.

Killing Scrubs Had Its Effect

The urgency with which the AMERICAN AGRICULTURIST has advised the block for certain cows has had some effect in ridding the territory of quite a number of cows, and now with improved milk prices there is some demand for cows. We look for prices for milk to keep up pretty well this summer and that will help hold prices for cows.

—H. H. Lyon.

Eastern Pennsylvania Notes OLIVER D. SCHOCK

THIS year's county agricultural fair season will commence August 18-22 in Armstrong County and close in York County, October 6-9. The Allentown fair is scheduled for September 22-26; Reading, September 15-19; Lancaster, September 29-October 3; York, October 6-9; Cressona, September 7-11; Philadel-

phia county, September 7-12; Quakertown, August 25-29. No less than 80 fairs are listed at present.

Lancaster county tobacco dealers and growers report an active demand for all stock remaining from the 1923 and 1924 crops. High grade leaf tobacco appears to be in special inquiry by large jobbing houses. While some growers will substitute tomatoes in some tobacco districts, it is believed that the normal acreage of tobacco will be planted in the county.

A definite step has been taken toward cooperative marketing of the tobacco crop in Lancaster and adjoining counties. Under the leadership of J. C. Brubaker, president of the farm bureau of the richest agricultural county in America and head of the Pennsylvania Farm Bureau Federation, conferences were held and committees appointed to plan definite organization of plans to improve the present unstable marketing conditions.

An act of the legislature has just been approved which provides that only bottled milk may be sold at eating places in Pennsylvania after May 26th. The act affects all restaurants, hotels, soda water fountains and dining cars. The milk must be served to patrons in the original bottles in which it is supplied to such dealers. "Mixed drinks" are not included in the act.

Granges are becoming active in passing resolutions endorsing the enforcement of prohibition laws, and condemning the laxity that prevailed in many localities. Federal and county courts are taxed to the limit with liquor cases.

Better Cultivation in Field and Orchard

A Real Double Purpose Harrow. Gangs can be closed together for field work or extended for orchard cultivation. Gangs are reversible in either position.

\$10 Down Buys Holstein Bull

A Direct Descendent of
The Century Sire
Dutchland Colantha Sir Inka

"Dairymen's League certificates accepted in partial payment at full face value."

READ WHAT THIS BUYER SAYS
In regard to the bull, I did not write you as your secretary phoned the house one day and Mrs. Lloyd told him the bull had arrived in good shape, and I had been waiting to write you until our County Agent visited the farm. Everyone who has seen the bull are very much impressed with him, the farmer who operates the place, most of all. The Tester was at the farm over Sunday while I was there and he also spoke very highly of him. I will let you know later what our County Agent thinks of him. I cannot understand how you can afford to sell a bull of so good breeding and so well fed and in such excellent shape at the price. It is needless to say that we are perfectly delighted with him.—H. M. Lloyd, New Jersey.

JAMES J. CUMMINGS, PLYMOUTH NEW HAMPSHIRE

Keep the Young Birds Growing

(Continued from page 539)

grain mixture fed in a litter twice a day—morning and night. This grain mixture should consist of 5 parts by weight of cracked corn, 3 parts of cracked wheat and 2 parts of pin head oats. By the time they are six weeks old you can gradually modify the mixture so that it consists of 6 parts by weight of cracked corn and 4 parts of wheat. This grain mixture is also fed in the litter three times a day, morning, noon and night. From the time they are three months old until they are matured the grain mixture may be fed in the litter twice a day, consisting of 5 parts of cracked corn, 2 parts of barley, 2 parts of wheat and 1 part of heavy oats. Do not omit the litter for this induces exercise, and appetite for mash. So much for the grain mixture.

Mash Makes Them Grow

The mash proposition is handled somewhat differently. From the time your birds start up until they are approximately 5 weeks of age they should have before them 4 to 6 hours a day, a mixture consisting of 2 parts wheat bran, 1 part wheat middlings, 1 part corn meal, 1 pound sifted ground oats and 1 pound sifted meat scrap of the best grade you can buy. You may find that it will pay you to moisten some of this mash with skim milk or buttermilk and feed it once a day at noon. Mix up just enough for the youngsters to clean up and then remove it from their troughs in order that they do not get any of it after it is soured.

From the age of 6 weeks to 3 months the mash is modified only by changing from sifted ground oats to ordinary ground oats otherwise it is the same as mentioned previously. During this period the mash should be always available to the birds in hoppers or troughs, so that they can get it at anytime of the day they desire. From the age of 3 months on to maturity, the mash is modified by reducing the wheat bran one half so that you will have equal parts by weight of bran, middlings, corn meal, ground oats and meat scrap. About 3 parts of salt are added to 500 pounds of this mixture. If you wish to develop your birds rapidly to the end it may pay you to resort once more to the hen's mash. During this latter period you will find that the birds will consume three parts of grain to 2 parts of mash.

There are one or two other details for you to bear in mind. Do not forget that the birds need lime and grit. Charcoal, steamed bone, oyster shells are all good for the various purposes for which they are intended.

Give the birds just enough food that they will clean it up nicely. Do not overfeed them and keep moldy food from them. Induce lots of exercise. That means a good appetite and with desirable quarters you should experience no trouble.

There are Profits in Caponizing

THE caponizing of chickens is a very ancient custom, the practice being general two thousand years ago. In comparatively recent times Columbus doubtless ate them, and Shakespeare writing of the justice whose fat belly was "with good capon lined, grew hungry for the delectable dish as he wrote. It is pretty well settled that if a practice of this kind persists century after century there is something in it, and something" is money. Capons are easy to make, easy to care for, easy to sell at good prices. Remember that it is the first few pounds of chickens that cost most to feed. Remember that the capon's only interest in life is to grow big and fat. He is a bird of one idea; he has no side issues; he dreams of neither love nor war. Just stays round to grow and make money for his own-

er. And if you will do your part he surely will do his without fail. The same amount of feed will raise an 8 pound capon and only 4½ pound rooster. His weight is nearly double and the price always double. So I say go to it this season.—C. A. Umosselle.

The Way "Hen Killers" Show Their Traits

WHERE chickens and hens are found killed, it is important to know the type of animal which killed them in order to take measures to prevent the recurrence. Where hawks kill smaller chickens, they are usually carried away. Larger ones are left with a wound in the back of the neck with the skull torn open and feathers scattered about. Where the hen is found lying on the side with a small wound in the throat, it is safe to assume that the bird was killed by a weasel. House cats commonly eat the head and breast and leave the remainder. Rate usually work at night and leave a carcass, which is gnawed in several places. Where chickens are out at night, they are sometimes killed by owls and are commonly dragged to a secluded place and saved for the next night's meal. Traps set nearby are almost sure to catch the owl the following night.—A. L. C., New York.

We Store Eggs Now and Sell the Fresh Ones Next Winter

THE price of eggs is rapidly going downward in the country, which is expected at this time of the year. This is the natural time for hens to lay and they do it with vengeance. The worst of it is that all hens do it at the same time with the result that there are more eggs on the market than folks in the city can use or will use and consequently prices hit bottom. It is too bad we cannot induce the hens to change their habits so that they lay heavily in the fall and winter. Such is the way with nature.

Storing eggs on the farm is an old story. Most everybody knows it but for the sake of those who have never tried it here is the method which is used. The advantage in storing eggs is that you can "put down" enough eggs to supply your winter needs at home, making it possible for you to sell your fresh eggs next fall and winter at much higher prices. It is easy to estimate the number of eggs you use per week and then multiply that by the number of weeks during the late fall and winter will give you an idea of the number of dozens you should put down.

Water Glass Most Commonly Used

Water glass is an accepted and very common preservative. In fact, it is the universal preservative that is used now-a-days on the farm. There are other and perhaps better methods that may be used in a commercial way but here we will only discuss the use of water glass. Eggs that are put down in water glass can be used for cooking for months and months after they have been placed in the preparation.

The most convenient way to put down the eggs, is to get five-gallon stone jars. These jars are cleaned thoroughly before having water glass placed in them. The water glass can be procured from any drug store or from the general store in small towns. A quart and a half of water glass is mixed with 18 quarts of boiled water. The eggs are first placed in the jars and the water glass is poured on them. Be sure that the top-most eggs are covered with at least 2 inches of liquid. It is a good idea to cover the jars to reduce the rate of evaporation.

Two 6-gallon or three 4-gallon jars are sufficient for 30 dozen eggs, using the amount of solution mentioned above of 18 quarts of water and 1½ quarts of water glass, making 19½ quarts altogether.

—N. B. J., New York.

Editors Note:—N. B. J., has neglected to mention that it will be more advantageous to "put down" sterile eggs. Take all the roosters away from the hens and in a couple of weeks you will be ready to start storing.

He Saved the Corn

AN Eastern farmer had trouble with his hens every time his cornfield happened to come near the building. About half an acre nearest the building was stripped by the hens when it came up.

Since hens are kept by the 300 to 500 plan now instead of the fifty to seventy-five plan of some years ago, it takes more sprouting corn to satisfy a flock.

Well, the farmer mentioned above beat his hens to it, and he didn't pen them up either. His cornfield was right around the hen house. He drilled wheat and oats in quite heavily on the part of the field nearest the hen house, where the hens would forage the most. This drilling was so timed that it would be coming up nicely when the corn was planted. This little patch was seeded several times, and the hens were kept busy all summer so that the corn was not molested, and the hens were not confined a single day.

LAWRENCE P. UHL

THE OLDEST AND LARGEST INDIVIDUALLY OWNED AND OPERATED HATCHERY IN OHIO. I am a PIONEER in the Baby Chick business. For 20 odd years I have been producing high class Baby Chicks which have gone out to thousands of Poultry people of America and proven highly satisfactory. The Valley of Voices—By George Marsh

STEELE smiled inwardly as St. Onge's eyes shifted to meet those of his daughter, then focused quizzically on the grinning face of the half-breed. If the situation at Wailing River was a source of mystification to St. Onge's guest, Steele was satisfied that the guests had now balanced the score, to the truth of which surmise the face of the Frenchman patently testified.

"But come, I forget my manners, Monsieur. We have a room and bed for you as long as you will honor us. My head man, Michel, will take care of David."

"Thank you, sir!" And picking up the bag containing his personal belongings, Steele followed his host.

CHAPTER II

THE house of the factor of Wailing River was built of square-hewn spruce logs, carefully chinked against the January winds of the Height-of-Land country. In front, a roofed porch of heven slabs commanded a view of the river which here gave no intimation of the swift metamorphosis which, a third of a mile below, turned it into a riot of white rapids. Beyond the river, the spruce forest rose to cap a high ridge, which, for miles to the south, marked the winding course of the Wailing, until it faded into the haze of the horizon. Surrounding the house and re from the post dogs, ran a stockade of vertical slabs. Beside the porch a bed of violets and wood anemone were now bloomless, but beyond, in their second flowering, white Canadian violets and the blue of fringed gentian and harebells against a blackground of northern golden rod bore gay witness to the care of one who loved flowers.

Familiar with the bare and uninviting interiors of the houses at the fur posts, often presided over by an Indian or half-breed, wife of the factor, the living room Steele now entered bore resemblance to those he had seen solely in its huge sheet-iron stove. The rough walls hung sparingly with small French etchings framed in white birch, the rustic furniture shaped from spruce and cedar poles, the shelves of books, and the rugs of moose and bear and wolf, had, by the alchemy of taste, been fused into a room—a home.

"I did not know there was a room like this north of Winnipeg, Mademoiselle," Steele said in frank admiration.

"Oh, Monsieur! would you have us live like the Indians? But you are laughing at our poor little home."

"Please don't," he begged. "It is charming—this room. And all the books!"

"It was hard on our packers," broke St. Onge, "but I insisted on having the books if I was to be marooned up here in this valley. The winter would be long without them—and the violin."

"I envy you the winters here with that violin, sir," said Steele, smiling at his hostess. But the face of the girl failed to respond and the eyes were heavy with shadows as her father drew her affectionately to his side.

"Without our violin," said the older man, "we should have many gray hours when the big snows hem us in."

"I hope to hear it again Mademoiselle—your superb playing."

Her face brightened. "It was only a mood—today at the rapids, Monsieur. I go there when lonely, to play to the troubled waters. You thought me sad—I saw in your face; but I was only homesick for Touraine. Tonight we shall have something gay."

But Steele felt that it was not loneliness which had driven Denise St. Onge to the restless waters.

"Monsieur, you will wish to see your room. Our Ojibway servant, Charlotte, will bring you hot water." And St. Onge led Steele to a room on the second floor of the house, the capacity of which was strained by a cot and washstand, whither a square-built, half-breed woman followed shortly with a steaming bucket.

Steele was thankful that his duffle bag

contained a change of clothes and mocassins. Hot water, a shave and fresh clothes speedily worked a miracle in the tattered stranger who had startled Denise St. Onge at the rapids. The face which grinned back at him from the small mirror was not handsome, but in the frank gray eyes and bold features, topped by tawny hair, there was much to enlist the respect of man and interest of women. A brown, muscular neck, enured to the tump-line, set the head on well-made shoulders.

When Steele rejoined his hostess he felt more at ease. He even had a suspicion that she approved his changed appearance. At the thought, something like a thrill swept him—to be followed by a shrug of annoyance. He had not seen an attractive woman in months and was paying the penalty. Yet, as he watched her pour the tea while her father dispensed caribou stew and fried trout, a quality—rarer than mere comeliness; an evident fineness of fibre, a savor of personality in this factor's daughter, which meant race and background—impressed itself upon him, and a strong curiosity to know the history of these people whom he had stumbled upon in the bad-lands south of the Albany—to

eyes, as though fearful of what he was about to say, he replied bitterly:

"That is our problem, Monsieur. The company rashly builds a post on this river which, for a hundred miles below the rapids here, is to be Ojibways a place of spirits; then sends me here to get the fur of the upper country. At Albany, they laugh at this talk of Windigo and spirits keeping the Indians from trading here. They even order me to send hunters to trap the valley below us—when they have avoided it for generations."

"They only betray their ignorance by belittling Indian superstition, sir. I was followed and shot at on the Albany this summer for photographing some Ojibway children. They believed the lens was an evil eye and that the children would be bewitched."

"But they missed you!" laughed the Frenchman. "Yes! Our inspector, Monsieur Lascelles, in his desire to get fur ignores the conditions here entirely."

At the mention of the name Lascelles, Steele sensed a swift change in Denise St. Onge. His curious eyes caught a faint color in the girl's temples as she avoided his glance. In a moment she had control of herself but he wondered if this then was

What Happened In The Story Thus Far

BRENT Steele, an American, is traveling through the Canadian wilds for the American Museum of Natural History. As he and his Indian guide, David, are making a "carry" over a portage on their way to the next trading post on the Wailing River, Steele hears the music of a violin. At first he believes it is an illusion due to the rigors he has experienced on the trail. A recurrence of the strains of the beautiful music, reassures him. David, his Indian guide expresses the opinion that perhaps Steele has heard the singing of the Windigo in the rapids of Wailing River, which received its name from the moaning sound of the fast water, in which, the story goes, many travellers have lost their lives, some under strange circumstances, leaving no trace. The Windigo is a mysterious monster no one has ever seen. The native Indians are panic stricken due to the wails and howls of the Windigo as it prowled along the trap lines. Steele laughs at David's surmise. After a brief search, he sees a young woman standing in a clearing overlooking the river valley, playing a violin. Hearing his approach, she turns on Steele. He speaks to her, telling her who he is and what his business is. It develops that she is Denise St. Onge, the daughter of Colonel Hilaire St. Onge, a Frenchman in the employ of a French fur trading company. Why this man and his only daughter should locate in such remote country is a mystery to Steele, who proceeds to the post. Colonel St. Onge is much interested in Steele's travels, especially in the fact that he and David had come over the rapids of Wailing River without having seen the trace of other travellers, long overdue. In their conversation it develops that another Frenchman, Laflamme, whose trading post is farther along the trail, is giving whiskey to the Indians in trade for furs, contrary to the Canadian law. David is interested in the villainy of Laflamme and expresses the wish to see him, leaving the impression that there is something of long standing between them.

learn the cause of the fear and heartache which this lonely girl had so poignantly revealed in the gorge, possessed him.

"You are collecting Indian relics and utensils for the American Museum?" asked the Frenchman. "You are an ethnologist?"

"Yes, I have been in the field four years for the Museum."

"You have found much of interest?"

"Last year and this summer, I shipped by Hudson's Bay canoes considerable stuff from Fort Hope and Henley House. Lake Makakibetan on the Albany has some burial places, unlike anything I've seen. And the Ojibways up there are still very wild and superstitious—medicine men, sorcerers, fear of spirits and the Windigo, and all that."

The factor paused, fork in air. Slowly he replaced it on his plate, untouched; then asked:

"You have never been in this valley before?"

"No," replied Steele, puzzled at his host's manner, "but what I heard on the Albany interested me. It seems to be Windigo country among the Albany Ojibways—under a sort of taboo. It must be a serious handicap to your trade, although the very fact that you're here proves that it is not generally considered haunted country by the Indians."

The fine features of St. Onge stiffened. With a glance at his daughter who watched him with parted lips and wide

the cause of her heartache.

"My position is most difficult, you see," continued St. Onge. "Laflamme controls the upper country with his whiskey. We get considerable Little Current and Drowning River trade, but Michel and I have to meet them with our goods over at Portage Lake. There are many who fear to come to the House of the Windigo, on the Spirit Rapids, as they call it."

"Strange your people at Albany fail to realize this!"

"They will realize it now—this summer, for we have come to an impasse, as we say in French."

"How is that, sir?"

"Why, my Indians, except Michel, who is a hardheaded Iroquois from the Nipissing and laughs at this devil talk, will not now go into the bush alone. They are always seeing and hearing things. Our hunter, Tete-Boule, refuses to leave the post since he found some prodigious tracks in the muskeg and heard screaming at night. Monsieur, our people are panic-stricken." St. Onge gravely shook his head. "And now, as you say in English, the climax is capped."

Steele leaned toward his host, keenly curious of what was coming, as St. Onge finished dramatically:

"Our fur canoe, which left here early in July, with four men, never reached—Albany!"

"Never reached—Albany?" repeated the astonished listener. "They sent you word, by canoe?"

"Yes, they sent a relief party up-river to find my men who were long overdue. They feared they had lost their boat in the Albany rapids and were following the shore."

"And this search party found nothing?"

"Nothing!" St. Onge lifted shoulders and hands in eloquent gesture. "Men, fur, canoe, gone; wiped out, swallowed up!"

"But there must have been something washed up alongshore," vehemently protested Steele, "the shell of the canoe, small stuff,—and a paddle always comes ashore."

"Nothing!" repeated the factor. "They searched the Albany and then the lower Wailing, for they had to pole and track most of the way as you know. Above the Devil's Mile they found the first camp of our people, but below, not a body, or paddle, or scrap of canoe—nothing!"

To Steele this was incredible—this mysterious tragedy of the fur canoe. He wished he had known what had happened on the Wailing but a few weeks before, when he and David fought day by day its stiff current on the way to the post.

"It's simply unbelievable, Colonel," he vigorously objected. "A swamped canoe, broken up in a big rapid, is bound to throw something on the beach below. We noticed nothing, but we were not on the lookout."

That there was more to this story Steele was convinced; but what personal bearing could it have on Denise St. Onge?

"Yet those are the facts, Monsieur, and our people are mad with fear. Thank Heaven! Michel had a bad ankle and was not with the boat. He tells the Indians that the canoe and bodies are held in the big eddy, but I doubt it."

Steele stared at the factor, unable to accept the sole inference to be drawn from his host's remark. St. Onge was surely facetious.

"That leaves us the Windigo theory, Colonel," he laughed, but to his surprise his pleasantry was met by so grave a face that for an instant Steele was in doubt of the mental balance of the Frenchman, harrassed by the misfortunes of the summer. The dark eyes of Denise St. Onge, fixed on the window, were cryptic. Then the factor smiled inscrutably as he said:

"Monsieur, I am a fur trader on a river believed to be haunted. It would be a policy most ruinous for me to admit a belief in the supernatural—in this Indian tradition. Is it not so? But," and the speaker glanced at his daughter, "as well believe it the Windigo; what other solution is left? Men and canoe disappear—like that!" and he snapped his fingers.

It was clear that St. Onge was dissembling—for some reason he was loath to give his guest the whole story. But why? What was there in this tragedy of fear and death that a stranger should not know? Why, since St. Onge had so frankly revealed the crisis he faced at Wailing River—the threatened loss of the trade and abandonment of the post, due to the superstition of the Indians—did he withhold his own solution of the riddle? Certainly there was more, much more, in this strange situation which Steele had accidentally stumbled upon, than the loss of the fur canoe. The furtive glances of father and daughter at Steele's reference to Laflamme, the free-trader; her evident embarrassment at the mention of Lascelles, Inspector at Albany; and above all her mood of despair at the rapids, voiced so poignantly by her violin; these could bear no relation to the tragedy of the fur canoe—to the panic of the Indians at the ill-starred post.

"Were your men trustworthy?" he suddenly asked.

"Absolutely. They could not desert and hope to dispose of the fur. We and the Hudson's Bay people have an agreement. On the Albany at that time they would surely have run into the Fort Hope York boats and the Martin's Falls and Henley

(Continued on page 554)

Lone Scouts of America

American Agriculturist Tribe

NOTHING that we have ever done has aroused the enthusiasm among our boys as has our organization of Lone Scouts in this territory. In order to get the movement started AMERICAN AGRICULTURIST offered to pay half of the application fee on the first hundred who sent in their applications to join. We expected that there would be a response at first of possibly twenty-five to fifty, but we got a big and pleasant surprise. We were overwhelmed with letters so that we have extended our offer to all those who mailed their application the first week. This includes about 200.

The names of most of the early applicants are printed on this

page. The rest will be printed next week.

We want to offer our congratulations to these boys and to assure them that if they will follow directions they will have a lot of instruction and recreation. Your applications have been sent to the LONG HOUSE at Chicago, and the headquarters have been asked to send direct to your the membership badge, the certificate and the handbook. We know you are anxious to get them as soon as possible. As soon as you get them you can follow the directions in the handbook, send for the degree books and begin to study. For those who join from now on, it will be necessary to pay the full charge of 30 cents. Those who sent their applications in the first week and who received our help of 15 cents toward their membership are as follows:

The Bell Telephone Laboratory in 1884. From an old wood engraving published in the "Scientific American".

Winning nature's secrets

Every day that passes records some new advance in the telephone art. Constant experiment and observation are winning new secrets of chemistry, of electricity and magnetism, and of matter. Nature's unseen quarry is yielding to the researches of the laboratory that exact scientific knowledge which is among the telephone engineer's most priceless resources. The workshop of the telephone engineer is a scientific laboratory. Here he studies and experiments with principles and laws of our physical environment and sets them to aid us in our daily lives.

Forty-nine years ago the telephone was born in a scientific laboratory—a very small laboratory, to be sure, as it numbered in its personnel none but Bell and his assistant. As the Bell System has grown that laboratory has grown, and as the laboratory has grown the telephone has grown in efficiency, in distance covered, in numbers, in perfection. Countless are the milestones marking progress in the telephone art that have come from the laboratory.

Today the laboratory numbers among its personnel 3000 employees, more than half of whom are skilled scientists and engineers. Headed by a vice-president of the American Telephone and Telegraph Company, it is known as the Bell Telephone Laboratories, Inc., and forms an indispensable department of the Bell System.

Use This Blank and Become a Lone Scout

Date
I have, with the consent of my parents or guardian, taken the following pledge of the Lone Scouts of America, which I have read and understand:
"I pledge my allegiance to my flag and the nation for which it stands, with liberty and justice for all. I will 'Do a Useful Thing Each Day' and be worthy of the name Lone Scout."

Enclosed find 30 cents to cover the cost of enrolling me as a member. This membership fee entitles me to a membership card, the badge, a handbook, and all the privileges of the order.

Name

Nationality and color Age

St. No. P. O. Box or R. F. D. No.

Town County State

Send all applications to Lone Scout Editor, AMERICAN AGRICULTURIST,
461 4th Ave., New York City.

Read over the rest of this article and the letters and get busy. It is the best thing that has come to AMERICAN AGRICULTURIST boys in many a long day. We hope you make the best of it.

What To Do Next

You will find that the Handbook is great reading, and tells you about everything you need to know in order to go ahead with the work. The degree books are still more interesting because they tell you how and what to do in order to get the degree pins. Either start or join a Lone Scout Tribe, because you will find that you will have a lot more fun by working with other boys. Your handbook will tell you exactly what to do to start a Tribe.

Where to Send Mail

We want you to send all your letters about Lone Scout work to us, because we want to get acquainted with you. We will then send your letters to headquarters in Chicago if necessary.

If you would like to write to other

Aunt Jane's Way

It Was The Way Of Preparedness Before The Need Came

Editor's Note.—Most of us know hard-working people who never seem to "get on" and the secret lies in that quality of personality called "brains-management." The story Aunt Jane shows how one woman applied this quality to her home affairs with most practical and satisfying results.

AUNT Jane was a thrifty woman. Improvidence had placed in neither her creed nor her conduct. "Forehanded," the neighbors called her. However early winter might swoop down upon the unwarned, it never caught Aunt Jane with storm windows unputtied and geraniums in the ground. However early the advent of hot weather, the summer wardrobe of her family was in readiness. Unexpected company never had reason to complain of "pot luck"; forethought and foresight took care of the emergency before it appeared.

I remember going once, when a child, with my mother for a visit to Aunt Jane. It was a hot day in August, and we found her tacking a thick "comfort."

"You don't think you are going to need that on your bed right away, do you, Aunt Jane?" mother joked.

"No, but I don't propose to borrow bedclothes when time of need comes," was the characteristic rejoinder.

She Remembered in Time

Aunt Jane Warner's tomato seeds were always up before anyone else in the neighborhood was able to dig out a spadeful of frozen dirt for planting; for Aunt Jane ever remembered to place in the cellar in the fall several pails of soil of various varieties. This provision was one secret of the hyacinths, narcissi, tulips and other bulb beauties that glorified her south windows when snow spread its cold white blanket over the prairies.

It was the saying of the neighborhood that "Mis' Warner was always a month ahead the year around." Yet Aunt Jane was never known to make the mistake of being "too previous."

Long before fly-time, her mosquito netting was measured, cut and bound ready for tacking into the sash when the first unwelcome blue bottles arrived.

"What's the use of takin' a whole day to put up the settin' room stove?" she used to say. "Some folks'll wait 'til the snow is in the air before they think about stoves. Then some mornin' when their teeth chatter at the breakfast table they'll get out the heater and find there's no blackin' in the house. Someone's got to make a trip to town or else the stove has to go up, rust and all. Then the zinc has to be tinkered up. It takes an hour to clean the pipe that's been put away with the soot all in it. Maybe it was chucked away in the same place with the parlor stovepipe and the joints are all mixed, so it uses a half a day and a whole year's growth in patience and good temper to get the pieces together right. Finally, when everybody's tucked out and cross and half frozen, the fire's lighted, and then like enough it's found the chimney wasn't cleaned out last summer and the stove smokes. P'raps it'll be another whole day before the stove's really in runnin' order; and all because of a shiftless way of lettin' things go 'til the last minute."

Cold Weather Found Her Ready

Certain it is that Aunt Jane's stoves never went up in that fashion. All the getting ready was done at the first warning of autumn chill, and the "setting up" was a light task, accomplished in good season. When the frost king sounded his first real challenge, Aunt Jane answered with a lighted fire.

No one ever saw Aunt Jane Warner get a preserving kettle full of hot fruit and make the discovery that she was all out of "crops" or some other requisite. It was her practice to take an inventory of crops, jars, bottles and corks, of sugar, spices, vinegar and other necessities for the job, before each encounter with the fruit kettle.

I have a vision now of Aunt Jane and Uncle Simeon at the sitting-room table under the big lamp, one evening in late February, poring over a seed catalog. I was staying over night with them, and I recall that the next morning Aunt Jane wrote and sent to the post-office an order for a full supply of both vegetable and flower seeds.

Near neighbors ever averred that "Mis' Warner was no borrower." Indeed, Aunt Jane had no need to borrow. She never waited until the coffee canister was empty before sending to the grocery. "No use waitin'," she would say, "I'll probably have to pay just as much

next week as I will to-day, and who knows but that the price will go up?"

The same theory she applied to making her Christmas fruit-cake: "It doesn't take a mite more time to make it in November than in December, and eggs are a bit cheaper when it's early. Besides, the cake will be all the better for the keepin'."—Josephine E. Teal.

An occasional well placed mirror adds space and light to living room or hall.

A piece of sandpaper held against the top will help in opening stubborn screw top cans.

For the Younger Set

The boys as well as the girls must have new spring and summer togs, and some of their necessities are pictured below. A light topcoat is a necessity practically all summer if the family rides in an open car.

2326

Of Camel Hair, Serge, Herringbone, Tweed or Polo Cloth, this coat for the very young man would be sure to please. It is made with raglan sleeves and patch pockets. The front of the coat is rolled with collar to form lapels. A belt which may be omitted is provided for in the pattern.

Pattern 2326 cuts in sizes 2, 4, 6, 8, 10, 12 and 14 years. Size 8 requires 2 3/4 yards of 36-inch material. Price of pattern 13c.

This cunning little one piece dress is made with raglan sleeves which may be long or short. The front of the dress is slashed down from the neck and bound with ribbon or the material used for the dress. Plain and printed voile, organdie, cotton crepe and gingham are suitable materials.

The pattern 2328 cuts in sizes 2, 4, 6 and 8 years. Size 4 requires 1 1/2 yards of 36-inch material. Price 13c.

2328

Printed silks, crepe de chine, taffeta, plain voile with drawn-work, percales, tissue gingham, or dimity would be suitable materials to develop this little frock. Pattern 2434 is cut in sizes 4, 6, 8, 10, 12 and 14 years. In the 8-year size, 1 1/2 yards of 36-inch material with 3/4 yards of ribbon are required. Price 13c.

2434

This blouse is made with two styles of collars, attached or separate or with neckband. The sleeves are full length and may be finished with either regulation or French cuffs. The pattern 2010 cuts in sizes 4, 6, 8, 10 and 12 years. Size 8 requires 1 1/2 yards of 36-inch material. Price 13c.

2010

TO ORDER: Write name, address, pattern numbers and sizes clearly and correctly, enclose with correct remittance either in coin or stamps (although coin is sent at own risk) and mail to Pattern Department, American Agriculturist 461-4th Ave., N. Y. C. Do not forget all our patterns are now 13c, pattern catalogues, 14c.

Some Ways of Earning Money at Home

Aunt Janet's Contest Offers Opportunities For Three At Least

THE following methods have been tried and have met with success.

One woman on a farm makes money by raising Scotch Collie puppies. She has bought a Ford car with her earnings and has now started a savings account in a town bank. She says there is very little work connected with raising the puppies, otherwise she could not undertake it, as she has a great deal of work to do in the house and field. The puppies have the run of the farm and are usually sold before they are three months old for five dollars a piece. She feeds them stale bread, boiled potatoes, skim-milk and all the table scraps.

Another woman on a farm started a savings account from the making of cottage cheese which she sells to the grocery stores in a town nearby. She sells it for 10c a pound, and makes a supply once a week.

A third woman on a farm, raises about one-fourth of an acre of flowers and sells the cut flowers. In the spring, she raises a good many asters, pansies, and salvia plants to sell. She says she sold about forty dollars worth of flowers last summer. She took some flowers to the county fair and got a number of prizes for them.—Alice Whitman.

Another Writer Says

HERE are a few of the ways I make money at home and so can almost any other farm woman. First place I always try to have something to sell. This year I bought some broiler chicks for ten cents a piece, when the young pullets were about ten weeks old I sold the whole bunch of fifty cents each, I have been selling off the young roosters for anywhere from sixty to eighty cents each and I have still a few left that weigh four pounds and over. So I expect about one dollar each out of these. You ask what it costs to raise them, well it cost me about two dollars and a half for the seventeen I raised out of twenty-five.

I also raise a few ducks. They eat so much there isn't so much profit in them but I sell the eggs for thirty cents each. I think there's more to be made by selling most of the eggs and ducklings, and one good duck sometimes lays as many as one hundred eggs in one season. Two ducks and a drake can be kept along with the hens and really pay. One woman I know raises rabbits.

Some Vegetables Swell the Fund

Cucumbers for pickles, winter squashes and pumpkins are good sellers and not much trouble to raise. Pumpkins sell well at Hallowe'en time. Picking over beans is a good home job. Ask your friends to give you the work of picking over their beans, if you are prompt in doing the work they would as soon pay you as anyone else.

If you can sew, if it is no more than mending put up a good readable sign on your front lawn, telling the kind you do, also put an ad in your nearest paper. Don't trust people you don't know or you will find bills on your hands that you can't collect. If you want home work to do tell all your friends to bring you their work if you are real handy. There are lots of different things you can do, maybe one washing and ironing a week or mending for some one else, make a quilt for another, bake bread for someone, in fact, there is a score of ways to help ourselves if we only wake up and get busy.—Mrs. Busy.

Just Rugs

TAKE a good piece of roofing paper any size that you wish your rug to be. Wash thoroughly: when dry give two coats of olive green paint. Put a three inch border of darker green or any harmonizing color around the outside edge. Paint a small scarlet triangle in each inside corner and stencil a scarlet diamond six inches long in the

middle. When dry give two good coats of the best floor varnish. Paint a narrow line of black around triangles, border and diamond, before varnishing.

By the use of a few tubes of oil paint and a stencil you can make some very pretty rugs.

Make a straight stencil of autumn leaves for a border and an all over pattern for the center. Make the stencil from thin strong fish paste board. Trace the pattern on using a maple leaf or Virginia Creeper leaf for a pattern. The stencil may be cut out with a sharp knife, but I like button hole scissors best to cut them with. Paint the leaves dark brown with touches of light brown scarlet, yellow and light green. If you give these rugs a couple of coats of varnish a year, they will wear almost indefinitely.—M. H.

Aunt Janet Starts a Contest on What the Movies Mean to You

HAVE you seen a moving picture which left lasting impression upon you? If so, tell us about it and why it struck you so forcibly. We shall offer the writer of the best letter a prize of three dollars, the second best two dollars, and the third one dollar. We shall also be glad to print as many letters as we have space for. Letters should not be over two hundred words in length and should be received by June 20th. Address Aunt Janet, Care of American Agriculturist, 461 4th Ave., New York City.

Rooting and Growing Oleanders

THE oleander is one of the easiest plants to root. You can cut off six inches of the tip of a branch, place it in a bottle of water, keep the water fresh by frequent changes and it will send out roots in a short time. It is not necessary to wrap something dark about the bottle but I have thought it helped, for we know that plant roots do not naturally like light. Any wide-mouthed bottle or a tumbler will answer and I always have at least three inches of the stem in the water as this helps to keep it well filled and prevent wilting. After the roots are an inch long the cutting is carefully potted in a small pot; after filling this with roots the plant is set out in the flower garden until fall. I like to grow them outside for the summer as they will make a sturdier stronger growth, and will usually branch evenly, three branches of about equal strength; if these are pinched when eight inches long they will in turn branch, often with another three of about equal strength, giving nine stems, and these I usually leave to bloom without further pinching.—L. H. Cobb.

Women of No Poise Lose Out This Year

ONLY a well-poised woman can look smart in the feminine wearing apparel in vogue this season.

This apparently discouraging statement comes from clothing specialists at Ohio State University in explaining the difficulties which arise in fitting the present styles to the average woman. They explain that while all forms cannot be perfect, an effort on the part of the individual will do much to correct round shoulders and other incorrect postures.

"To be well dressed this spring we are told to study our silhouette," says Ann Biebricker, one of the specialists. "It is important that the garment fit closely across the shoulders and that there be a simple straight line from the shoulders to the hem of the skirt.

"Good posture is essential for good looks as well as for good health. The slouching figure with hollow chest and round

shoulders cannot disguise her poor posture in the garments now in style. The woman who stands and walks well, with chest high and head up, may look beautiful in the simplest type of frock because of her poise and carriage.

"A good foundation upon which to place our clothing is the first essential to smart dressing."

Delicious Ice Creams

Chocolate Ice Cream

4 cupfuls cream	1/8 teaspoonful salt
1 cupful sugar	1 tablespoonful vanilla
4 tablespoonfuls cocoa	1/2 cupful boiling water

Dissolve the cocoa in the boiling water and boil until the mixture is smooth and glossy, stirring constantly. Add it to the cream, sugar and flavoring. Freeze.

Caramel Ice Cream

2 cupfuls milk	1/2 cupful sugar
2 eggs or 4 egg yolks	1/2 cupful caramelized sugar
	2 cupfuls thin cream

Scald the milk, dissolve the caramelized sugar in it, pour this over the egg which has been beaten with the granulated sugar. Cook over water until the mixture coats the back of a spoon. Strain, chill and freeze. To caramelize the sugar, stir it in a pan directly over the fire without adding water, and stir until it melts and becomes a light brown color.

Two or three strips of bacon added to the dish of macaroni and cheese just before putting it in the oven will improve the flavor.

Bright! Sparkling! Wholesome! Clothes washed with Fels-Naptha are different. For splendid soap working together with dirt-loosening naptha, make Fels-Naptha different from any other soap, or any other form of soap. Isn't this extra help worth a penny more a week?

SAVE YOUR HANDS

*banish
dish-washing
slavery*

ONLY a housewife knows the back-breaking task of running from stove to sink with a heavy tea-kettle and then have only half enough hot water for dishwashing. Likewise, no one but a housewife can know how lukewarm and greasy water ruins both the hands and the temper.

With a Perfection Kerosene Water Heater, you can have an ample supply of hot water for any purpose, enough for washing dishes in 10 minutes, for a bath in 30 minutes.

Every owner of a home without gas should investigate this new convenience—all the dependability of a gas water heater, but burning the clean and economical Socony Kerosene.

Lone Scouts of America

(Continued from page 549)

Lone Scouts send us your name and address, and what you are most interested in, and we will put your name and address in the Lone Scout Column, so that other Scouts who are interested in the same things may write to you.

Write us some letters. We want to print some of them. Tell other Scouts your experiences in scouting, and read about theirs.

One boy wants to know if he can join when he is only six years old. There is no age limit. If you really wish to join and are interested in the work, it does not matter what your age may be. It may be harder for you to do the work, but when you reach the age of twelve or fourteen, you will know a lot more about scouting than the boy who does not start till he is fourteen. Be sure you carry out the work, though, because the habit of finishing what you start is a good habit to cultivate.

Here are a few of the early letters we received:

Dear Lone Scout Editor:

I am sending my membership blank for the Lone Scouts. I am pretty sure I can get some more members in this town if you will please send me some blanks. I would like to start a troop of Lone Scouts here as I know a group would probably work better together.—**Richard H. Cleveland**, R. D. 2, Milford, N. Y.

Dear Lone Scout Editors:

Enclosed find a blank cut from American Agriculturist, also 15 cents in stamps. I think I can get four other boys here to join The Lone Scouts. Will you send me four other blanks so I can get these other boys to send the entrance fee of 30 cents.—**Herbert Chaffee**, L. B. 62, Candor, N. Y., Tioga County.

Dear Lone Scout Editor:

A boy showed me a paper with a blank on it and he cut it out so now I am writing a letter because I have no blank to send you. I am sending you 15 cents for the first Lone Scout Pin. I think Scouts are all useful in all ways. I would have joined in the city but I have moved away and I want a Lone Scout Pin.—**Thomas Scandura**, R. D. 3, Altamont, N. Y.

SEEDS—NURSERY STOCK

VEGETABLE PLANTS—Potted (2 inch paper pots.) \$30.00 per 1000, \$3.50 per 100. Tomatoes—Langdon's Earliana, Bonny Best, John Baer, Jewel, Stone, Ponderosa and Dwarf Champion. LOOMS ONLY \$9.00—Big money in weaving rugs, carpets, portieres, etc., at home, from rags and waste materials. Weavers are rushed with orders. Send for free loom book, it tells all about the weaving business and our wonderful \$9.00 and other looms. **UNION LOOM WORKS**, 332 Factory St., Boonville, N. Y.

Service Department

\$100 Reward For Evidence Against Crooks---Other Service Notes

AMERICAN AGRICULTURIST will pay to any subscriber, not an officer of the law, \$100 in cash, for evidence which will lead to the arrest and conviction of any person or persons, trying to sell stock or bonds of a fraudulent nature. The only condition is that the fraud must be attempted on a farm on which is posted an AMERICAN AGRICULTURIST Protective Service Bureau sign. We furnish these signs free of charge to all paid in advance subscribers. See our last week's issue.

We are very seriously concerned with the large number of frauds that are being put over. Every newspaper contains accounts of some new scheme and every mail brings to us pathetic letters from our people, asking for help in getting their money back from fraudulent investments. The sad part of it is that there is seldom anything that can be done. The crooks get the money and the purchaser has the worthless stock on his hands with no market for it at any price. There always seems to be a large number of people who want to turn their small life time savings to larger account and these people are the ones that listen to the glib statements of the sales crooks who would not hesitate to rob the baby's savings bank or take the pennies off from a dead man's eyes.

Must Lock the Barn First

Henry Morgenthau, Jr., publisher of AMERICAN AGRICULTURIST, has come to the conclusion that it is too late to protect people after they have once given over their money. We must get the crooks first. Already such agencies as the Fraud Prevention Department of the State Attorney's office, The Better Business Bureau and our Service Department, are doing what they can, to stop fraud but still the new schemes are being successfully put over every day. So, we are offering this cash reward in an effort to enlist the help of every citizen in cleaning up the crooks. Here is what we would like to have you do:

If any agent or salesman tries to sell any kind of stock to you, first, do not let him get your money until you have investigated; second, report the matter to AMERICAN AGRICULTURIST Service Bureau immediately with all details. Follow this procedure no matter what the proposition is or how good it may sound to you. It may be all right; if it is we will tell you so, but if it is not we will put all of the information into the hands of the State Attorney General, who will make an investigation and if the facts warrant, arrests will follow. If convictions are secured you will get the cash reward from the AMERICAN AGRICULTURIST.

The proposition need not necessarily be put up to you directly, only remember our condition that the attempted fraud must be against a farmer on whose farm is posted an AMERICAN AGRICULTURIST Service Bu-

reau sign. If you hear of any such salesmen in your community or county, get all of the facts and details and be sure that they are right and send them to us immediately. Remember that in doing this you are not only protecting yourself, but perhaps you are also helping to protect some poor widow or old people from untold sorrow and suffering through loss of their life-time savings. Help us clean up the crooks!

A Million Dollar Fraud

ONE of the latest schemes to sell stock of doubtful value is the promotion of the DeForest Phono-Film Corporation stock. President Coolidge has been considerably embarrassed and vexed because his name and picture has been used in connection with the film for selling this stock. It seems that the President posed for a motion picture on the lawn of the White House on the guarantee of those interested that the picture was to be used at a private dinner and never exhibited in public. This guarantee was not lived up to and the picture was given considerable public circulation all for the purpose of creating interest in the doubtful stock of the corporation.

The gullibility of the public is shown by the fact that a supersalesman of the corporation made the boast that they sold over one million dollars worth of Phono-Film stock in a brief campaign. Newspapers on the morning that this is written, report that representatives of the New York State Attorney General, Albert Ottinger, visited the office of the Phono-Film Company and ordered the books of the corporation to be sent to the Bureau of Fraudulent Stock Promotions for investigation. This will probably hold up future sales of the stock, but what about those who hold the million dollars worth of stock already sold? It seems that the public will never learn its bitter lesson.

Principal Main Thing in Making Investment

CREDIT is a good deal like a buzz saw—it can be constructive or destructive, said Professor F. A. Pearson in a recent talk at the New York State College of Agriculture.

The time to invest, said Professor Pearson, is when securities are cheap. When they are high, it is better to put the money in a savings bank, for a few months later the same number of dollars may be drawn out as were put in. Securities will probably drop in value in the same length of time.

In general, the farmer should not buy common stock in industrial corporations, according to Professor Pearson, for he is not in a position to study business conditions. The farmer is specializing in making money on the farm, and should leave the

stock market alone, for he makes a poor speculator. If he does buy shares of stock, he should buy preferred stock.

Safety Comes First

The pure investor should never look for appreciation of the security which he buys, said Professor Pearson. The dividend or the interest return is the important thing. A good investment has a low return but a high degree of stability of principal and income. Safety of principal should always come first.

Professor Pearson stated that the best investment for the farmer to make is in Liberty Bonds or federal land bank bonds, farm mortgages in the community, or in savings banks. Life insurance is a good investment for those who find it hard to save. Common stock in railroad companies or in public utilities is usually a good investment.

There is no difference in speculation and investment, except in the risk, said Professor Pearson. The farmer should not finance oil wells or wild cat ventures; he had better finance agriculture.

Investment Information

I wish you would give me some information on the following companies: Sour Lake Texas Oil Co., Hub-Wyoming Oil Company, Desdemonia Oil & Refining Company, the General Oil Co., and the Petroleum Producers Ass'n. I would like to know if the stock of any of these companies is worth anything and if it is how much.—L. A. S., N. Y.

AS to your oil stock, we have no record of Sour Lake Texas Oil. Hub-Wyoming is offered at .00¼¢ a share. Desdemonia Oil & Refining is offered at 4¢ a share. General Oil is offered at .00¼¢ a share and we have no information about Petroleum Producers Association. As we have said often before there is no way to lose more surely and more quickly than to buy stocks in oil promotions.

* * *

On Trading Stock

I have 7 shares of United Auto Stores common stock and Hackett and Fairweather of 500 Fifth Ave., New York, wrote me and said they would make special proposition in trade for them. I am writing you for advice on this matter.—H. A. Y., New York.

OUR records show that ten shares of United States Auto Stores stock were sold at auction in 1922 at \$6.00 for the lot and dealers in unlisted securities offer the shares now anywhere from \$1.25 to \$3.00 a share but there are no bids as far as we can find out. You may as well charge this unfortunate commitment to profit and loss. There is no objection to exchanging stock for anything else provided you are not asked to put up any new money. Do not do that under any circumstances. If you have new funds to invest put them into some sound, readily marketable security and leave all these promotions alone hereafter.

* * *

Invest Nearer Home

Can you tell me anything of the Bond Company doing business whose address is: Investor's Syndicate, Minneapolis, Minn. The money is supposed to be invested in second mortgages on property in Minn. The installments are paid to one of local banks. I can send the bond if necessary to have more details.—W. F. B., New York.

WE have only meager information about this Minneapolis firm, not enough to advise one way or the other. In a general way, however, we think when you have money to loan on mortgage or money to buy bonds with you ought to take something nearer home. Your bank can always recommend to you some good local first mortgage or you can buy real estate bonds of one of the reliable New York companies, such as the Prudence Company which will give you 5½ per cent and the highest degree of security.

Leaky Roofs

Made Water-tight at Small Cost

an amazingly simple way to make your leaky roofs watertight and last 10 years longer at one-fifth the cost of a new roof. 20 years use on industrial buildings all over the world prove what it will do for you.

SEAL-TITE

TRADE MARK THICK LIQUID REGISTERED

ASBESTOS ROOFING

You pour it on right over the old roof and spread it out with a roofer's brush. You do it yourself in a few hours—no labor cost—you end your roof worries for 10 years to come. Remember, Seal-Tite is not a paint.

Don't Pay for 4 Months!

We ask no pay till 4 months of sun and rain have proved all our claims. SEAL-TITE must do what we say it will or it costs you nothing. Could you make a fairer offer if you wrote it yourself?

WRITE NOW!

Our big, illustrated circular tells all about how you can turn an old, leaky roof into a new, watertight roof, at a small fraction of the cost of a new roof. What a wonderful chance to save! Don't wait for the next rain to remind you that your roofs leak. Look into this thing right now. Seal-Tite carries a positive 10-year guarantee. Send today for full details of our amazing offer. House brigades. Besides, two of them left young wives here."

"Still, I'm sure Michel is wrong about the eddy," ventured Steele, hoping to draw out the factor. "The big Pelican Whirlpool, below Lac Seul, the worst I've ever seen, always throws out the stuff sucked into it in the course of a few hours."

St. Onge lifted his heavy eyebrows in a nod of assent. "Oh, Michel is in doubt about it also, but that is what he tells the Indians. A man of parts is Michel, Monsieur. He is more than my right hand here."

"Yes, he looks like a good man. Did you notice David, Colonel?" Steele's face lighted as he mentioned his swarthy comrade.

"He seemed most intelligent," replied St. Onge, "and looks as if he could pack for a hundred over a portage, if he wished."

"He can, Colonel." Then Steele gambled with his host's curiosity. "What worries me is how to keep him from wringing Laflamme's neck when we reach Ogoké—and, aside from getting supplies, we wish to stop at Ogoké, Colonel St. Onge."

The factor was palpably interested. His narrowed eyes seemed to search those of his guest in an endeavor to read his thoughts. Then, leaning forward, elbows on table, he asked tensely:

"Why?"

"I am sorry, but that is David's secret."

"Oh, I see! It is right, then, that you do not tell. But I was curious, Monsieur, for today when we reached here, he asked at once how many days' travel it was to Ogoké Lake."

That St. Onge should be vitally interested in the man, who, by the use of whiskey, was winning the fur trade of the whole headwater country of the Wailing, was natural, but the observant Steele sensed more to the story than mere trade rivalry, in the attitude of the factor. However, he dropped the subject and returned to the lost canoe.

"It's by far the strangest case I have heard of—four men in a loaded canoe, wiped out without leaving a scrap of birchbark or a sliver of spruce as a clue, and a wonderful opportunity at first hand."

"Eighteen thousand dollars in fur!" sighed the factor, whose face was drawn and old, as they left the table.

CHAPTER III

"WILL you come with me to the trade-house, Monsieur? For a time my daughter will be busy with the dishes. Then we shall have some music. Denise?"

"If you wish," and addressing Steele she added suggestively: "It will be gay music tonight, Monsieur, I promise you, in honor of your arrival at the House of the Windigo."

"But I like your sad music, Mademoiselle," he said, "and I am clever at washing dishes, if I could be of service."

There was challenge in her black eyes as she countered: "Ah, Monsieur, but you are more clever, I fear, at concealing your thoughts."

As he walked with the factor to the trade-house he wondered precisely to what she had alluded.

St. Onge was writing a lengthy report of the situation at Wailing River to his chief at Albany, three hundred miles downstream, so Steele joined David and Michel seated beside the post canoes on the beach, smoking after-supper pipes. River and ridges and forest splashed with the yellow and gold of the turning birches were bathed in the warm glow of the long northern twilight. In front of the Indian shacks, a group of shawled women talked in hushed voices. Near them, three men, squatted on their heels, Indian fashion, conversed, heads together. No shrill shouts broke the quiet. Even the play of the dusky children seemed suppressed. Truly, thought Steele, St. Onge had not exaggerated. The air hung heavy with fear. The Indians were in a panic. Dread of the fabled Windigo had wrought its spell. At this rate it would not be long before the foxes would bark in the clearing of the abandoned post—before padded feet would roam at will in what was now

A new low Price

Delco-Light for Every Farm Home

\$195

F.O.B. DAYTON, O.

THERE is a new Delco-Light—a Delco-Light that places electricity within the reach of every farm in America. It is lower in price than any Delco-Light Plant has ever been. And it can be bought on terms so easy that no farm family need wait any longer to give its home the wonderful benefits of electric light.

All that electric light means in comfort, convenience, safety and economy is now available to the million farm homes that have always wanted electricity but have felt that its cost was too great.

An Amazingly Low Price

For months we have been working on the development of this new Delco-Light. Our years of experience as the world's largest manufacturers of farm electric plants have enabled us to design a plant that will give dependable electric light to any home. And our enormous manufacturing facilities enable us to build this plant at the lowest possible cost, and to sell it at a price that makes Delco-Light a real economy.

A Non-Storage Battery Plant—600 Watt Capacity

The new plant is a genuine Delco-Light in every respect—will light twenty-four

25-watt bulbs—is strong, sturdily built, economical in operation. It is equipped with a standard Delco starter and an economical starting battery. And its price is only \$195 f. o. b. Dayton—the lowest price and the greatest value ever offered in a Delco-Light electric plant.

Completely Installed at a Small Extra Cost

In addition to this, special arrangements have been made whereby the Delco-Light Dealer in your community will install your plant and wire your house for five lights to be located wherever you specify. You will receive with the plant five beautiful spun-brass lighting fixtures complete with bulbs.

And all of this—installation, wiring, fixtures, everything ready to turn on the lights—will cost you only \$53 in addition to the price of the plant itself.

A Small Down Payment—Balance on Easy Terms

Finally, we have arranged that this new low cost for Delco-Light, completely installed, can be paid on terms so easy

that anyone can take advantage of them. The total cost is only \$248, including freight (a little more west of the Mississippi). But you make only a small down payment. The balance is payable on easy terms, arranged to suit your convenience.

Write for Details

Never before has such an offer been made. Never before has Delco-Light cost so little and been so easy to buy. It means that any farm home—your home—can have Delco-Light today.

We want to send you the full details of this remarkable offer. Write immediately to us or to the nearest Delco-Light Distributor for full information—specifications of the plant, illustrations of the fixtures that come with it, details of our complete installation and wiring plan and the figures that show how easily you can now get Delco-Light.

Sign and mail the coupon. There is no obligation.

a home. And the girl up there—what would become of her?

"Well, David, has Michel told you of the fur canoe?" demanded Steele.

David's broad face wrinkled in a grin. Taking his pipe from his mouth, he spat deliberately before he answered with another question.

"How long we stop here?"

"I don't know. Why? Steele was interested."

"Wal, Michel an' Daveed lak to drop down to de deep strong water. We strike back in seven-eight sleep, maybe."

"What's your idea? It's not just to make another search on a mere chance of finding something. There's something else cooking under that black hat of yours."

But David was noncommittal. "We tak a look at de las' camp fur canoe made, an' shore below, for little piece."

Steele was secretly delighted at the excuse this expedition of David's would give

him for prolonging indefinitely his stay at Wailing River. As a student of Indian mythology worship of the supernatural, the probing of this mystery—the study of its effect on the post Indians—demanded his best efforts. It was a rare opportunity for an ethnologist, a student of folklore, to gather data at first hand. But over and beyond that was the riddle of this girl whose hands of an artist were now busy with the dishes up there in the factor's house.

"We have six weeks before the freeze-up, David. If St. Onge wishes Michel to go, I'm willing," he turned with a grin to the inscrutable face of Michel. "But what do you expect to find, Michel? There have been two canoes over the ground. The Windigo have swallowed canoe, fur and men."

The small eyes of the Indian snapped. "Daveed and Michel nevaire see M'sieu Windigo. We lak to hav' look at heem. Tete-Boule," with a gesture toward the

three men grouped in front of the shacks, "he hear Windigo one, two, many tam. He fin' track een muskeg—ver' beeg. But he hav' fear to tak Michel to de track. Maybe down on de beeg rapids, Daveed an' Michel shake han' wid de Windigo. Maybe we fin' he is hongree—den we feed heem—some lead." And the smile faded, while the swart features of the Indian set stiff with hate.

"Ah, ha!" thought Steele. These two old foxes have got something in their heads."

But knowing his people, he did not press them for an explanation. Later, alone with David, he would be told. So he filled his pipe and sat down.

"Michel," he asked, "why did the Revillon Frères build this place at the head of these rapids instead of up at Ogoké Lake where they could buck Laflamme, face to face, for the trade of the whole country?"

(To be continued)

A New Idea In Remodeling

HERE are some novel suggestions for progressive alterations in an old house. You can take as much or as little as you please, according to your means and your inclination. The ideas can be adapted to the remodeling of any old house.

The first step in remodeling

New porches, a larger living room, and a heavy chimney and shutters to give a colonial effect, are the principal changes.

The original house, with floor plans, is shown in the picture above. The result of the first step in remodeling is shown in the picture below. New porches have been added at the front and side. The living room is enlarged by removing the partition that formed the old rear bedroom. The approximate cost of these changes is \$600, depending of course on local costs of labor and material. It should run less than this in the country. The shutters, small-paned windows and large chimney shown in the picture are not necessary, but they add to the colonial effect. The cost of these is not included in the figure given.

Plan your alterations carefully, working them all out on paper in advance.

The second step

This is a Mt. Vernon effect, obtained by building a two-story porch across the front. The living room is enlarged and a porch opening from it through French windows is added at the side. These changes will cost about \$1200.

Now for the Next Step

THE picture below shows the third plan of alteration. The main roof is carried down across the whole front of the house to cover a wide porch.

A long dormer is built in the roof, which enlarges the front bedroom and provides them with large closets. The living room is made especially attractive with a long bay window opposite the fireplace arranged with single seats. The approximate cost of this plan of alteration is \$2,000.

Plastering Whitewashed Walls

A permanent job of papering over whitewashed or calcimined walls usually requires that the wall coats first be removed. This is a simple process with white-

The fourth plan of alteration, which costs approximately \$3,500, is shown in the illustration below. A new wing with

chimney is built at the right side of the house, containing a study or den and porch on the first floor and a bedroom above. A new staircase is built, the living room enlarged, and two bathrooms provided.

The final plan of alteration is shown in the lower right-hand corner of the page. Here a new wing is built at the left containing a kitchen, a room for the maid or hired man, a bathroom; with a large bedroom and bath on the second floor. The former kitchen is made the dining room. A breakfast porch and a living porch are also added. The approximate cost of this plan of alteration is \$4,500.

Paint and varnish are among our most useful inventions. They preserve wood and metal surfaces from decay and rust, and add to their beauty.

WE ARE always glad to help our readers with their remodeling problems. Write us what you want to do, inclosing a picture and floor plans of the old home if possible, and we may be able to offer some helpful suggestions. It pays to get all the expert advice you can before you start to build or remodel. The more thought you give to your plans the more likely you are to be satisfied with the result. It is expensive to make alterations in your plans after the carpenters are at work. It is much better to work everything out on paper beforehand, so as to avoid expensive mistakes later.

Are the Men Always to Blame?

"Inconsistency, Thy Name Is Woman"—Sometimes

By GRACE WATKINS HUCKETT

Household Editor, American Agriculturist

WHEN I stop to think about the whys and wherefores of what I see in this world, I sometimes wonder where a man's consistency is when I see certain of the results of his labor and life. For instance, why should a woman have reason to say

to me that now after twenty years of lugging in pails of water for washing and lugging the water out again, her husband had piped water into the kitchen, although there had been running water in the barn all that time? And why, too, should a man say "The missus has been after me for fourteen years to build this kitchen cupboard and shelves, and now its getting done?" He felt very pleased with himself too!

Now I know perfect-

ly well that the wives will be the first to rise up in defense of their husbands—I'd do it myself!—but the inconsistency is there just the same. Women just naturally love to be self-sacrificing and if the matter is even put to a vote, as to whether the barn or the house gets an improvement, one won't have to guess much as to where the money will go.

Someone said he could always tell what the status of a family was by comparing the house with the barn—and I'm not sure but that the man was right, only he also should have included the contents of both.

Who Earns the Living?

Would that comparison reveal all the latest machinery for farm work while the kitchen remained as it was when the young folks started housekeeping? If it is ever a draw as to whether an overhead carrier is installed in the barn or bathroom fixtures in the house, which wins? Concrete floor in the barn or linoleum in the kitchen—which? I'm not blaming the men for these conditions, for the majority of women have not only let them happen, but have encouraged them because they themselves have felt that the farm should get the first consideration, since upon it depends the family livelihood.

But I am moved to ask plainly, who earns the living on the farm anyhow? How long could the farm go on successfully without the housewife? Is she an economic asset or is she not? Then is it good economy (not to mention the human side of it) to ignore the fact that conveniences within the house are just as much a part of the working plant as those without?

It has been estimated that a farm woman would earn from three to four thousand dollars a year, if she were paid by the job, nursemaid, cook, housekeeper, laundress, and all the rest. Yet be-

cause it has not been necessary to pay cash for such services they are taken as a matter of course. Just see how fast the condition is usually remedied when the wife drops out and her duties must be performed by a paid helper!

Why Not Apply Cost Figures?

Lessons in farm management direct the farmer to charge so much per hour for his time: why not apply that to the household in reckoning costs and saving? For contribution of work counts as well as money.

Woman's work in the home is coming to be recognized more and more at its true value. Several women have had to leave homes in order to prove this: the women in business or professions have made matters easier for all. People are admitting that marriage is a business partnership as well as a sentimental one and that it should not be a one-sided partnership, at that. Certain business principles can apply in part to the home partnership as well as to business establishments.

do not cross and cause confusion. This is more apparent if two or three are working together in a kitchen, but the principle applies if only one works there.

Working equipment should be chosen to suit the work to be done and arranged in the rooms after studying out the best location for each piece. For instance, those pieces having to do with cleaning dishes should be near the sink, or those to be used in cleaning house are best located in a convenient group. In the living room those pieces of furniture whose use is related, such as reading lamp, table, easy-chair and book-shelves, should form a group, while a work basket and low chair for sewing belong within easy reach of each other.

One group too often left to take care of itself is the table, light, and comfortable chair for home study by the youngsters.

Storage Space Is a Problem

How much time and temper the youngsters are saved if only things can be found when wanted! Overcrowding of linen or clothing produce heart breaking results to an orderly soul. To put away a beautifully laundered table-cloth or doilie or to

hang up a delicate dress only to retrieve them some day a wrinkled mess, is enough to try the soul of a saint. Shelves for canned fruit, kitchen shelves closed-in from dust, enough hooks for everything that can be made to hang, cupboard space for cooking vessels so that the whole stack is not capsized when a pan is wanted, water faucets that do not drip or else require a Hercules to wrench open and shut, and so on ad infinitum—these sound trivial enough to most husband's ears, but in industry, where time and labor are synonymous with money, they would not be considered trivial.

Buying Takes a Lot of Study

The men get their ideas of when to sell farm produce by reading the papers or by the radio. Knowing when to buy is fully as valuable information, even if it is only household stuff. Best prices on white goods come at certain seasons, oranges and other citrus fruits are cheapest and best at a certain season, the fresh canned goods get into the market at certain seasons, woolen materials may

cost one price but shoddy should be less, linoleum must always be higher priced than a floor covering with a paper back—these are samples of a few market conditions which a woman must know if she is a keen buyer. Merely haggling over the price is not always clever buying, but knowing whether the article is honestly worth what is being paid for it is fundamental.

Planning Involves Dad's Promptness

Women are accused of thinking there is virtue in long hours spent over housework: Whether true or not, timing a certain job is good practice until one knows just how long to allow for it thereafter. Knowing what can be done and how long it takes enter largely into a workable plan for

(Continued on page 560)

GRACE WATKINS HUCKETT

Let the power do the work. Shortening and lightening working hours, by whatever mechanical means one can provide, means added years to "mother's" life. She needs labor saving devices as much as the man on the farm. The layout above is not the most modern but it is a step in the right direction.

The household machinery moves with much less friction if each one knows what is his responsibility and performs it cheerfully. To be sure, it requires a real diplomat and something of a general to get the orders carried out, but the practice serves as more than a mere device for getting the present work done. It trains the junior members of the partnership for their own jobs in the future and should help them in the art of "getting on" with people—a most important business asset all through life.

Good Plans and Equipment Help

The floor plan laid out well will take advantage of heat, light and fresh air, besides having no waste space. It allows "routing" the work over it so that in going back and forth at work, paths

Lest We Forget

IN these days when one holiday means just the same as any other to most people the meaning of Decoration Day is too often obscured. The individual usually plans for a day of personal enjoyment in freedom from the regular routine. This is legitimate provided he also plans not to overlook the meaning of the Day itself. It was easy during war time to form the habit of applause at parades, of talking about our patriotism of even feverish devotion to loan drives, Red Cross work, or other activities of the hour; but now that the parades are over, and the busy-ness of the multitude has turned to other channels, what has become of our devotion to those who fought our battles? The speech with which we turned aside and left the returned soldier's problems to be settled by the politicians who made a political football of such questions is far from being to our national credit.

And as for those who did not return but lie sleeping "over there", unless the bolt struck in one's immediate family, how many even pause to give the matter a second thought? Although we did our best and our contribution was great, yet our homes were not saddened to the extent of our Allies where often all the male members of the family were wiped out. To those families Commemoration Day means more than a mere holiday. It means an opportunity to honor those who gave up their most precious gift-life itself. But to those who did not suffer personal loss, it is too easy to be forgetful of the sacrifice.

In short, Decoration Day has a distinct purpose which distinguishes it from other national holidays. On that day we do honor to the nation's noble dead, whether of the late war or previous wars, and to them on this day should we dedicate our thoughts.

That Youngest Child

ONE of our friends used to remark that she thanked God that she was neither an only child nor the youngest of her family. That's putting it rather strongly, especially since many good people unintentionally fall in one class or the other. But, after all, this friend had had much opportunity to observe people under trial, since she was a physician.

What do we do to the "only or the youngest" that marks them in the eyes of the community throughout their lives? It is hard to answer, but

nevertheless we each could name several men or women thus distinguished.

In justice to our many fine friends who are "youngest or only", we must say, that there are notable exceptions to this supposed rule.

It may be that we destroy their sense of responsibility by shouldering it ourselves or by putting it upon the shoulders of the older children. We encourage selfishness too by "humoring" them and requiring the older ones to "give in" on every occasion. But, whatever we do, we make it hard for them to be self-supporting and for other people to live with them after their cunning childhood has passed.

No less than three examples of the "youngest" in mature life have been strongly before our eyes within recent years. Each of these women had been the youngest and adored daughter of large families. Now, old age facing them and with only meager funds, they are incapable of self-support and because they have been spoiled they cannot be a very welcome addition to families of their relatives.

The tragedy is that those who have loved them most have really unfitted these people for coping with life's problems—what could be a worse handicap?

How Will the Summer Be Spent?

HOW should we spend our summers if we had an absolute choice, without having to consider whether a living must be made? Sometimes I feel as if the "consummation most devoutly to be wished" would be the chance to read or sew as long as I like without interruption. At other times I believe it would be to go swimming or fishing. Yet any of these pleasures indulged in to the exclusion of everything else soon grows most wearisome.

After all, a change is what we need, and if we can't get far from home, there are few sections indeed in the East that do not permit a trip to the lake or beach or woods where the family can relax and play or rest for a while. It need not spoil a day's work even, but a supper outdoors in these long hours of daylight is fun for all—and no dishes afterwards!

Or get the neighbor women together and take turns at reading some lively story whilst each gets the weekly mending done. A sheltered porch is just made for such enjoyment.

Summer seems made for pleasure and we need to store up in our bodies a supply of sunshine to last through the many dark days of winter; so if we are inclined to begrudge ourselves the joys of summer we can be satisfied knowing that it is an economy after all because it helps to keep us well.

Herbert Quick

IN the recent death of Herbert Quick at his home in Chicago, farmers lost a real friend. Mr. Quick was one of the few writers who could paint farm life and people as they really are. He was a native of Iowa and most of his stories were about farm life and history of his own state. Our readers will well remember Mr. Quick for his fine little story, "The Brown Mouse", about the rural school, which recently ran in AMERICAN AGRICULTURIST. Other good novels written by Mr. Quick include "Vandermark's Folly" and "The Hawkeye".

To Study Cooperation

HERE is something worthwhile for those who are interested in farm organization. The American Institute of Cooperation announces a "four weeks' practical educational course in cooperation" to be held at the University of Pennsylvania from July 20 to August 15. The American Institute of Cooperation is an association of the leading farmers' organizations in America, including such organizations as the National Grange, the American Farm Bureau Federation, the National Board of Farm Organizations, the National Cooperative Milk Producers' Federation, the Federated Fruit and Vegetable Growers, the Farmers' Union, and the Sun-Maid Raisin Growers

of California. Richard Pattee, general manager of the New England Milk Producers, is chairman, and Charles W. Holman of Washington is secretary.

Some of the most famous speakers in cooperative work in both this country and Europe will address the institute and an intensive study will be made of all the different problems faced by farmers' organizations. AMERICAN AGRICULTURIST commends the idea in highest terms. What we need most in farm organizations today is more knowledge of the facts that will help each one to avoid failures and to bring about results.

Your Last Chance

THIS is your last chance to tell us about your roadside market. For the three best letters we will pay \$10 for the first prize, \$5 for the second, and \$3 for the third. If you have had any experience with a roadside market, write us a letter about it. You may win one of the prizes. Pictures are not necessary.

Also, let us remind you of our other contest, which also closes June 1st, on "The Worst Mistake I Ever Made". The prizes in this contest are \$5, \$3 and \$2 for the best letters, and \$1 for all others we publish. Letters should not be more than three hundred words in length, and names should be signed, although they will be considered confidential.

May we ask if you have begun to think about the biggest contest of all, that is, the Grange Lecturer's Program contest, for all Granges and Grange members. The prizes are \$50, \$30 and \$20, for the best suggestions for Lecturers' programs in Subordinate Granges for a series of three meetings. The rules for the contest and conditions under which the prizes will be awarded were printed in the May 23rd issue of AMERICAN AGRICULTURIST.

The Men Are Invited

IN this, the Woman's Number of the AMERICAN AGRICULTURIST, we trust that not only our feminine readers will derive benefit and pleasure, but that the sterner sex as well will be interested.

One of our readers wrote that often her husband "came across" with some suggestion or bit of news which particularly applied to her work. When she wanted to know where he heard that he said "In the AMERICAN AGRICULTURIST."

So the men *do* read our household pages and seem to find them interesting.

Go Slowly On Sweet Clover For Hay

WE occasionally receive an inquiry from a farmer regarding sowing sweet clover for hay. Sweet clover does not make a good hay crop. There are farms where it can be used to advantage for pasture purposes and for improving the soil, but it is not a satisfactory substitute for the regular hay crops, particularly for alfalfa and clover.

The acreage of alfalfa is mounting rapidly in Eastern United States, even in the acid soil counties. More and more farmers are finding that they can grow it and are coming to realize what an addition it makes to the dairy ration. Why not give it a trial this year on a small basis? Full instructions for getting started can be had from your State College of Agriculture, your County Farm Bureau Agent, or from AMERICAN AGRICULTURIST.

Aunt Janet's Chestnuts

THE methodical user of a shopping list would be hard put to it if she forgot her list and left it at home.

Jimmy met the situation, however, in a way all his own. He had been sent to the grocery by his mother to get a quart of vinegar. On the way to the store he forgot what he was sent for. But he was equal to the occasion, for going up to the grocer he pulled out the cork with a ker-plunk, slammed the jug on the counter and said, "SMELL O' THAT AND GIMME A QUART!"

What Shall We Do About Our Young Folks?

How Will They Come Through This Age of Speed and Jazz?

By E. R. EASTMAN

THE other day I sat in a first class hotel in a small upstate city. On a big settee across the lobby from me was a girl in her teens. On each side of her sat a young fellow with an arm around her. She lolled back against the settee in a too short skirt, her highly colored complexion was bought at a store, and she was smoking a cigarette. Ten years ago the hotel manager would have unceremoniously driven the girl out of the hotel. Today the incident is so common-place that no one paid any particular attention to it.

E. R. EASTMAN

A few days later, in another upstate county, I picked up a local paper and read of a raid that the sheriff of the county had just made on a local country dance hall. It seems that the place had been complained of and the sheriff went to see how things were conducted. In order to take the proprietor by surprise, he went around through the back yard and into the back door. In cars parked in the back yard, he found several young men and one young woman drunk, and when he entered the hall, he saw that at least two-thirds of the young people present—some of them from the very best families in the county—were under the influence of booze.

Young People Must Go Somewhere

A couple of months ago a young friend of mine, a lad of seventeen, was the guest at a party in a city home in Yonkers. It was a carefully selected party, but in spite of this it some way got out of control. Two or three of the boys brought liquor and several of the girls began to smoke. Some of the boys became loud and hilarious and it was necessary for the mother to send them home. The lady of the house felt so badly about it, and worried so much that she has been more or less ill ever since. Incidentally, my young friend was so disgusted that he tells me that he has not been to a party since. It is natural and right that he should attend parties once in a while but how can he and his parents, and how can the parents of other boys, feel safe when an incident like this can happen in a good home?

In any restaurant in any city one can now see many women and often young girls in their teens smoking cigarettes, lighting one from the butt of another as expertly as the most accomplished cigarette fiend.

On almost any country highway leading out of any city one can find young people in parked automobiles, busily engaged in what is known in modern parlance as "petting" or "necking" parties.

Many high school teachers and principals are worrying as never before not only about the difficulty of maintaining discipline with the young people in their charge, but what is more important, about their conduct at the various social affairs having more or less connection with the schools.

Bad in Both City and Country

I could go on, multiplying incidents like these almost without number. But what is the use? Every informed person knows that a serious situation exists among our young people. We should not fool ourselves either for it is a situation which is just as bad, in proportion to the population, in the country as it is in the city. Is it any wonder that many are beginning to think that all of the young people are headed for ruin and that the

modern world is rapidly approaching the conditions that caused the decline and fall of the great Roman Empire?

That there has been a slump in all things spiritual, a great decline in our general moral tone, both of old people and young, no one can deny. Why? What has caused it?

In the first place, there has been a great moral action following the World War. People en masse are made up of individuals; therefore, they are like individuals. When an individual is under a great nervous tension for a long period, after the tension lets up, he or she is apt to let down all the way along the line, morally, mentally and physically. If there is good stuff in the individual, he will come back again; if not, he will go straight on to ruin. Now that is exactly what has happened to the great mass of the world's people. We were keyed up to a nervous strain for years in the most terrible war of history. When the war was over, we let down. Some of

It is easier to keep the young folks interested in right things in the country than it is in the city.

us will not have the moral stamina to come back. Most of us will.

What Will Women Do With their Freedom?

The chief reason, however, in my opinion, for our present moral slackness is the emancipation of women. Few of us realize the amount of economic and personal freedom that has come to women even during the last twenty-five years. Hundreds of thousands of them, millions of them, have been forced out into the world to earn their own living and to compete with men. Used to the protection of the home for centuries, they have not at first known just how to use this freedom. It has been history that whenever any people have won their liberty after years of bondage, their first use of the new liberty has often led to license. Some races, like the Mexicans and South Americans, have not yet, even after fifty years, learned to adjust themselves to the liberty of a Republic. Even our own colonists struggled around after the Revolution in the early days of this Republic, fighting and quarreling among themselves, uncertain what to do with their liberty after they had won it. I remember the newspaper story of the rich little boy in the city of Washington who was always protected in every way. Tiring of his restraint one day he ran away and in crossing a street he was killed. An ordinary youngster of the same age would have crossed uninjured hundreds of times.

Our young women have been given a great lot of new freedom, and they have not yet learned to adjust themselves to it. If sound at heart—and a very great majority of them are—they will come out all right. A few individuals will fall by the wayside, some others will get burned, but not too seriously. Any slump, however, in the dignity or moral tone of women is serious because all the world looks to them for its ideals and standard.

Nor does this new freedom apply only to the girls. Our boys are given liberties that would make their old Puritan great grandfathers almost turn over in their graves if they knew it. Few of the boys, not having reached years of judgment, know how to use their new privileges without abusing them.

Automobile Partly to Blame

Still another cause of our moral troubles is the automobile. Public opinion of one's own friends and neighbors acts as a great restraining influence. A lot of people will do things more or less wrong among strangers and in strange communities that they never would think of doing in their home town or neighborhood, and the automobile in just a few minutes can carry these folks where none of their friends will know what they are doing, and especially where they are outside of the knowledge and control of their parents.

In the raid on the country dance hall that I have already spoken of, the sheriff found many girls and boys whose parents would have been absolutely horrified had they known that their children were attending such a place.

The automobile too may make possible more of the so-called "petting" parties, although there are those who say—and I am inclined to agree with them—that as far as this is concerned, young folks now are no different than they used to be, only John and Mary used to travel in a horse and buggy with the lines over the dashboard instead of in an automobile, and they called it "spooning" then instead of "petting" and "necking."

Lack of enforcement of prohibition is another cause of moral trouble. "Disgraceful" is the best term to apply to both people and officers for what is going on in liquor traffic. The worst of it is, the young people are the ones most affected.

Whatever the causes of the situation that exists with our modern young people, they are only important so far as they help us to find a remedy. The question is, what can we do, if anything, to help our young folks get their feet back upon the ground?

Let us say first that we will not magnify a situation by over-stating it. Perhaps I am too much of an optimist, but I have had considerable chance to study young folks, through my experience as a teacher in a country high school and working with young people in large offices, and with my own boys. I have concluded that the most of them will come through all right. Let us not forget that there never was an older generation since the beginning of time that did not think the young folks were all going to the dogs.

New Conditions Make New Problems

"When I was young, we did so-and-so" is too often a favorite expression. Maybe you did not do just what young folks do now, but you probably did something just as bad that was in keeping with the spirit of the times. New conditions produce new problems. They may not be, probably are not, worse problems, but they seem worse to us older ones because they are different. Too many of us forget that we were ever young and

(Continued on page 566)

milk and money

No wonder you want to keep dairy cows. They make your corn realize from thirty to forty per cent. more than if sold as grain. And your income from the dairy is steady—you receive it every month throughout the year.

But to make your cows pay as they should you must give them good feed and good quarters. Protect them against weather, against fire, against vermin, with concrete improvements.

Concrete, made with Atlas Portland Cement, is permanent, fire-safe, economical—and easy to keep clean and sanitary. It is desirable for barn floors, silos, troughs, milk houses and cooling tanks.

Actual money savings are made possible through the uses of concrete on the dairy farm. If you want to know more about them let us send you a free copy of "Concrete on the Farm," the Atlas book on permanent construction. It tells briefly, but clearly, how farm labor can do much of the smaller concrete work that means protection and economy to you. Use the coupon.

Are Other Fields Greener?

A Farm and Home Talk

By M. C. BURRITT

I AM not writing this as usual from

my desk in the old farm house; but from a room in a hotel in the heart of the great metropolis. I say this so no one will expect the usual kind of message. But there has been in my mind all day a thought

which I want to express if I can. It is that we ought to be more appreciative than some of us are of the privileges and joys of living in the country and more contented with our lot.

It is human nature to long for distant fields and to think the other

fellows' lot a pleasanter one. The countryman looks to the lights and the life of the city. The city man longs for the green and the freshness of the open country. One has only to be in the city on a fine spring day like today and witness the rush to the parks and the suburban highways to be convinced of the latter. There the city dweller finds the best approximation that can be provided for the open country. And one must say that this city has done remarkably well in this respect. But when he arrives, what does one find? Thousands upon thousands of others seeking to satisfy the same desire each in his one way. The roads are jammed with other cars which take most of the joy out of the ride. The playing fields are full of players each limiting the other's freedom. The water is full of boats and even the woods are full of folks. Nature and the day must be shared with everybody.

Is it selfish to want to be alone in the fields and woods? At home I could walk miles in the fields and hardly see a person. Somehow in the big city folks always seem to be in each other's way. There we only have to open the door to enjoy all the sunshine and air and open spaces we desire. Here we must travel miles in stuffy cars for a poor substitute. There we can be alone "monarchs of all we survey". Here we are limited by the needs and de-

sires of all. There we can grow our own fruit and garden "sass". Here we must buy it all and at three to four times the prices the farmer gets for it. There we can choose the environment for our children. Here it is only partially under our control.

And yet such restless mortals are we that thousands of us have gone and will continue to go to the big cities seeking after wealth and happiness. After all what is, is probably best. We all need each other. Had not so many of us come to the cities each year, had the cities grown up out of themselves (if that were possible) and from immigrants, the Complex we call Americans would have been very different. I was much interested today in a review of a book "Our Rural Heritage" by Professor James M. Williams of Hobart. He sums it up thus:

"Our rural heritage has profoundly affected our national psychology. The pioneer conditions increased the influence of women in the home and the community. So did the conditions of settled agricultural life, and this was one of the influences that made for the emancipation of women and for the final achievement of political equality. The rural attitude of austere self-restraint and the resulting rigorous standard of morality also have affected the national life, as seen in the legislation against various forms of vice. The vigorous attitude for the enforcement of law is also rural; so is our predilection for formulas and conventional phrases in thinking; so is our keen partisanship that has thus far maintained the two party system. The widely prevalent belief in special providence and the pronounced regard for the Sabbath also savor of rural life."

Surely these are worthwhile rural contributions to the city, although one must admit that many of them, particularly the standard of morality and regard for the Sabbath, are rapidly wearing off.

If our lot is cast in the country we have many reasons to be thankful for it and contented with country life. There may be less opportunity to accumulate wealth, but there is quiet and wholesome outdoor life and comparative freedom from evil influences especially desirable for the children, and plenty of room!—M. C. Burritt.

Are the Men Always to Blame?

(Continued from page 567)

a day or week. No plan should be iron-bound, but it saves much time and makes for smooth operation when all the family understand the general plan and help rather than hinder carrying it out. One home which has in it three children of school age besides other younger children would now be in a less disorganized state much of the time if the father did not so utterly disregard any regular meal hours.

Understanding

If any one item were convicted of being the cause of greatest family misunderstandings and unhappiness it would most likely be—money. Business men have learned that one of their first "articles of agreement" is to define the financial obligations or reward of each member of the firm. Strange and inconsistent as it may seem, that very item is left to rock along as best as it may in most families and occasionally with most disastrous results.

The man whose attitude is that of "giving" his wife money is not so universal as he once was. The process is now more like a division of the proceeds of their joint labor; that is as it should be.

Do You Saw Off the End of the Ham Bone?

Industry has gone so far as to take pictures of operators at work in order to find what motions were unnecessary and could be eliminated. If the worker

were inclined to argue, the picture is there to prove the case. Since I can't produce a picture of you working in your kitchen I'll merely tell a story which illustrates how most of us got our working methods.

A mother was busily sawing off the end of a ham bone; her seventeen year old daughter who was taking an interest in affairs of the kitchen and who did not see any apparent reason for this said: "Ma, why do you always do that?" The mother said "Oh, I don't know; your grandmother always did, so I do too." The girl was not satisfied with that answer, and, fortunately enough Grandmother was still living (which isn't always the case!), so the question was submitted to her. The answer was "My dear child, I never had a kettle which would hold a whole ham, so I HAD to cut off the end of the bone!"

Home Should Not Be a Factory

Furthermore, the things which really make life worth living often tend to slow up the works. A trip to the window to help Katie identify the beautiful bird in the tree outside, or an unexpected visit from a distant friend may interrupt some intricate household process, but nobody doubts for a minute which should take precedence over the other.

The real working home partnerships of husband with wife and of both parents with the children is the finest example of human relationships.

Reviewing the Markets

MILK PRICES

THE Dairymen's League Cooperative Association announces the following prices that dealers will pay the League during the last half of May for milk testing 3% in the basic zone or 201 to 210 miles of New York City. It is understood of course that the prices mentioned below are not received by the farmer but go into the pool. They are prices dealers pay the League.

These prices became effective May 18.

Class 1 Fluid Milk	\$2.33
Class 2A Fluid Cream	1.90
Class 2B Ice Cream	2.05
Class 2C Soft Cheese	2.00
Class 3A Evaporated whole milk	
Cond. whole milk	1.80
Milk for Chocolate	1.70
Class 3B Whole milk powder	...	1.80
Class 3C Hard cheese other than	
American	1.70

Class 4 prices will be based on butter and American cheese quotations on the New York market.

Sheffield Producers

The Sheffield Farms Producers announces the following prices for 3% milk in the 201 to 210-mile zone:

Class 1	\$2.33
Class 2	2.00
Class 3	1.65

Class 4 prices determined by butter and cheese quotations on the New York market.

Non Pool Cooperative

The Non-Pooling Dairymen's Cooperative announces the following prices for 3% milk in the 201 to 210-mile zone:

Class 1	\$2.23
Class 2	2.00
Class 3A	1.70
Class 3B	1.65

Interstate Producers

The Interstate Milk Producers Association (Philadelphia Price Plan), announce the receiving station prices or the price to the farmer in the 201 to 210-mile zone from Philadelphia for 3% milk is \$2.19. In the 101 to 110 mile-zone, the price is \$2.29.

BUTTER PRICES LOWER

CREAMERY	May 19	May 12	Ago
SALTED			
93 score	43 1/2c	45c	39 1/2c
92 score	42 1/2c	44c	38 1/2c
84-91 score	39-42c	40-43c	35-38c
Lower Grades	37-38 1/2c	30-40c	33-34 1/2c

The expected turn in the butter market has come and prices of all grades are lower. Stock has been arriving very freely and the trade is well supplied for the first time in two weeks. In fact, there has been some carry overs. As a result prices have been lowered to affect a better working basis. The market is easier, buyers showing more discrimination. Receivers are pushing sales to avoid accumulations in view of the quality of some goods, which are arriving. Grass flavor is much more pronounced. The accumulation is running higher than the market prefers and many buyers are discriminating against color. New York does not like a deep yellow butter.

NEARBY EGGS FIRM

NEARBY WHITES	May 19	May 12	Ago
SALTED			
Selected Extras	39-40c	38-39c	34-35c
Av'ge extras	37-38	36-37	32-33
Extra firsts	35 1/2-36	35	30-31
Firsts	34-35	31-35	26-30
Gathered	32-36	31-35	26-30
NEARBY BROWNS			
Fancy	37-38	33-38	30-33

The market has improved on nearby eggs to the extent of a full cent increase in price. This has been primarily due to the fact that supplies of Pacific Coast whites have been short and dealers who have been supplying their trade with that line of goods have had to turn to nearbys to fill their orders. This has improved the market on fancy nearbys and affect a much more satisfactory clearance. How permanent this is remains to be seen for as soon as fancy Pacific stock comes in, we see a whole lot of accumulations of nearbys. The government report of cold storage holdings in the United States shows an excess of 1,330,000 cases over last year's holdings on the same day. The New York State figures show that the cold storage holdings are almost twice as heavy as last year. There seems to be more storing of eggs in the producing sections in the interior than previous. Just what affect this is going to have

on the market, is hard to say. December options suffered shortly after the release of the report but they soon recovered and are now stronger than at any time during this season. Folks who have gone into the poultry business heavily must watch their step and figure costs closely.

FRESH CHEESE HIGHER

STATE FLATS	May 19	May 12	Ago
Held fancy	27c	26 1/2c	25c
Held. med.	26	25 1/2	23 1/2
Fresh, fancy	22	20 1/2	17 1/2
Fresh, Med.	..	19 1/2	16

Prices have advanced slightly on fancy fresh cheese. As a matter of fact the offerings of fresh cheese are very light and stocks that are coming in are of fancy quality. Practically no average run is being offered in the market at the moment. In general the cheese market in New York City is quite firm.

GRAINS AND FEEDS

FUTURES	May 19	May 12	Ago
Wheat	\$ 1.67	\$ 1.62 1/2	\$ 1.04 3/4
Corn	1.13 3/4	1.15 1/4	.77 1/2
Oats	.45 3/8	.45 3/8	.47
CASH GRAINS			
Wheat N. 2 Rd	2.08	2.04	1.23
Corn, No. 2 YI	1.34 3/4	1.37 1/2	.95
Oats, No. 2	.55	.55	.58

FEEDS	May 16	May 9	Ago
Grd. Oats	37.50	37.50	40.00
Sp'g Bran	33.50	34.00	22.50
H'd Bran	34.00	35.00	24.00
Stand'd Mids	34.50	35.00	22.50
Soft W. Mids	40.00	40.00	28.00

Red Dog	45.00	46.00	33.50
Wh. Hominy	42.25	42.25	33.00
Yel. Hominy	42.25	42.50	32.50
Corn Meal	44.50	46.00	32.00
Gluten Feed	35.75
Gluten Meal	43.75
36% C S Meal	45.50	42.00	43.25
41% C S Meal	47.00	45.00	45.50
43% C S Meal	47.00	47.25
34% O P Linseed O. Meal	43.50	40.50

The above feed prices are given for the local Buffalo feed market in straight car lots as reported by the New York State Department of Farms and Markets.

The future market on wheat experienced a considerable jump. At one time during the past week May wheat was over \$1.70. Foreign cables are very influential in affecting changes in the market, which is almost solely speculative at the present time.

FANCY BROILERS HIGHER

FOWLS	May 12	May 5	Ago
Light	26c	29-30c	28c
Heavy	25	28-29	27
BROILERS			
Colored	35-55	40-50	45-50
Leghorns	30-45	30-40	35-45

Indications are that we are going to see a pretty good market for broilers for the Decoration Day trade. This report will reach the readers too late to influence shipments. Previous issues have carried announcements of the best market days, which should be the 26th, 27th and 28th. Fancy large Plymouth Rock broilers were worth 55c on the 20th. A comparison of prices will show very clearly that it pays to fit poultry before you ship to market.

POTATO MARKET QUIET

The potato market is not as keen as it was last week, although offerings are almost on par. There has been some easing tendency of late. Arrivals however, have not been very heavy due to the fact that weather has kept yields down. Indications point to lower prices on southern goods during the next few days.

Central New York Cattle Men Reported in Shady Deals

A REPORT from the New York State Department of Farms and Markets states that the Department has information to the effect that a number of men are involved in a "cattle ring", which is carrying on shady practice with tubercular cows. The workings of the ring are said to be extensive and involve many prominent individuals. The reports have it that two veterinarians have been disqualified by the State from taking any future tests on tubercular cattle. The State is now conducting two separate investigations to determine the facts in the case. Watch next week's issue for further developments.

HUBER'S RELIABLE HATCHERY, NORTH HIGH ST. FOSTORIA, OHIO

An Instance Where Rose Bugs May Be at Work

Can you tell me what is the trouble with my baby chicks? I have had trouble now for two years. Last year I lost nearly all of my flock of 150 and this year have lost half of them. They do not droop around for 2 or 3 days. Sometimes you find several dead in a couple of hours and if they are alive do not live more than one hour and sometimes not more than five minutes. The fluff about the vent is not soiled in hardly one of the dead chicks. Sometimes the droppings are watery—a little white substance in some of the droppings, but not like diarrhea. If you find the chickens alive they are panting. Some peep furiously. Some draw their heads around to one side or backwards and flop about. Some just lie still until they are dead.

My chickens are now two weeks old. What disease have they? What is the cause and what is the remedy?
—Mrs. O. B. C., New York.

BEFORE answering this question we wish to call the attention of our subscriber that under ordinary circumstances her inquiry would not have been answered as it was received unsigned. Had she signed her name in full she would have received the information fully two weeks ago when we might have been of more immediate service. Practically all unsigned questions are relegated to the wastepaper basket. This one would have gone the same way had it not been for the circumstances and the fact that we want to use this as a means of showing folks how necessary it is that they sign their names in full and include their address.

May Be Rose Bugs at Work

Now to get down to the problem. Either the chicks are suffering from an attack of rose bugs or rose chaffers or they have a serious case of aspergillosis or brooder pneumonia. It is difficult to definitely establish a condition at long distance. The proper way to determine what is wrong is to open the birds, examine the crop and other organs. Rose chaffers will make themselves very evident in the crop. There is no outward symptoms other than the fact that the chicks emit sharp cries and the head and neck is retracted over the body of the bird. Furthermore they die from the attack of poison that the rose bugs give off in a very short time, often as soon as an hour from the time the bugs begin to work. The only internal sign is the presence of rose chaffers in the crop. If rose chaffers are found, about the only thing to do is mow the range in order that those plants on which the rose bugs live may be destroyed. In other words remove the host.

Possible Case of Brooder Pneumonia

If rose chaffers are not the cause of the condition, then there is evidently some disease in your flock which is closely associated with white diarrhoea. Aspergillosis or brooder pneumonia is a disease that has as its symptoms those similar to white diarrhoea. However, the disease is more closely associated with the chick's breathing apparatus. The lungs become clogged and the birds have difficulty in breathing. Finally the situation becomes so bad that they have difficulty in getting sufficient air into their lungs so that they begin to choke and in their distress they peep loudly.

We doubt if your birds have this disease because ordinarily they mope and are droopy for several days before death comes. The disease comes from moldy food or litter and can be handed down from the adult birds. If you are having trouble with one of those diseases which have as their common symptom white diarrhoea, we would suggest that you have your flock examined by your county agricultural agent and he will tell you whether it is worth while to keep it. Off hand, we would suggest that perhaps it would pay you another year to buy your baby chicks from new stock. Raise them in a different part from that where the old birds have been ranging and gradually get rid of the adult hens.

BABY CHIX 1925 DUX

Our chix and dux are bred from stock thoroughly hardened and acclimated to our severe and changeable climate. They are hatched on a REAL POULTRY FARM in their natural environment, only a few hours from the nests to the incubators. Less handling of the eggs and stronger chicks are the results. We are, and have been for 38 years, a Poultry Farm specializing in the best stock it is possible to produce. We are not a chicken factory; faster growth, earlier maturity and more eggs for our customers are the results.

Cooley's chicks are hatched from eggs of selected and personally supervised flocks—with egg records of 160 to 225—with exceptional pens running nearly 300 eggs per year.

Cooley chicks are strong, healthy and vigorous. They always satisfy.

50,000 customers know these facts.

Elden E. Cooley
FRENCHTOWN, N.J.

Do Not Let the Lice and Mites Get Ahead of You

AS the weather grows warmer lice and mites multiply rapidly, and if neglected will cause serious loss.

They are not hard to control, if the work is done in the right way and at the right time. We have seen cases where control was attempted after lice and mites became very numerous. One treatment at this time may possibly kill all the adults but in a few days eggs will hatch and in a short time the pests are as numerous as before.

The easiest way to control the red mite which is the fellow that infests the roosts and sucks the hens blood at night, is to paint the roosts early in the spring and again in the fall with one of several preparations. Oil that has been drained from the crank case of an automobile or tractor engine is good, but will be still better if a pint of crude carbolic acid is added to each gallon of the oil. Any of the coal tar products which are used for disinfecting will do the work just as well. Kerosene which is so commonly used is not so good, because it will not last. It is so light that it evaporates quickly.

Lice which live on the hen all the time can easily be controlled by dusting the hens twice a year with a good lice powder. A pinch of Sodium flouride, under each wing and in the fluff, the same amount of a good louse powder, or a mixture of blue ointment and vaseline equal parts, a piece the size of a pea under each wing and in the fluff, will control the lice.

The important thing is to do the work early. It will take two men nearly a day to treat four hundred hens with the louse powder.—H. L. C.

The Valley of Voices—By George Marsh

FOR a space Michel smoked, ignoring the question; then he grunted through the stem of his pipe:

"You see M'sieu Lascelles at Albany?"

"No, I stopped with the Hudson's Bay people. Why?"

"Wal, eef you see M'sieu Lascelles maybe you know why," was the reply.

"Where were you before you came here?" asked Steele.

"At Albany."

"You know him, then. But he can't be a good fur man to build here—in the bad-lands, at these Spirit Rapids of the Ojibways."

"De man who build dees pos' die. M'sieu Lascelles ees no fool; he not keep eet for fur—he keep eet—for 'noder reason." After which startling statement Michel became a sphinx to Steele's further questioning.

More than ever mystified by what he had heard, he left the men on the river shore, and rejoined his host.

In the warm candle light of the factor's quarters Steele soon lost himself in the playing of Denise St. Onge. There was no trace of the troubled eyes, of the reserve of the girl who had sat mute through the evening meal, listening to the talk of the men, in the gay creature who now conjured with her violin mad dances of the Polish and Hungarian peasants, love songs of Italy, French and German opera. Seemingly her mood of the day had fled with the sun, and the music-loving Steele sat captivated, yet puzzled, watching the violinist who played with closed eyes, oblivious of her surroundings.

Here was rare temperament, technique, training—all wasted in this wilderness. It was monstrous—inexplicable! What could have brought them here?

She ceased playing and throwing back her head, smiled through her long lashes at the American.

"You see, Monsieur, we are not always sad—my violin and I."

"It is superb, Mademoiselle—your playing," he cried impulsively, "you have appeared professionally, of course, in France?"

She shook her head, wistfully. "At the Conservatoire they had planned for me—a career, but father was coming out to Canada—and I could not have him come—alone."

"She was the favorite pupil of the great Mario," announced St. Onge, proudly, "but her love for her old father could not suffer a separation, so she is sharing with me—" the Frenchman rose and nervously paced the room, then, with a gesture of hopelessness, finished, "the loneliness and the — hell of this spirit-ridden valley."

Steele's eyes were on the fine profile of the girl as she followed her father's nervous pacing. Frankly ignoring his presence, she made no effort to conceal the solicitude pictured by her sensitive face. What a sacrifice she had made! To give up career, life—all that people, cities, civilization mean to the artist—how could St. Onge have permitted it? What a tragedy he had stumbled on at Wailing River!

"I've told David he could go down the river with Michel, sir," Steele hastened to change a too painful subject.

"They will find nothing, Monsieur."

"Has Michel told you exactly what they are going to look for, Colonel St. Onge?"

The factor stopped his pacing. "Why, what is there to seek, Monsieur, except the evidence which has escaped us?"

"Based on a familiarity with the way David's mind works, coupled with an idea of my own, my guess is that they will not spend much time following the shore."

St. Onge's black eyebrows lifted in surprise, "What do you mean; they are

going into the back country?"

"Precisely."

"What for?"

"To find a trail!"

"A trail—through the muskeg? But they couldn't get out that way. A trail leading where?"

"That's what puzzles me, Colonel."

"Oh, you are wrong! My men never stole that fur. We shall find something yet to prove they were broken up in the big rapid—"

"And then, father, it may be too late," added the low voice of Denise St. Onge.

The bronzed face of the old soldier noticeably reddened at the remark, but he avoided his daughter's eyes.

It was Greek to Steele—this innuendo, and besides, he was hungry for music. "Please, Mademoiselle, just a little more—if you are not too tired," he begged.

But the gay mood was not to be recaptured. She shook her head, put aside her bow and violin, and with chin in hand sat with brooding eyes on the bearskin rug at her feet. As the factor talked of the trade, the glance of his guest shifted constantly to the masses of the girl's hair, stray tendrils of which

If the latter, the course of the evening strong liquor had to St. Onge's presence in Canada. Then he opened abruptly:

"By keeping this post active, under the conditions here in this valley, Lascelles must have realized the chances he took. I cannot understand a fur-trader of judgment doing such a thing."

The face of the Frenchman hardened. "Why this post was built in this place, I do not know; but I do know why Lascelles sent me here." St. Onge leaned toward Steele as he repeated bitterly: "He sent me here—to ruin me."

"To ruin you?" gasped the other. "I don't understand. It is to his interest as an inspector that every post in his district should make a profit." Then he suddenly remembered the mysterious statement of Michel: "M'sieu Lascelles ees no fool; he not keep eet for fur; he keep eet for 'noder reason." That explained it; the head man knew. "But why?" pressed the curious Steele.

The factor rose and paced the floor, his hands working nervously. Turning impulsively to the man he had met but a few hours before, he exclaimed:

"Why I am telling you this, I do not know. It is an affair the most private, but I am alone with my troubles—and you are a gentleman—a man of heart. You will understand."

Steele tingled with expectancy.

"The situation in this valley deeply interests me, sir. The loss of your fur canoe—this fear of the Windigo among the Indians. As for your being kept here by Lascelles to make a failure of the trade—it is very strange. But in all this shroud of mystery which enveloped the post, what chiefly engrossed Steele's curiosity was the evident unhappiness and anxiety of Denise St. Onge and he wondered if he were now to learn its cause."

"It surprised you to hear that I was sent here to make a failure of the trade, but that is the truth," went on the factor.

"But for what reason, sir?"

St. Onge shook with emotion. "Because that *canaille* at Albany desires to marry my daughter!"

Steele wondered, now, why he had not guessed. Of course, the failure of St. Onge as a trader would put him into the hands of his superior at Albany, so he had been sent to the doomed fur post on the Wailing.

"You will leave the company, then?" he hazarded, sick with thoughts of the girl who was the stake in this mad game of Lascelles.

"I must, if I fail here. Up to this year, I have beaten him, in spite of the odds—shown a small profit. And this year, at Portage Lake, we had a good trade—better than ever before—in spite of Laflamme. But the loss of this fur canoe destroys our four years' profits. Monsieur, I am a ruined man."

There was little Steele could say. For a space St. Onge walked the floor with his bitter thoughts, then he began:

"We have been a proud family, the St. Onges. My grandfather fought under the great Napoleon. My father was killed at Sedan. We have always been soldiers, bearing an honored name, but I, the last, am unworthy of it. Cards and this," pointing to the bottle, "have done it. They lost me my old home in Touraine; my poor wife died while I was deep in the Sahara, at Lake Tchad. She is all I have left—Denise." The voice of St. Onge softened as he spoke of his daughter. Then he finished fiercely:

"Give her to that bourgeois? Never!"

Conscious of the fact that the voice of the enraged factor carried to the remotest corner of the house, the embarrassed Steele rose to check further revelations which could prove only a source of pain

(Continued on page 570)

What Happened In The Story Thus Far

BRENT Steele, an American, is travelling through the Canadian wilds for the American Museum of Natural History, collecting Indian relics and studying Indian folklore. As he approaches a fur trading post on the Wailing River, which gets its name from the monotonous moan of the treacherous rapids, Steele comes upon a beautiful girl playing a violin. He is mystified in meeting such an apparently cultured person in the wilderness. It develops she is Denise St. Onge, the daughter of a former French Army man who is head of the nearby trading post. When Steele and David, his Indian guide reach the post, they learn that the Indians in the Valley are terror stricken and on the verge of panic due to the presence of an unseen creature that prowls at the dead of night through the forests emitting blood curdling howls and moans. The Indians believe that it is the Windigo, a spirit or ghostly beast of Indian fables. As a result the post faces ruin, particularly since four of the post Indians have mysteriously disappeared during their journey to the headquarters of the trading company with a valuable cargo of furs. They left no trace. Steele is at a loss to know why the trading company has located St. Onge's post in the heart of the spirit ridden country instead of closer to the post of LaFlamme, a free trader who is illegally giving whiskey to the Indians for the furs they bring in. He learns that another Frenchman by the name of Lascelles, responsible for St. Onge's being kept at the Wailing River post in spite of the fact that it faces ruin. Steele asks St. Onge's head hunter Michel, why the post had been placed where it is. The reason comes out in this installment.

caught and held the light of the candles; to the hand of the artist, with its tapering fingers, which masked her cheek; to the trim foot, in the house moccasin, and rounded ankle; and within him was born the determination to help this girl in her secret trouble, if the aid of a stranger were possible.

Shortly, with a few words of apology, she bade them good-night.

CHAPTER IV

WITH a sigh, as she left the room, the factor went to a cupboard and produced a bottle and two glasses.

"You will honor me, Monsieur, by joining me in a glass of cognac? This, and the books, I insisted on having if I were to be exiled to this valley."

Steele poured himself a modest drink. "It is not right, Colonel, that you should squander this good stuff upon me. In a few weeks I shall be in New York, while your supply is limited."

"It is not wasted if appreciated," protested St. Onge, "but I fear you have a suspicion of it; you have hardly a taste there," and he deliberately filled his own glass, and raising it with the toast, "Your health, Monsieur, and the devil take the Windigo and their friends!" swallowed the brandy.

To Steele it was patently the act of a man possessed of an unusually strong head or else a deliberate attempt to find temporary release from a harassed brain.

some face of St. Onge. Lines multiplied about the eyes and mouth as he slouched in his chair. All trace of the soldier had vanished; in his place sat a man, broken—conquered by life.

"You have not been in Canada long?" Steele ventured, hoping that the Frenchman would now talk more freely.

"Four years. I was a year at Albany—at school, you might say, learning the ways of the trade. Then they sent me here."

"You found it hard—this life in the north—after France?"

The factor straightened in his chair. His dark eyes snapped. His face stiffened. He looked the leader of men, now. "Hard, Monsieur? I have faced hardship all my life—in Algeria, Senegal, the Sahara. It's not the hardship here, it's the humiliation, for one who has led his regiment of cavalry in two Moroccan campaigns, to receive the orders of a former sous-lieutenant."

"You mean Lascelles, at Albany?"

"Yes!" St. Onge was patently laboring under strong excitement. It seemed to Steele that a revelation was imminent, but the factor turned to the bottle. "Monsieur," he protested, "you do not flatter my cognac!"

"I am enjoying it, sir," replied Steele, pouring himself a drink to humor his host, to which he added water, for the brandy was powerful. That the cognac habit was an old story with St. Onge was evident, and the younger man wondered what relation a fondness for

Lone Scouts of America

American Agriculturist Tribe

WELL, Lone Scouts no doubt wonder what of the A. A. to do next. If you Tribe, here we are want to get the most again. We have received some fine letters from some of you, and by the time this gets to you, we expect that you will have received your pin, card and handbook

from the Long House at Chicago, and a letter from us.

The applications are still coming, and we now have nearly three hundred and fifty. We are sending the handbook and membership card to all the Lone Scouts whose applications were too late to get the pins given by us, if you were too late to get yours you can get it at any time by sending us fifteen cents, which we will forward to the Long House.

Quite a number of applications were mailed to us the first day the paper was out, but the first application we opened was that of Walter McAllister of 2813 High St., Camden, N. J.

When you get your handbook, you will

soon as you can. We can promise you that even if you do your best it will be a long time before you complete the work of a Lone Scout. It will take a long time to pass the seven degrees, and after you have passed them or while you are passing them you can work for other honors such as Tribe chief, a Lone Scout Merit Medal for contributing to Scout Publications, the title of Lone Scout Booster for getting new members or getting subscriptions to "Boys Life."

Any Lone Scout who has passed all his degree tests, and has won either the Booster Title or the title of Lone Scout Contributor may apply for admission to

Time Tested Windmill

The Auto-Oiled Aermotor has behind it a record of 10 years of successful operation. In all climates and under the severest conditions it has proven itself to be a real self-oiling windmill and a most reliable pumping machine.

An Auto-Oiled Aermotor, when once properly erected, needs no further attention except the annual oiling. There are no bolts or nuts to work loose and no delicate parts to get out of order.

There are no untried features in the Auto-Oiled Aermotor. The gears run in oil in the oil-tight, storm-proof gear case just as they did 10 years ago. Some refinements have been made, as experience has shown the possibility of improvement, but the original simplicity of design has been retained while greater perfection of operation has been achieved. The Aermotor is wonderfully efficient in the light winds, which are the prevailing ones. The self-oiled motor works with practically no friction, and the wind-wheel of the Aermotor is made to run in the lightest breeze. It is also amply strong to run safely in the strongest winds. In any condition of wind or weather you may be sure that the Auto-Oiled Aermotor will give you the best of service. It is made by the company which established the steel windmill business 38 years ago.

Perfection for Mother

TWO o'clock and the Sunday dinner's done!
Full-flavored, steaming hot, and the family's
gathered 'round!

And Mother's fresh as a daisy. Cool in temper and
temperature.

Her Perfection Oil Cook Stove has done the trick.
No smoke and dust, no ashes and litter of the old-
fashioned cooking range to steal away her hap-
piness and serenity.

Over 2,000,000 housewives know what joy of
mind, what acme of cooking—comes with the Per-
fection Oil Cook Stove.

*Less work—
no dirt*

For best results use

What Shall We Do About the Young Folks?

(Continued from page 559)

that a youngster without life and spirit will be a dead head when he gets out into the world of business. Blowing off a certain amount of steam is harmless and even necessary for the development of a live boy or girl.

Most Young Folks Have High Ideals

So I say for one thing that when you begin to get blue about the morals of the world and the young folks, get out and talk with the youngsters. If you can get their shy confidences, you will find often that under the noise and bravado there are surprisingly high ideals and a spiritual groping around for the things that are right and beautiful.

It is a hard lesson for the older generation to learn not to condemn the young folks because they may think that YOUR way of getting or doing things is old-fashioned and out of date.

Help us to remember, O Lord, that the world moves on should be our prayer and that

"New Occasions teach new duties;
Time makes ancient good uncouth;
They must upward still, and onward,
Who would keep abreast of Truth."

But while I am optimistic and have faith in the fundamental goodness of the majority of young folks, I do not minimize at all the seriousness of the situation that parents and teachers are now facing, for it is a situation which is destroying a lot of weaker individuals and bringing sorrow and unhappiness into many a home. It is a condition which makes it the most serious job of our times to help our young people, and many of our old ones to, if they are not beyond help, to a proper appreciation of the real facts of life.

Let Mother Stop Smoking

But how are we going to do it? That is the question.

First, father and mother, particularly mother, must set the example. If father brings home booze and drinks it in the presence of his children, the chances are that the boys, and maybe the girls

too, will think it perfectly all right, in fact, the proper thing to do, to drink at their parties. If mother smokes, why not daughter? And particularly, why not son? Father and mother have a right to their own lives. None of us are models and none are perfect. Yet the power of example is of more effect than all the preaching in the world.

Make Them Mind

Now maybe I am hopelessly out of date, but it seems to me that the second plank in my platform for helping the young folks should be to restore some good old-fashioned discipline. The Puritans might have been wrong about a good many things, and no doubt they went too far, but I do not think they were far wrong in their belief that "you spoil the child when you spare the rod." The situation of lax discipline that exists in the average modern home where there are several children is almost disgraceful, and none but the parents are to blame for the modern idea a lot of children have that they can do almost everything they want to without fear or hindrance.

"Train up the child in the way he should go, and when he is old he will not depart from it."

None but the mother and father are to blame either when the young people, even those children in their early teens, are out alone night after night at parties and movies with practically no restrictions on their goings and comings. Parents who allow conditions like these to exist are begging for future trouble which is almost sure to come.

My third suggestion is that all of us should make more effort to gain and keep the child's confidence. This is a job that has to be started early. One of the saddest situations in the world is when father and mother are spiritual strangers with their children, and when the boys or girls, longing for advice and counsel, seek somebody outside of the family to whom they can give their confidence. I believe that boys and girls should be taught early, as soon as they begin to show some natural curiosity, the fundamental biological facts of life. In my opinion, no one thing is a greater moral safeguard of both boys and girls than a full knowledge of the sex facts which they received early in life in a wholesome way from father and mother.

Give Them Something To Do

Another suggestion that I think would help a lot is to give the boys and girls something interesting to do. Nothing is truer than the old saying that "an idle brain is the devil's workshop". Healthy young people are possessed of almost unlimited energy; they just naturally have to be on the move nearly all of the time except when they are asleep. Nor can their interest be held if all that you suggest for them to do is hard work.

One of my associate editors just stated, as I read what I was writing to him, that he knew of a farm boy who had settled down to a general interest in things about the farm only after the father had gotten the boy interested in tinkering with the engine of the Ford car. He was a natural mechanic and this gave him an outlet for his interest and his energy.

A large number of boys throughout the country are getting a lot of fun and instruction out of the Lone Scout organization. Others earn considerable money and keep themselves interested through the long dull months of winter by trapping. Thousands of others are interested in junior project work and grow fine crops and animals under proper instruction and in cooperation with their fathers.

These things are possible on every farm. In fact, it is a thousand times easier to keep the young folks busy at interesting things in the country than it is in the city.

numbers and sizes clearly and correctly and
enclose with correct remittance in stamps
or coin (although coin is sent at own risk)
and mail to Pattern Department, American
Agriculturist, 461-4th Ave., N. Y. C.

Summer Is On The Way

With Recipes, Embroidery, and a Book Contest to Interest Everyone

(Editor's Note: The recipes given here will help to use the strawberries most temptingly after shortcake loses something of its appeal.)

Strawberry Ice Cream—One and one-half tablespoonfuls of powdered sugar, one-half cupful of hot water, one quart of strawberries, two cupfuls of whipped cream, two cupfuls of milk, one and one-half cupfuls of sugar, two tablespoonfuls of lemon juice, two eggs, and red coloring. Pick the strawberries, sprinkle over them three tablespoonfuls of the sugar, let stand in a cool place for one hour, then rub through a sieve. Make a custard with the two eggs, milk, and the remainder of the sugar. Dissolve the gelatine in the water, strain into the custard and allow to become cool, then stir into the fruit pulp, add the lemon juice, red coloring and cream. Freeze and when frozen, allow to ripen for two hours. Serve in dainty ice cups topped with a ripe strawberry.

Strawberry Pudding With Fruit Salad—One and one-half tablespoonfuls of powdered gelatine, one cupful of hot water, juice of half a lemon, three-fourths cupful of sugar, one and one-half cupfuls of mashed strawberries, and some seasonable fruits. Dissolve the gelatine in one-half cupful of the hot water, add the lemon juice, sugar dissolved in the remainder of the hot water and strawberries rubbed through a sieve. Turn into a wet ring mold and allow to become firm. Turn out when set and fill center with a mixture of seasonable fruit, such as sliced oranges, bananas, cherries and apple, sweetened with sugar to taste. Serve very cold.

Strawberry Toast—Have ready some slices of buttered toast. Mix well two level tablespoonfuls of cornstarch and one cupful of sugar. Put the mixture gradually into one cupful of boiling water, stirring constantly. Cook in a double boiler until thick and clear, boil down to one cupful, add one-quarter cupful of orange juice, and remove from the fire; stir in gently one cupful of ripe strawberries, pour over toast and serve immediately.

Strawberry Pie—Pick, wash and stew one quart of strawberries with one-half cupful of water and one cupful of sugar add one tablespoonful of butter and one teaspoonful of mixed spices, and bake until slightly browned. Or bake shells, sprinkle with sugar, and fill with ripe strawberries well sweetened, cover with whipped cream, sweetened. Or with a meringue made of sugar and juice of one-half small lemon. Set the pie in the oven to brown the meringue. Serve cold.

Strawberry Jelly—Six tablespoonfuls of powdered gelatine, one pound of strawberries, one cupful of sugar, four cupfuls of cold water, juice of one lemon, whites and shells of two eggs, one tablespoonful of strawberry extract, red coloring and whipped cream. Cut the strawberries into halves, put them into a saucepan with the water, allow them to remain for one hour, then add the gelatine, whites, and shells of eggs, lemon juice and sugar. Beat till they boil, remove the whisk, draw to one side, cover and leave for ten minutes. Strain through a hot jelly bag, add coloring and extract, pour into a wet mold, turn out when set and serve with whipped sweetened cream flavored with strawberry extract.

Strawberry Tapioca—Cook for fifteen minutes in a double boiler, one-half cupful of minute tapioca, one-half cupful of sugar, one teaspoonful of butter, and three cupfuls of hot water. Crush one pint of strawberries sweeten to taste, and let stand one-half hour. Take tapioca from the fire and stir in fruit. Set in a cool place. Serve very cold. Delicious served with whipped cream.—Miss H. A. L.

"Where the Jam Pots Grow"

EVERY housewife can make jellies of grapes, currants and crab apples—but what pride swells up in your heart when you've done the unusual thing. So let's get ready for jelly making as strawberry days are not far off and if your jars are all gone or just too fast diminishing—my

Transfer Patterns That Are Easily Worked

These transfer patterns are simple in design and would work up quickly. We suggest for the large centerpiece and scarf a cream or ecru linen with the flowers worked in bright colors and the stems and leaves in green. For the 12-inch dollie nothing is nicer than white linen with solid embroidery.

Large 36-inch centerpiece pattern 20c. each
12-inch dollie pattern 7c. each
Scarf end pattern 18 by 18 inches 10c. each

little plan will help you replenish your stock by using that extra fruit juice, peach, pineapple or even prune.

Lately we have been eating a good many oranges, just as others are doing, to help make the canned fruits last till June, at least, and those orange rinds are so useful. Next time you have six or more rinds make a boiling of orange pectin. Pare away the colored rind, using the thick inner case only. Chop it up or grind it using the coarse blade. To each pint of this pulp add one quart of cold water and let it stand for two hours. Then cook it rapidly, reducing the liquid about one-half. Strain through a good jelly bag and boil slowly for just a few minutes—then seal.

Five or six tablespoons of this pectin will serve to make jelly with one cup of fruit juices which will not jell under ordinary circumstances. Use the usual amount of sugar. The color and taste are not affected if you follow carefully the above instructions.—Montana.

Keeping Garments Fresh

NOTHING is quite so convenient for a busy country housewife as a one-piece dress of dark silk or wool material as it is 'always ready to wear.' The one objection to such a frock is that, if it is carelessly hung away in a close dark closet, it does not seem quite fresh and nice after it has been worn a few times.

The remedy for this is a thorough airing of all garments before they are hung

away after each wearing. The handiest arrangement for this that I have ever found is a small nicked towel-rack that opens out like a fan. Fasten this to a window-frame where sun and air can be admitted and I find it an ideal arrangement.

When removing a dress, slip the sleeves over two of the rack-arms and allow it to hang until well aired. If wrinkles have developed across the back of the skirt from riding or sitting, dip a whisk-brush lightly in warm water and brush the wrinkled portion; very often this will entirely remove the wrinkles without pressing. If coats are well aired after being worn they will keep nice much longer. Hung on this rack the garment does not wrinkle as it is inclined to do when placed over a chair-back for airing.—Alice M. Ashton.

What Book Has Meant the Most to You and Why?

AUNT Janet would like to know what book other than the Bible, has impressed you most in your reading and why it so impressed you? For the best letter answering this question there will be a prize of three dollars; for second best, two dollars, and third best, one dollar. Contest will close June 20th. Send your letters to Aunt Janet, care of American Agriculturist, 461 4th Ave., N. Y. C.

(Continued from page 565)

the Grand Council. Once each year the Grand Council elects members for an executive committee, the members of which are known as Council Chiefs.

You may also work for advancing the Tribe which you helped to organize. At its organization a Tribe is known as a third class Tribe. It becomes a Tribe of the second class when all the charter members, that is the members who belonged when it was formed, have passed all their degree tests. It becomes a First Class Tribe when, in addition to satisfying the requirements for second class Tribe it either has three final merit honors, no two held by the same Scout, and at least one of each kind, or two recruits who have passed all their degrees.

We are also wondering who will be the first to send us his application for a first degree badge. You will find exactly how to do this on page 18 of the handbook.

We are glad to know that we have some Lone Scouts in our territory who have been working for some time. L. S. Henry Bilton of Franklinville, N. Y., has been awarded the title of Lone Scout Organizer. L. S. Roland Hinkley, 133 Court St., Portsmouth, N. H.; L. S. Maurice Connor, 125 W. Embargo St., Rome, N. Y. and L. S. John Madore, Box 70, Hyndman, Pa., have been awarded the title of Lone Scout Boosters. L. S. Willis Hart of Cochran, Pa., was awarded a Silver medal.

L. S. G. Kenneth Greer of Maryland, has won the Gold Quill, signifying that he has earned 400 points by contributing to Scout Publications.

Our letters sent to the following boys have been returned. Will you send us your correct address.

Albert Peterson, Yates Co., M. Alexander, Jefferson Co., Roswell Long, Chautauqua Co., Walter Knapp, Tompkins Co. Names of new members next week.

TURKEY EGGS from our famous pure bred Mammoth Bronze, Bourbon Red Narragansett and White Holland flocks. You should order early. Write Walter Bros., Powhatan Point, O.

BARRONS WHITE LEGHORN CHICKS EXCLUSIVELY. We import direct from England. Catalogue free. BISHOP'S POULTRY FARM, Department A., New Washington, Ohio.

BARRED ROCKS, Parks strain direct, trapped stock, eggs from my best matings, 15, \$1.50, 100, \$8. NORTON INGALLS, Greenville, N. Y.

TOM BARRON single comb White Leghorns, the world's best layers, baby chicks, circular free. DAVID M. HAMMOND, Cortland, N. Y.

CHICKS—8c up, c. o. d. Rocks, Reds, Leghorns and mixed, 20th year, 100% delivery guaranteed. Pamphlet. Box 26, C. M. LAUVER, McAlisterville, Pa.

FOR SALE: Baby Chicks of super-quality, from culled stock, send for prices and circular. BUCHER BROS. HATCHERY, Bucyrus, Ohio, 841 W. Mary St.

TEN CHOICE BOURBON RED TURKEY eggs, five dollars, from pure bred, free range, healthy birds. GEO. LEHMAN, Amaranth, Pa.

WHITE WYANDOTTES — Regal - Dorcas Strain. Eggs from selected, heavy layers of large eggs, \$1.25-15; \$7-100. R. HILL, R. 1, Seneca Falls, N. Y.

BABY CHICKS—From pure bred selected flocks, leghorns, 10c, Rocks and Reds, 12c, mixed 8c. Live delivery guaranteed by prepaid parcel post. Free circular. BANKER'S HATCHERY, Dansville, N. Y.

JERSEY BLACK GIANTS Baby Chicks, setting eggs from pure bred, heavy laying, free range stock. BLAUVELT, Breeder, Holmdel, N. J.

EGGS—POULTRY—TURKEYS

S. C. WHITE LEGHORN chicks, 100% live delivery. Write for circular. FREE RANGE POULTRY FARM, R. 2, Richfield, Pa.

MARCY FARM STRAIN Jersey Black Giants hatching eggs, 15, \$2; 45, \$5; 100, \$10. Prepaid. H. D. PINCKNEY, Mahopac, N. Y.

BOURBON RED TURKEY eggs from large, dark red birds, extra good wing and tail markings. Yearling hens for sale. A. W. HARVEY, Cincinnati, N. Y.

CHICKS—S. C. Buff and White Leghorns, \$8—100; Barred Rocks, \$9—100; White Rocks, \$12—100; Reds, \$9—100; light mixed, \$7—100; heavy \$8—100. 100% live delivery guaranteed. Circular free. JACOB NIEMOND, McAlisterville, Pa., Box A.

CHICKS—White Leghorns, 8c; Barred Rocks, 9c; mixed, 7c. Delivery guaranteed. Order direct. Circular free. L. E. STRAWSER, Box 30, McAlisterville, Pa.

BETTER-HATCHED ANCONAS since 1917. \$13.00—100, \$3.50—25. Eggs \$2.50—30. Also White Wyandottes and Barred Rocks. Circulars. OWNLAND FARMS, Hammond, N. Y.

BABY CHICKS—B. P. Rocks, 11c; S. C. W. Leghorns, 10c; Mixed, 8c. These chicks are from healthy, high producing, free range stock, 100% live delivery guaranteed. Order from this ad or write for free circular. VALLEY VIEW POULTRY FARM & HATCHERY, R. D. No. 2, McAlisterville, Pa. N. J. Ehrenzeller, Prop.

BABY CHICKS—Reds, \$3.25—25; \$6—50; \$11—100; Rocks, \$3, \$5.50, \$10; W. Leghorns, \$2.75, \$5, \$9; Heavy Mixed, \$2.50, \$4.50, \$8; Light Mixed, \$2.25, \$4, \$7. Free range, 100% arrival guaranteed. Circular free. W. A. LAUVER, McAlisterville, Pa.

SINGLE COMB R. I. REDS: Rich, dark color; hens from breeding pens, each one Vermont certified and tested, free from white diarrhea, \$2.50. Baby Chix, after June 15, 20c; 300, \$50; 600, \$90. Circular. ASCUTNEY FARMS, AA 10, Hartland, Vt.

MIXED CHICKS, 8c; Rocks, Reds, 10c; Leghorns, 9c; Anconas, 11c; Wyandottes, Minorcas, \$11c; Langshans, 13c. CONTINENTAL HATCHERY, York, Pa.

BOURBON RED TURKEY EGGS, \$6 per doz., from purebred matured stock. Excellent layers. MRS. THURSTON SMITH, Wappingers Falls, N. Y.

WYCKOFF'S WHITE LEGHORNS—Chicks after June 1, 10c; eggs, 4c each. Satisfaction guaranteed. M. W. DEMICK, Hammond, N. Y.

COCKERELS—8 weeks old, S. C. Buff Leghorns, free range stock, 60c each. H. MABERRY, R. 2, Hammondsport, N. Y.

WHITE PEKIN DUCKS EGGS, 12—\$1.75; ducklings, 35c; White Wyandotte eggs, 15—\$1.50. Postpaid. D. WRIGHT, Bayville, N. J.

POULTRY SUPPLIES

PREVENT COCCIDIOSIS by adding coccidiosis powder to chicks drinking water or milk. Two sizes; 60c and \$1.00. Order direct. FULLER BIOLOGICAL LABORATORY, Ithaca, N. Y.

TOBACCO DUST of the highest grade for sprinkling, fumigating and worms in poultry. \$3 per 100 lb. \$40 per ton. F.O.B. N. Y. TOBACCO DUST CO., 97 Reade St., New York.

FARM IMPLEMENTS

FARM DITCH DIGGER—Build your own. For particulars write C. G. ALDEN, 225 E. Tenth Street, Erie, Pennsylvania.

RICH MAN'S Corn Harvester, poor man's price—only \$25.00 with bundle tying attachment. Free catalog showing pictures of harvester. Box 528, Salina, Kans.

FOR SALE CHEAP—18 H. P. Double Cylinder Birdsall Steam Traction Engine in fine shape. JOHN RAPPELVEY, Watkins, N. Y.

HELP WANTED

ALL men-women, 18 to 65, wanting to qualify for Government Positions, \$140-\$300 monthly, home or traveling. Write, OZMENT, 253, St. Louis, Mo.

AN UNUSUAL OPPORTUNITY. Wanted—Supervisors and salesmen with ears to sell fully equipped high class five tube radio sets direct to homes in rural districts. Sets guaranteed, easy terms, liberal commissions. Write RURAL DISTRIBUTING CO., 39 Broadway, New York City.

FIREMEN AND BRAKEMEN—Men to train for firemen or brakemen on railroads nearest their homes—everywhere; beginners \$150, later \$250; later as conductors, engineers, \$300-\$400 monthly (which position?). RAILWAY ASSOCIATION, Desk W-16, Brooklyn, N. Y.

MILKERS—Clean, dryhand milkers. Wages piecework, \$67.50 to \$90 per month, board and room. WALKER-GORDON LABORATORY CO., Plainsboro, N. J.

WANTED—Couple on farm, woman as housekeeper, man to do farm work. State wages and references. C. M. HARVEY, Blue Store, Columbia Co., N. Y.

Leaky Roofs

Made
Water-tight
at
Small Cost

Guaranteed
To Wear
10 Years

an amazingly simple way to make your leaky roofs watertight and last 10 years longer at one-fifth the cost of a new roof. 20 years use on industrial buildings all over the world prove what it will do for you.

SEAL-TITE

THICK LIQUID
ASBESTOS ROOFING

You pour it on right over the old roof and spread it out with a roofer's brush. You do it yourself in a few hours—no labor cost—you end your roof worries for 10 years to come. Remember, Seal-Tite is not a paint.

Don't Pay for 4 Months!

We ask no pay till 4 months of sun and rain have proved all our claims. **SEAL-TITE** must do what we say it will or it costs you nothing. Could you make a fairer offer if you wrote it yourself?

WRITE NOW!

Our big, illustrated circular tells all about how you can turn an old, leaky roof into a new, watertight roof, at a small fraction of the cost of a new roof. What a wonderful chance to save! Don't wait for the next rain to remind you that your roof leaks. Look into this thing right now. Seal-Tite carries a positive 10-year guarantee. Send today for full details of our amazing offer. Write TODAY!

What Readers Want to Know

Where New York Gets Its Butter Supply

MORE than one-fifth of all the creamery butter produced in the United States is shipped to the New York metropolitan district. The average daily consumption of the Port of New York district probably exceeds half a million pounds daily.

It may surprise even dairymen who realize the importance of their industry to know that the total value of the butter produced in the United States in 1921 exceeded the value of that year's cotton crop, was nearly three times the value of the nation's tobacco crop, and was relatively close to the value of the wheat crop.

Most Comes From Middle West

By far the largest part of New York's butter is shipped from great agricultural States of the Middle West. Minnesota led last year with 80,588,659 pounds. Iowa was second with 43,488,617, Illinois third with 33,537,502 and Nebraska fourth with 24,074,323. Wisconsin, Ohio, Michigan and Indiana are also important butter-producing States, though the first-named is best known for its cheese. New York State itself shipped 9,597,981 pounds to the metropolis.

Canada last year contributed some 1,827,978 pounds; imports of Canadian and other foreign butters are kept down by the duty of eight cents per pound. Creamery experts assert that if cream or milk is imported from Canada and converted into butter in this country, the duty on the cream or milk works out to practically the same as that on the butter.

What Foreign Countries Send Us

Other countries contribute to some slight extent to the butter supply of the metropolis. Last year some 390,844 pounds were received here from miscellaneous sources—for the most part Denmark, Holland, New Zealand and the Argentine. Danish butter is of high quality and is said to be equal to that made in this country, while butter from Holland is often excellent, but butter from other countries is not particularly favored by the trade.

Australia, New Zealand and the Argentine benefit from the fact that their seasons are directly opposite to ours, so that during their highest production of butter our own production is at its ebb. The chief sale of butter from these countries, however, is to Great Britain, and ordinarily we receive their butter only when the London market is over supplied.

What Is Telegony?

IT was widely believed at one time that after a female has borne young, sired by a certain male, her later offspring, sired by other males, will show characteristics derived from the first, a supposed phenomenon which has been called telegony. Such an influence could come only from a modification of the egg cells of the female by influences from the first offspring before birth, and so come under the head of the inheritance of acquired characteristics. It is even more improbable, however, as the influence of the first male must necessarily be very indirect. The most widely quoted example of this sort of influence was a case in which a mare was mated with a zebra, producing a hybrid, and later, after mating with a horse, produced a colt which had certain markings which resembled those of a zebra. This, however, was merely an isolated case. A considerable number of attempts have been made to confirm it, but with no success. The most extensive experiments were those of J. Cossar Ewart, likewise with zebras and mares. He could find no effects which could be ascribed to telegony. There was found of elegony. The theory is now considered a colt with stripes after having produced

a hybrid. However, it was found that the sire of this colt, an Arab, produced similarly striped colts from mares which had never seen a zebra.

Similar experiments with zebra crosses, also with negative results, have been carried on by the U. S. Bureau of Animal Industry. Many cases were found in which mares bore mules and horse colts successively, but no evidence could be found of elegony. The theory is now considered to be thoroughly discredited and is evidently one which need give the practical breeder no concern.

Scours in Calves and Lambs

Our calves and lambs, when two days old, get a white diarrhea and die two or three days later. We have well ventilated and clean stables for cows and feed the calves mixed clover and timothy hay silage and Tioga dairy rations. The ewes are fed on mixed hay, and about six weeks before lambing time, equal parts of buckwheat and oats for their grain. Can you tell me what would be good to give the calves or lambs, or what to give the mothers to prevent this disease?—L. W., New York.

THE disease you describe is called white scours and attacks young animals. It is supposed to be caused by a germ. We suggest you procure at your local drug store the following, and give it four times a day, one teaspoonful on the tongue: Salol, 4 ounces; powdered opium, 20 grains and bismuth sub. gallate, ½ pound. We also suggest that you scrub the floors with a caustic soda solution where the drippings have been and whitewash the stalls.

Suggests Charcoal As a Remedy

IN AMERICAN AGRICULTURIST I read Mr. E. S.'s letter on "Scours."

I am a lawyer now, but used to live and work on a farm and fed hundreds of cattle. I always found best quality of charcoal pulverized fine as wheat flour one of the very best general remedies for any kind of scours. Put it into dry feed such as bran, chop, etc., a good tablespoonful once a day until relieved. Better get willow charcoal at drugstore.

This remedy is harmless and so simple that many farmers refuse to use it because it is too common.—T. W. T., New York.

Cows Suffer from Eczema

One of my cows is suffering from a disease of the skin. The skin becomes very red and full of blood spots when rubbed and is itchy. The skin of her whole body also becomes affected.

—W. Z. S. Pennsylvania.

APPARENTLY your cow suffers from Eczema. We suggest you give the animal a saline cathartic (one-half pound of salts) and have the following prescription made by your local druggist, and apply it over the surface of the cow's body for three days: Powdered sulphate, 3 pounds; denatured alcohol, 2 pints; septic (P. D. & Co.), 4 ounces and crude oil, 2 gallons.

What Shall we do about the Young Folks

(Continued from page 566)

And lastly in my program for bringing back the moral plane, I would restore the spirit of the American home. How often it is the case, rapidly becoming more so, that the home is nothing more than a place to eat and sleep, a house and not a home in any real sense of the term. The farm home has been something of an exception to this because it is tied up so closely with the business. But even with the farm home, the automobile, the motion picture and the frequent parties—all of them good influences when not used to excess—are tending to take the young folks away too much when they might better be gathered at least a part of the time around the family hearthstone.

My own memory of long winter evenings spent with books and with my brothers and parents in the old "settling room" with its blazing wood fire is a priceless possession.

ALTERNATES—Like Milking With Hands

THE Universal Natural Milker not only duplicates the milking action of the calf, but also that of milking with hands. The Universal improved pulsator alternates—applies suction on two teats at a time, while the other two are resting and being gently massaged by the Universal perfect teat cup. Result: cows take to the Universal naturally right at the start—they don't have to be "educated" up to liking it. This is one of the reasons why so many dairymen milk their finest pure-bred cows with Universals.

Mail the coupon for full information about this better milker that will cut your milking time and labor in half.

The Valley of Voices

(Continued from page 564)

and mortification to the girl who heard them.

"It is very late, sir—we may be disturbing your daughter," and he offered his hand with a "good night!" when the pat of moccasins drew the attention of both men.

Clothed in a loose garment, caught at the waist by a Cree sash, her wayward hair in a great coil at the nape of her neck, Denise St. Onge stood in the doorway. She was a figure of peculiar beauty and dignity as she calmly said, "Father, Monsieur Steele doubtless desires to rest after a long journey. It is late."

St. Onge pulled himself together. "Pardon me, Monsieur, you are tired. Good night."

Red with confusion, Steele met the level eyes of the girl who had heard her personal affairs so intimately discussed with a stranger, and marveled to find there no humiliation, no anger, as he murmured a good night and sought his room.

There, for a time, he sat smoking, as he watched the moon drift down to the purple ridge beyond the river. The post was asleep. Not a husky stirred. From below, the muffled fret of the rapids in the gorge alone broke through the dead silence of the night. His thoughts traversed the events of the day; the meeting with Denise St. Onge; the news of the loss of the fur canoe and the panic of the post Indians; the startling revelation by the factor of what the future might hold for him and the girl downstairs. As for this fur canoe—St. Onge was palpably holding back something there. But what? And his daughter—had he told the whole story? Could it be that she had already bound herself to Lascelles, to save her father? That would account for the heartache, but not for the fear he had seen in her eyes at the rapids. Fear of whom? Would the old soldier, in spite of his protestations, allow her to sacrifice herself? This Windigo matter—what a rare chance for a first-hand study of the Ojibway superstition! What a monograph it would make for the Museum! There was certainly much to do here until they were forced to race the ice down to Nepigon.

Steele undressed and was soon asleep. Presently, from a dream in which timber wolves in full cry were running an old caribou across a frozen lake, he waked to find himself sitting upright in his cot. Through the open window the ridge over the river now loomed indigo black, masking the moon. On the flat surface of the stream stars still glittered, but the timbered shore lay blurred in shadow.

With a muttered exclamation of annoyance, the weary man again sought much-needed sleep. He was drifting swiftly into unconsciousness when out across the still valley floated a low wail. The man stirred. For a space the hush of the forest night returned. Then from the somber shoulder of the ridge rose sobbing as of a creature in torment.

Wide awake now, nerves tingling, Steele sprang to the window. The voice ceased. The man waited, expectant. Was it a trick of his senses, had he dreamed it, or— Then the eerie wail filled the night with horror, rising in wild crescendo to climax in a demoniacal shriek.

The brain of the excited and mystified man at the window was working swiftly. "Lynx," he muttered, "No! Wolverine? No, not at this time of the year. Wolf? Impossible!" Then his mouth shaped a grim smile. "The Windigo!"

CHAPTER V

STEELE strained from the window, waiting for a repetition of the wail. But the voice which had defiled the

night was hushed. From the clearing came the whimpering of awed huskies, the wolf challenge smothered in their throats. Among the dim shapes of the Indian shacks beyond the trade-house not a light flickered. They were as the houses of the dead. The post people lay in their blankets, stiff with fear. Like a shroud, panic had fallen on Wailing River.

Throwing on his clothes, the man swung from the window and dropped to the grass below. The house, also, was dark—St. Onge doubtless drugged with cognac, but she? Did she lie numb with fright, or was she gallantly struggling with the mystery?

As he approached Michel's dark shack, Steele was puzzled. Had the Iroquois and David also weakened?

But two silent shapes, carrying something in their hands, met him at the door.

"You heard it, Michel?" demanded Steele, searching the swart face of the half-breed, as they left the shack, for traces of excitement.

The features of Michel were set like stone as he said: "De Windigo get de fur cano'; now he get de pos'."

"What d'you mean?" quickly demanded Steele, fearing that the Indian in the head man had at last triumphed over his intelligence—that he, too, had succumbed to the general terror.

"Michel mean," exclaimed David, "that de Indian will leave de pos' after tonight."

The white man was relieved. These two, at least, had not been stampeded

by the nameless thing on the ridge. And then, as they reached the shore, it began again.

From the crest of the ridge came an unspeakable mewing, now strangely cat-like, now unearthly; followed by the moaning of a mangled thing in torture.

It ceased. The white man heard the rough breathing of the men beside him. Slowly the click of steel on steel marked the cocking of two rifles. Then upon the heavy silence broke the prolonged wailing of an Ojibway woman for her dead.

Rigid, the three men listened. Steele felt the slow rising of goose flesh along his spine.

The wailing climaxed in maniacal shrieks.—Again the night was soundless.

(To Be Continued)

—then **NEVER CHANGED**

We adopted the present Larro formula after long-time feeding tests under practical dairy conditions had *proved* the milk-producing, condition-building qualities of its six ingredients, when uniformly mixed in exactly the right proportion.

Every one of the millions of sacks of Larro manufactured since that time has been made from the same six ingredients—of the same high quality, combined in exactly the same proportions.

Every sack of Larro made in the future will contain exactly the same proportions of these same six materials, unless experiments and feeding tests (which we are constantly carrying on) should prove some other combination more effective in the production of milk and profit for dairymen.

There never has been and never will be, in Larro, a reduction in the amount of any ingredient and an increase in another simply to reduce costs.

Larro isn't merely a name on a bag or tag. It is the symbol of unchanging high quality in feed. It is a pledge and a guarantee that every sack bearing our trade mark may be depended upon to *be* the same and to *produce the same results*, no matter when or where it is purchased.

The SAFE Ration for Dairy Cows

What Shall We Do With Our Hay?

A Suggestion Worth Considering—A Plow Handle Talk

By H. E. COOK

I WAS out in the field today with one of our men looking to see if we could find out what the prospect was for a grass crop this year following a period of night freezes for a week. The grass is pushing up through a mulch of about one

H. E. COOK.

The plants are timothy and the three clovers.

The plants in this field are pretty well nourished but they are ideally protected and I am beginning to think that protection is a 50-50 requirement with fertility. Protection comes from allowing the second

growth to go back to the land and as much top dressing with stable manure as we can spare and more, not to let a cow's foot touch the field. The folks go wild if the cows get into the garden, but they won't do as much damage as when they get into a meadow of equal size. A permanent meadow is, or should be, a grass garden, and should have the same respect shown it.

Our wise men have told us to use short rotations. I do not know whether that is good advice for a dairyman without reservations. Of course, if the grass field is weedy and the roots are weak ones, all the field should be plowed and cultivated and reseeded and so have a right start. Such a job needs a surgeon's knife and not a courtplaster. A friend of ours has been in a hospital or under a doctor's care for several years. Last fall one leg was taken off. He looks now like a boy. Now he says we are going right, very fitting to a good many jobs.

I have believed for a long time that we should, in the East, grow more of our cattle feed, and quite naturally my thoughts have centered around the grain field. That is all right. Let's grow all

we can. But I am beginning to think that from a business and psychological point combined, we will not get far until we have gone to the limit in the growing and feeding of hay.

I know that grain growing is expensive and where the labor is not performed by the family, a good deal of extra labor will be required. This labor is demanded for a short season and the people to perform it are not in sight and they will not come just when we want them. The chances are they will be the farthest away when we want them,—April, May, June, July and August. So we just do not do it and our friends who write and lecture and philosophize, not many of them every day dirt farmers however, lay our hard times chiefly to the feed bill and probably it is true or at least it savors of truth.

All this in the face of the fact that the dairies of Northern New York would the first year, if they could get it, consume 50% more hay than they do now and a lot of them would double the first year. Hay has been without market value and we, with our year round feeding, have been crowding our cows just to get the stuff out of the way and into manure. I have been surprised to find the actual hay capacity of cows. It is common practice to get the dairy out to pasture about four weeks earlier than they should go, which poisons the pastures. They are soft and the close grazing and poaching almost puts grass out of business, but the hay is gone and what is a feller going to say? Turn them

(Continued on page 576)

Not in years have farmers begun haying with so much old hay on hand.

Zinc Insulated
American Anthony Royal
U. S. and National Fences

The Test of Time

in service on the farm under all kinds of weather conditions is the only true test by which good fence can be measured. Knowing the extra long lasting qualities of Zinc-Insulated American, Anthony, Royal, U. S. and National Fences we give this

GUARANTEE:

Our dealer will hand you with every purchase of fence our written guarantee that it will equal or outlast in actual length of service any other fence now made, of equal size wires and used under the same conditions. Any buyer who can show that it fails to do so will be supplied with an equal amount of new fence free.

Our fences have always given every user the highest degree of satisfactory service. Their quality is the result of more than 25 years of experience, with the most advanced skill of workers and progressive methods of manufacture. Improvements constantly have been added, to make them last longer and give even better service.

When you buy any of our fences from your dealer, your investment is protected with guaranteed fence service. In their making we control every process from selection of ore to the finished product. We know what our fences are and stand back of them with this unqualified guarantee, based on our past record for producing **QUALITY PRODUCTS**.

What Readers Want to Know

How They Market Sweet Corn in New Jersey

STATE statistics show that Burlington County leads New Jersey in the acreage devoted to sweet and sugar corn. It dominates the New York market during the month of July and forms the main money crop for a large number of truck farmers.

Last year the Cooperative Growers Association at Beverly shipped 80,000 sacks of green corn to New York and Brooklyn for its members, and as much more found its way to Philadelphia and other nearby cities.

The bulk of the corn crop is produced in a section along the Delaware River, midway between Trenton and Philadelphia. The area is approximately 3 miles wide and about 12 miles long. The soil is a sandy loam, very early, but dries out rapidly and a prolonged dry spell cuts the crop badly.

Start Work Early

Ground is plowed in March. A heavy rye sod, or rye and vetch, is plowed under, land is disced or harrowed, and rows are made with a Darnell marker two furrows at one time, 3 feet 6 inches to 4 feet apart.

About 500 pounds of fertilizer are spread in the furrow. Then a planting machine is hooked on behind the marking sled, discs are arranged to cover up the furrows, and planting machine runs on top of the covered furrow. Seed is planted six or seven inches apart and not over one inch deep.

As soon as corn is up, it is dressed with 600 to 1000 pounds of high grade fertilizer per acre. When it is four or five inches high it is thinned to stand from twelve to fourteen inches apart in the row.

Nitrate of Soda Used

Soil is worked to the plants until stalks are too high for further working. Nitrate of Soda, 100 to 200 pounds per acre is applied when corn is about knee high. Suckers are removed. Ears are ready for cutting from June 25th to August 1st, according to variety and season.

A sled and large box, drawn by one horse or mule, is used to gather crop. Generally, two men take two rows each, on either side of the box, thus cutting four rows at a time. The box is dumped on the head land where the packers count it into sacks, sew them across the top, attach shipping tag, and it is ready for market.

Sold in Sacks

Uniform sacks, 28x40 inches, holding from 90 to 100 ears, are used for shipping. Motor trucks load at the farm and leave the Beverly section about 5 or 6 o'clock in the evening, arriving in New York about midnight. Corn is sold on the early market and the grower has his market information by 10 o'clock the next morning.

Some growers use the regular two row corn planter in putting in the crop, while some few have made up a planting machine by using two one-row drills hung on a long axle. But the bulk of the crop is put in with a regular one row drill, as it does not pack the soil too much and comes through more readily.

Two Varieties Planted

Two kinds of seed are used; the smooth white, and the wrinkled, a true sugar variety. The smooth white seed can withstand a lot of wet, cold weather and is planted early, from March 25th to April 5th, according to the season. Most growers save their own seed and by careful handling, some extra early strains of large eared corn have been developed. The sugar variety is planted about the middle of April.

The yield varies on different farms. Eight thousand ears per acre is considered good, though many exceed that and of course some fall below. There is no doubt but that those who use fertilizer heavily produce the best crops, the largest ears and realize the most money.

As soon as ears are harvested the stalks are either plowed under, or cut up with a tractor disc. When plowed, a chain is used to drag the stalks under. Sometimes corn is followed by beans for a second crop, but whether the ground is used for a tractor disc. When plowed, a chain is most always planted, rye being chiefly used.

—W. K. HOOGSTRA.

Controlling the Brown Measuring Worm

We have a large orchard. The brown measuring worms have gotten on the trees for two or three years. They eat the leaves, blossoms and apples and leave the trees apparently dead. Do you know what to get to prevent them. If you know of any remedy please tell me what to get and where to get it and how to use it.

—Mrs. F. R., Pennsylvania.

UNDOUBTEDLY your trees have either been attacked by tent caterpillars or the spring canker worm. There is another canker worm that comes out in the fall and continues the work of the species that makes its appearance in the spring.

Arsenate of lead is the best poison to apply. You can get it at your local supply store. There are a number of different brands that are good. If you get the paste, read the directions on the can very closely for mixing it up. If you get the powder, watch the directions there, because you use different proportions.

In the use of paste you can use anywhere from 3 to 10 pounds per 50 gallon of water, depending on the way the material is made up. The arsenate of lead that is in powder form is mixed up at the rate of about 2½ pounds per 50 gallons of water. The advantage in using arsenate of lead lies in the fact that there is not enough free arsenic to burn the foliage. Paris green is another poison that is often used, but if too much of this is put on it burns the foliage.

Bands Are Effective

If you are seriously bothered with these insects, it would be a good idea to band your trees another year, about six weeks before the blossoms are due to appear. The worms work from the ground up. The life history of the worm is such that the mature worms enter the ground in the fall and remain there until spring. The female adult that emerges in the spring is wingless and she crawls up the trunk of the tree and lays the eggs. The eggs hatch out shortly after the apple leaves have unfolded. You can apply the arsenate any time now before the blossoms have fully opened, or shortly after the petals begin to fall. If you have bees it may not be well to apply poisons during the height of the blossoming season, due to the fact that the poison may have a serious affect upon them.

Growing Cucumbers for Market

ALMOST any odd patch of ground will be found suitable for a cucumber plot just so the soil is fairly fertile and not inclined to be too greatly susceptible to drought, nor on the other hand wet enough to endanger the plants drowning out. When the piece has been worked up nicely and pulverized into garden shape, the seeds should be planted and this should be about the middle of June. It is not necessary to make raised hills; quite the contrary. The ordinary surface planting will resist dry weather much better than where the ridging method is practised. A little commercial fertilizer sprinkled in the hill will make rapid growth in the young plants and increase the yield later. The rows should be made wide enough apart that the vines do not overgrow each other across middles.

I have in mind a plot of cucumbers 20 feet by 300 that were planted in just this manner. This patch brought in \$125 and had not the early frost killed the vines,

How They Farmed in 1844

New York Agricultural Society Records Reveal Cow Sales at \$15

IN February, 1832, a few progressive friends of agriculture met in Albany, and decided to form a state society for the study and promotion of agriculture, which became the New York State Agricultural Society. This society has a long list of accomplishments in the interests of agriculture to its credit. Mr. E. R. Eastman, Editor of the AMERICAN AGRICULTURIST, is now President of this society.

It is doubtful whether any authority gives a better idea of agricultural development in New York State than the reports of this society. In the report of 1844, we read that to

By CHARLES H. BALDWIN

Secretary, New York State Agricultural Society

acre of corn was \$18.64. Ninety-nine and one-half bushels of corn were harvested and, at four shillings a bushel, were valued at \$45.75.

Old Methods with New

Compare methods and values today with those of eighty years ago. Today the oxen, and many of the horses, have been replaced with tractors and motor-driven trucks; the cradle, the ox-cart, and many of the other implements are curiosities today; the farm labor, which at that time was hired for a period of eight months, or the growing season, at \$9 to \$10 per month with board, now costs \$60 a month—with a house to live in and several added privileges, such as fuel, garden, milk, fruit, potatoes, etc., and it is necessary to give employment the year round. Satisfactory farm labor is difficult to find at these wages. Much of the farm labor that was formerly done by hand or with small tools is now being done with heavy tractor-drawn machinery. A good tuberculin-tested milk cow costs from \$100 to \$125—as much as the eight cows cost in 1844—and will undoubtedly produce as much milk as eight average milk cows did at that time.

Farmers Decreased from 87% to 26%

The United States Department of Agriculture reports that "in 1820 approximately 87% of those engaged in gainful occupations in the United States were in agriculture. The percentage engaged in agriculture in 1920 was 26%." Better and improved varieties developed by our State Colleges and Experiment Stations, improved breeds of live stock, better methods of farming, and the substitution of machinery for hand labor have brought these changes about. The proportion of those gainfully occupied who are engaged in agriculture

The question is, are these changes taking place rapidly enough, and are they improving agricultural conditions? Today we have an over-production of many farm products, resulting in over-supplied markets and prices to the producer that do not bring a profit. To establish and insure sound, thrifty, permanent agriculture is the problem before the public today. Some authorities say that at the present time there is no fault to be found with the production end of the farm industry and that production problems have been solved. But the fact that government figures show the average cost of raising an acre of corn for the seven-year period 1914-1920 to be \$57.48 as

compared with \$18.64 in 1844, as reported by the State Agricultural Society, does not bear out such a statement. The fact is, that economical production adjusted to the market demands is as much of a problem today as it has ever been. For New York State, a conscientious effort on the part of every farmer to devote the same amount of labor to growing less of

This cumbersome implement is one of the old forms of horse fork. The illustration is taken from the 1855 volume of American Agriculturist and represents what was in those days an improved device.

a better quality article can be recommended. The selection of the best known varieties of field and garden crops and the best breeds of live stock are fundamental. Modern methods of culture are necessary. The cost of labor is a big item everywhere, and economical use and proper distribution of it throughout the year are production problems.

"All knowledge is lost which ends in the knowing, for every truth we know is a candle to work by."—RUSKIN.

* * *

The good education of youth has been esteemed by wise men in all ages as the surest foundation of the happiness both of private families and of commonwealths. Almost all governments have therefore made it a principal object of their attention to establish and endow with proper revenues such seminaries of learning as might supply the succeeding age with men qualified to serve the public with honor to themselves and to their country.—Benjamin Franklin.

* * *

Education is more indispensable, and must be more general, under a free government than any other. In a monarchy, the few who are likely to govern must have some education, but the common people must be kept in ignorance; in an aristocracy, the nobles should be educated, but here it is even more necessary that the common people should be ignorant; but in a free government knowledge must be general and ought to be universal.—John Adams.

This machine is what was known as Allen's Patent Mower. This illustration was taken from the American Agriculturist of May, 1855. This machine was patented in 1852 and at the time it was placed on the market it was considered the "most perfect machine yet invented."

properly stock a farm having 100 acres of improved land one should have three horses, one yoke of oxen, eight milch cows, ten steers, twenty pigs, one-hundred fifty sheep, and a flock of poultry. The cows were valued at \$15 per head, the pigs at \$3 per head, the sheep at \$2, and the other animals at correspondingly low prices. The total value of live stock was \$810. Among the implements needed for this up-to-date farm were a revolving hay rake that cost \$8, two grain cradles that cost \$4 each, a straw cutter at \$15, a root slicer at \$8, an ox-cart at \$50, and a wheelbarrow at \$4. The total value of all implements was \$437.

Labor Required on a 100 Acre Farm

As for labor, it is stated that the owner should work, as far as consistent, and that he should have two men and one boy during eight months of the year and one man during the winter. During haying and harvesting two additional day hands would be required. The men boarding themselves could be had for \$15 per month in summer, and \$12 in winter. If boarded, the cost of their meals would be deducted from this amount. The report states that the hard work of skillful farmers was bought and sold at the wages mentioned, and twelve hours' toil was cheerfully performed each day.

What It Cost to Raise an Acre of Corn

That year (1844) Mr. S. H. Knappen, of Beekmantown, Clinton County, received the first premium for the best large eight-rowed Dutton corn. It cost him \$2.25 to plow and harrow an acre; planting took one man two days and cost \$1.50; seed cost thirty-one cents; the corn was hand-hoed six times at a cost of \$4.40; interest at 7% on the land, valued at \$50, was \$3.50. The total cost of raising the

How many have ever used one of these old revolving hay rakes? This illustration was taken from the American Agriculturist of July 1846. In the description of it, the writer states that this implement can be used to good advantage "even on quite rough lands."

will doubtless be further reduced, but even when perfection has been reached in farm labor-saving machinery there will continually be a movement of population from country to city. This movement, within proper limits, should be looked upon as desirable. Without this movement from country to city, we would have entirely too many people engaged in agriculture and farm prices would be even lower than they are today.

The Cortland Cattle Scandal

THE account of the bovine tuberculosis scandal in Cortland County which we print on Page 578 of this issue will interest you. In our determination to get the exact facts on this serious situation, we sent one of our editors to Cortland County to make a personal investigation. Our representative talked with several of the official representatives of the State who are now making investigations and with many farmers. The article in this issue is a result of his visit.

While this scandal is serious, and we have no desire to minimize the unfortunate facts, there is nothing for either dairymen in general or the public to get excited about. The possible injury to the public health through these illicit transactions is not great. Some fifty cows with tuberculosis so far have been discovered which were condemned and then illegally resold back into the milk production. Suppose that there were several hundred such cows? Their production would be absurdly insignificant as compared with the production of hundreds of thousands of untested cattle in this State (there probably are at least ten thousand untested cattle in Cortland County alone) many of which undoubtedly have tuberculosis whose production is regularly going into the markets.

Let no one get the idea either that this unfortunate development in Cortland County is any argument against TB work. Rather, it is an argument for it, and the great indignation which prevails in Cortland County shows how much the general public are now concerned in cleaning up bovine tuberculosis in dairy cattle. An outstanding fact of the investigation so far shows that not a single one of these condemned animals was sold back into an accredited herd at least in Cortland County.

More progress has been made in the last few years in the campaign against tuberculosis than has been made in all the other years put together. The very size of the work made it possible for the unscrupulous and dishonest dealers to carry on their disreputable business for a short time.

If there is any possible criticism, it may be that there has not been close enough supervision of the animals from the time they are condemned until they are slaughtered. But if

men are so naturally dishonest that a policeman must be hired to stand over all of them, there would not be much of the appropriations left to carry on the cattle work. We do not believe that there are many such scoundrels in the State. One of the fine things disclosed so far is that no real farmers have been actually involved in the scandal.

The investigation should disclose and bring to justice the guilty parties. If these men are put in jail where such scoundrels belong, perhaps the whole affair will have been worthwhile as a warning to others who would not only break the laws of their state but who would endanger the lives and health of the public and of little children by selling tuberculous cattle back into milk production. Judas and his thirty pieces of silver had nothing on such outlaws.

Barnyard Golf Again

THE thousands interested in the fine old sport, barnyard golf, will be glad to know that the AMERICAN AGRICULTURIST, in cooperation with the Farm Bureaus, will conduct another big statewide tournament at the Syracuse Fair this year. So get out the old horse-shoes and go to it. Many of the Farm Bureaus will hold local county contests and the winning teams will go to Syracuse to compete for the AMERICAN AGRICULTURIST prizes and for the State championship. Full details and rules will be printed in a little later issue, but there will be few changes in the old standard rules. Therefore, there is nothing to prevent your beginning to practice up immediately.

Burritt's Fruit Forecast

NO one of course can accurately forecast a fruit crop, or anything else for that matter, but an experienced grower can foretell much from the bloom. Mr. M. C. Burritt, who makes a forecast for the fruit crop on Page 576 in this issue, is an experienced grower who does not jump at conclusions until he has all the facts to warrant them.

If you are not reading Burritt's weekly observations regularly, we think you are missing much, both in entertainment and knowledge of what is going on right out on the farm. We think Mr. Burritt is a happy combination for a regular contributor to a farm paper. In the first place, he is a practical and successful farmer doing much of his own work on a large fruit and grain farm in Western New York. In the second place, he has trained himself through long years of study and experience so that he knows the theory as well as the practical application of the science of agriculture. And then lastly, and not the least important, he can write what he knows and observes so that it is a real pleasure to read it.

What Shall We Do With So Much Hay?

NOT in years has there been so much old hay carried over as is now in the farmers' barns. The market is flooded with it and the price is extremely low. Then too, indications are for another good crop. There is no getting around the fact that consumption of hay in the big markets has rapidly declined. In our opinion, it will never come back to any great extent. The horse is fast becoming as rare on the city streets as he is on the country roads. Motor trucks are taking the place of horses, and motor trucks do not eat hay. What is the solution?

H. E. Cook, in his Plow Handle Talk in this issue, says that farmers can feed much more hay at home than they now do. The best way to sell the hay is on the hoof. We agree with this, but if it is done, there must be a gradual substitution of better feeding hay in the place of timothy. For real feeding values, even for horses, we think that timothy has been over-rated. Its one big advantage is that a timothy

sod can be held a longer time than the clovers without plowing. But it seems to us that the lessening demand for market hay is going to force the increased growing of clover, alfalfa and some other grasses in the place of timothy in the longer rotations.

The Gamble Against Destructive Storms

A FEW days ago we watched a terrific hailstorm cut off the leaves of trees until the ground was literally covered with them, and it was all done within a matter of five or ten minutes. As we watched the heavy wind and hail, we were again impressed with the chances that farmers have to take with their crops against frost, winter killing, drought, excessive moisture, floods, hot winds, winter storms and hail; all of this to say nothing of the usual animal and insect diseases and pests.

In a matter of a few minutes, we have known a hailstorm to nearly destroy a young apple orchard that a farmer had worked for years to get started. One hailstorm in Connecticut Valley can do three hundred thousand dollars' worth of damage to the tobacco crop alone.

Because of these sudden "brain storms" of Nature, many attempts have been made to start insurance companies that would cover losses to crops, but so far few of them have been successful. Either the company has to charge such large rates that the farmer cannot afford to pay them, or else one or two great storms will put the company into bankruptcy. There have been some exceptions to this, however, a notable one a mutual insurance company in Connecticut which has been protecting the tobacco growers for a matter of forty-five years, and most crops can now be protected against hail by insurance.

The whole matter of crop insurance is in its infancy. This is no doubt one of the things that will be worked out within a few years, and when it is, at premium costs which the ordinary farmer can afford, some of the gamble at least will be taken out of farming.

Eastman's Chestnuts

DO you remember the story in Coleridge's "Rhyme of the Ancient Mariner" about the poor delayed wedding guest who was caught by the Ancient Mariner and made to stop and listen to the long story about the albatross. Well, I've always had considerable sympathy for that wedding guest, for when I was a boy my brother, George Duff, insisted upon telling a story so often that I was finally driven away from home to avoid listening to it!

But it seems that I did not escape, for the other day he sent it to me in a letter. So with apologies to his friends who have had to listen to it so many times, I am reprinting it here:

A party of travelers going through New Hampshire one time noticed a farmer entering a poor hill field in the early morning equipped with a team, plow, and a gallon jug.

"What are you going to do in that worthless field?" inquired one of the tourists. "Any fool can see that it isn't worth plowing!"

"It's just idle curiosity on my part, mister," replied the farmer. "I'm a-goin' to flop 'er bottom side up and see if it's as poor on the under side as it is on top!"

Returning past the field in the late afternoon the tourists beheld the plowman crawling out of the field on his hands and knees, trailing the empty jug, too drunk to walk. They paused to have some fun with him and one of the party dismounted and started to enter the lot.

"Keep out o' here, mister, keep back out o' here!" shouted the farmer. "THIS SILE IS SO DUMMED THIN THAT I GOT SCAIRT AND DIDN'T DARE STAND UP AND WALK ON IT ANY MORE!"

What About the Farmers' Telephone?

"Land Sharks" And Other Letters In The Editor's Mail

IT REALLY looks as though cheap telephone rates for farmers are a thing of the past for the most part. The change has just come to our section if I correctly understand the situation. For twenty years or more various farmers' lines have been constructed locally to include a dozen to twenty or more members. Commonly these have not been incorporated but have been operated as partnership affairs. Neighbors knowing each other perfectly have trusted each other, have donated work and sometimes material and have managed to go along rather cheaply. Shares at the start may have been ten dollars or sometimes a little more and the 'phones perhaps cost something over twenty dollars. From thirty to forty dollars may have been the usual cost twenty years or so ago.

As other farmers' lines were completed it became necessary to bring them together in a central or centrals so that considerable territory became connected and usually villagec were connected with the same central. This made it easy to talk to the doctor and the merchant. Central fees were low at first but have increased considerably. One line that I know something about paid five dollars at one central and three dollars at the other end of the line, making the entire cost eight dollars for the whole year. As the lines became older there has been increased cost to maintain them and keep them in repair.

The Coming of the "Two Phone" System

Gradually the larger lines or something affiliated with them have gained ground in the villages and that made it necessary for the business people to maintain two phones. In many places it is said that business has gone over to the corporation lines and have brought many of the outside lines with them. This seems to place the farmers at some disadvantage. The farmers' lines can be sold at some price to the corporation and then those farmers can be accommodated with 'phones at a cost to start with of some eighteen dollars a year. Or they can get central fees at twelve dollars and continue to maintain their own lines. In either case they are facing costs rather above what many of them feel that they can afford. It is expected that the fee will be advanced after a time possibly to \$24 a year.

Farmers Are in a Quandary

Many farmers are debating what to do. Some think that they had better cut loose from town entirely and just maintain a neighborhood line on which to visit and perhaps to do some little business among themselves. It is thought that some way can be devised to get a word to a doctor, (only there is doubt of getting a doctor when he is called to go out in the country). There is talk sometimes of maintaining a separate central with various farmer lines connecting and attempt to get messages through the corporation line by payment each time when needed. This too has its drawbacks. Farmers may have to join and pay the bill or give up their chances to call any one in town, and perhaps many may have to give up the 'phone entirely. It is said to be the result of the march of progress but some doubt it. It is the march of changes.—H. H. LYON.

Editors' Note: Things always look better when we look back upon them than they really were. The new telephone service does cost more than did the old farmers' lines; but then, so does

everything else. We have had considerable experience in other days with the farmers' telephones, and we remember that they were often very unsatisfactory. With many of them it was difficult, if not impossible, a good deal of the time to get long distance calls, and farmers today do considerable long distance business over the telephone. Then the repair service on the farmers' lines was slow, when it existed at all, with the result that when a 'phone or part of the line got out of order, it was likely to stay that way for weeks. Of all the nuisances that we know of,

time I heard of him agitation had again sprung up in the new county.

I believe that the law in this State providing for the licensing of real estate dealers is a good one and should tend to cull out the dishonest dealers. The article referred to states that the law only applies to cities and picked counties. I believe most emphatically that the need of regulation exists in the rural sections as well as in the cities, and believe that the real estate licensing law should be extended to become State-wide.

I heartily commend your paper for calling this vital subject to the attention of its readers. With best regards, I am

H. B. ROGERS, Agricultural Agent
Erie Railroad Company

A Letter From the Near East

Editors' Note:—The following is a personal letter to Mr. and Mrs. Henry Morgenthau, Jr., from an American friend who is teaching agriculture in Southern Russia to Near East Relief orphans. It gives such an interesting brief glimpse of farming and agricultural education in the Near East that we thought you would enjoy reading it.

CONGRATULATIONS! Mother wrote me the other day that on your farm in Dutchess County, familiar to me for many happy memories, is a heifer that broke the world's record for milk and butterfat. Mother gives me all the figures, etc., etc., and I gasp in amazement. "Of course," says she, "this is all Greek to me, but you will understand."

I am not sure I do, it is all too wonderful. I am wondering if she is from Dutchland Somebody-or-other. Yes, I know he passed on to a Bull Heaven a while ago, but I do not remember just when.—But, Henry, if you want to see real bulls, you ought to come here. You will smile at the thought of any animal in Armenia or the Russian Caucasus being superior to the magnificent Holsteins you raise in America. But these belong to the Near East Relief and are on our 20,000-

acre ranch about twenty versts (a verst is about two-thirds of a mile) from here. They were brought from Switzerland about a year ago, and are Semental and Switz. We have six of them, about two years old, and they are—well, glorious. Some of the little calves are great. Do you know these breeds? The Semental is tawny yellow and white, very powerfully built, with very short legs, heavy shoulders and head. The Switz is much smaller, a velvety gray, short and compact and very strong. We plan to run a huge cheese making establishment in Kara Kala this spring.

The Agricultural School is here in Djalal-Oghly. We have about 600 boys and girls here, taking a two-year course in all branches of agriculture. The equipment here is very good, and we have the foundation for a good school. If only we can carry on it will be great! But everything is so precarious over here. This sounds like a bit of conceited statement to make, but the truth is our school is the only one of its kind in Russia. We have some of the best trained agriculturists from Moscow among our teaching staff, and a small but adequate equipment. We carry on: the

By J. N. Darling

the very worst is two sets of telephones in the same community or county.

Curbing Land Sharks

I RECENTLY read an article on one of your issues entitled, "Curbing the Land Sharks," by Mr. Gabriel Davidson. This article, as its name implies, expresses the need of further preventing misrepresentation and frauds in the sale of farms by real estate agencies.

Some observation along this line has convinced me that the great majority of operators in farm real estate in the State of New York are reliable and honest. However, my attention has been called from time to time to various misrepresentations in such dealings which have caused great hardships on farm purchasers.

One real estate dealer, located in a New York county, is said to have sold something over 120 farms to people coming from industrial districts. It is reported that because of dissatisfaction among the people thus located due to misrepresentation of facts about the farms purchased, this dealer moved to another county and began operations in it. The last

The too-full milk pail comes to grief

PROBABLY every farmer who ever owned a cow, has yielded to the temptation to fill the pail too full—only to have it bump against his knees, spill milk all over his feet, lose part of the contents and his temper in the bargain. A few steps saved—but much more lost!

That's like trying to save a few cents a gallon on cheap oil for your Ford. *The saving isn't worth the chance you take.* Judging your expected savings purely on a price per quart basis, the most you can save in a year is very little, perhaps \$5.00.

But price per quart is no accurate basis for figuring oil costs. Price per mile is.

With inferior or incorrect oil your price *per mile* includes the prematurely-worn rings and pistons, the burned-out bearings, the quickly-formed carbon, the loss of power, and the increased gas and oil consumption that always follows low quality lubrication.

On a price per mile basis, Gargoyle Mobiloil "E" is the cheapest oil you can buy, and it will give you that full measure of economy without spilling trouble at your feet.

In the differential of your Ford you secure the same economy by using Mobiloil "CC" or Mobilubricant, as specified in the Chart of Recommendations. For your Fordson Tractor use Gargoyle Mobiloil "BB" in summer and Gargoyle Mobiloil "A" in winter.

Vacuum Oil Company, branches in principal cities. Address: New York, Chicago, or Kansas City.

Let this sign guide you to safe economy

VACUUM OIL COMPANY

A Fruit Forecast

A Farm and Home Talk

By M. C. BURRITT

ON May 23rd apples are in full bloom throughout Western New York. Pear and plum bloom is practically all off the trees. The petals of early apple varieties are beginning to fall freely and late varieties like Northern Spy, are just open. It is now possible to give an intelligent estimate of the prospect of a fruit crop as indicated by the bloom. A good bloom does not necessarily mean a good crop, but a good crop is impossible without a good bloom. I have observed a good many orchards in this vicinity and talked with local growers and growers from other neighboring counties who have been trying to size up the possible crop. I base my estimates both on my own judgment and on that of these men I have talked with.

M. C. BURRITT

The consensus of opinion, in which I concur, seems to be that there is in prospect not over 75 per cent of an apple crop, with opinions varying from 60 to 100 per cent. Generally speaking, fall varieties are lightest this year and Baldwins heaviest. Conditions are more or less spotted which explains differences of opinion.

Baldwins Blooming Well

Dutchess and Gravenstein seem to have a fair to good bloom again except where they bore heavily last year. Wealthy are much lighter than last year. Kings are very light. Twenty-Ounce are blooming for practically a full crop. Greenings are generally only fair to light. Northern Spys and McIntosh show excellent bloom, especially the latter.

Baldwins, which count heaviest in determining the total crop, are blooming well. Many old orchards which have not borne much during the last two or three years, are full. Younger orchards too, show good bloom wherever they did not bear well last year. Trees that bore heavily last year are as usual conspicuous now because of the absence of blossoms. If there was about one-third of a crop of Baldwins last, then we might normally expect about two-thirds of a crop this year. I think there is rather more than this. Baldwin bloom is spotted and there will hardly be a full crop of this variety this year.

So far the quality of the crop appears to be excellent. Spraying has been more than usually general and well done. Weather conditions have been quite favorable to date. Unless something unusual happens, with the fruit clean to date, the crop should come through with better than usual quality.

Pears Blooming Heavily

The bloom of pears has been very heavy, more than a hundred per cent. Bartlett and Kieffer trees I have hardly ever seen so full of bloom all over the trees, spurs on the inside and even on the main limbs and out to the very tips of the branches. If they don't thin out the fruits won't be as big as hickory nuts. Clean well grown pears will be the only ones it will pay to own this fall, if fruits are in proportion to bloom.

Plums and cherries have generally bloomed well also, and it is reasonable to expect a big crop of these fruits. Peaches, though variable, more or less according to distance from the lake, blossomed better than was anticipated at first, and promise a fair crop.

The weather during blossoming time

has so far been fairly favorable, especially during the early part of the period. There has been sunshine more than 50 per cent of the time and fairly warm weather. Today it is unusually cold and cloudy. We have had two or three light rains but the trees have not been kept continually wet. Good winds have kept the air stirring but there have been no severe blows.

Looks Like Another 1922

Altogether it seems reasonable to expect another fruit crop in Western New York about like 1922. The quality ought to be rather better. Early apples will be lighter and late varieties considerably heavier.

The week has been generally fair and cool with two short rainy periods. Many thousands of acres have been plowed. Everybody has been plowing. I should say that 75 to 85 per cent of the spring plowing is done and much of it worked over. Very little corn has been planted. Nights have been cool and farmers are waiting for warmer weather. But it will be heavily planted next week. Generally, farm work is well advanced and in good shape. During the coming week the important pear spray will be made, and the after-the-petal-fall apple spray begun. Corn and potato planting will be in order. The last of the plowing of field and orchard should be done. Most farmers are driving their work instead of having it drive them this spring—a pleasant state of affairs, mostly due to Providence.—M. C. Burritt.

What Shall We Do With Our Hay?

(Continued from page One)

out, I suppose, same as last year and next year and so on to the end of our chapter. I do not mean to say that cows can eat hay enough to wholly supplant concentrates by any means, but they will eat enough to take the place of a portion of the grain feed. They will eat tons of hay to take the place of nothing. Cows are supposed to refuse hay fodder in the summer season. Most of them won't eat it because they do not get a chance. But some people say we feed silage in the summer. Now and then there is one who does it, that is all.

Cows want hay in the summer in connection with the little grass they get. If we are to feed silage at all, winter is the time. But it takes work and gumption to grow hay. Yes, I know it, and if we do not feed the after feed, what will be fed at that time? We will feed the extra hay that will grow because we have kept the cows off. "But again," says our questioner, "We will not get this extra hay until the year following." Then what,—why sell out. I know how hard it is to change long existing customs, and we will not do it all at once and if we became habited to frequent radical changes, no matter how good the principle might be, we would probably go to the bow wows, if anyone knows where that is and I will not do it myself. We can, however, make changes slowly, fitting them into our general practices always adjusting to our means. I know of no way to make improvements, either in buildings, equipment, live stock, quality of product, soils, plants or our morals without costing some new money. Water and sunshine are free, the greatest cleansing agents and yet it costs money to keep clean. I know from experience. Then why do these things, if it does not pay? Well sir, I give it up.—H. E. Cook.

GLOBE SILOS

Merit proved by time

TWENTY years and a Globe Silo is still in service. Why? They are built of the finest materials—spruce and fir. Heavy matching walls, double splines, sealed joints and adjustable doors make them absolutely air-tight. Not only now, but a generation from now. The extension roof makes a Globe Silo the cheapest per ton capacity—an exclusive Globe feature. Increases value of farm. Durable, convenient and profitable—these are the time-proved merits of a Globe. Write today for catalog and price-list; silos, tanks, ensilage cutters, stanchions, etc.

Looking Back Over My Poultry Experiences

Mrs. F. W. OWENS

Last week was the special woman's issue and we intended to run this story in view of the fact that it tells of the achievements of a farm woman in the poultry business. We are sure that our readers will be interested in the achievements of Mrs. Owens. It is a story of a slow but sure progress. One of the great mistakes made in the poultry business these days is trying to go into it too quickly without sufficient background and experience to warrant the venture.

OUR editor has asked me to give the readers of AMERICAN AGRICULTURIST a story of the development of our poultry business at Hillview Farm, which is located 2½ miles north of the village of Painted Post, N.Y. The farm consists of 151 acres about 40 acres are planted to corn, oats, potatoes and other small grains. About 50 acres are kept seeded and about 50 acres are in pasturage. A small dairy is kept and the whole milk disposed of locally. There is a piece of woodland and an orchard which slopes to the west. In this orchard the chickens are raised and the poultry houses and dwellings are located. The drainage is excellent and helps to keep the flocks healthy and vigorous.

From childhood I was always a "lover of chickens". Well can I remember fixing warm mashers to coax my father's hens to lay and the joy of finding the first egg. The fowls were as varied in color as Joseph's coat and ranged in size from a little bantam hen to a large Plymouth Rock rooster. Their home was a small coop in the basement of the barn. Here they were shut in the fall and kept until the sun had melted the snow and then they were allowed to roam at will. Winter eggs were unheard of and I do not wonder at it for the poor little hen had all she could do to live through the dark cold winter. I always helped set the hens and traded our eggs with a neighbor for Barred Plymouth eggs until the flock was quite uniform.

Good Results with Small Incubator

After a few years I persuaded my father to get a small incubator which was the wonder of the neighborhood. My results with this were very good and more than repaid me for the sleep I lost watching it nights. A year or so later I began teaching and in a few years my people left the farm. The little incubator remained in the attic until I married and came to my present home.

Here my interest in poultry revived and as soon as our new home was finished, I began to get the poultry fever again. This was in 1908. I purchased seven chickens from my sister-in-law in the fall. There were four pullets and three roosters. When the roosters were full grown I sold them for nearly enough to pay for all. We had 10 hens given to us and bought 11 more and a rooster. My husband built a 10x20 foot house and I was very happy with my flock. Just as soon as the first warm days of spring came I made preparations for baby chicks. I set some hens and brought the little incubator from the attic and set it amid the doubts and misgivings of all around me. What an anxious time the next three weeks was.

Early Efforts a Success

But in due course I was rewarded with an excellent hatch. I kept them in a box in the house until it was quite warm then we got a lamp brooder and put them out. The chicks were Barred and White Rocks and by fall I had 50 fine pullets. These pullets probably received as good care as chickens could get and soon began laying. Winter eggs were unheard of in this section then, but my pullets did not care and

One pound of Yeast will last 100 birds over 4 weeks. The cost is less than 1c per bird per month! Try a package today.

Yeast Fermentation!

Costs less than 1¢ a bird per month—
Adds dollars to your profits!

THE early bird not only gets the worm—the early heavy broiler pays the biggest profit! And the early pullet has repeatedly proved her superiority as a layer when egg prices are highest.

Fermentation of poultry feeds with Fleischmann's Pure Dry Yeast speeds up growth—and keeps the growing birds vigorous and resistant to disease!

When Yeast, dissolved in water or milk, is added to your regular poultry feed, it starts at once to ferment. After the mixture has stood from 12 to 24 hours, the whole character of the feed is changed. (When fed in a dry mash,

Yeast acts on the feed as soon as it is eaten.) The fermentation breaks down the food elements of the grain and makes them ready for easy, rapid absorption.

Fleischmann's Pure Dry Yeast can be bought in 1 lb. or 2½ lb. packages, 25 lb. cartons or 100 lb. barrels. The cost is less than 1c per bird per month! It will keep indefinitely. Full directions in every container. Your dealer should be able to supply you. If not, order direct from us—enclose check, cash or money order with the coupon below. And ask for a copy of our new poultry bulletin—it's free. The Fleischmann Company, 69 Bank Street, New York.

T B Scandal in Cortland

Who Resold Condemned Dairy Cattle?

THE resale of condemned tubercular cows in Cortland County seems to be fully as bad as first reports would indicate. Up to date Federal and State inspectors and the milk companies' Veterinarians have uncovered 50 cases where cattle branded with the T indicating that they have reacted to the tuberculin test have been resold as clean stock into dairy herds.

The branded cows are being quarantined as they are found but the milk from the other cows in the herd is accepted by the milk companies and by the New York City Board of Health. Inspector Illiston made it clear that none of the parties concerned in the investigation have any wish to inconvenience the farmers more than is absolutely necessary.

This situation directly affects three parties; the farmers who will no doubt suffer the loss of these cattle unless they can collect from dealers who sold them; the State which has already paid the indemnity on large numbers of cattle which have been fraudulently substituted for those condemned, and the consumers who have received the milk which they had every reason to believe had been closely checked by the New York City Board of Health and the inspectors of the milk companies and was therefore, perfectly healthful to use.

Scrubs Substituted for Reactors

The farmers in Cortland County seem to vent their indignation on the dealers who sold them the cattle. The State Department is not mentioning any names but it is common knowledge that at least one and probably several dealers are involved. They bought cattle which had been tested for tuberculosis, found diseased, branded with a T and a tag inserted in the ear. These cattle were taken to a farm or farms, back from the main road, the ear tags were removed and the brand was carefully greased until it healed and the hair grew so that it was concealed.

Cheap cattle were bought and substituted for the reactors which in many cases were high grade cows. They were branded and killed under supervision of the State. The tuberculous cattle were then sold to dairy farmers who owned grade herds and so were not quite as careful about investigating the past record of these animals.

Farmers Not Involved in Fraud

The evidence points to the fact that the farmers who sold condemned cows to dealers had no knowledge of the fact that they were not to be slaughtered in accordance with the law. In fact, it has been pointed out that the origin of these cows is not definitely known. They may have been tested in Cortland County or there is a chance that Cortland County dealers may have bought them from herds in adjoining counties. In any case, the owners of the condemned cows, as well as the State Department of Farms and Markets, believed that these cows had been slaughtered according to the law. The State has paid an indemnity for a large percentage of them, although recently some were found on which indemnity has not been paid. As soon as all the branded cattle in the County are found, they will be destroyed and presumably the present owners will be obliged to stand the loss.

The State Department of Farms and Markets, the New York City Board of Health, local authorities, and the milk companies operating in the county, have been cooperating during the past two months to search out these cattle. At the same time, the Deputy Attorney General, Mr. Maurice Kaman, from Albany, is gathering evidence against the guilty parties, and states very emphatically, that the evidence will be turned over to the local authorities and the guilty parties will be prosecuted regardless of who is involved.

There has been suspicion in the minds of several persons connected with the Ac-

credited Herd plan in Cortland County, that something of this sort has been going on, on a small scale, but the magnitude of it was not realized and for a long time definite proof could not be found. About two months ago, a Borden's inspector found a cow with a T brand on a farm which was delivering milk to the Borden's Farm Products Company. Since that time the investigation has been progressing quietly but it has not been known generally until recently. There are about thirty inspectors, including local authorities, State and Federal men and the milk company inspectors who have been looking over the herds of the County as rapidly as they can. One animal found, has been in the herd for at least two years, which leads to the conclusion that the fraud is of that duration at least, and probably has been practiced for a much longer time.

Farmers Are Cooperating

Mr. Fay Mott, Superintendent of the Borden plant at Cortland, stated that they are cooperating in all possible ways with the State inspectors and that the Borden's Farm Products Company intends to inspect all the dairies in central counties as soon as possible and that no doubt all dairies in the State delivering to his company will be inspected in the near future. Mr. E.V. Moore, who is County Veterinarian of Cortland County and Mr. John Illiston, who is State Inspector in charge of Accredited Herd work in Cortland County, both stated very emphatically that up to date no cows bearing the T brand had been found in any dairy, which has been under State and Federal supervision, in Cortland County. Mr. Illiston stated that the farmers of the County have been cooperating to the fullest extent in the investigation. A large number of farmers who have recently bought cattle have telephoned in, asking that their herds be inspected. In all cases farmers have been willing and ready to answer questions which have been asked them regarding the purchase of the cattle.

Farmers Innocent Victims

Only one case has been found where a farmer knew of the presence of branded animals in his herd, and this is not believed to be a part of the "ring." The other farmers have been the innocent victims of the men who sold them the cows.

The owner of one farm, where two cattle had been found branded, said that although he would feel the money loss of the animals, his principal thought was concerning the people who had been consuming the milk under the impression that it was safe to use.

The plan of the inspectors is that all branded cattle shall be temporarily quarantined, but that the milk from the remainder of the herd will not be rejected by the milk plants. Mr. Kaman stated that they had no wish to add to the troubles of the farmers more than was absolutely necessary. Although ownership of such cattle is legally sufficient for action, no action will be taken against any farmer unless it is definitely shown that he has been knowingly connected with the fraud.

Mr. H. L. Vaughn, the Cortland County Farm Bureau Agent, stated that he has not been in close touch with the accredited herd work. He has been in the County about a year and about the time he took over the duties of the office, the State Department of Farms and Markets ordered that the supervision of the accredited herd work be placed in the hands of Mr. John Illiston. Up to that time, the Farm Bureau had done educational work among its members, had helped to get an appropriation for the hiring of the County Veterinarian and had been in close touch with the actual testing, but had had nothing to do with the disposing of the reacting animals.

The farmers seem to be greatly incensed against live stock dealers, but little

WILLIAM J. DAILEY
Lexington, Massachusetts.

criticism was heard of either the local authorities or the State Department of Farms and Markets. The only criticism offered was that the State Department of Farms and Markets should have supervised the disposal of the animals much more closely than has been done. Up to date the inspectors have examined approximately fifteen hundred cows in Cortland County and have found fifty which have been branded. The plans call for the examination of the entire thirty-five thousand cows in the County.

The inspectors have been going whenever possible, either early in the morning or at night so that the cows can be examined in the barn. A flashlight is used to find whether or not there is a hole in the left ear which was made by the ear tag placed there at the time the animal was tuberculin tested and condemned. The brand on the jaw has healed so perfectly that it is necessary to clip or shave the hair in order to see it.

All Kinds of Rumors Current

There are many rumors, which may not be founded on facts. One report says that farmers who did observe the brand when buying the cows were in some instances told that it meant the cattle came from Texas and in other cases, that it meant the cattle had been tested. Several instances are known where dealers have made attempts to regain possession of animals after the investigation started. One dealer regained possession of two cows by telling the farmer that he had discovered there was a chattel mortgage on them and that he would get into trouble unless they could be returned. Very shortly after they had left the place, the State inspectors telephoned that under no circumstances was he to let these cattle go.

Another report says that several animals were found running loose on the main highway and no one could be found who would claim ownership to them. Still another report has it that one farmer missed the ear tag which he casually noticed when buying the cattle and assumed that it was a T. B. tag which the dealer remembered and removed during the night.

The people in Cortland County have also changed their habits of diet. A salesman for a packing house says that there is absolutely no sale for beef in Cortland and that the demand has caused a raise in the price of pork.

It is rumored that evidence has been gathered which will lead to the indictment of at least four, and possibly six people. Deputy Attorney General Kaman is looking for evidence regarding the means by which the conspiracy was carried out, the identity of the guilty persons and the facts as to what extent the public health has been endangered. He is not making the evidence public as yet. Look for another story about this situation next week.

A Letter from the Near East

(Continued from page 575)

project system the way they do in Hampton, and the children seem to like the work a lot. There are four Americans here at this Post, and each one heads up one branch of the work. I am in charge of the Animal Husbandry and have one building given over for a Demonstration Stable. I have worked out an Elementary course for my children. They have breeding, and feed, care and management, butter and cheese making, etc. When they finish the course with me, the boys go to the Ranch where they have two months of practical work in all stables.

It is a very beautiful place I have been transferred to now. I think I wrote you of the barrenness of Alexandropol, now by the way, called Leninakan. It was difficult to farm there. The climate here is lovely in the fall and spring, although with many rainy days, and mud that sticks as no mud ever thought to stick in Dutchess County! The trees, flowers and all vegetation grows amazingly as a result however, and makes the whole place beautiful.—Phyllis Brown, Djalal-Oghly.

A Milker With Long Tubes Cannot Possibly Be "Easy to Clean"

4 of these—the only Rubber to wash

The Surge has No Long Tubes—No Claws

It is possible to wash any machine—even to make clean milk with it. But no machine with long milk tubes is EASY to keep clean—and no advertising or selling talk can make it so.

It's a long hard job to clean long milk tubes, milk claws and complicated teat cups. If you take enough time to do it right, you might as well go back to hand milking. Thousands of farmers have done that very thing.

To produce clean milk, a machine must be washed clean after every milking—not simply rinsed and dumped into a strong sterilizing solution. You can't buy any magic compound that will take the place of thorough washing. It takes a clean machine to produce clean milk; don't let anybody tell you different.

A salesman may say, "Easy

to clean", but why should you take anyone's word for it, when it's so easy to find out for yourself? Why buy any machine until you try taking it apart, washing it, and putting it together again, yourself? Do that and then judge from your own experience whether or not it is "Easy to clean."

We are glad to give you a chance to make this test of the Surge—so you can see how easy it is to clean a milker that has no long tubes—no claws, and a teat cup that you can jerk apart in half a second. Ask the other fellow to give you the same chance at his machine. Get the full FACTS. Then if you want to spend a lot of time every day, washing long tubes and fussing with teat cups, go ahead. That's your business. But it is only horse sense to know what you're up against before you buy.

Free Demonstration In Your Own Barn

Instead of claims and promises, we offer PROOF. Write us at once for our free demonstration offer—the like of which was never made before in the milker business. If you are the first man in your community to write, we have an extra special offer to make you. **Write Today!**

Reviewing the Latest Eastern Markets

MILK PRICES

THE Dairymen's League Cooperative Association announces the following prices that dealers will pay the League during the first half of June for milk testing 3% in the basic zone or 201 to 210 miles of New York City. It is understood of course that the prices mentioned below are not received by the farmer but go into the pool. They are prices dealers pay the League.

These quotations are subject to change between time of publication and mailing due to conditions in the market.

These prices became effective May 18.

Class 1 Fluid Milk	\$2.33
Class 2A Fluid Cream	1.80
Class 2B Ice Cream	1.95
Class 2C Soft Cheese	1.90
Class 3A Evaporated whole milk	
Cond. whole milk	1.80
Milk for Chocolate	1.70
Class 3B Whole milk powder	1.80
Class 3C Hard cheese other than American	1.70

Class 4 prices will be based on butter and American cheese quotations on the New York market.

Sheffield Producers

The Sheffield Farms Producers announces the following prices for 3% milk in the 201 to 210-mile zone:

Class 1	\$2.33
Class 2	2.00
Class 3	1.65

Class 4 prices determined by butter and cheese quotations on the New York market.

Non Pool Cooperative

The Non-Pooling Dairymen's Cooperative announces the following prices for 3% milk in the 201 to 210-mile zone:

Class 1	\$2.23
Class 2	2.00
Class 3A	1.70
Class 3B	1.65

Interstate Producers

The Interstate Milk Producers Association (Philadelphia Price Plan), announce the receiving station prices or the price to the farmer in the 201 to 210-mile zone from Philadelphia for 3% milk is \$2.19. In the 101 to 110 mile-zone, the price is \$2.29.

LITTLE CHANGE IN BUTTER

CREAMERY	May 26	May 19	A Year Ago
SALTED			
93 score	43-43½c	43½c	40c
92 score	42½c	42½c	39c
84-91 score	39-42c	39-42c	34-38½c
Lower Grades	37-38½c	37-38½c	33c

There is little or no change in the butter market since last week's report. During the week ending May 23 there was a sharp downward turn when fanciest marks of butter dropped to 41c on 92 score. This was primarily due to heavier receipts from interior points which shipped this way on account of more satisfactory prices. Advices from all producing sections indicate that there is a heavy increase in the make and this will undoubtedly be reflected in next week's report. Much of the business at the present is going immediately into current consuming channels. Retail prices have been adjusted so that more butter is going in this direction. As yet there is little disposition to store butter partially because a considerable percentage of receipts have been grassy. The drop in the market was only temporary for with lower prices buyers took firmer hold and by the 23rd quotations were again up to those of the week previous. The present situation in the butter market and in the producing field is such that it is practically impossible to make any definite statements about the trend. Operators do not look for much lower prices for a while at least. As a whole there is a much larger percentage of high scoring butter than has been arriving heretofore and these goods are the basis of most of the business.

FRESH CHEESE STILL FIRM

STATE FLATS	May 26	May 19	A Year Ago
Held fancy	26½-27c	27c	24-25c
Held, average	26c	26c	23-23½c
Fresh, fancy	22-23c	22c	17-17½c
Fresh, av'ge	21-21½c		16c

The market is still holding firm on fresh cheese. As a matter of fact quotations have reacted upward so that now fancy fresh cheese is worth from 22 to

23c. Trading has been satisfactory. As yet our prices are relatively low compared with Wisconsin fresh daisies. In fact, the up-state market seems to be stronger than the city market for several sales have been reported above a parity with New York City. In New York State the market has been affected somewhat by the further reduction in the price of milk going into the fluid trade.

EGG PRICES THE SAME

NEARBY WHITES	May 26	May 19	A Year Ago
Selected Extras	39-40c	39-40c	33-35c
Av'ge extras	37-38	37-38	31-33
Extra firsts	35½-36	35½-36	28-30
Firsts	34-35	34-35	27
Gathered	32-35	32-36	25-30

NEARBY BROWNS

Fancy	37-39	37-38	30-33
-------	-------	-------	-------

There is no change in the price of nearby eggs compared with last week. Receipts are fairly liberal. In some stores it is a little heavier than distributing trade will absorb readily. In such cases fancy packs are going into the cold storages rather than at a concession in price. Incidentally the storage situation is going to give somebody something to worry about next fall and winter. Cold storage holdings are considerably over a million cases heavier than at the same time last year. Many of these eggs in storage have been placed there at offerings ranging from 38 to 40c. In fact some storage packed eggs have been put into the freezers at 42c. Next fall and winter some of these storage eggs may be taken out at a loss, especially if there are lots of nearbys. It is a situation that will take a whole lot of study. The man who sells well graded fancy nearby stock has nothing to fear. The experiences of 1923 are still fresh in the memory of some who at that time put eggs away at too high a price when the supply was more than the demand.

LIVE POULTRY MARKET UNSTEADY

FOWLS	May 26	May 19	A Year Ago
Light	28c	26c	29c
Heavy	28c	25c	28c

BROILERS

Colored	35-45c	35-55	50c
Leghorns	25-42	30-45	30-45c

It is impossible to give a definite report on the live poultry market. It is too uncertain. On Saturday, May 23, New York City experienced mid-summer weather and every one felt we were in for some real holiday trade, consequently buying was heavy. Sunday saw some of the coldest May weather in the history of the Weather Bureau, which continued on Monday. This knocked the props out from under the buying interests and about the 26th the market was very much unsettled. The weather is too chilly to warrant sufficiently heavy holiday buying; enough to absorb the accumulations at anything above existing quotations. The fanciest broilers are 45c whereas last week they were 55c. Prices may pull back just before the market closes but most of the business is being done at a low figure. The live fowl market is very unsettled. At the moment it looks as though it will be a 28-cent fowl market on light and heavy stock. Freight receipts have been very heavy and the express trade is waiting for the establishment of quotations before going ahead. If the weather turns favorable, we are going to have a good selling market because there is a Jewish holiday the day before Decoration Day, giving us two holidays together. If the weather is unfavorable we are going to see a very weak live poultry market next week.

GRAINS AND FEEDS

The feed prices below are given for the local Buffalo feed market in straight car lots as reported by the New York State Department of Farms and Markets. Due to the fact that this report is not available in time for current use, and due to spread between time of going to press and time the issue is received by readers these quotations merely serve to interpret to the reader the way the market has been turning.

FUTURES	May 26	May 19	A Year Ago
Wheat	\$ 1.71¾	\$ 1.67	\$ 1.06¼
Corn	1.18¼	1.13¾	.78¾
Oats	.47	.45½	.46¾

CASH GRAINS

36% C. S. Meal	42.00		43.25
41% C. S. Meal	45.00	45.50	45.50
43% C. S. Meal	47.00	47.00	47.25
34% O. P. Linseed			40.00
Oil Meal	44.50		

The unseasonal weather that has been experienced in the spring and winter wheat belts has had a decided effect upon the market sending prices upward. The freezing temperatures reported in many sections. This naturally would have an immediate effect upon the speculative market. These unfavorable reports also had an immediate influence on corn and oats so that all along the line advances have been reported.

OLD POTATOES EASIER

The sprint that the old potato market made last week has about disappeared, having slipped back several days ago with lower prices both on bulk stock and sacks. States are bringing between \$1.75 and \$2.00 for 150-pound sack delivered. As a matter of fact the higher quotation is extreme. States in bulk are generally worth about a cent a pound or a little better, while Maines are generally bringing \$1.20 a cwt in car lots.

Southern potatoes are beginning to meet a weaker market. South Carolina Cobblers are rolling in, the best ranging \$5.75 a barrel with fair stock selling between \$5 to \$5.50. A few fancy marks have been reported at \$6. Southern arrivals have been so heavy that the market has turned somewhat easier.

UNITED STATES TIRES ARE GOOD TIRES

This new

"Low-Pressure" Tread Paves a Country Road

HERE is the latest thing in Balloon Tires—the new, flat "Low-Pressure" Tread.

It gives 15% to 25% more road contact than a round tread.

This eliminates early and uneven tread wear.

It permits you to run your tires at the low inflations necessary to *real* balloon cushioning.

It gives better traction, better non-skid protection,

easier steering and greater stability.

It is as necessary to successful Balloon Tire performance as Web Cord—the only cord construction in which the individual cords are webbed together with pure rubber latex without injurious chemicals.

Both are exclusive with U.S. Royal Balloon Cords, and give an extremely strong yet flexible tire that can be run at *real* low inflation without injury.

Among the Farmers

Farm News From New York and New Jersey

ONE of the first steps in the expansion of the New York State Fair, to be held two extra days this fall at Syracuse, September 12-19, is the announcement of the appointment by Lieutenant-Governor Seymour Lowman of a Special Transportation Committee, the purpose of which is to facilitate transportation to the fair from all parts of the State.

Automobile travel to the fair has become so heavy in the past few years that, with state wide interest greatly increased in the much bigger exhibit this fall, the fair commission cannot arrange to handle all of the cars.

Members of the Special Transportation Committee appointed to consider the matter are: R. W. Quackenbush, agricultural agent of the N. Y. Central, chairman; S. L. Strivings, Master of the New York State Grange, and Enos Lee, President of the Farm Bureau Federation.

Mr. Quackenbush has had considerable experience in such matters with western fairs. The State Grange and the Farm Bureau will be asked to cooperate through the efforts of Mr. Strivings and Mr. Lee. Other organizations will also be asked to lend their assistance.

To Improve Traffic Conditions

The committee will endeavor to devise other means of transit to the fair this year than by auto, so that everyone interested will have a chance to see the fair without loss of time in getting to the grounds. The traffic was so heavy last year on the good days that even the efficient army of the State Police were unable to handle all the cars.

Railroads of the state have offered to help solve the problem by giving special rates with entrance to the Fair, included in the round trip ticket. The New York Central and the D. L. & W. run directly to the grounds with special entrance gates.

Interest and attendance at the fair throughout the State is looked for more than ever this year, owing to the fact that economical transportation will be afforded in a systematic way.

"Old Man Weather" Plays Queer Pranks on May 24

ONE of the most unusual days as far as weather is concerned that New York and adjoining states have experienced in many years characterized May 24. In one day the state reported snow, heat, floods and a quake.

The temperature change was possibly the most marked in the history of the weather bureau. On Saturday temperatures as high as 94 degrees were reported and in less than 24 hours the thermometer had fallen over 50 degrees. New York City suffered one of the most severe chills in its experience.

Long Island reported severe hail storms. In one community where there are a number of greenhouses, the damage ran into hundreds of dollars through broken glass. New Jersey also reported heavy hail with stones as large as hen's eggs.

In Buffalo, ice formed in puddles resulting from melting snow on the day after the city had sweltered in a temperature of 90 degrees.

Records were broken at Binghamton when snow fell heavily enough to give the surrounding country the appearance of winter. Trees laden with apple and peach blossoms were covered with snow and it is feared that much damage was done to fruit and early garden truck.

In the Harlem Valley, considerable damage was done to vegetable and fruit trees by the hail. Poughkeepsie reported a temperature of 32 degrees.

The Niagara fruit belt reported 32 degrees and snow fell for two hours. However, fruit experts do not look for any damage to fruit trees except possibly on some late varieties.

Reports from Hornell have it that early crops were injured by the severe cold and snow which came on Sunday. In some places ice formed.

On top of all these erratic temperature changes a tidal wave was reported along the south shore of Lake Ontario, resulting it is said from a slight earthquake beneath the water's surface. The torrential rains all over the state resulted in floods and considerable damage from the effect of water. It was one of our most unusual days.

Camden Market Soon Ready for New Jersey Farmers

SOUTHERN New Jersey farmers will have a new wholesale market at Camden, N. J., open for their use in early June, the New Jersey Federation of County Boards of Agriculture states in a news bulletin in which it discusses the importance of the new trading center in New Jersey-grown farm products to the thousands of producers in the State now using the Philadelphia markets.

The new market is located on the site of the old Philadelphia and Reading Railroad docks, adjacent to principal transportation lines and trucking highways and with all-water shipping facilities to various markets. Its operation is the outgrowth of more than a year's effort on the part of the New Jersey Federation, the New Jersey State Bureau of Markets and the Camden City officials.

Wholesale stores for the accommodation of commission merchants, dealers and jobbers are rapidly nearing completion and connecting sheds are undergoing repair to provide space for South Jersey farmers and market gardeners who will rent permanent locations. Water supply and modern conveniences are being installed and applications for space received from Camden merchants and Philadelphia buyers indicate that the markets will be in full swing as a trading center within a few weeks.

Southern New Jersey farmers have already pledged their support to the new project, and meetings of farmers held recently in Camden and in the adjacent counties guarantee a wide variety as well as a constant supply of Southern New Jersey farm products.

Growing Cucumbers for Market

(Continued from page 572)

would have netted at least \$25 more. Fifty cents per hundred was realized from the crop and as you can readily figure some 25,000 cucumbers were produced on this scrap of ground. This was no unusual piece of ground, it was only an odd, unhandy patch of bottom waste land that had previously produced its annual crop of weeds.

The cucumbers were gathered every other day and occasionally oftener, when growth was more rapid; and were promptly graded into slicers, dill or olive size, pickling or canning size and taken to market which was quickly found in the local town of 800 people. This farmer found it wise to grade out and discard all crooked and poorly developed fruit. Great care was exercised to deliver the carefully graded cucumbers in a crisp and fresh condition. When it was necessary to keep any number on hand a few days, they were stored in a cool cellar with paper over the tops of the containers to prevent wilting from evaporation.

This farmer made his first cucumber project two years ago on a smaller scale, but since the demand was so much greater than this year's supply, a still larger enterprise is planned for next season.

—VERNE MOORE.

Give them What They Want

Don't let the green pasture fool you. Your cows may be giving a lot of milk, but they are not making it on grass alone. They are also making it from the protein and lime stored in their bodies.

Every animal needs protein for both health and production. Fresh pasture contains some protein, but not enough to support the cow and enable her to make milk. Unless you feed her some grain with the grass there is a sad day coming.

When the cow is on pasture alone she may soon drop off in her milk yield. It is then difficult to bring her production up until she freshens again. She may go into the Winter in poor condition and lose money for you.

Your animals want a feed that they can convert into meat—milk—butter fat. The most easily convertible of all protein feeds is **Corn Gluten Feed**. Feed it in your grain mixture during the Summer and you'll make more money.

Standard for 30 Years

Corn Gluten Feed has been the standard protein feed for thirty years. It is the best feeding part of corn. It gives you the most digestible protein per dollar.

You can get Corn Gluten Feed from your feed dealer or any manufacturer. If you mix your own ration your main protein ingredient should be Corn Gluten Feed.

If you feed a ready-mixed feed it will pay you to buy from a manufacturer who uses Corn Gluten Feed as one of his main ingredients. It makes any ration better and more profitable to the man who feeds it.

Our Bulletin No. 1 contains several good rations for summer feeding. If you have not seen a copy please write us and we will mail it to you.

I want your business this season and you may rest assured we will take care of you right. I am now the ONLY one of the Uhl family owning and operating a Hatchery. Be sure to address as below.

LAWRENCE P. UHL, Box 53 NEW WASHINGTON, OHIO

My Poultry Experiences

(Continued from page 577)

just kept busy filling my egg basket all winter.

The next year our oldest daughter came to us but I still managed to care for my hens and increased the flock to 120 by fall. This required more room and my husband built another coop near the first one but 16x24 feet in size.

Install Large Incubator

In the spring of 1912 we purchased our first large incubator of 390 egg capacity. We built two 10x10 foot brooder houses and divided them through the center with wire netting and installed a 100 chick size lamp brooder in each pen. The chicks raised this way did very well and began laying at an early age. The most of them were Single Comb White Leghorns and the rest Single Comb Rhode Island Reds and Wyandottes. About 200 hens and pullets were wintered and the average price of eggs this year was 28 cents.

In 1913 about 1,100 chicks were hatched. Several hundred were sold and nearly 200 pullets were raised. About 25 old hens were kept. Perhaps it would be interesting to know the price of feed at this time. In my account book I find the following: Bran, \$1.50, meal and cracked corn \$1.75, wheat middlings \$1.75, meat scrap \$3.25, oyster shells and grit \$1 each per cwt., wheat was \$1, buckwheat 65 cents and oats 50 cents per bushel.

White Leghorns Preferred

1914 to 1921 did not see much change in our flocks except that we tried the Rose Comb Brown Leghorn and while we found them excellent layers we discarded them on account of their small size.

In 1916 our last daughter was born and 1920 the New Year brought us a baby boy which completed our family circle.

We had kept some of our original stock and in 1921 again raised a nice flock of over 200 Single Comb White Leghorn pullets. This year we installed one 220 egg and two 360 eggs incubators and sold several hundred baby chicks. We had the use of another poultry house and kept about 400 hens and pullets this year.

Electric Lights Help Matters

About the first of October, 1922, we bought a farm lighting plant and wired all of the farm buildings, dwellings and poultry buildings. The increase in egg production was surprising and I have already given it in a former issue of AMERICAN AGRICULTURIST. The pullets while under lights are not forced but fed an extra allowance of whole grain and seem to keep growing all winter and still give a very good egg yield. Besides this gain we have all of the benefits of electricity for ourselves, including a radio which seems the most wonderful of all.

In 1923 we decided to enlarge our plant and installed two large oil homing brooders and raised over 800 chickens. We built a 20x50 feet woods type of poultry house, installed an electric pump and pressure water system and piped the water into this building and our dwelling house, having faucets outside for the older hen houses and colony coops. Heavy laying hens require a vast amount of water and one has to have everything as convenient as possible to care for so many hens. This year we purchased a small delivery truck and are often able to obtain a premium for quick delivery of poultry or eggs to the

BABY

BABY CHIX 1925 DUX

Our chix and dux are bred from stock thoroughly hardened and acclimated to our severe and changeable climate. They are hatched on a REAL POULTRY FARM in their natural environment, only a few hours from the nests to the incubators. Less handling of the eggs and stronger chicks are the results. We are, and have been for 38 years, a Poultry Farm specializing in the best stock it is possible to produce. We are not a chicken factory; faster growth, earlier maturity and more eggs for our customers are the results.

local merchants, who need an extra supply on short notice.

We put 325 pullets in the new house and about 375 old hens were kept in the older houses. In August of 1924 this flock was culled. About 75 were found to be profitable to keep for production under lights and were kept in a separate coop for this purpose. They have proven that this is profitable but we are now selling them as fast as they stop laying, 350 of the others were kept as breeders.

Tried Several Breeds

I had always read all the poultry papers and articles on poultry in the farm papers that I could get and remember that AMERICAN AGRICULTURIST was among the first of these. The Single Comb White Leghorns were highly spoken of in these papers and I decided in 1910 to try them. We purchased 200 baby chicks and 130 hatching eggs of very good strain and have always kept the original blood by improving it in the way of selection and culling each year. About 80 nice pullets were raised from these chicks and 85 hens and pullets of the former flock were kept. Since then I have tried the White Wyandotte, Silver Laced Wyandotte, Rhode Island Red and Brown Leghorn fowls, but like the Single Comb White Leghorn best of all. All of the other breeds have many fine characteristics and anyone should choose their favorite breed as they are sure to have better success by doing so.

The 165 hens and pullets made a net return of a little more than \$200. The average price received for eggs was 24 cents and the cost of production was 14 cents per dozen.

In 1911 the flock was not increased very much as another daughter came to us in the spring, but a few pullets were raised and nearly all of the old hens were kept over.

Prefer Coal-burning Brooders

The spring of 1924 we bought two coal brooders as the oil brooders did not give very good satisfaction. By fall we had 450 nice pullets and had sold quite a few besides the baby chicks. W. built a new 18x56-foot Jamesway ventilated house and put 325 pullets in this, 125 in one of the older coops, kept 350 of the best yearlings and 2 year olds for breeders in the coop built in 1923 and kept 75 selected for use under lights in the oldest coop of all. We keep constantly culling our flocks and our winter egg yield is a very profitable one. Since 1911 we have shipped eggs and chickens to New York commission houses and never lost a case yet. We are very careful to ship to either bonded or well recommended houses.

Our demand for baby chicks has steadily increased and in order to care for this we purchased a Mammoth Incubator in August, 1924.

January, 1925 found us installing this machine, and looking forward to a profitable season. Our success is no more than any ambitious person can achieve and is due mainly to good breeders, careful management and attention to details.

Advice on Starting

To anyone interested in poultry raising I would say, secure a start with eggs, chicks or stock of a good laying strain of breed you like best. Give them good intelligent care, study them as you work with them and increase the size of your flock as fast as you can and still give it the proper care and management. By observing these simple rules success is assured and you will learn many things not found in books.

The Valley of Voices—By George Marsh

TURNING to Steele, Michael muttered: "Tete-Boule ees right; dat ees ver' bad t'ing to hear."

"What is it, David?" Steele demanded of his hard-headed friend.

"Eef David was on dat ridge, he tell you," was the dry response.

"There's nothing on four feet in this country that could do that. There may be something in this Windigo story, after all." And Steele peered quizzically into the dark faces of his companions. But they were inscrutable.

"Is it beast, bird, or devil,—Michel?"

"Eet may be crazee wolverine; eet may be devil; it may be Windigo—but eet feenish dees pos' all de same." As the half-breed sadly shook his head, the caterwauling began anew.

With heads thrust forward the three men on the shore strove to pierce its mystery. But this time, as the voice rose to a climax, flame shot from the muzzles of two rifles and the shrieks were smothered in the report of the guns echoing from the ridge. Again silence blanketed the valley.

Thus did David and Michel fling back their challenge of lead to the powers of darkness which menaced the fur fort.

"The Windigo knows now that there's some fighting blood left in Wailing River," chuckled Steele, when he heard approaching footsteps.

"Who's there?" called the voice of St. Onge. "Who fired those shots?"

"Michel and David, Colonel; did you hear it?" asked Steele, curious to know the state of the factor's nerves.

St. Onge approached and gripped Steele's arm. "I've been listening—with my daughter," he said in a strained voice. "I went to rouse you, but you had gone. It's the last straw, Monsieur. My Indians will not stay after this."

"There are two right here who won't be stampeded, Colonel."

"Yes, I know, but look at the shaeks—not a light! All paralyzed with fear, their heads under their blankets—they won't stay, now."

"What d'you think it is?" asked Steele, closely watching the features of St. Onge in the dim starlight.

"Who can say?" replied the Frenchman, with a shrug. "It may be some crazed beast—wolverine or lynx or bear. And then," he looked hard into Steele's eyes, "it may be—the Windigo."

At the words, David, who had been listening, turned to Michel in surprise. But the face of the head man was wooden. The Ojibway's narrow eyes shifted to those of Steele, and for a space white man and red held each other's gaze.

Was the Frenchman, after all, superstitious? Steele wondered. Had his nerve softened, after what he had now heard with his own ears; or was he playing a game?

"Colonel St. Onge," said the American after a space, "this thing has got to be followed up—run down—seotched! To you, it's vital! To me, as a scientist, it's the opportunity of a lifetime. With your permission, David and I will stay here and lend a hand until the winter threatens to break."

The factor impulsively offered his hand. "Thank you, Monsieur! I shall be most grateful for your aid."

"And Mademoiselle St. Onge?" asked Steele, deeply curious. "She heard it all?"

"Yes, she called me when it began. She was very brave, but there have been so many things lately—St. Onge suddenly checked himself. "Michel," he said, swiftly changing the subject, "we must look after the Indians at once. But what can we tell them now, after this?"

"We tell dem de Windigo weel ketch dem on de riviere cef dey leave now," replied the ready-witted head man.

The four men found the post people

numb in their blankets, awaiting an unspeakable death at the hands of the dreaded prowler of the night.

Approaching the nearest cabin Michel pounded on the door and called in Ojibway:

"It is Michel and the chief. Get up, Gaspard, the Windigo has gone away. We wish to talk to you."

For answer, the small shack was filled with a woman's shriek of despair. Then the awed voice of an Indian quavered: "It has come! It has come!"

Testing the door with his shoulder to find it heavily barred, Michel turned to his chief. "Dey are all de same. Dey will not let us in. Dey t'ink de Windigo use my voice to fool dem."

"We will go to Tete-Boule's," replied St. Onge.

The cabin of the post hunter, also, was dark and his door barred, but continued pounding by Michel and repeated commands of the factor, finally convinced the terrified Ojibway that St. Onge, and not a giant Windigo, was at his door. In the dim light of a candle the Frenchman and Michel endeavored to persuade him to accompany them to the other shacks, but the trembling In-

meeting Denise St. Onge whose humiliation of the night before must have been deep, but naturally curious as to her mental condition after the night wailing, he turned with:

"Good morning, Mademoiselle! We are all here, you see, safe and sound, in spite of the screenade of our friend."

The fine eyes of the girl were heavy with shadows, but to his relief, were not unfriendly. She has not slept, thought Steele. The Windigo has got her, too.

"Good morning, Monsieur!" she returned in a voice without spirit, and there was no life in the colorless face as she went on: "Yes, we are still here, as you say; but after last night I trust you realize what my father faces in this terrible valley."

"It is most mysterious," he said, "but you must not allow it to get your nerve. You are an educated woman, Mademoiselle; you must hold your mental grip. Nerve-racking? Of course it is, but there is a solution—mad wolf or wolverine probably." As he spoke, he strove to pierce the reserve of her dark eyes to the thoughts they masked.

"But it was horrible—ghastly!" she replied. "Is it to be wondered at that

had been correct. There was much that he had not been told.

"I do not understand what you mean. Not being superstitious, Michel, David and I have nothing to fear," he protested, hoping to draw her out.

With a shrug of her shoulders, she attempted to cover what Steele saw was a palpable shiver. Her slender fingers worked nervously. The sensitive face pictured the mental battle she was waging. Then she broke out impulsively:

"Oh, Monsieur, you do not know all! There are so many—" The abrupt entrance of St. Onge cut off what Steele sensed she had intended as a warning.

"Good morning, Monsieur Steele!" cried the factor, with what was palpably a forced liveliness of manner. "You have not changed your mind since our talk, eh? You will honor us by spending September at Wailing River."

"Father," Denise protested, "Monsieur Steele does not know—"

St. Onge turned petulantly upon his daughter.

"Monsieur Steele is a brave man and a scientist; he has no fear of your Indian devils and Windigos."

"But he has a right to know all, if he is—"

"He shall know all, my dear," broke in the factor, evidently desirous of stopping further reference to what was blind mystery to the younger man.

"We shall have a week, Mademoiselle, before David and Michel return, to make our plans," added Steele in defense of his host; but throughout the simple breakfast of trout, toast and coffee, his active brain was busy with the strange attitude of St. Onge and its cause.

At the trade-house the factor and his guest learned from the still shaky Tete-Boule that Michel and David had packed a canoe and provisions over the portage at daylight. With his daughter St. Onge visited the shacks of the post Indians in the faint hope of finding that the sunlight, as it lifts the river mists, had also banished the terror of the night. But fear of the thing which, without trace or trail, had swallowed up four of their men, and with its night wailing had frozen them with dread in their blankets, still elung to the gray-faced men and women.

But before starting down river on his quest with David, Michel had done his work well. Not an Indian dared leave the post because of the demon which the wily head man had assured them was lying in wait for them. So, for a time St. Onge could count on keeping his post servants, and then—

"Well, who can foretell what is on the knees of the gods, Monsieur?" he said with a characteristic shrug.

Through the following days while he impatiently waited for the return of David, Steele occupied his time with the study of two interesting subjects—Tete-Boule and Denise St. Onge. And he found in each much to stimulate his curiosity. The Indian, once a twist of nigger-head tobacco and the gift of a skinning knife had established friendly relations, was led to repeat the tales of huge tracks in the muskeg and night wailing which he had brought to the post during the summer. To Steele, familiar with shamanism and the practice of sorcery among the Ojibways and Crees, this squat redman, with his high cheek bones and close-set eyes, was something of a puzzle. In his forty years of wandering life, the bow-legged Ojibway had drifted from Oxford House, far in western Keewatin, east to Flying Post. And in all this thousand miles of forest and muskeg, there was not a fur post known to Steele with which the Indian was not familiar. Patently superstitious, evidenced by his terror of the night before and the wild

(Continued on opposite page)

What Happened In The Story Thus Far

BRENT STEELE, an American ethnologist is traveling through the Canadian wilds studying Indian life for the American Museum of Natural History. He is in the Valley of the Wailing River which gets its name from the moan of its fierce and treacherous rapids. It is rich fur country but the native Indian hunters are terror stricken and planning to leave it due to an unseen monster which howls and shrieks in the forest at the dead of night. The superstitious Indians say it is the Windigo, a beast of Indian fable and they fear that the Evil Spirit has come to bewitch them. It spells the doom of the Wailing River trading post, at which Steele stops for supplies, as well as the whole country roundabout. The post is in charge of Colonel St. Onge, a former French calvary officer. With him lives his beautiful and cultured daughter, Denise. St. Onge faces ruin due to the activities of a free trader, Laflamme, who is giving the Indians whiskey for their furs in violation of the Canadian law, and also to the growing fear of the Windigo, especially since four Indians with a shipment of valuable furs have mysteriously disappeared in the rapids of the Wailing. St. Onge tells Steele that he is kept at the doomed post by Lascelles, his superior in the Revillon Freres, which is the trading company owning St. Onge's post. It is Lascelles' plan to ruin St. Onge and thereby force Denise to become his wife. St. Onge vows that Lascelles shall never have her. That night after all at the post have retired, the terrible shrieking howl of what the Indians call the Windigo, breaks the stillness. Steele is aroused. He is determined to hunt the Windigo and reveal its true character with the help of his guide, David and Michel, the head hunter of the post, who promises to aid him in running down the monster. The terror of the Indians is aggravated by the murmurings of an Indian medicine man at St. Onge's post by the name of Tete-Boule.

dian refused to hazard the night outside. They were doomed, he insisted, like the fur canoe. What they had just heard was a warning. The following night the Windigo would come into Wailing River and eat every creature in the post.

Leaving him, St. Onge finally gained admittance to the remaining cabins, but found the people beyond help, maudlin with fear of the thing on the ridge. So, ordering David and Michel to do what they could with the frantic Ojibways, St. Onge and his guest returned to their beds.

As Steele again stretched himself on his cot, he wondered if there would be sleep that night for the girl down stairs—what thoughts were hers as she lay facing the problem of her future; a problem of which the sole solution seemed at that moment to rest with Monsieur Lascelles at Fort Albany.

CHAPTER VI

THERE was no one in the living room when Steele entered early the following morning, but from the direction of the kitchen came the sound of women's voices. He was examining the shelves of French and English classics when he heard the light foot fall of moccasins behind him. Diffident at

the Indians are in a panic—and these poor women whose husbands were with the fur canoe; they are imbeciles from terror. I found them this morning in a cabin, too frightened to cook the breakfast of the children."

"So you cooked it for them," he hazarded with a smile. Surely, Mademoiselle St. Onge had not lost her nerve, if she could think of the children.

The girl flushed. "One could not have them suffer, Monsieur." Then with a flash of white teeth, went on, "But we all feel better, now that the sun is out."

Steele smiled at the human touch.

"Has your father told you that I am staying here, with his permission, to follow up this Windigo?"

She glanced up in surprise. For an instant her eyes fell, the dark brows contracting in thought; then she met his quizzical look.

"You are going—to fight—the Windigo?—You, a stranger—who have—no interest?"

"But I have a very great interest, Mademoiselle. I am sent into the field by the Museum to study this sort of thing. Michel, David and I are going to fight him—and solve him."

"But you do not know the danger!" Her face was very grave as she faced him, and he now knew that his surmise

Lone Scouts of America

American Agriculturist Tribe

FOUR HUNDRED members for the American Agriculturist Tribe of The Lone Scouts of America, two weeks after the first announcement appeared. That's going some. If every Lone Scout will get a new member that will be eight hundred. Let's have a mark to shoot at. Why not have a thousand Lone Scouts in the Tribe by September first? Numbers isn't the only thing we want, but we do want all the boys in the territory who will make good scouts to join with us. Let's go.

How is this for a letter? We think it's great. Let's hear from some more of you.

Dear Lone Scout Editor:
Recently I was looking through the "American Agriculturist" and what should greet me but an article concerning the Lone Scouts of America. I was more pleased than surprised because I was once a Lone Scout of good standing. I joined that organization way back in August 1918 when I was twelve years of age and the Lone Scouts had been going for only three years. I took a great deal of pleasure, derived many benefits and made many new friends. Some who are well known in the Lone Scout world are particular friends of mine.

About two years ago I was obliged to give up all of my studies and scouting work due to serious eye trouble from which I am slowly but decidedly recovering. I had to drop the Lone Scouts and for the past two years I have nearly lost track of that organization. But now I want to come back. I want to be one of the first hundred to join in the American Agriculturist Tribe. Because the Lone Scouts is recognized by the world as being one of the finest organizations to which any boy can attach himself and also because one of the most reliable farm papers in the United States encourages this organization no boy should hesitate for a single minute to fill out the blank and be a true Lone Scout.

I personally wish to congratulate you in the good work and efforts spent in connection with the Lone Scouts. May you be well repaid. If you wish you may use this letter for publication.

Scoutingly yours,

LEO G. KERST,
Sabaal, N. Y.

The Membership Card

Your membership card should mean a lot to you. On it you will keep a record of your advancement in Lone Scout work. You should have a place to keep

it, where it will not become damaged. On spaces for recording the back, you will find your booster points and the dates when you pass your degree tests.

Read the pledge carefully before you sign it, and as you sign it make a resolution to live up to the pledge every day. When you make a record of your achievements on the back of the card, be very careful to do it neatly so you will be proud to show your card to other Lone Scouts. At all times you should remember that you are now a member of a great organization, and that you now have more influence with other boys than you had before you became a Lone Scout. If you are tempted to do things that are not quite square, remember that you are a Lone Scout and don't do them.

Degree Work

Every new scout should try to pass his first degree test as soon as possible, but do not let your eagerness to get your first degree pin influence you to be satisfied with "just passing." Your first degree is the foundation for all your scout work, and you should not only know it thoroughly, but practice it. You wouldn't think much of the fellow who threw to second base when he should have thrown to first, and then excused himself by saying, "Well, I knew where to throw it, all right, but I didn't have time to think." In the same way it isn't enough to know your first degree tests, you must form a habit of doing the things which you learn. The first degree teaches you that you should not read in bad light, and with the paper too close to your eyes, but this knowledge doesn't do much good, if you learn it, and then do not follow it.

The tests of the first degree tell you a lot about how you should live and how to develop your senses so they will be keen. You will be told how to train yourself so you can hear slight noises, and see long distances. All these things will be of value to you, and help to be successful in whatever you try to do.

Kodak Simplicity further Simplified

The 1A Pocket Kodak Series II

WITH the Kodak Anastigmat Lens and Diomatic Shutter equipment, this camera offers a range of efficiency not heretofore obtainable at the price.

This superior combination of lens and shutter means better timed, sharper negatives, the evidence of which is plain in the prints—overwhelmingly plain in enlargements.

The focus is prompt and precise. A mere turn of the lens, which is at your fingertips, brings the focus instantly, accurately, while beneath the lens a plainly lettered, simple scale tells you how to fit the exposure to the light.

It's all simple, yet there's speed

in the f.7.7 lens, and a shutter with speeds up to one-hundredth part of a second to make that speed available.

No. 1A Pocket Kodak, Series II, for 2½ x 4¼ pictures, equipped with Kodak Anastigmat f.7.7 Lens, Diomatic Shutter—\$26.

The Valley of Voices

(Continued from opposite page)

tales he had circulated, Steele soon learned that Tete-Boule—who owed his name to the likeness of his broad face to the Tete-de-Boule Cress—was possessed of more than ordinary intelligence.

"Tete-Boule," demanded Steele in one of their conversations on the river shore, "why should this Windigo wish to harm this post; the people, here, have never done him an injury?"

The minklike eyes of the Indian widened with fear at the mention of the dread name, which is taboo among the superstitious.

"Dis ces hees countree. Long tam ago, he cum here on dis riviére," the Indian muttered, evidently ill at ease.

"Was it the Windigo who drowned the men with the fur canoe?"

At the use of the forbidden word by Steele, for the second time, Tete-Boule furtively glanced to the rear and up and down the shore. It was apparent that he feared that the name might conjure up the reality.

"What do you think, Tete-Boule?" Steele insisted.

For a space the Ojibway smoked in silence, then spat far into the water before he answered.

"De crew ov de fur-cano' not drown'—eat up!" And he opened his wide mouth and snapped his jaws.

"Will he come again by night to the post here?"

The Indian slowly nodded.
(To Be Continued)

Use This Blank and Become a Lone Scout

I have, with the consent of my parents or guardian, taken the following pledge of the Lone Scouts of America, which I have read and understand:
"I pledge my allegiance to my flag and the nation for which it stands, with liberty and justice for all. I will 'Do a Useful Thing Each Day' and be worthy of the name Lone Scout."

Enclosed find 30 cents to cover the cost of enrolling me as a member. This membership fee entitles me to a membership card, the badge, a handbook, and all the privileges of the order.

Perfection in the Home

A NEW home is started, a new nest, as it were, feathered and made ready.

And ten to one, Daughter does her cooking on a Perfection Oil Cook Stove. Thoughtful mother who gave it as a wedding gift; lucky daughter to receive it!

And, speaking of luck, think of Friend Hubby and the dinner ahead. Thick broiled steaks, tasty stews, light-as-thistle-down popovers! Every dish another stove can cook, the Perfection does, and better.

Over 2,000,000 happy housewives use and praise the New Perfection.

The Clothes Moth

Experiments Reveal New Facts About Moths

The specialists in Entomology at Washington have been making tests to determine what is best to prevent damage to fabrics and furs by the clothes moth. What they have found out does not in every case coincide with our own ideas of the most effective methods of prevention.

The usual cedar-lined closet or chests made of cedar or Eucalyptus are of comparatively little practical value if they are in constant use. Clothing should be put away absolutely clean and free from insect eggs or larvae, besides

ing furs, both before storing and removing them from storage—G. W. H.

Washing Woolen Blankets

WASHING woolen blankets is an easy matter when done according to the method I have found through experience to be a sure and easy way of getting this somewhat hard task done. They are put through a rainwater suds, being careful to use a good grade of soap. Sometimes it is advisable to use a second suds. I like to use fairly warm but not hot water. Then they are wrung and placed on the line full-length. Now the hose is taken and they are rinsed by turning the hose on both sides. I find that this beats up the nap that has been compressed in the washing.

I learned also that one must prop up the line high or else the blankets will touch the ground as they become filled with water. The stretching caused by the weight of the water is beneficial as it helps to prevent some of the shrinkage that sometimes occurs. No other method has given us the soft and nice results when the blankets are dry.—Mrs. W. E. Farver.

Stylish Pattern for Girls

The pattern pictured below would work up to advantage in material suited for utility wear, as gingham, pongee, madras, or English cotton broadcloth.

Pattern 2325 has the sleeves and yoke cut in one, a Peter Pan collar, and has bloomers to match the dress. It comes in sizes 6, 8, 10, 12, and 14 years. It requires 3 yards of 36-inch material with 1/2 yard of 32-inch contrasting in the 8-year size. Price 13c.

TO ORDER: Write name, address, pattern numbers and sizes clearly and correctly, enclose with correct remittance in coin or stamps (coin sent at own risk) and mail to Pattern Department, American Agriculturist, 461 Fourth Ave., N. Y. C.

being wrapped in airtight containers which may or may not be treated with oil of red cedar or camphor. Oil of Eucalyptus or oil of pine have little or no value for this purpose.

Napthalene flakes or balls, or paradichlorobenzene (which the peach growers use against the peach-borer) are the most effective preventives against moths. They should be packed with the fabrics or furs in tight containers after the clothing has had a thorough sunning and cleaning.

If one sends furs to the cold storage the same rule of absolute freedom from eggs and larvae must be observed. Furs which have not been beaten, brushed and sunned before storage may come home with active healthy larvae in them. The temperature of the storage plant has to be as low as 20° to 25° F. if it succeeds in killing the larvae of the clothes moth in as little as 67 days. If the temperature is around 40° F. the well-grown larvae may last from 6 to 14 months while the eggs of the moth would be killed in 6 weeks at that temperature.

Knowing the results of these tests, it is well then to form the habit of thoroughly sunning, brushing and beat-

For Party Wear

Made up in pretty printed voile or of silk this dress pattern would furnish the High School girl or a slender young woman a charming dress for evening affairs.

Pattern 2330 comes in sizes 16 years, 36, 38, 40, 42 and 44 inches bust measure. The dress closes on the left shoulder and a godet is inserted at the left side only. Size 36 requires 3 yards of 36-inch material with 1/2 yard of 40-inch contrasting. Price 13c.

Refinishing Bedsteads

I CAN easily make over my white iron bedsteads, I have found, with a can of white enamel paint. I first touch the scarred spots, nicely, and when that has dried, I give the entire bedstead a thorough coat.

For those bedsteads with what is known as a Vernis Martin finish, I have found that I can buy at the paint shop an especially prepared gilt finish. This is a powder and oil which I mix together myself as it is needed. Experience has shown me that this should be put on rather thin, and a second coat used if necessary.—Mrs. W. E. Farver.

Tabloids From the Owego Conference

District Home Bureau Federation Has Noted Speakers

(Editor's Note:—Mrs. Mabel G. Feint who attended the three-day home bureau conference in Owego reports the following tabloids of speeches made there. These indicate the trend of ideas expressed by the speakers.)

IN this prolonged period of agricultural depression we need to have an abiding faith in the farming of New York State. Much of its good fertile land was cleared by the Indians before the whites came to this country, has a high intrinsic value of its own and lies in the backyard of the greatest eastern markets.

We must, too, have in mind two things. First, our rural people must not lower their standards of living in this time of trial. I am not thinking of the kind of car they shall drive nor of a furnace in the house or even of a bathroom for the farm home. But, I am thinking of education for the children. Nothing should interfere with that. Their eyes must be tested, and we must see that they grow good strong bodies. The ability to provide for physical and mental needs should come first. I would advise leaving the farm for a short time if necessary to do this, rather than to stay on and lower the standard of living. The Home Bureau is more efficient in maintaining this high standard than any other organization working in the rural communities.

Second, we must also remember that farming is going to be more prosperous in the future. Now is the best time to encourage boys to make ready for farming, by getting proper education for the work. It is a better time to purchase a farm than when farming was at its peak in 1915. The young people in Home Bureau homes now have a wonderful opportunity and responsibility to prepare for the future in farm life.

DR. CARL E. LADD—Director
of Extension, N. Y. State of
Agriculture.

* * *

ONE subject that I want the members of this organization to take home with them to think about is this: "What does my husband think of the Home Bureau?" If it means anything that is truly worthwhile it should mean something to the man who sees it first hand. Some of the things he is entitled to ask are:

1. Does the work my wife does and the things she learns in the Home Bureau make home a happier place?
2. Has the organization taught her the principles of budgeting? Is she able to judge values, to purchase intelligently, to make the best use of the money I earn?
3. Has she learned to budget her time, as well as her money? Does she have to hurry constantly?
4. Is she a better mother to her children? Does she know how to build strong bodies, good minds, splendid characters?
5. Is she a better companion to me because she goes to the Home Bureau?

The best kind of a Home Bureau member is really alive, does her work well, makes a comfortable home, and is somebody in her community. Her husband will be proud of her. I believe that we might well adopt a new slogan—"Make every husband a Home Bureau Booster."

MRS. G. T. POWELL—President
State Federation of Home Bureaus

* * *

THE men have looked to the State College to solve their difficulties, and now the women may look to their own State College for the same service. One thing the New York State College of Home Economics needs to develop is a program that will help men as well as women. An economic study is now most essential, so that the man may meet at his door a trained intelligence that will make his dollar go as far as it will. In the selection of food, clothing, and housing and all their accessories, the homemaker needs to be able to spend the income wisely and to secure the highest possible standard of living.

PROF. MARTHA VAN RENSSLAER—
N. Y. State Leader of Home
Demonstration Agents.

WE need to hold our community programs up for inspection and determine whether they are truly educational or merely entertaining. We need to develop the study of civics, that we may develop a better citizenship. We also need to develop the Home Bureau scholarship fund, started three years ago, in order to enable rural girls to get an education in home economics. One dollar from each of the 400 communities represented here today would never be missed and would send some girl to our new College of Home Economics.

As in all lives, so in all organizations there are two lines, the line of vision and the line of performance. If in the conflict we get to the point where we see only

No. E318-6 Pillow cases of fine white tubing, embroidered in white edged with narrow crochet. Pillow tubing 36 by 42 inches stamped for pillow case 75c each. Floss 15c. extra.

performance it means failure. The big thing to keep in view is the aim. "Every home an ideal home."—MRS. A. E. BRIDEN, First President State Federation of Home Bureaus.

* * *

OUR aim is to develop so fine a program in each community that we can ask for public support without apologies. Already eleven departments of the college are contributing to this program and child training is on the horizon. Community projects, of interest to both men and women, are the connective tissue of the Home Bureau organization. As soon as rural life becomes as well organized as city life, it will not be necessary for farmers to have poorer schools, churches, hospitals, or recreation facilities than those of the city.

Five years ago we had 11 community projects under way. Now there are no less than 79 in actual operation, a contribution to all phases of rural life of the state that is beyond mathematical measurement.

It is in terms of community service that life's real satisfaction is measured. The various projects hold the organization together. The number of projects taken by local groups is the real test of the efficiency of that group.

Unfinished Songs.

MRS. MAE MORRIS.

A haunting melody, a throb
Of sweet, unfinished song,
A glimpse of gardens through old trees
Where birds trill all day long—
A lingering fragrance just at dusk
When shadows veil the flower,
A breath of new-mown hay at dawn
Elusive as the hour;

A curving road that beckons on
To sparkling drift of sea,
A ship that slips to sky beyond
With phantom sails blow free—
A face surpassing fair that lights
With sweet unuttered dreams,
A deep revealing flash of soul
Where startling courage gleams—

My heart leaps like an eager child
Who seeks the rainbow's gold,
Alluring charm and mystery
Half hidden beauties hold.
To each fair vista fancy brings
A wealth of sweet imaginings.

cy of that group. The Home Bureau is not only serving with the college and the people, but as between the two. Some projects have actually been secured and financed by the people as the college was at the time unable to give it such as millinery, and others may be. I prophesy that in ten years' time all departments of the college will be contributing to the work. Story telling, with the help of Mrs. Durand has been a very valuable recent addition to the projects. In the South the Home Bureaus are making splendid use of this with frequent use of impersonations of well known characters by the children. Nothing finer can be given our youth than great stories of great heroism, and great deeds. It is bound to enrich

and influence their lives and to help to prevent the disappearance annually of the 11,000 boys and girls, most of them rural.

The biggest single thing the Home Bureau has to its credit is its share in securing the new rural school law.—DR. RUBY GREEN SMITH, Secretary State Federation of Home Bureaus and Associate State Leader of Home Demonstration Agents.

SPONGE CAKE

S PONGE cake are favorites with some people and while they call for a lot of eggs they are not prohibitive after all. The white sponge, a yellow cake and a dark cake may be easily made with a dozen eggs. Never throw the yolks away as one woman I know does. The yolks may be used in too many ways to allow a waste like that.

Delicious Sponge Cake

- 1 cup of sugar
- 1 cup flour
- 12 egg whites
- 2 level teaspoonfuls cream of tartar.

Beat the egg whites until light. Fold in the sugar in which one teaspoon of cream of tartar has been sifted. Sift the flour and the other cream of tartar four or five times and fold in but do not beat. Flavor with vanilla and bake in slow oven about 40 minutes. Allow to cool in pan, turn out and ice.—L. H. L.

Don't Forget the Contests

Don't forget that Aunt Janet is running two contests, both to end June 20th. Prizes are offered for best letters on the two subjects, "What book outside of the Bible has meant the most to me and why?" "What motion picture has impressed me most and why?" The prizes in each contest are three dollars for first prize letter, two dollars for second and one dollar for third. We shall print as many letters as we can find room for.

Practical Hints

When starching curtains, be careful not to starch the hem the rod goes through. The rod will go in more easily and the curtain's life will be lengthened.—E. B. L.

When the girl receives a new bisque-head doll, varnish the head with the colorless varnish if you wish to lengthen the life of the doll.—E. B. L.

Extra washing help that you cannot get in any other form! Splendid soap and dirt-loosening naphtha, working together, make Fels-Naptha different from any other soap or soap product. Isn't this extra help worth a penny more a week?

Your dealer has Fels-Naptha or will get it for you

Keeping Out Trespassers --- Killing Dogs

"I have a trout pond on my farm which is legally posted against trespassers. People constantly come in from the State Road and fish in this pond. How can I go about stopping this trespass as my lands are properly posted?"—A New York Reader.

THE answer to this question is contained in the following sections of the New York Conservation Law.

PART XI

Section 361: Notices or sign-boards not less than one foot square warning all persons against hunting or fishing or trespassing thereon for that purpose, shall be conspicuously posted and maintained on a private park not more than forty rods apart close to and along the entire boundary thereof, and there shall be so placed at least one notice or sign-board on each side and one at each corner of such park and where an outer boundary runs along or under any waters, the nearest shore or banks within the park shall be deemed the boundary for the purpose of posting such notices or sign-boards.

Section 362: An owner or person having the exclusive right to hunt or fish upon inclosed or cultivated lands, or to take fish in a private pond or stream and desiring to protect the same, shall maintain notices or sign-boards of the size and posted and maintained in the manner described in Section 361.

PART X

Section 182: A person who violates any provision of part eleven shall be guilty of a misdemeanor, and shall be liable to exemplary damages in the sum of twenty-five dollars for each offense or trespass to be recovered by the owner of the lands, or hunting or fishing rights thereon, with costs of suit, in addition to the actual damages, all of which may be recovered in the same action.

Hence, the only effective method of curbing trespassers is to sue under the above section.

What About Shooting Dogs?

I want advice on the following question: My neighbor's dogs killed four ducks of mine about three years ago. He promised to pay for the ducks, also to keep his dogs on his own premises. He kept the dogs off my premises for a while but now the dogs are allowed to go where they please. He has also failed to pay for the ducks. This morning they came on our farm again and began chasing the ducks. Is there any law in Pennsylvania to prevent one from shooting these dogs?

REPLYING to your recent inquiry, it is our opinion that unless you shoot the dogs while in the act of duck-killing, you could be subjected to an action for damages. A person is permitted to protect his own property from destruction. Hence, before the ducks are killed, or while they are being killed, the dogs can be safely shot. But after the damage is done and the dogs are in flight, they cannot be shot. That is the rule unreasonable as it may seem. The law feels that your action for damages against the dog owner is sufficient protection once the damage has actually been done.

How About Ditch Water?

"I would like to know if my neighbor has the right to dig a ditch from his land into mine and leave all the water from his swamp land run over mine and spoil much of my seedling. What can I do? Should I block it or should I notify him as he has a farm on the both sides of mine and he has done it on the both sides. Is there no law to protect me?"—G. A. K., New York.

REPLYING to your recent letter, we are very glad to tell you that your neighbor has committed an unlawful act in draining water by means of an artificial ditch from his land on to yours.

He can not only be subjected to a suit, for damages, but you also have the right either to close up the ditch where it enters your land or to have the Court issue an injunction ordering him to close same. You have no right to enter upon his property, and if it cannot be closed without such an entrance, the better plan would be to seek an injunction. This you must do through a local attorney.

D. B. Cornell Back in the Limelight

A FLORIDA news item to the New York Packer states that D. B. Cornell, the land faker, who has been operating around the Arcadia section for the past year under the firm name known as the American Development Company, is now writing letters on stationery which reads,

"Tampa Investment Company."

Cornell has had a long and shady history. He operated at one time at Great Barrington, Mass., and also in New York State. His American Development Company was a scheme for selling swamp land, but his advertisement told of the wonderful soil on which could be grown rubber, bananas, pineapples and everything else in the catalogue. The American Development Company failed a short time ago with creditors holding the bag.

Did You Ship to A. Paul, Jr.

FARMERS who have shipped produce to A. Paul, Jr. Company, commission merchants formerly doing business at 50-62 Grace Avenue, West Washington Market, must file their claims as consignor creditors against that firm for produce they have shipped. A verified statement of their claims must be filed with the Commissioner of Farms and Markets at his office at 132 State Street, Albany, N. Y., before June 22, 1925. This firm was licensed and bonded by the New York State Department of Farms and Markets. It has gone bankrupt and now the state is taking action to protect those farmers who have shipped produce to them.

Is It Legal to Work Sundays?

"Could you tell me if a man working out by the month is entitled to every other Sunday off or not?"—J. R., New York.

I am of the opinion that whether you were entitled to every other Sunday off or not would depend entirely upon the original agreement that you made your employer. It is my opinion that if nothing at that was said about Sundays and the matter carried to the Courts, you could not be forced to work any Sunday. It is always well to have a written agreement, covering all of the points on all important transactions, then there can be no misunderstanding.

Make Your Leaky Roofs Watertight

At less than 2 cents per square foot

NO NEED to tear off the old roof! Just brush on a coat of National Asbestos and Asphalt Liquid Roofing. Wood shingles, felt, tin or rubber roofing—it makes no difference.

It takes asbestos and lots of it to make a long-lasting roof coating. And asbestos—that's been our business for 35 years. Isn't it logical then, that the safe and reliable place to buy roof coating is right here at asbestos headquarters?

National AanA Roof Coating is a *real product* made by a *real firm* with a *real reputation* to uphold. Different from any roof coating you have used, or seen advertised. Contains no coal tar or other short-lived ingredients.

Why take chances with 'fly-by-nights' who concoct thin mixtures with little or no asbestos, that after 4 to 6 months dry, check and crack—for which you pay as much or more.

National AanA Liquid Roofing when properly applied is guaranteed to make any roof positively stormtight for ten years.

We Pay the Freight--Send this Coupon

RIVERSIDE OVERSIZE CORD

A Riverside Tire put on my Buick one year ago, with Ward's Heavy Duty Tube, still has in it the same air—that's going some!

D. S. Robbins,
Las Cruces, N. Mex.

Riverside

Oversize Cord TIRES and TUBES

Quality Equal to the Best
at Prices Very Much Lower

Forget that the price is low. Just consider *quality* alone. Compare service and mileage, and you will find that Riverside Tires give you all you get in any tire—give you just as long mileage, just as satisfactory service.

Riverside Tires are *not made to sell at a low price*. They are made to be as good as any tire. They cost just as much to make, just as much for fabric and rubber, the difference in price is a difference in *profit*. They cost less to sell.

Ward's is the Largest Retailer of Tires in the World

Quality equal to the best at a price much lower than even a fairly good tire costs has made Ward's the largest retailers of tires in all the world. We sell 5,000 to 6,000 tires per day. Hundreds

of thousands of people use nothing but Riversides. Why not you too? When a Riverside gives you all you can get in any tire, *why pay more?*

Greater Protection Against Skidding

Big heavy blocks of *live* rubber and extra thick side studs and the husky ribs of Riverside Cords grab the slippery roads and are your greatest protection against skidding.

Riverside Cords are thus the safest tire, the most satisfactory tire and the most economical tire you can possibly buy. Why pay more?

For fifty-three years Ward's have sold "Quality" goods only—with a definite "Money Back" guarantee. The reliability of Montgomery Ward & Co. is beyond question. You cannot buy a tire with a better guarantee.

I bought a Riverside Cord tire a year ago and must say I never took it off the rim yet. Used it every day. All my tires from now on will be Riverside Oversize Cords.

Arthur Mueller,
Jacksonport, Wis.

I have had two Riverside Cords on my car for fifteen months and they are still good. I use this car every day in the year over all kinds of roads. I recommend Riversides to everyone who wants the most for their money.

What a Difference the Fordson Makes!

When the weather is hot and the grain fast ripening, then Fordson owners fully appreciate the value of tractor power.

Many more acres harvested in a day than was possible in the old way—a big saving in hired help, in time, and in effort.

Belted to a separator, Fordson power makes threshing much easier. No delays—the whole job cleanly done and the grain ready for market.

Every farm task is performed with dispatch when the Fordson is put to work. Its cost is forgotten in the face of its splendid, satisfying performance.

Let the nearest authorized Ford dealer give you a practical demonstration of Fordson on your own land.

Ford Motor Company
Detroit, Michigan

Fordson

Fordson makes potato digging an easy job.

Ford trucks haul the bushels to market.

Thresh the grain at just the right time with Fordson power.

John Brown

"I Am Worth More For Hanging Than Any Other Purpose"

"John Brown's body lies a mouldering in the grave
But his Soul goes marching on."

By JARED VAN WAGENEN, Jr.

I AM glad that as America comes to increasing years of age, we are also coming to venerate our past and that there is a growing custom of commemorating by stately shaft or simple marker the heroic deeds or simple virtues of the men and women

Jared Van Wageningen, Jr.

who have made noteworthy contributions to our national life or perhaps have merely lived their quiet life in worthy ways. For more than three hundred years New York state has had her full share in the making of our history and there are so very many places deserving of being called historic shrines that merely to list them without comment would make a lengthy catalogue.

Many of these memorials have to do with "old, forgotten, far off things and battles long ago."

Such is the great Battle Monument on the hilltop above Schuylerville commemorating the Field of Saratoga and the surrender of the British under Burgoyne.

Another noteworthy monument of the state is the shaft marking the battle of Oriskany. You may plainly see this from the New York Central trains as they sweep along the valley. The monument stands on the hillslope on the south side of the tracks a few miles west of Utica. Here it was that Gen. Nichols Herkimer was mortally wounded. He was propped up in a sitting position against a tree and from this post directed the battle until its triumphant close. They carried him to his home—the big brick house still standing on the south side of the river two miles east of Little Falls. There he lived for some days, then gathered his family around him, called for his great German Bible, read aloud the 90th Psalm and so died.

Then one might mention the very

beautiful memorial on Cumberland Head near Plattsburg which recalls again the naval battle fought on Lake Champlain in the war of 1812.

But to me there is greater appeal in the shrine at Auriesville in the Mohawk valley. There is the monument which marks the spot where Father Isaac Jogues suffered martyrdom at the hands of the Indians in 1646. In all the world there is surely no finer example of devout heroism than was exhibited by this scholarly gentleman and intrepid explorer and consecrated missionary—this French Catholic priest.

I suppose there are literally hundreds of places in the state where a man might well

turn aside for a moment—or an hour—to do homage to the memory of by-gone men. But tonight I am thinking of a grave hidden in a lonely valley in the heart of the Adirondacks where lies the worn body of a man whose life was stormy and full of trouble and who knew no rest—a man who made a mighty tempest in his time and whose soul goes marching on.

It is not necessary to again relate in detail the familiar life story of this strange, wild figure of our history. It will be enough to say that he was born in 1800 at Torrington, Conn., and after an adventurous life full of storm and stress, he was hanged at Charlestown, Va., in 1859. On the whole he had little connection with New York State. He was only a pilgrim and sojourner here for part of the time during about six years and it is almost by accident that our state has the keeping of his bones.

Madison County readers will remember the interesting and historic hamlet of Peterboro high upon the hills just south of Canastota. Here was the home of Gerrit Smith and here his descendants live until this day. Smith was a man of great wealth and influence. He was also devoutly religious, philanthropic and ardently devoted to the anti-slavery movement. Indeed Peterboro was one of the important stations on the "underground railway" and even now the little village has a very unusual number of negroes. Gerrit Smith was naturally attracted to John Brown and out of his vast real estate holdings he gave him a farm at North Elba near Lake Placid in Essex county. Hither Brown moved his family about 1849 and he himself spent most of his time there until 1855 when his always restless spirit bade him betake himself to Kansas although his family remained on the little mountain farm. This brief residence really constitutes his only connection with our state. The real theater of his life was in Kansas and Missouri together with certain trips and enterprises in Canada and then of course his wild adventure at Harper's Ferry.

According to one of his biographies, John Brown was fifth in descent from Peter Brown who came
(Continued on page 600)

John Brown, on his way to his execution, stops to bless a colored child (from an old painting).

Farms Lose \$830,000,000 Yearly by Depreciation

Old Man Depreciation penalizes the American farmer to the neat amount of \$830,000,000 annually because he does not or cannot at certain intervals paint the 38,530,000 buildings that are scattered over the farms of the United States, according to the Farm Journal of Philadelphia.

Farms use 30,000,000 gallons of paint yearly—but they need to use 100,000,000. Ninety-eight per cent of all farm buildings are built of wood. Of the 53,000,000 square feet of outside wood surface 29.1 per cent is never painted. The remainder is repainted on the average every eight and a fifth years. That average should be three or four years.

How much does neglect to paint cost you?

LEAD paint would save the millions of dollars lost through depreciation of farm buildings. The size of this loss is so tremendous that it is enough to pay \$7.50 to every person in the United States.

Lead paint will save you from paying your share of that \$830,000,000. It will help you keep down expenses that can so quickly eat into your profits. Use white-lead, the paint made from the metal, lead, to preserve your property from weather attacks—to save the money you have invested in it—to increase the value of your farm. It is less expensive to keep your buildings properly protected with white-lead than it is to make repairs and replacements.

The paint that painters use

White-lead has been the standard surface protection for generations among master painters and house owners. There is nothing better than pure white-lead to give complete protection to wood and other non-metallic surfaces. You will find it the basic ingredient in all the best paints.

Because it is pure white-lead thousands of house owners specify Dutch Boy white-lead. They know they can rely on it to give the complete protection the surface needs.

For exterior painting, and also for interior work where a gloss finish is desired, mix Dutch Boy white-lead with pure linseed oil. This gives a moisture-proof and weather-

proof film—a smooth, uniformly even coat that sticks so tight it seems to be a part of the covered surface. It does not crack and scale.

For interior walls, ceilings, and woodwork, where a flat finish is usually preferred, mix Dutch Boy white-lead with Dutch Boy flatting oil. You'll get a flat paint that gives to your home unusual beauty. You can tint this combination, as you can Dutch Boy white-lead and linseed oil, to any color you desire.

As Dutch Boy white-lead protects non-metallic surfaces from deterioration, so Dutch Boy red-lead keeps metal farm equipment, machinery and tools from rusting.

For your own paint campaign

We have a "Handy Book on Painting" that contains all kinds of information on paint, including directions for the painting of wood, masonry and metal. This book will help you in your own private "Save the surface" campaign. Write for your copy. It is free.

This Dutch Boy trademark is on every package of Dutch Boy white-lead, flatting oil and red-lead and is a guarantee of exceptional purity.

Besides paint materials, National Lead Company make lead products for practically every purpose to which lead can be put in art, industry and daily life.

If you are particularly interested in any use of lead or have any special paint problem, write to any branch listed below.

"Save the surface and you save all" — Dutch Boy

Our Old Friend Buckwheat

Something to Rely on When Other Crops Fail

BUCKWHEAT

was introduced into America in Colonial times and

By H. L. Cosline

Assistant Editor, American Agriculturist

frosts or cutworms kill the corn, or if it fails to germinate, there is always a

formed a considerable part of the ration of the colonists in the form of "Buckwheat cakes". It is only recently that folks have learned of their delectable qualities and there is now a great demand for buckwheat flour. Personally I do not blame them, for one of my pleasantest memories is that of steaming buckwheat cakes direct from the griddle, lavishly buttered, and drowned in delicious maple syrup. They tasted especially good in the fall when the first buckwheat was ground, and it was no doubt fortunate that at that time of year the maple syrup was likely to be low. The combination of new buckwheat cakes and new maple syrup at the same time might have resulted in great damage to digestion, though as I recall it, I never stopped until one of two things happened; either the supply was exhausted or I was wholly unable to hold any more. In addition to the pleasure derived from eating them, I learned that nothing seemed to "stay by" quite so well during the days when Dad and I were pulling a cross cut saw to supply the winter's fuel.

The State of New York and Pennsylvania produce about two-thirds of the Buckwheat grown in this country, and two countries only grow more buckwheat than the United States. Russia comes first in the production of this cereal and France second. In spite of these facts we do not commonly consider buckwheat an important crop in this country. It is true that in the annual yield in bushels it is far surpassed by other cereals.

A "Poor Soil" Crop

For every bushel of buckwheat raised in this country, we produce about 200 bushels of corn, 50 bushels of wheat, 80 bushels of oats and 12 bushels of barley. Yet in spite of these figures which seem to belittle its importance, the crop holds an important place in certain parts of New York and Pennsylvania, particularly in hilly sections, where the soil is not of the richest, the growing season short, and the range of possible cash crops small.

As a crop, Buckwheat asks little in the way of soil or climate. It will grow well on soil too poor to produce other cereals profitably, maturing in about twelve weeks from time of planting. The section where the growing season is shorter than that is scarcely an agricultural country. The crop seems to be able to use minerals in a relatively insoluble form. New land, just cleared, and therefore never subjected to the full weathering action of the elements, or soil lacking in organic matter will produce a good crop of buckwheat.

The use of the crop is not restricted to buckwheat cakes. It makes a good green manure crop. The fact that it grows well on poor land, makes its use possible as a soil improver. Another point in its favor as a green manure crop is that the seed is not costly, and still another is that it will decay quickly when plowed under.

A Good Weed Killer

It is a good weed killer. Even quack grass can be subdued by it, if the ground is well harrowed just previous to planting. It comes up rapidly, and shades the ground so completely that other plants have a small chance of living. In addition to killing weeds the crop seems to have a way of leaving the soil in an especially workable condition. The roots are fine, and penetrate all through the soil. For this reason buckwheat is sometimes grown previous to potatoes.

A comforting thing about the crop is that a farmer always knows that if late

crop to fall back on that will use the land and prevent a total loss. In fact the best yields are often obtained when this is done, because the soil has had a chance to settle and make contact with the subsoil before the seed is sown.

In addition to the troubles already mentioned the crop has two danger points to pass. One is the blossoming period, when extremely hot weather or heavy rains may blast the flowers so that the crop is hardly worth harvesting. I remember one case where an entire load was run through the threshing machine, with a result of not quite a bag of grain. In this case better management would have been to plow it under for the benefit of the next crop and save the expense of harvesting and threshing it.

Subject to Early Frosts

The other danger point is that an early frost may kill it before it is mature. Late sowing helps to prevent blasting during the blossoming period, but the later it is sown, the greater is the danger of a crop failure through frost. The crop is easily frozen, and when early frosts come, nothing can be done except plow it under.

Buckwheat will make use of fertilizers—some seems to be quite necessary. I learned this lesson at an early age when sent to a field at some distance from the house to drill a field of buckwheat. It was about the first time I had been trusted with such an important job, and was quite proud of the responsibility. The fact that the fertilizer ran out before I quite finished the job, and the fact that the crop showed very plainly where the fertilizer was not applied made such an impression on my mind that I have always remembered it.

Acid Phosphate Shows Up Best

Phosphorus seems to be the most important element to use, and acid phosphate is likely to pay better than a complete fertilizer. Quite a bit of potash is used by the plant, but most of the soil on which it is grown contains a good percentage of clay, and the potash in the soil seems to be available to the crop. Some nitrogen is needed, but too much causes the crop to lodge badly. I remember one field that was grown after peas had been sown there for several years. The peas had collected nitrogen from the air through the nodules on their roots, and the result was that the crop of buckwheat had the rankest growth of straw that I ever saw, but only an average yield of grain.

The common rate of sowing is a bushel per acre. Buckwheat does not tiller like the true cereals, but branches are sent out more profusely where the seedling is light.

Cradles Still Used in Harvesting

In years past, the cradle was the tool with which the crop was harvested. It is still used to some extent on fields where the land is too hilly to make the use of a binder possible, but this method is too slow for any but small areas. The grain binder is the common way of harvesting and if cut before too ripe, there is no more loss of grain than when cutting with a cradle.

It is extremely doubtful if the acreage of the crop will increase greatly. It has a distinct place in the farming of southern New York State and some parts of Pennsylvania, and to a more limited extent in other states. There may be some farms in this territory where it could be profitably grown to a much greater extent than at present. We sincerely hope that enough will be grown to at least furnish us with buckwheat cakes.—H. L. Cosline.

Why I Spray Potatoes

It Pays Because It Is A Three-Way Insurance

By H. R. TALMAGE

NO single section of our country has ALL of the natural advantages for the profitable production of any major crop. Many times when a locality can grow a crop almost to perfection, the market is so far away that it more than offsets the favorable growing conditions. It is only when a section has more than the average of favorable conditions that it can grow a crop profitably in a large way.

H. R. TALMAGE

Favorable conditions have enabled Long Island to specialize in potato growing. Because of continuous growing of potatoes on the same fields, without rotation, our soils have become quite generally infected with rhizoctonia and common scab. More than fifteen years ago. Prof.

F. A. Sirrene, then connected with the New York Experiment Station, demonstrated here on Long Island, that seed treatment, or soaking had but little effect in reducing either rhizoctonia or scab. Many carefully conducted tests have since given the same results.

Soaking seed with corrosive sublimate has the effect of retarding the crop at least a week, which is a detriment here. It is a rather disagreeable job, in a very busy time when it is difficult to dry the tubers off. For these reasons I know of no grower in this section who makes a practice of soaking his seed. That it does pay to soak seed in many other sections of the country has been amply demonstrated. On our farms in Maine, where we grow our own certified seed, we soak all the seed we plant.

That rhizoctonia does grow on other plants besides potatoes has been shown several times on our Maine farms where we have planted carefully soaked seed on old pastures not in potatoes for many years previous. The crop has been severely infected with the disease in some instances.

We suffer but little injury here from rhizoctonia, except in the spring when the sprouts are first coming up. At that time, when soil and weather conditions are favorable we may have as much as 15 per cent of the sprouts rotted off. When this occurs another sprout starts. Sometimes as many as four sprouts will be destroyed, but usually the second sprout will come through all right and the plants infected, will not be more than a week or ten days later than others not infected.

Many careful inspections have shown us that quite generally the infection of the sprout is at a point between the seed piece and the top of the ground and not where the sprout starts off from the seed piece. We have found that by having the seed piece as near to the top of the ground as practical, lessens the danger of infection. This

is the only measure taken to lessen the loss from rhizoctonia.

Scab Not a Serious Trouble

Common Scab is not a serious trouble with us. That disease is not serious only on soils that are alkaline or "sweet." Our growers are learning to control this condition by plowing under green rye, and using fertilizer specially compounded to produce a mild acid effect. On those fields, or portions of fields known to produce scabby potatoes, sulphur is used. The sulphur is broadcasted, 300 to 500 pounds per acre before planting and harrowed in.

It is quite likely that the soils which are being planted to potatoes almost continuously can be held at the proper degree of acidity to prevent scab and still get maximum crops of potatoes, by using fertilizers made from the proper materials. Many of our wide awake growers are now doing that.

Ordinarily the common potato bug must be poisoned. This is usually done with Arsenate of Lead or of Calcium. These poisons are either

season, Long Island would have had at least two million bushels more potatoes. It means a loss but I am free to admit that there was no shortage of potatoes even if we were hit by the aphids.

Here is a chance for the scientists to help us. We very much need some kind of gas to be applied over our fields, that is practical to use, not injurious to man or horse, and that will kill the insects.

Shall We Spray for Late Blight?

Here is a question that is or should be in the minds of every commercial grower of potatoes. Late Blight is carried over the winter in the seed and no kind of seed treatment will have any effect in getting rid of it. For that reason it is essential that every precaution be taken to see that the seed is not infected. That being true, it leaves no room for a question whether the grower of certified seed should spray. The question then is for the grower of table potatoes.

There may be sections of our country where Late Blight is not a problem, but in the north eastern states it is a question we have to face. Perhaps another question will help us to answer this one rightly. Do you insure your buildings against fire? If so, why? The average person lives all through his life without his house or barn burning. Fire insurance costs very much more than the loss from fire, yet all normal persons insure their buildings.

Spraying for blight is insurance, on the average it saves much more than it costs. On Long Island we plant our potatoes early in the Spring and they ripen in mid-summer when it is usually hot and dry. Even under such conditions, it will pay us to spray three years out of five. Often we save enough by spraying in one year to pay the cost for five years and in some seasons we have saved enough to pay all spraying costs for ten years. Before the war when costs of growing per acre were

well under a hundred dollars, and returns in proportion, spraying was not very general among our growers. During the war costs of growing went well above two hundred dollars per acre and nearly all of our growers as a matter of insurance took up spraying.

Three Kinds of Insurance in Spraying

Spraying furnishes three kinds of insurance. First, it frequently protects the vines from a premature death, thus prolonging the growing season on the last end, just when the tubers are making their greatest growth. This frequently makes a quarter or third increase in yield, besides making the crop of better eating quality and better looks. A potato prematurely killed by the blight is not of the best eating quality. Second, it prevents rot which may mean anywhere from a one per cent to a 90 per cent loss. Thirdly, it helps very materially in securing a higher price for the potatoes. Local buyers will not take potatoes from a farmer if they know those potatoes are infected with blight rot. They frequently do get such potatoes without knowing it, and when the car containing them ar-

(Continued on page 598)

Spraying affords three kinds of insurance, in the form of yield, quality of product and price. Much depends on how and when the spray is applied. High pressure is an advantage. Here is a sprayer at work on Long Island spraying ten rows on a single trip across the field.

applied in Bordeaux Mixture or with one of the types of horse drawn dusters.

The Flea Beetles have to be reckoned with. There are usually two broods of them, the first coming soon after the potatoes are up, the second between July fifth and tenth. The latter is the brood that does the most damage. Bordeaux Mixture is the best remedy known for the flea beetle. Where vines are well covered with spray, the fleas seldom do serious damage.

The third insect that we have to contend with is the Aphids. It is only within the past eight years that they have been present in sufficient numbers to reduce our crops. Of all the enemies of the potato crop, these are the hardest to combat. As yet there seems to be no practical, effective method of keeping our fields from injury by the aphids. With frequent rains they seldom do much damage, but in a season like 1924, when we had no rain for 42 days, the aphids increased unhindered and our crop was cut nearly fifty per cent by the dry weather and aphids combined. Neither one alone would have produced so disastrous results.

Had there not been a scourge of aphids last

VOL. 115 June 13, 1925 No. 24

The Real Issue In The Cattle Frauds

A REPRESENTATIVE of AMERICAN AGRICULTURIST has just returned from another study of the cattle tuberculosis situation in Cortland County. The outstanding thing that he found this time was the large amount of gossip that fills the air. As usual with gossip, most of it is untrue or grossly exaggerated. Furthermore, there is a tendency to hide the real issue by attacks on the accredited herd system and by statements that cattle infected with tuberculosis are not dangerous anyway. Every sound thinking dairyman knows that such statements are nonsensical.

Suppose, for instance, you have killed a beef cow and have found her very badly infected with TB. How many of you would like to eat that infected beef, or feed it to your children? How many of you would like to drink the milk from that cow or allow your children, or the other fellow's children, to drink it? That is the answer as to whether it is worthwhile to clean up bovine tuberculosis.

Tremendous progress has been made in the last two or three years in eliminating TB. The very size of the job gives some room for fraud. While this Cortland situation is serious, there is no use "making mountains out of mole hills" by exaggerating its seriousness or by letting it interfere with the progress of tuberculosis work which must go forward.

The only real issue in the Cortland County situation is to find the criminals responsible for the fraud and properly prosecute them and then so far as possible to tighten up all along the line in the TB work that it may be more difficult for fraud to occur again.

Grange Program Contest

GRANGERS are responding already to our contest for the best suggestions for a lecturer's program. Our ideal is to get at least one suggestion from every Grange in New York State. But every member of the Grange is eligible to compete. For full details, see the AMERICAN AGRICULTURIST, issue of May 23rd, or write direct to AMERICAN AGRICULTURIST.

Briefly, a first prize of \$50, a second prize of \$30 and a third prize of \$20 are offered by Henry Morgenthau, Jr., publisher of AMERICAN AGRICULTURIST, for the best suggestions for lecturers' programs in subordinate Granges for a series of

which have been already used, or they can be three meetings. These programs can be those made up entirely new. One-half of the prize money will go to the individual winner and the other half will go to his or her Grange. Programs should be stated in sufficient detail so that they may be easily followed by any Grange, and each program may be accompanied by a brief discussion not to exceed one hundred words. Contest closes September 1, 1925.

Judges will be S. L. Strivings, Master of the New York State Grange, Henry Morgenthau, Jr., publisher of AMERICAN AGRICULTURIST, Raymond Cooper, Lecturer of the New York State Grange, E. R. Eastman, editor of AMERICAN AGRICULTURIST, and Charles M. Gardner, editor of the National Grange Monthly. Send all programs to AMERICAN AGRICULTURIST, 461 Fourth Avenue, New York City.

"Plow Deep, Boys"

HOW the ideas about how to take care of crops and animals change with the years! We can close our eyes and see as clearly as if it were yesterday, Father going down the corn rows with the lines tied tightly around his back, bearing on the handles with all of his might, and with the cultivator itself piled high with stones in order to make it "plow deep." He was always remonstrating with us boys if we did not do likewise, claiming that it did no good to cultivate unless you get the teeth way down into the soil.

In one sense, he was right, for the only way to get rid of weeds, particularly in a wet season, is by fairly deep cultivating. But for the most part, deep cultivation, particularly in dry season, is very bad practice. It injures the roots, reduces the yield of the crop, and does not conserve the moisture as well as shallow cultivation.

One Hundred Dollars Reward

IN our Service Department, AMERICAN AGRICULTURIST issue of May 23rd, Henry Morgenthau, Jr., offered one hundred dollars reward for evidence which will lead to the arrest and conviction of any person or persons trying to sell stock or bonds of a fraudulent nature. The only condition is that the fraud must be attempted on a farm on which is posted AMERICAN AGRICULTURIST Protective Service Bureau sign. One of these signs, which are very attractive, will be sent to any subscriber upon receipt of six cents to cover cost of mailing, or one of our salesmen will put up one free of charge when he calls.

The idea of this is to protect our readers who are members of our Service Bureau against the large number of frauds that are constantly being put over in these times. It is just another part of the many services which this publication is trying to furnish to farm people.

To Farm Boys and Their Parents

OVER five hundred boys have already joined AMERICAN AGRICULTURIST Lone Scout tribe. More applications are coming in every mail. So many are being received that it takes a little time to acknowledge all of them, so do not be too impatient if we are a little slow in replying. We are answering them as fast as we can.

As we have before explained, the Lone Scouts are the same as the Boy Scouts' organization and under the same management. The only difference is the Lone Scouts' rules and regulations have been adapted to country conditions where it is difficult and sometimes impossible for a large troop to get together the way the Boy Scouts do in town and city.

We are very enthusiastic over what the Lone Scouts can do for farm boys. No one makes any profit out of any part of the movement. The supplies are furnished practically at cost. There is so much to be gained from what can be done for a boy who will join up and make the most of the opportunities offered that we have no hesitation in urging parents to encourage the boys to

join and to work for the different degrees. We call your attention to the regular column devoted to the boys and to the Lone Scouts on another page. If there is anything not explained in this column or any further information that either the boys or the parents want, we hope you will feel free to write to the Lone Scout Editor of AMERICAN AGRICULTURIST.

Experiences Count Most

IF you keep poultry you will find a lot of valuable information in the article on caponizing by Mr. Hiscock on page 604, especially if you are looking for a means of increasing your income from your poultry business.

Mr. Hiscock's article is not made up of a lot of warmed-over ideas. They are actual experiences he has had in caponizing. He tells how he went about the job just as you and I would do. Comparatively few people raise capons, as Mr. Hiscock says, for a lack of sufficient confidence. Capons are associated with the more exclusive in the poultry trade. They are a means of getting high prices for surplus stock. When you have read Mr. Hiscock's article you will see that there is not so much exclusiveness to it after all, but just an operation that requires a steady nerve and a sure hand.

Are We A Nation of Road Hogs?

SOME time ago M. C. Burritt was riding with us in an automobile and as we drove down a steep pitch into a main highway, we had to hold the car, with some difficulty, before we could get an opportunity to turn into the traffic of the main road. Not a single driver offered to hold up and let us in. We might have stayed there for an hour unless we had ourselves taken the initiative and crowded in, holding up somebody else.

From this incident, Mr. Burritt was led to comment upon the apparent lack of courtesy in automobile drivers. It is so. We dislike to admit it, but it looks as if we were becoming a nation of road hogs.

The National Grange Monthly, in commenting on this same thing, says:

"There is a decrease in plain, ordinary courtesy, a tendency sharply manifesting itself in many avenues of life. Nowhere is it more noticeable than on the road where a seat behind the steering wheel appears to beget a sense of autocratic power that is alike destroying human lives and blasting the ideals of civilization."

This is putting it pretty strongly, but it is certainly deplorable and dangerous to our ideals when courtesy, a fundamental virtue, is permitted to decline.

I consider knowledge to be the soul of a republic, and as the weak and the wicked are generally in alliance, as much care should be taken to diminish the number of the former as of the latter. Education is the way to do this, and nothing should be left undone to afford all ranks of people the means of obtaining a proper degree of it at a cheap and easy rate.—John Jay.

Eastman's Chestnuts

HAVE you ever noticed when you go forth to plant potatoes in the spring, friend potato bug sitting on the fence post leering at you in derision and licking his chops in anticipation of the good times he will have when the potatoes come up?

I was reminded of this when I received from a Canadian friend, Mrs. Thomson of Belleisle Creek, N. B., the following:

Says the doctor to his patient: "Why, man, what is the matter with you?"

Says his patient to the doctor: "Well, Doc, I SWALLOWED A PERTATER BUG AND ALTHOUGH I TOOK SOME PARIS GREEN RIGHT AFTER TO KILL THE BASTE HE'S STILL JUST RAISIN' THE VERY DIVIL INSIDE O' ME!"

The Worst Mistake I Ever Made

Prize-Winning and Other Good Letters on This Great Subject

I Married A Man to Reform Him

(First Prize)

A WIDOW at twenty-seven, I faced the problem of earning a livelihood. I took stock—a small life insurance, two years' hospital training, good health, presentable appearance, and a fair education. These were my assets. Liabilities: two babies. My parents, well-to-do, living on a farm, were glad to keep my children while I secured a good position as nurse in a state institution nearby. I liked my work, got a good salary, and my parents adored the children, and we were contented and happy for two years.

Then I made my worst mistake—I married again, a young farmer I had known all of my life. I knew also that he often drank to excess. Disregarding the advice of all my relatives, we were married. Of course he promised to reform. Let this one glimmer of reason stand to my credit: I did not believe that he would be a total abstainer, but I had no idea of what periodical sprees meant to a farmer. Apart from the degradation, and loss of social standing, I learned there was and is no method of making a living on a farm if the owner is intemperate. Whole crops ruined, hay and grain left in the fields. Knowing my husband's failing, his help, picked up in emergency, is usually incompetent and insolent. I have always been a lover of dumb animals, and have laid awake many nights when they were neglected. And above all, I have to be cheerful and optimistic and try to keep up appearances, in spite of the ever-present debts and duns and shabby clothes.

You will undoubtedly say, "Well, she knew better." I did, but it does not help much now. I have made many mistakes, some queer, some laughable, but my marriage to a periodical drinker was the worst mistake of my life.

Should Have Bought a Home

(Second Prize)

WE made a great mistake, in our early married life, by not buying a home. Being farmers we would have had to buy a farm. We always waited to be a "little better fixed," which was a big mistake. For poor people there is no better time than the present to buy a home. It gives an incentive to save. It is well to wait when wanting to buy unnecessary things, but if it can possibly be done, buy a home at once. I have always, even before marriage, wanted a home of my own, one with grounds to plant a big garden, flowers, shrubs and vines. I have built many castles in the air about my home, but they have all fallen. Now I am on the last stretch of my race, and no home here on earth. Soon I will not have the strength to spend on a home such as I have pictured all these years.

Young folks should buy a home while young, while the "kiddies" will not mind the saving and skimping to pay for the home. Thus when they are grown there will be more with which to educate the boys and girls and give them some advantages, to help them grow into useful men and women so much in demand today. A beautiful, well kept home—one's own home—does much to help boys and girls to fill responsible places in life, also much in making the later years of one's life happy and contented. Yes, I believe this is the biggest mistake we made in our life: Failure to buy a home when young and not to have always to call some other man's house our home.

Seeking For Fool's Gold

Third Prize

WHEN a person has made many mistakes during a period of forty years on a farm, to pick out the worst one is no easy matter. At

first I thought not marrying in my twenties as I should have was the greatest mistake I ever made, especially after reading the life of ex-President Wilson by William Allen White and seeing what a helpmate President Wilson had in Ellen Axton, the wife of his early years. She was his advisor and counselor; it was she who not only guided his movements but stimulated every effort for his advancement and was loyal and faithful to her trust, to the end of her days. A wife and her counsel have steered many a man from going over the breakers and made him the success he is, if he would but own it.

As I look back I think my greatest mistake was looking for a gold mine in some far distant place than right on the farm where I should have. It happened like this. During the Pan-American, I ran a couple of rooming houses in Buffalo. A man and wife came one day. He handed me a card of introduction from a prominent clergyman of my own county. He carried too a handsome cane which he informed me later was a testimonial gift from his friends in a western

Some Worthwhile Letters

YOU will go a long ways before you will find more interesting reading than the letters on this page on "The Worst Mistake I Ever Made". They are right out of the heart, and from burning human experience. If experience is worth anything to the race at all, these letters should mean something to those who read them.

There was a very large number received in answer to our contest. Practically all of them make interesting reading. Probably other judges would have selected others for the prize winners, for it was very hard to decide, and we did the best we could. We had more good ones than we could print in this issue, so in an early number we will give you another page.

We want to take this opportunity to extend our thanks and express our appreciation to all of those who opened up their hearts and confessed their mistakes in the hope that they would save others from making the same ones.—The Editors.

city where he lived. He told me he had given up the practice of medicine and had found something that promised far better returns—a gold and copper mine. The sample of ore was very conclusive evidence, but the blueprints of the many elaborate veins were proof positive that his mine would make every fortunate investor rich. Many of us found later that you can put anything on paper.

It never paid. I found it was practically inaccessible and more than fifty miles from a railroad. This lesson should have been sufficient, but I thought like many others that it was best to look for my money where I had lost it and keep trying to regain my losses in other mining propositions, which carried, or appeared to, all the ear marks of a real mine. They have all so far turned out like my first speculation, so I can say my worst mistake was investing in mining stocks.

No Training For Life Work

AS I look back upon my life I think that the greatest mistake I ever made was when I failed to educate myself in a special way for my life work.

Born and reared in a town where I had only a small patch of God's green to enjoy, I early learned to think of my uncle's farm as the nicest place on earth. I just tolerated the life in town

during the school year with the happy thought in mind of the coming vacation on uncle's farm for there in the country I had ever before me the wonderful picture and nature study of "God's great outdoors."

As years passed this feeling deepened within me until I decided that my life, if it were to be truly happy, must be spent in the country. I was educated for a teacher and taught in the public schools for several years. I married a farmer and set up housekeeping on a farm. The country was the same place to me that it was in childhood, but I soon found that I had not been educated for my chosen life work. Ill planned work and meals together with poorly cooked food soon brought their results, viz., overworked body, confused mind, and indigestion with all the ills that follow in its wake.

Had I taken a course in home economics or in some other way educated myself for a homemaker, I would have been able to plan and execute my work in such a way that I could have time for reading and recreation. Order instead of confusion would have reigned and the chances are that the children would have loved farm life instead of disliking it so much that they left it for the city as soon as they were old enough.

Caught By the Song Sharks

MY greatest mistake is most bitter to think of. Having the song-writing mania I made easy prey for the frauds looking for easy money minus labor. Being one of a large family of limited circumstances I had a desire to earn money. I sent to several studios enclosing song poems which friends had praised. After a week of anxiety two were returned stating they had too many on hand. My joy knew no bounds when a few days later I received a flattering letter and contracts from a Chicago firm.

The musical arrangement by a noted professor and song plates, they stated, would cost fifty dollars, to be paid in weekly payments of five dollars each. How I wish all had been refused! My parents gladly deprived themselves of the money weekly. When the time was up I received fifty copies of music and plates with a letter stating that the matter should be taken up with a publisher who would charge a small fee for putting it on the

market. Before I had time to send it anywhere, I received contracts from a publisher in Chicago. The fee was forty-five dollars. Thinking I must finish I sent plates and also weekly payments. When all had been paid I never heard from them again although I wrote many times in vain.

My foolish bargain taught me a wonderful lesson for all time. Please do not laugh, readers, when I tell you that the one-time poetess is about to enter the chicken business in a small way. I cannot doubt that the latter will be more profitable and sensible for dear little biddy will recompense me for past losses with less anxiety.

Tragic

I AM looking forward to the things the contest on "The Worst Mistake I Ever Made" will bring. Could I feel eligible to the contest, I should have to say that the worst mistake I ever made was when I failed to stop breathing after taking my first breath in real life.

Of all subsequent mistakes there are two, but I fail to decide which is the worst. The one is feeding my right hand to the revolving knives of a planing machine and the other—buying a starved-to-death farm with no money to buy food for its resurrection.

Planting Is Here

A Farm and Home Talk

By M. C. BURRITT

THIS past week might be termed "corn planting week" in Western New York, for seventy-five to ninety per cent of the corn has been planted during the week. The crop went in in

and think, and our editor tells me that that his readers want to read this sort of experience. So I am foolhardy enough to try to write of such experiences myself. I need our reader's experiences myself. I need our reader's helpful comment and encouragement to make them most worthwhile.

Another week ought to take us out of the spring rush and into a brief breathing period before we begin the next rush period of cultivation of hoed crops and the first of the harvest,—alfalfa hay-ing.—M. C. Burritt.

M. C. BURRITT

us who finished plowing bean or cabbage ground last week, found the ground pretty hard and plowing beginning to be difficult.

A good many farmers have planted late potatoes also because they had the time to do so and the land was ready. It is plenty early for this crop here and many prefer to wait until June 10 to 15. The week has been fairly warm, about the warmest yet, as a whole, but it is far from ideal corn weather.

Some Are Neglecting Timely Spraying

The calyx pear and early apple sprays have been started this past week, although a surprisingly large number of growers have not yet started the spray on apples. The old habit of planning to get certain work out of the way before spraying, is still too strong with many to give way to the spray job even though the right time for spraying is a vitally important part of this operation. Few, if any Baldwins have been sprayed on May 30th. A large part of the coming week will have to be devoted to this third application which promises to be important this year. The fruit is on the whole apparently clean and ought to be kept so.

Another job for the first week in June will be the setting of tomato plants for canning factory. Two carloads of tomato plants have already been unloaded at Hilton.

* * *

Word has come to me through the Circulation Department of AMERICAN AGRICULTURIST that these plain notes of current doings in this part of the state were meeting with favorable comment among readers. Apparently those who read them like them because they are simple across-the-fence visiting about the weather, the week's work and the work and prospects immediately ahead. I am pleased to get this word. I am always glad to get comments because they help me to know what is helpful and interesting to others. I welcome criticisms too, as much as favorable comment.

I feel like taking this opportunity to say also that in writing these notes I make no pretensions to be better informed than thousands of good farmers, or to having expert knowledge of the things I write about. A feeling of reluctance to put many thoughts on paper always comes to me when I stop to think how many good farmers there are who know much more about good practice than I do. My only excuse is that 99.99 per cent of these men do not write what they know

Modern civilization has made life on the farm more complicated. The advice so freely handed out to us farmers from some quarters, that we diversify, is wrong. Farming is dividing itself, more all the time, in special lines. Labor for farms is so high that it is essential that the most improved machinery be used. In these days, whether a farmer is producing fruit, milk, grain, or potatoes it is necessary to be a specialist in order to be able to have the necessary equipment to meet competition and make any profit in the business.

The man who grows but a few acres of potatoes cannot afford the expensive machinery to do a good job spraying. If he cannot spray he had better devote his efforts to some line of farming, which he has machinery to carry on, and let some one else grow the potatoes.

"I see Hank's wayward son come back from the city."

THE LONG-LIFE
BATTERY FOR
YOUR CAR

Save battery dollars

The man who has driven a number of years knows that the economical battery is not the one that you buy at a "bargain" price. The way to save dollars is to get a battery that stays on the job in your car—instead of on a repairman's shelf—and that stays on the job a long, long time.

Exide is the choice of experienced drivers because its price is reasonable; it is ruggedly sturdy and it is dependable to a very advanced battery age.

The nearest Exide Service Station has the economical battery for your car. You can also get Exide Radio Batteries there and at radio dealers.

Cattle Fraud Developments

Gossip Running Wild in Cortland County

THERE have been few developments in the Cortland County cattle tuberculosis investigation during the past week. The most that can be said is that the several investigations have been going forward and some ten more cows have been discovered that were condemned and then later fraudulently resold. One of the editors of AMERICAN AGRICULTURIST has just returned from a second visit to Cortland County to study the situation. He reports that the most outstanding thing in the investigations present status is the amount of gossip that is present. Everybody is talking about it, and as usual when everybody is talking, no two stories agree.

There are two or three very healthy signs in the situation. Perhaps the chief one is the great hope of the dairymen that the investigation now being carried on by the State will be properly finished and that there will be real punishment for the parties who are guilty of fraud. There is quite general fear that nothing will come of it. One reason for this is that there seems to be difficulty in getting adequate proof against the guilty parties.

Investigation Must Bear Fruit

The opinion is frequently expressed by farmers that failure to finish the investigation would hurt the accredited work in the State by undermining the confidence which farmers have had in it in the past. Many farmers have concluded that they will be forced to raise their own heifers or buy them from herds that are accredited.

Two different farmers expressed the opinion to AMERICAN AGRICULTURIST's representative that even if it were impossible to punish the guilty men some good would come of the investigation if it would lead to measures which would prevent the recurrence of anything similar in the State. The investigators say that it is extremely difficult to get definite proof as to who is actually responsible. The possession or sale of such cows is a violation of the law, but it is not the intent of the State to prosecute men who have innocently had such cows in their possession, but rather to go after the men who have been involved in deliberate fraud.

How Farmers May Help

No absolute proof has been secured that the indemnities on any of the cows have been paid because their identity has been destroyed by removing the ear tag. Of course, it is undoubtedly true that the indemnity has been paid on many of them; a few have been found on which it is known that the indemnity has not been paid and which are not in the hands of the original owners. In a majority of cases, these cows have passed through several hands and it cannot be determined on what farm they were tested. Mr. Almon Burrel, deputy attorney general, says that if the State could find a farmer who could identify some cows as having been tested on his farm, condemned and branded, and could tell to whom he sold them, it would be of immeasurable help to the investigation.

About sixty branded cows have been found so far. There is a possibility that some cows have been missed because the brand was so slight and it has healed so completely that it cannot be seen at all. If the ear tag were removed immediately, the hole in the ear would heal so that it would not show. This does not prove that the veterinarian who branded the cows was necessarily crooked. The brand no doubt would show as long as the cow was supposed to live; but farmers expressed the opinion to our representative that cows should be branded so thoroughly that it would never heal.

Gossip Running Wild

There is much gossip to the effect that dealers have regained possession of such cows and have either slaughtered them or hidden them on some hill farms. The question is, how can dealers regain pos-

session of the cows without the knowledge of the owner? To this, some Cortland farmers say that a number of farmers are financially indebted to dealers to an extent that makes it possible for the dealer to dictate what the farmer shall or shall not do. There are also many reports indicating that considerable pressure has been used on some individuals to prevent their giving testimony. It is said that foreclosures of mortgages, jail sentences and physical harm have been threatened to some men who know the facts that might incriminate some of the men guilty of this cattle fraud.

This pressure might explain the situation whereby dealers can force certain farmers to accept cattle, have them condemned, and then turn the indemnity from the State back to the dealer. There is a ruling whereby cattle dealers cannot directly collect money from the State for condemning cattle, but reports are that they get around this often by forcing farmers in their control to have it done in the farmer's name.

Stories of Threats Passed

Our representative was told that deputy attorney general Maurice Kaman had been threatened unless he let up in the vigor of his investigation. This was not confirmed by Mr. Kaman.

Our representative talked with a large number of farmers and those representing the State and the milk companies engaged in the investigation, and a healthy sign of the situation is that all of these men were frank, and anxious to get at the truth of the situation and to let the public know what the truth really is.

While the investigations to find the criminals are going on, the milk companies, including the Borden's and the Sheffield's and the Dairymen's League Cooperative Association, have been working hard on inspecting herds delivering to their plants. These inspections are about all finished. AMERICAN AGRICULTURIST representative was told, however, that there are some cows in the county which will not be inspected unless the State Department of Farms and Markets inspects them. These include cows which furnish milk to the city of Cortland, for cheese factories, and for milk sold out of the State. It is expected, however, that the State will make inspection of these dairies as soon as it can get to it.

A Letter From a Cortland County Farmer

We have seen no better discussion and summary of the whole situation in Cortland County than that given in the following letter. This letter was written to AMERICAN AGRICULTURIST by one of the best farmers in Cortland County and by a man who believes thoroughly in tuberculosis control and who owns an accredited herd. His letter follows:

I am very glad that you are attempting to get the facts of the case about the cattle frauds here, but I have not answered your letter sooner because I hoped to have a little more definite information.

So far as I can learn, at least in this section of the county the farmers are in no way implicated in the frauds, and apparently they have been in every case, with one possible exception, the unfortunate victims of a few unscrupulous dealers. So far as I know, or have been able to hear, all the testing work done under the accredited herd plan has been efficient and honest, and no frauds of any kind have been attempted.

It has been said that as long as fifteen years ago, when certain dealers used the tuberculin test before shipping cattle, especially when they were subject to a retest, the dealers had some cows to sell locally which they did not wish to ship, and that the reason why New York State now has so many reactors is the wide dissemination of these diseased cattle among utterly unsuspecting farmers who were unfamiliar with testing.

If there is any more abominable fraud than knowingly selling diseased animals to unsuspecting farmers, thus deliberately spreading disease among dairy cattle, I do not know what it can be. We are hoping very fervently that the State authorities will know what ought to be done, and will do it. We are fearing very greatly that on account of political or other pull, the cases will be dropped, and those

Whether you have 5 or 500 Cows there is a

De Laval Milker

For your needs and purse

WHETHER you have 5 or 500 cows or more to milk, there is a De Laval Outfit exactly suited for your needs and purse. More than 25,000 De Laval Milkers in use prove that they soon pay for themselves in saving time and labor, increasing the quantity and quality of the milk, and by making dairying more pleasant and profitable.

A De Laval Milker will save you at least \$20 per cow per year. You will find a De Laval easy to own, easy to operate and easy to pay for. It will please both you and your cows and your only regret will be that you didn't get one sooner.

EASY MONTHLY PAYMENTS

A small payment down (from 10% to 25%) will put a De Laval Milker to work for you. Then the easy monthly payments can more than be met by the savings it makes for you. See your De Laval Agent or mail coupon below for full information.

HOW LONG Will My Silo Last?

Will it get out of shape and eventually fall? Can I depend on it to do its job year after year? Will it continually need repairs, causing me a lot of trouble and expense? Can I forget it or must I worry about tightening lugs or loops? Will it keep my silage in the proper succulent condition?

The Craine owner has no such worries. After his silo is up he simply uses it season after season without thought of its condition. It's a strong, handsome, durable, weather proof and frost resisting structure that will stand up and save money for many years. Write today for catalog and descriptive literature.

THEO. BURT & SONS, Melrose, Ohio

to Plymouth in the Mayflower in 1620. This may well be true for surely in him was personified all those characters which we associate with those iron men. When he was still young his family moved to Ohio and as he grew up he was in turn tanner, surveyor, wool merchant and farmer. Once too, he thought of becoming a minister of the Congregational Church. He was always traveling and always poor. His wandering made him for a brief period a resident of Springfield, Mass., and once he voyaged to London. For a man of his time he had seen a good deal of the world. For at least twenty years before his death his obsession—his master passion—was the freedom of the slave.

His theology—his philosophy of life if you will—was Old Testament. He was a stern, uncompromising religious zealot—a praying, Bible-reading, Psalm-singing old prophet of Zion. He married and lost one wife and married another and reared a great family of children, boys and girls, and at least three of his boys were fated to die for their father's cause.

When he went to Kansas in 1855 he left his wife and younger children behind on the farm at North Elba. Unquestionably he loved his family and one of the few things that ever disturbed his dauntless spirit was the thought of their possible want and suffering in his absence.

For his part in the bloody Border War of Kansas, Brown surely needs all the apology that can be made for him. He had to deal with strong, ruthless men and he himself was hard and cruel. A sympathetic biographer admits that he was guilty of massacre that was hardly less than cold-blooded murder. It is a legend told concerning him that once taking a party of seven Missourians—wicked, ungodly men—he forced the entire party to kneel and pray aloud—at the muzzle of a cocked rifle. At best, this was a savage, blasphemous joke. Thus like the Crusaders of old, he "preached the Gospel with the sword." If there be any apology, it is this: That he was saturated with the stories of the early wars of the Hebrews until he felt that he too was one of the Lord's anointed called to smite Amalek hip and thigh.

Sometimes during those years the idea grew upon him that he was to strike a blow at slavery, not in some scattered frontier of the West but back in the old, established center of that evil system. During the early months of 1859 he appeared in Maryland and representing himself as a sheep-farmer leased the Kennedy farm in that state—a poor, rough farm lying about six miles from Harper's Ferry. Here during the several months he gradually collected considerable quantities of arms and munitions and also gathered an "army" of about twenty followers, black and white. This seems to have been done so quietly

that not even curious neighbors suspected that a revolution was being hatched in their very midst. About ten o'clock of Sunday night, October 16, he invaded the village, captured the guard of the important United States Arsenal, made prisoners of some of the more prominent citizens and carried on some desultory fighting in which men were killed on both sides. By sheer audacity he held practical possession of the town until Tuesday morning when a detachment of U. S. Marines under Robert E. Lee (afterwards destined to become the greatest commander of the Confederacy) over-powered the little garrison after a brave but of course utterly futile resistance. It is hard to conceive of a more ridiculous and hair-brained enterprise than thus with his motley crew to challenge the might of a great nation.

Brown was imprisoned at Charlestown, Va., and ten days later was brought to trial and indicted under three distinct counts: For conspiring with the negroes to bring about an insurrection: For treason against the Commonwealth of Virginia and for murder. Brown did not lack for warm admirers and for powerful friends of wealth and position. Able counsel was brought from the North and it is the sober verdict of history that he had his "day in court" and received a fair trial in full enjoyment of all the constitutional guarantees and privileges of the accused. As a matter of fact not much defense was possible. His counsel would have offered a plea of insanity but Brown himself indignantly repudiated any such move. He also offered to save trouble and the time of the court by acknowledging the genuineness of certain writings attributed to him. For his execution the honor of Virginia takes no stain. He was unquestionably guilty on all three counts and a sovereign state could hardly do less nor could a jury sworn to render a verdict according to the evidence find otherwise than guilty.

The trial lasted four days and a little more than a month later Brown was hung at Charlestown thus officially closing the book of his Great Adventure.

* * *

His outstanding triumph in life was those last few weeks. All his life heretofore had been labor and sorrow and privation and failure and disappointment but in his death he was magnificent. Unfriendly witnesses have testified to his splendid composure and dignity during the trial and until the end. It is pleasant to believe that during those closing days when he definitely knew that his troubled life had come at last to an end, he was vouchsafed a certain clarity of vision—a certain outlook of charity and understanding of those who did not in all matter think as he did. From his prison he wrote many letters. His biographer Gamaliel Bradford says that he "corresponded voluminously." His

John Brown

(Continued from opposite page)

wife visited him in prison as did certain northern friends and also Wise, Governor of Virginia who signed his death warrant. One gets the impression that his last days must have been very busy while he set his earthly house in order. Men say that during those weeks a smile frequently hovered around that usually inflexible, unsmiling mouth as if he was thinking of pleasant things. So the smile came when he said "I am worth inconceivably more for hanging than for any other purpose." For once he was absolutely right. John Brown at large in the world was merely a battered tanner and backwoods farmer gone daft on a subject which after all was none of his particular business. But John Brown duly hanged in the name of the Commonwealth of Virginia. Ah! that was quite a different matter and straightaway he was a Holy Martyr for a Sacred Cause. He served that Cause a thousand fold better in his death than he could possibly have done in his life. No man may even guess how many soldiers he was worth to the North during the next six years.

The morning of his last day he took an affectionate farewell of his companions in arms giving to each his last, poor, pathetic little gift—a silver quarter of a dollar observing whimsically that he was about to travel to a country where such coin would not be needed. He also bade goodbye to his jailer and thanked him for his kindness and consideration. During the short drive from the prison to the place of death he looked out with interest upon the pleasant landscape of the Valley of Virginia: "This is a beautiful country. I never had the pleasure of seeing it before." It was a strange, simple, impersonal, touching phrase to fall from the lips of one whose eyes were about to close forever. They say that at the very end he was calmest and least disturbed in spirit of anyone present. He walked to the scaffold like a king going to be crowned and there he became one of the great, shadowy, legendary figures of all time. Almost we might use concerning him the same phrase which Secretary Stanton uttered at the moment Lincoln died: "Now he belongs to the ages."

* * *

Even so that wild and in some ways half-crazed abolitionist has his secure and honored place in history. It is perhaps well that at last men are judged by their motives and their ideals rather than by their accomplishments. Thus was Brown fortunate. In his life he was a visionary, impractical and oft times lawless man but he died as a man might who heard the plaudits of posterity. So Torrington where he was born outdid herself at the celebration of the centennial of the birth of her honored son.

When Virginia was finally done with Brown, his body was delivered to his widow who bore it back north, presumably by steamer up Lake Champlain to Plattsburg and hence the long trail back into the mountains and laid it in the thin and sandy soil of the poor mountain farm which perhaps came as near being his "home" as any abode of his disordered, migratory life. The State of New York has since added it to the public domain and will preserve it forever as a memorial to the man who once lived there.

* * *

One October afternoon, I made a pilgrimage to his grave. It lies in an open and elevated mountain valley. His house is small and low and very humble—the sort of house that men build on little mountain farms where the struggle for existence is hard. Within they show you a few of his belongings—some household furniture, his chair, his pine table, his Bible and a gun that he once owned, but I suppose "Captain" Brown owned many different guns in his time. Just in front of the house is an iron fence enclosing the plot where Brown and several of his followers lie. Almost by the door is a giant granite boulder so big that it is hard to say

Reviewing the Latest Eastern Markets

MILK PRICES

THE Dairyman's League Cooperative Association announces the following prices that dealers will pay the League during the first half of June for milk testing 3% in the basic zone of 201 to 210 miles of New York City. It is understood of course that the prices mentioned below are not received by the farmer but go into the pool. They are prices dealers pay the League.

These quotations are subject to change between time of publication and mailing due to conditions in the market.

Class 1 Fluid Milk	\$2.33
Class 2A Fluid Cream	1.80
Class 2B Ice Cream	1.95
Class 2C Soft Cheese	1.90
Class 3A Evaporated whole milk	
Cond. whole milk	1.80
Milk for Chocolate	1.70
Class 3B Whole milk powder ...	1.80
Class 3C Hard cheese other than	
American	1.70

Class 4 prices will be based on butter and American cheese quotations on the New York market.

The New York Milk Conference Board announces that the average price of 92 score butter, outside quotations for May, is 42.58 cents. The price for April was 44.5384 cents. In comparison to this the May price in 1924 was 38.90384 cents.

Sheffield Producers

The Sheffield Farms Producers announces the following prices for 3% milk in the 201 to 210-mile zone:

Class 1	\$2.33
Class 2	2.00
Class 3	1.65

Class 4 prices determined by butter and cheese quotations on the New York market.

Non Pool Cooperative

The Non-Pooling Dairyman's Cooperative announces the following prices for 3% milk in the 201 to 210-mile zone:

Class 1	\$2.23
Class 2	2.00
Class 3A	1.70
Class 3B	1.65

Interstate Producers

The Interstate Milk Producers Association (Philadelphia Price Plan), announce the receiving station prices or the price to the farmer in the 201 to 210-mile zone from Philadelphia for 3% milk is \$2.19. In the 101 to 110 mile-zone, the price is \$2.29.

BUTTER PRICES HIGHER

CREAMERY	June 2	May 26	A Year Ago
SALTED			
Scoring higher			
than extras .44-44½	43-43½	40½-41	
Extras (92 score) .43½	42½	39½-40	
84-91 score40-43	39-42	35-39	
Lower Grades 38½-39½	37-38½	33-34½	

Butter prices are a full cent higher than they were a week ago. Several factors have been at work to make this so. For one thing there is an excellent consumptive demand. On top of this there is not a whole lot of butter available for much beyond immediate trade needs in spite of normal receipts. A lot of butter is coming

EGGS

FARMS FOR SALE

\$12,000 in Year From 550 Acres
Stocked & Equipped; All \$6500

Estimate 600,000 ft. timber, 6,000 eds. hardwood to more than pay for all; return assured from log contract, campers, summer boarders, sheepraising, farming, etc.; adjoins State Park with 10,000 acres free pasture; 100 acres tillable loam, 150-acre pasture, 1000 sugar maples, fruit, berries; good 7-room house, barns, garage, etc. Leaving country, only \$6,500, with cows and calves, 74 sheep, poultry, 4000 ft. lumber, hay, grain, potatoes, vegetables, equipment included. Easy terms. CHAS TYRE, Corinth, N. Y.

forward under terms that make it impossible to sell immediately except at a loss. Therefore receivers are consigning this high cost stock at once to the freezers. This reduces the available supply, at the same time keeping the level of prices so high that speculative interest is lacking. It is for this reason that considerably less butter is going into cold storage warehouses than at the same time last year. Speculators figure that existing retail prices are too high to warrant a risk—prices at the present time being 3½¢ above the price at the same time last year. However, some operators are making moderate purchases for storage. The chain store distributors always put away some stock during June and July to be taken out late next fall and early winter and these houses have always started stock into cold storage. The quality of present arrivals is generally high class, much of it being full grass and the kind that should encourage an "into storage" movement. But high prices are working against it and we are in a period when they should be at their low point. Of course present prices may break in a day. The market is very sensitive to prevailing conditions especially if receipts suddenly become burdensome. Lower grades are sharing favorable prices with the fancy marks.

NO CHANGE IN FRESH CHEESE

STATE FLATS	June 2	May 26	A Year Ago
Held fancy 26½-27	26½-27	24½-25½	
Held aver. 25½-26	25½-26	23-24	
Fresh, fancy 22-23	22-23	18-18½	
Fresh, av'ge ...21½	21-21½	17-18	

There is practically no change in the cheese market since our report last week as far as fresh cheese is concerned. Trading has not been very active but values are steady as supplies are comparatively light. The few that are available are offering within a range of 21½ to 23¢ depending on selection. Country costs are relatively stronger than quotations here. Prices here apparently are too high for much speculative interest on the part of local operators. Even at that, there seems to be hardly enough stock available to warrant much speculative activity. On June 1 receipts were said to be the lightest in New York City than on any June 1st since the early days of the industry. As yet no straight carlots have been available.

There has been no change in the market on old cheese except that whites continue relatively scarcer than colored cheeses.

EGG PRICES THE SAME

NEARBY WHITES	June 2	May 26	A Year Ago
Selected Extras 39-40	33-35	33-35	
Av'ge extras37-38	37-38	31-32	
Extra firsts35-36	35½-36	28½-30	
Firsts34-35	34-35	27½-28	
Gathered32-36	32-35	25-30	

The market on nearby eggs is comparatively the same as it was a week ago. As a whole the market has become quieter and in some instances has become a shade easier. Receipts postings show heavy arrivals and this has had a decided influence on the frame of mind of the market. Comparatively few of the nearby receipts are high grade. Real fancy marks are steady at prices as high as 40¢ but most of the arrivals are selling anywhere from 36¢ down to 33¢. More of the eggs coming in are showing the effects of heat and these are being forced out at lower figures than they would, had they received more careful handling in transit.

From now on we are going to hear more about this complaint. Heat makes itself evident in shrunken yolks which are easily discernible when the eggs are candled. This criticism is used very strongly at times like this when prices are comparatively high and buyers use every excuse to knock the price down. The market is from 5 to 7¢ higher than it was a year ago and it is to be expected that buyers will use every excuse to force matters. When they pay existing quotations they are extremely fussy and discriminating. During this hot weather eggs should be collected twice a day and stored in a cool cellar. When they are taken to the railroad it should be at some time other than during the heat of the day. If this is impossible they should be protected from the hot rays of the sun and not allowed to stand on the station platform unprotected. They should be routed over the shortest run. Sometimes it may be possible to take

the eggs to town in the evening to connect with the night express into the city.

LIVE POULTRY SELLING WELL

FOWLS	June 2	May 26	A Year Ago
Light	30	28	27
Heavy	28	28	26
BROILERS			
Colored	35-43	35-45	43-45
Leghorns	25-36	25-42	30-42

The fact the Decoration Day brought with it clear weather in the vicinity of New York City, had much to do with saving the situation in the live poultry market. Even at that the situation could not be considered the best. Considerable stock was carried over the week end. Weather conditions kept folks in doubt and buying did not reach the limit. Rain on Friday did not encourage heavy stocking-up on the part of retailers and consequently the floors were not cleared and stock was carried. With more broilers coming in, indications are that prices are going to be somewhat easier than they were a week ago. The live fowl market is a little stronger than broilers. Receipts have been running somewhat lighter. Both fowls and broilers are selling fairly well at existing quotations.

As the season advances now we are going to have heavier receipts of broilers. The man who will sell his stock quickest and at the best price is the fellow who is going to put the fanciest birds on the market. Although feathers are not eaten, nevertheless they have a certain influence on the buyer. Clean feathers make nice looking birds and nice looking birds sell more readily than those all plastered with mud and manure. Use some bright clean straw in the bottom of the coop or crate. It will help keep the birds clean and it is a lot more sanitary.

GRAINS AND FEEDS

Wheat and corn futures have reacted downward due primarily to weather conditions in the producing areas. Liberal rains are reported to have relieved the situation in important areas to which has been added much warmer weather. This has had a more decided effect upon the corn crop and this reacted more markedly than wheat. The future grain market is bidding time until the release of government reports sometime next week. The estimates of prominent crop forecasters indicate a crop that will run over 200 million bushels less than that harvested last year. These private crop estimates, showing an average yield of 664 million bushels or 209 million bushels less than harvested last year. The government reports are awaited with much anticipation to see how they compare with these private estimates.

FUTURES	June 2	May 26	A Year Ago

OLD POTATOES ABOUT DONE

The old potato market is rapidly closing out inasmuch as the trade is taking more strongly to new potatoes which are now coming from South Carolina, Georgia and Virginia. Although States range from \$2.00 to \$2.50 a 150-pound sack delivered, nevertheless the trade in that line is very dull. Maines are selling by the carlot in bulk anywhere from \$1.80 to \$2.00 per cwt. and it is with difficulty that these values are being maintained. It will not be long before the new crop will be available back in AMERICAN AGRICULTURIST territory and the development of the crop is being watched with much anticipation. Long Island potatoes are looking good. Rain came in the nick of time to relieve the long dry spell and did the crop a world of good.

John Brown

(Continued from page 601)

if it be indeed a boulder or an outcropping of the underlying rock and on this is deeply cut in letters of colossal size just his name

JOHN BROWN

It is a stern monument like the man whose name it commemorates.

Perhaps there is no place in the state where winter comes earlier or more relentlessly than in this mountain valley, high up in the air and far to the north. So on the October day when I was there, the touch of frost showed everywhere and all the landscape was brown and russett and sere. But far above, as always, on its beautiful tapering staff a splendid glowing flag—the flag that Brown according to his light sincerely loved—the Stars and Stripes—made a brilliant splotch of color as it lazily billowed and flaunted in the October sunshine and to me the valley seemed ennobled by the presence of the wayworn, mistaken man who had come back there to lie.

And again there came to me that majestic phrase from Shakespeare—a phrase applied to another man who lived long before and whose life also was wild and troubled

"... Duncan is in his grave
After life's fitful fever he sleeps well."

Cattle Fraud Developments

(Continued from page 599)

responsible for the whole thing will go unpunished.

It seems clear that there are three things that ought to be done. (1) The dealers who have been practicing these frauds should be prosecuted, no matter what their race, color, or religion, chiefly in order that it may be clearly known who the unreliable dealers in this vicinity are. It is very likely that Cortland is the only county where this sort of thing has been going on. Something ought to be done so that its continuation here would be impossible, and at least highly risky elsewhere. At the same time, the many honest cattle men ought not to have to suffer from unfounded suspicion. So far as possible, let us know just who is who.

(2) Some arrangements should be made so that after a cow has been condemned, she should be adequately branded or marked in some way and then should pass immediately into the charge of state officials who should be responsible for these animals until they can certify to their slaughter.

(3) Greater emphasis should be placed upon the desirability of every farmer's buying only stock known to be disease free. The fact that a cow is not branded or even never has been branded, is not a guarantee that she does not have tuberculosis. Whenever a farmer buys a cow that he does not know has been tested and found free from tuberculosis, (and this test is most reliable when made by the county veterinarian), he runs the risk of placing infection in his herd.

News From Among the Farmers

Are Your Auto Headlights Right---County Notes

THE use of certain headlamp devices on many automobiles operated in this State will be illegal after June 29. The six months' notice required by law after the withdrawal of approval by the Bureau of Motor Vehicles will expire on that date, and automobile owners should see that their cars are properly equipped with legal lighting devices before the end of next month. For this purpose they may make use of the official light adjusting stations.

Devices that have been approved and from which the car owner should make a selection before July 1 are as follows:

AUTOMOBILE

- | | |
|-----------------------------------|----------------------|
| Alpheco | Hudson (8½ In. only) |
| Bausch & Lomb | Johnson |

MOTORCYCLE

- | | |
|------------------|-------------|
| Conaphore Type F | Patterson |
| McKeeltype | Spreadlight |
| Monogram | Standard |

*Eastern Conference Approval withdrawn April 24, 1925.

The above have been approved by the Eastern Conference of Motor Vehicle Administrators and are good in all Eastern States.

Lighting devices which within a few weeks will be under the ban, approval having been withdrawn by this State on December 29, 1924, are as follows:

- | | |
|-------------------------------|--------------------------|
| Clamert Lens | National Lens |
| Fracto-lite | Paraflector |
| Green Moon | Primolite Lens |
| Hocking Glass Lens | Revelo |
| Killglare Lens | Saferlite |
| Lancaster Beam control type A | Shaler roadlighter (new) |
| MacDonald Optical Lens | Superfect Lens |
| McKee Lens, type "M" | Universal Lens |
| McKee fluted type "D" | Victor |
| | Violet Ray Lens |

That headlamps shall reveal substantial objects at two hundred feet in front of the lamps, and that no glaring or dazzling light shall be projected above the forty-two inch line at seventy-five feet or more in front of the lamps to the left of the axis of the vehicle.

Copies of lighting regulations and instructions may be obtained at the Albany office of the Bureau, and the official light adjusting stations have been established in various parts of the State, where owners may have motor vehicle headlights tested.

The law does not require that adjustments be made by official adjusters. It may be done by the motor vehicle owner

himself. However, in case the operator or owner does not have the facilities or does not desire to do the work himself he may have the headlamps adjusted at any of the official headlight adjusting stations in the State, that have been designated by the Motor Vehicle Bureau.

Chemung County Holstein Sale A Success

THE Chemung Valley Holstein Association held a successful sale at the County Fair Grounds on May 30. Forty-seven animals sold at an average price of \$158.00. The high cow was Mercedes Woodworth Segis, a five year old cow consigned by Lowman and Roe, Lowman, N. Y., and purchased by George P. Wood of Horseheads. The second high cow was Aagie Ketura Student, a five year old cow consigned by F. A. Wigsten and Son, of Horseheads and purchased by Olcott Farms of Big Flats, N. Y.

A good crowd was on hand. About half the animals were sold to dairymen outside the County. Buyers were present from Arkport, Lockport, Owego, WilliamSPORT, and Troy, Pa. and other cities outside the County. Mr. Harold Denmark was chairman of the Committee in charge of the sale. Mr. R. Austin Backus was sales manager and George W. Baxter of Elmira acted as auctioneer.

Much of the credit for the smooth way in which the sale was handled is given to Mr. Baxter. The average price of \$158 was higher than the average at the State

Keep flies away from your cows and horses if you want to collect dividends on your investment. Cows sprayed with Cow-Ease during fly time give 10% to 20% more milk and of higher quality.

One gallon of Cow-Ease sprays about 200 cows. Twice a day at milking time in fly season keeps the flies away. Cattle ticks, grubs, and hen lice and mites hate it, too! Will not blister or gum. Try it! A sixty-cent Cow-Ease Sprayer does the trick.

If your dealer cannot supply you, send his name and address and \$1.50 (\$1.75 west of Missouri River) to Carpenter-Morton Co., Boston, Mass., and we will deliver, prepaid, a gallon can of Cow-Ease. Cow-Ease Sprayer 60c extra. Give both postal and express address, as we ship the cheapest and quickest way. We guarantee entire satisfaction.

New York County Notes

Chautauqua County—May has been a cold backward month with very warm days and frost most every morning. The prospects for fruit is very discouraging. Some farmers are not planting any corn this spring. The oats sown the last of April are well up and generally look good. Feed in pastures is short and cows are not up to normal in milk production. The price of dairy cows has greatly increased in the last month. Good T B tested cows are becoming scarce. Meadows in general look good although some new seedings show the effects of winter killing.—A. J. N.

Delaware County—The contract has been let for the state road up the East Branch of Delaware from East Branch to Dunraven. The work of surveying has already begun. This is an important piece of road construction as it will connect Liberty and Binghamton highway with the Catskill Trail. Farmers have been sowing oats, planting potatoes and gardens. Not many potatoes are raised in the county and in some sections they are quite scarce. When they are selling for 35c a bushel in neighboring counties, some of the stores here are paying \$1 a bushel. Ayer McKinney paid \$2.25 for March milk and \$2.15 for April milk, the same price as they paid for those months last year. Most cows are out on pasture though some farmers are still feeding grain. Pasture started early but several ground frosts retarded their growth.—E. M. N.

Solution of No. 3

Let GRAVITY do the WORK!

The Unadilla does away with the back breaking work of tossing tons of silage out over your head. The air tight, water tight, doors that cannot stick or freeze, have the additional advantage of giving continuous opening at level of the silage! You simply push the silage out—gravity does the rest.

Door fasteners form a permanent safety ladder—convenient and secure. Hoops are easily adjusted from this ladder. No dangerous adjusting from easy-slipping ladders. Write today for our big catalog and for special discounts on early orders.

Easy payments if desired!

What I Found Out About Caponizing

L. H. Hiscock

OF all the various meat birds, save the turkey, the capon stands supreme. Yet, as a by-product of the farm poultry flock, his popularity in the east seems confined to an individual here and there. No doubt there are some reasons for this. The operation of unsexing the male chicken is discouraging to one. The fear of serious loss in the flock is the chief worry of another. The long period required for suitable development and inadequate housing facilities also contribute their share in dooming the capon as an annual cash crop.

L. H. Hiscock

How I Started

As a matter of fact the operation is extremely simple and the actual loss very light. I say this with the view point of a novice. Two years ago I went into the capon business with the idea of making it annually part of my poultry revenue. By killing two birds first and then performing the operation upon them, I found myself with enough experience to tackle the live subject. Pictures may help to give one a good idea of the whole operation, but, if you seriously consider caponizing any birds, the best way to start is by actual experience on a dead bird or else by having someone demonstrate how the operation is performed. In your locality there may be a successful operator. A veterinary surgeon can always give you a lesson. It is best to pay a little money to learn, if you have trouble acquiring the art. Sometimes it so happens that one can procure an expert who will caponize your birds at so much a head.

Nerve is the First Requirement

The convenience and ease with which one can learn, however, is no exaggeration. To tell the truth, nerve on the first few birds is more of a requirement than actual skill. But, if you can really make your first incision and operate successfully, you will wonder how you ever were so scared.

The success of your operation will depend largely upon two or three often unstressed factors in most directions on caponizing. Never caponize any bird that weighs less than a pound and a quarter nor more than a pound and three-quarters. Use only strong, healthy birds. Never attempt to operate on any bird that has not been starved for twenty-four hours. The presence of any food, however slight, in the intestines is enough to be a serious and even dangerous handicap in caponizing. Most books say not to make an incision longer than an inch or an inch and a half, the cut, of course, to be made just in front of the last rib. Make your cut two inches, if it will help you to see. You will not kill the bird by the size of the cut you make. There is just one thing in regard to this cut: cut the skin a little in front or in back of that last rib so that, when the operation is over, the skin will actually slip over and cover up the hole in the ribs.

Weighting the Bird a Big Help

What helps most in the operation and particularly in the cutting processes is the weighting down of the bird. For this purpose I found a brick with a string

tied to it and a slip noose at the other end most valuable. I had two of these weights; one to slip over the bird's wings and the other around his legs. My table was a high box, and, when I let the bricks down on opposite sides, the cockerel was and continued to be well stretched out. I always worked out in the sun on a bright day. A good light is essential and makes the task easier.

Assuming that the outside skin is cut, the next step is the cut through the ribs, and, as I say, do not hesitate to make it larger, if you find your first cut cramping you for room. Generally the bird will bleed a little when this incision is made, but the blood will clot quickly and may be flocked out with the tool called a hook. The remaining step is easy. There will be exposed a membrane or tissue. With a little care it can be ruptured and torn open exposing the intestines and a testicle, a little white, bean-shaped object near the backbone. Spread your spreading tool wide to give you plenty of room between the bird's ribs and then with your spoon or remover thread the testicle thru its eye and gently—this is the serious and dangerous part, because the testicle is practically attached to the main artery—twist it and twirl your tool until it comes loose. Be sure that you have not threaded thru the testicle but gone under it so that it may be brought away whole.

Advices Two Cuts

And now we come to another place where there is plenty of room for argument. If you are an expert, do not read any more. If you are a novice like I am, then we can continue. With one testicle removed simply flop the bricks from one side to the other, or, in other words, turn the bird over and operate as you did before to remove the second testicle. Under no circumstances try to perform the operation of removing two testicles from one cut. You will save time, you will save life, and produce more birds that are capons than by using the single cut method.

If you will pardon the personal side of my article, I want to explain this above paragraph with a few figures. The first year that I caponized birds I used the single cut method and I killed seven birds to an hundred regularly for upwards of 250 cockerels. In the late summer and early fall I began to see a good many capons so-called budding forth with rosy combs and wattles. Some even had nerve enough to crow. To make a long story short, two-thirds of the birds I had caponized that spring turned out slips. A slip, of course, is a bird that is neither a capon nor a rooster but generally has some of the characteristics of each. He can be sold as a rooster in the fall or early winter, but, because of his male characteristics, he is barred as a capon.

I did not mind the loss due to the (Continued on opposite page)

BABY

BABY 1887 CHIX 1925 DUX

Our chix and dux are bred from stock thoroughly hardened and acclimated to our severe and changeable climate. They are hatched on a REAL POULTRY FARM in their natural environment, only a few hours from the nests to the incubators. Less handling of the eggs and, stronger chix are the results. We are, and have been for 38 years, a Poultry Farm specializing in the best stock it is possible to produce. We are not a chicken factory; faster growth, earlier maturity and more eggs for our customers are the results.

AMERICAN AGRICULTURIST

operation itself; the birds were good to eat for they simply bled to death. But the terrific number of slips rather appalled me, and the next spring I decided to try the experiment from a different angle. This time I cut the birds on both sides, taking only one testicle at a time. The results were rather surprising even to myself. First, I operated successfully upon 150 Rhode Island Reds without the loss of a bird. Secondly, in the fall and winter, my slips were fewer; twenty-five per cent this time. In other words, by actual figure and check, the double cut was far more efficient as far as I was concerned.

There was perhaps one failing as compared with the single cut method; wind-puff was much more prevalent, but let us go back to the completion of the operation for a minute. Once it is over the birds should be confined to a fairly limited area for a few days. As they have been starved, they will require something to eat. Let them have only soft food and plenty of water for a couple of days.

Keep the Birds Confined

The actual confinement of the birds is not so necessary for their sakes as it is for yours. You want them where you can keep an eye on them. If your instruments were properly disinfected between operations with a good disinfectant (I used carbolic acid, one part, and water, two parts, to rinse them in) you need have little fear of infection or gangrene. You will, however, have trouble with wind-puff, and hence the necessity of keeping them where they can be watched. There is nothing serious about wind-puff, for it is nothing more than air or gas. The actual cut heals over very rapidly, but the incision between the ribs heals slowly, allowing gas from the intestines to collect between the flesh and outer skin. Sometimes in bad cases the bird becomes a veritable balloon. A sharp knife or a large, heavy, needle will puncture the bird's skin. Perhaps the bird will puff again. In the use of the double operation, I found it necessary to puncture most of the birds twice and one even five times. With the single operation one puncture seemed to be sufficient. There is, of course, nothing serious about this after effect. Once a bird's scar is healed and no wind is present beneath the skin, the bird may be turned loose.

After-Care

From this time on there is no more worry. For best all around development a capon requires plenty of range, shade, fresh water, and feed. Milk will prove a valuable addition to the ration if you can spare some.

There is perhaps just one other point that ought to be stressed. The earlier the cockerel, the better the chance for his development between the early spring and next February. March and April furnish the best cockerels for the purpose. To caponize a bird later than June hatched is probably a useless waste of time.

International Baby Chick Convention Definitely Announced

THE International Baby Chick Association will hold its next convention, according to Victor G. Aubry, managing director of the association, on August 5, 6 and 7 in Kansas City. These days have been chosen so they will not conflict with the meeting of the American Poultry Association and convention and meeting of the International Instructors and Investigators in Poultry Husbandry, which will be held in the same section of the country about the same time.

The Valley of Voices—By George Marsh

FURTHER than repeating to Steele that in August he had seen huge tracks in the muskeg and heard cries at night similar to those which had wakened the post, Tete-Boule could not be led to talk. But what interested the American especially was to hear, later, from Denise St. Onge, that the squat post hunter was bewailing with the already stampeded Indians the fate which menaced them.

"This Tete-Boule ought to be suppressed," he suggested to St. Onge. "Your daughter tells me that he keeps the Indians in a ferment with his wild tales of demons and Windigos."

"I've told him to stop it. But he is very superstitious. When he first came here from Albany, he was a most valuable man—very intelligent."

"He's doing a lot of harm, now. I wish Michel were here. You need him."

"Yes, he understands the Indians, and can quiet them," agreed the factor wearily. "And he is wasting his time down river."

"I am not so sure of that. They may find something." And Steele smiled into the Frenchman's eyes quizzically, but met a blank stare.

CHAPTER VII

SINCE the morning that Denise St. Onge had been checked by the entrance of her father from lifting the screen of mystery which further complicated the situation at Wailing River, Steele had endeavored in their frequent tete-a-tetes to afford her the opportunity of finishing what she had evidently started to tell him. But he had not again caught her in the mood for confidence. Once only, after much persuasion, she had given them an evening of music, momentarily throwing off the mental burden she patently carried to lose herself in the art which was a part of her. At other times she left the men immediately after dinner, much to the regret of Steele, for he was making no headway with the factor. Their talk covered the wide range of topics in which two men of education and experience have a common interest, but St. Onge politely avoided every attempt of his guest to lead him into throwing light upon the secret between himself and his daughter. And furthermore, evidently repenting the disclosure of his personal affairs on the night of Steele's arrival, and fearing his weakness, he had on subsequent evenings limited his hospitality to the offer of a solitary glass of cognac to his guest.

As the days passed at Wailing River, and the dread voice failed to break upon the crisp September nights with a recurrence of its horror, the people timidly took up the old order of their days. The rabbit snares in the forest were again visited and reset by the women, who traveled in pairs for mutual encouragement, and one day Tete-Boule was prevailed upon by the father to go out with another Indian after moose, for the fort needed fresh meat. As he left, the Ojibway gravely shook the hands of the fearful women and children gathered on the shore, bidding them look upon him for the last time, for by night he and his comrade would be mangled flesh in the maw of the Windigo.

To the accompaniment of tears and protestation the doomed hunters pushed off and paddled upstream.

"Did you hear that fool?" Steele asked St. Onge, standing near him on the beach.

"This thing has ruined him as a hunter, replied the factor, "he will never recover from it."

"I think I'll run upstream to the rifles this morning and catch some doré for supper," said the younger man as they returned to the trade-house.

Later, a second canoe quietly left the post, but when the boat reached the rifles, a mile above, the occupant did not stop to fish but continued upstream following the shore. And when the flash from the paddles of the craft above ceased, and the

spot on the river which was the canoe, moved to the shore, the boat following, also turned in, and was lifted and hidden in the alders. Then the premonition of Tete-Boule attained a partial fulfilment, for on the shores of the Wailing started a man hunt; but the incentive in the hunter was not a craving for human flesh, but a mild curiosity.

Before sunset the safe return to the post of Tete-Boule and his partner was heralded with joy, although they had failed in their hunt. But it was well after dark before the second canoe slid silently in to the stony beach.

"You had no luck this afternoon, Monsieur, you caught nothing?" laughed St. Onge as Steele appeared for supper.

"As a matter of fact, Colonel, I went hunting but the game was too tame for sport."

St. Onge's black brows lifted.

"You are cryptic, Monsieur."

"Well, to confess," laughed Steele, "I was interested to see how much hunting your men would really do—and I found out."

"You followed Tete-Boule's canoe?"

"Yes, I watched them for a few hours, but as they showed no sign of taking to

"Nothing! Not a trace. But the leaves are thick up there and it's dry and rocky, so there's small cause of wonder."

St. Onge deliberately shook his head as he met the questioning look of his daughter.

"I suggested to Michel that he postpone his trip down river and search the ridge first, as he is my best trailer, but he seemed set on leaving at once."

"That was my fault, sir. We talked it over together and David persuaded him to wait until their return."

"Why was David in such haste to go on that wild goose chase?"

"Because he had, what we call in the States, a hunch, and wished to put it to the proof before the bush dried out still more."

"A few days more or less are of little account now."

"They should be back in a day or two, and then we shall know, sir."

In the week past, Steele had seen all too little of the girl whose personality had so vividly aroused his interest, whose moods, defying analysis, only added to her charm. Convinced that beyond a dread of the ugly alternatives which the future might present to her choice, beyond any possible

in surprise at the change in face and manner of his hostess. The ghost of worry had left her eyes which shone with high spirits. Her mood of silence had given way to a gayety foreign to his knowledge of her.

"This beautiful morning, Monsieur, Charlotte and I go to wave an au revoir to the summer which passes."

"Charlotte is to be envied," he replied, charmed with the note of cheerfulness.

Her eyes lighted with amusement. "It is possible that it might be arranged that we take with us a body guard," she said archly. "Of course, it is not for ladies to demand the presence of cavaliers—"

"Take me, oh fair lady, as thy knight!" he begged.

"Laggard though you are, you may escort us to my watch tower, where Charlotte and I go to play the spring north, and to wave a bon voyage to the last of the geese."

"It is charming of you, Mademoiselle, to allow me to go," he said, delighted at having the girl to himself in her gay mood. "And you, sir," he asked St. Onge, "are you never so honored?"

The Frenchman was unable to meet the cheerful note struck by his daughter. Looking gravely at Steele, he replied, "It is au revoir you give the summer today, Monsieur. But summer may return to Wailing River to find a deserted post."

"Oh no, my dear father! Today we are to forget—to have hope!" she said imperatively, and for the remainder of the meal refused to allow the gloom of St. Onge to dominate her.

Later, accompanied by the stolid Charlotte, carrying a birch bark basket containing the lunch, and whose swart face betrayed misgivings she dared not voice, Denise St. Onge appeared at the trade-house.

"You will not go without your rifle, Monsieur?" queried St. Onge as Steele joined them.

"Is the Windigo dangerous in broad daylight?" facetiously asked Steele.

The bronze face of the factor reddened.

"The Windigo may strike in the day or night, Monsieur. Who knows? It is well you go armed." And he handed the Mannlicher to the American, who took it, mystified, irritated, that the man to whom he had offered his services should withhold his confidence.

Led by the girl, hardly recognizable in her sudden metamorphosis from a creature of reticence and aloofness to one quick with life, vibrant to the magic of the sunlit September hills, they took the trail to an isolated ridge about a mile back from the river.

The Watch Tower was aptly named, for unlike most of the high land of the country, the hill was capped by a bare brow of rock commanding a little valley studded with a chain of miniature lakes. Beyond, a sweep of rolling forest faded into the haze of the southern horizon.

"Is it not beautiful—my valley, Monsieur?" she asked with a wide sweep of her arm.

"Beautiful!" he repeated, "And you come here often?"

"Yes—that is, we used to come here; but lately—" She caught herself up sharply, then continued, "This valley, Monsieur, I call my Vale of Temple. It is enchanting to watch the spring slowly sweep it with its magic—paint in, here and there, the soft green of the young birch leaves, the silver of poplar, and balm of gilead; then rim that brook with the red of the willow buds. And the first flowers of the forest—hepatica, purple and pink and white; violets and wood anemone and trillium—"

She paused, the dark eyes grew wistful—the voice throaty, as she continued: "Once there was no terror in these green forests; once we searched, unafraid, Charlotte and I, for the flower treasures they possessed. 'Come and find us?' they

(Continued on page 612)

What Happened In The Story Thus Far

BRENT STEELE, an American ethnologist is traveling through the Canadian wilds studying Indian life for the American Museum of Natural History. He is in the Valley of the Wailing River which gets its name from the moan of its fierce and treacherous rapids. It is rich fur country but the native Indian hunters are terror stricken and planning to leave it due to an unseen monster which howls and shrieks in the forest at the dead of night. The superstitious Indians say it is the Windigo, a beast of Indian fable and they fear that the Evil Spirit has come to bewitch them. It spells the doom of the Wailing River trading post, at which Steele stops for supplies, as well as the whole country roundabout. The post is in charge of Colonel St. Onge, a former French cavalry officer. With him lives his beautiful and cultured daughter, Denise. St. Onge faces ruin due to the activities of a free trader, Laflamme, who is giving the Indians whiskey for their furs in violation of the Canadian law, and also to the growing fear of the Windigo, especially since four Indians with a shipment of valuable furs have mysteriously disappeared in the rapids of the Wailing. St. Onge tells Steele that he is kept at the doomed post by Lascelles, his superior in the Revillon Freres, which is the trading company owning St. Onge's post. It is Lascelles' plan to ruin St. Onge and thereby force Denise to become his wife. St. Onge vows that Lascelles shall never have her. That night after all at the post have retired, the terrible shrieking howl of what the Indians call the Windigo, breaks the stillness. Steele is aroused. He is determined to hunt the Windigo and reveal its true character with the help of his guide, David and Michel, the head hunter of the post, who promises to aid him in running down the monster. The terror of the Indians is aggravated by the murmurings of an Indian medicine man at St. Onge's post by the name of Tete-Boule, whose actions arouse Steele's curiosity.

the bush, I traveled over to those ponds Michel told me about. Tomorrow, if you have a man who will help me pack the meat, I'll get a moose."

"You saw game?"

"A cow and two yearlings. The mud is trampled with tracks."

"And Tete-Boule never left the river?"

"Not while I watched him."

The factor shrugged significantly. "He's 'bush shy' now and will not hunt. But what is there to do?"

"Have you thought that he might be shamming to avoid work? Is he lazy?"

"No, he always was a good packer and hunter. It's the Windigo."

"I wonder."

"Monsieur Steele," suddenly asked the factor, as Steele rose at the entrance of Denise St. Onge to announce supper, "you had remarkably bad luck fishing in a river that is known as good fish water, the two days following the night of our trouble." The factor shook a deprecatory finger in the unusual face of his guest while his daughter waited wide-eyed for him to finish. "What were you hunting then Monsieur?"

"Same thing!" laconically drawled Steele. "Windigo sign!"

"You mean that you climbed the ridge?" demanded the factor excitedly.

"I covered the whole country."

"And you found?"

fear of the manifestations of the supernatural which the post had witnessed, there lurked a tangible cause for anxiety, his active mind had been ceaseless in its groping for a clue to its nature. The two days following the night of terror, that he had spent searching the big ridge for sign of wolverine, lynx or wolf, had produced nothing in explanation of the mysterious cries, but while his eyes swept the dry floor of the forest to right and left, his thoughts had dealt with the reiterated query: "Whom did she fear at the rapids? What was she about to tell me when St. Onge interrupted? She had said, 'But you do not know the danger! and, there are so many—' Many what? Clearly there was something more than the Windigo in this warning. But what could it be?"

So Steele had returned from his profitless search of the ridge to wait for the return of David and Michael, when a definite plan of campaign could be framed.

CHAPTER VIII

ON a morning when the warm September sun, lifting the low-lying river mists, rolled them back on ridges, here and there already flecked with the yellow and gold of a frost-painted birch or poplar, Denise St. Onge appeared at breakfast in whipcord and heavy boots, Steele stared

American Agriculturist Tribe

WELL boys, I just had a talk with Mr. Perry from the Long House at Chicago, and he thinks you boys are doing fine. He suggested to me that Lone Scouts who are working for a merit medal for contributing to magazines, might try writing for their local paper. Any original story that you write and have printed in your local paper will be awarded points toward a merit badge, if you will clip the article from the paper and send it to us:

The Booster Contest

The 1925 Booster Contest begins June first and continues until November thirtieth. This contest is for securing new members and for subscriptions to Boy's Life, Lone Scout Amateur Publications, or for papers containing a Scout Page. There will be a fine list of prizes for the Scouts getting the most—Booster points. Official blanks for reporting points secured may be obtained at the Long House, 500 North Dearborn St., Chicago, Ill. Watch for a more complete announcement next week, and plan to get into the contest.

Write Us Something for the Lone Scout Column

You will get booster points for anything you write which is printed by us. We think that you will enjoy the column more if it contains the experiences of other scouts. Let's have some good pictures, too.

We have had one inquiry from a tribe that is nearly ready to get its charter and it looks as though it would be the one to get the Tribe Chief pin we are giving. We hope to have a lot more tribes by next week. Get busy and start your tribe.

Some Lone Scout Experiences

By Roland Hinkley, L.S.B.

I joined the Lone Scouts of America in August, 1923. I did not do much Lone Scout work until January, 1924, when I passed my first degree. I passed my second in February, 1924, third in April, fourth in September, fifth in November, and my sixth in January, 1925. I am now working on my seventh and last degree.

I became a Lone Scout organizer in June, 1924, and I received my Lone Scout Booster button in April, 1925. I secured this by subscription to "Boy's Life" and securing new members of the Lone Scouts of America.

I have started contributing to American Lone Scout Amateur Publications lately and I now subscribe to 12 Tribe papers. They are "Youth", "National Scout", "Black Hawk News", "Breezy Scout", "Lone Scout Collector", "The Council Fire", "Chicago Lone Scout", "The Tug", "Pita", "Bay State Scout", "Canadian Councilor", and "Okayto Scout".

I organized a Local Tribe in March, 1925, and we have applied for a charter. I am chief of this tribe. The way we chose our name was this; we took two or three letters of each fellow's name combined them and obtained "Hin-me-iri-ha-ke". The "Hinmeirihake" Tribe now has six members.

I belong to the W.L.S. Radio Tribe, National Mail Tribe, National Collector's Exchange, Wallace's Farmer Tribe and the Gobbler Exchange Tribe.

I correspond with Lone Scouts in New Jersey, Texas, Ohio, Hawaii, India, Egypt, North Dakota, Florida and North Carolina.

Any boy who doesn't belong to the Lone Scouts of America, surely does not know what he is missing and the best thing that he can do is to enroll at once.

The BRAND NAME that Leads in the Movies

Is there enough change in your life, enough play to balance the chores?

Think this over—city folks may have all the entertainment they want. Farm folks certainly have too little.

Every day has an evening, and if you stay home or drudge every evening the engine of life is certainly not hitting on all six for you.

Swing into step with the leading brand of motion pictures, Paramount. See a Paramount Picture this week and start your happier life right away! Some theatre near you is scheduling Paramount Pictures now.

Paramount Pictures are leaders because they are made of the

same stuff as your longings for adventure, romance and wholesome entertainment.

You will be delighted with the tonic that Paramount Pictures provide, and so will your neighbors. Social intercourse is brightened and the theatre showing Paramount Pictures becomes the meeting place of the community.

Such Paramount Pictures as The Covered Wagon, Manhandled, North of 36, Merton of the Movies and Triumph, provide happy entertainment for all. People drive many a mile to see them. The young folks don't leave home for the cities!

Life is more animated these days, what with autos and better roads and radio and Paramount!

Paramount will give you a great 1925—if you will—showing you all the world in action at your own theatre. Make it tonight!

Go by this name and trademark and you can't go wrong!

Vary the Vegetables

The Garden Furnishes Good Things to Eat and to Smell

WHEN asparagus and peas first come in the garden we are so glad to have them that we don't object to serving them the same way meal after meal. But after a while we do wish that there was some other way to serve them than just plain boiled and buttered. So it is with the other early spring vegetables and when that time comes you will be interested in these recipes, I am sure.

Asparagus with Eggs.—Cover the bottom of a heated baking dish with cooked and well seasoned asparagus. Beat the yolks and whites of four eggs separately; mix with the yolks 2 tablespoons cream, 2 teaspoons butter, salt and pepper; add the beaten whites of eggs; pour all over the asparagus and bake in a moderate oven until the eggs are set. This may be used for the main dish at lunch or supper.

Ambushed Asparagus.—Prepare one quart of tender asparagus tips; boil and drain. Carefully remove the tops from

add flour, salt and pepper and mix thoroughly together. Add milk gradually and bring to boiling point, stirring constantly. Add chopped mint and peas. Mix together and serve at once.

Peas with Lettuce.—You will need $\frac{1}{2}$ peck peas, 2 heads lettuce, seasonings and one egg. Shell peas and shred lettuce. Cook together with as little water as possible to keep from burning; stir frequently. Stew one hour, set back on the stove and add 1 tablespoon butter, 1 teaspoon salt and a dash of cayenne pepper. Add one well beaten egg and serve at once. The mixture should not boil after egg is added.

Cream of Lettuce Soup.—Wash, drain and chop 3 small heads of lettuce. Put into saucepan with 1 tablespoon butter, cover and let steam for a few minutes; then add 2 quarts soup stock and $\frac{1}{2}$ cup rice and boil until rice is tender. Season with salt, pepper and a dash of nutmeg; return to the fire, add a pint of cream or rich milk, let come to the boiling point and serve.

Dutch Dandelions.—To one well beaten egg yolk add $\frac{1}{3}$ cup sour cream, $\frac{1}{4}$ cup weak vinegar, $\frac{1}{2}$ teaspoon salt and 1 teaspoon sugar. Beat until smooth and pour into a hot pan in which 1 teaspoon bacon fat has been melted. Cook mixture until it thickens, somewhat; then pour over dandelion greens which have been mixed with chopped onion. Toss lightly together and serve at once.

Carrot Croquettes.—Wash small fine grained carrots and boil until tender. Drain and mash them. To each cupful add $\frac{1}{2}$ teaspoon salt; $\frac{1}{4}$ teaspoon pepper, a dash of nutmeg, 1 teaspoon butter and the yolks of 2 eggs. Mix thoroughly and set away until cold. Shape into tiny croquettes, dip in egg and crumbs and fry in deep fat.

Beet Pudding.—Boil beets until tender, remove skins and cut in dice. You should have one pint. To one pint of milk add 2 well beaten eggs, salt and pepper to taste and a dash of nutmeg. Put the beets into a greased dish, pour over them the custard and bake in a moderate oven until firm. Serve hot as a vegetable.

New Potatoes with Cheese Sauce.—You will need $1\frac{1}{2}$ cups milk, 1 dozen small new potatoes, 2 tablespoons butter, 1 tablespoon flour, $\frac{2}{3}$ cup grated cheese, 1 tablespoon grated sweet pepper and salt. Boil the potatoes in salt water until tender. Drain and remove skins. Melt butter in saucepan, add flour, milk and cheese. When hot and thickened add the pepper; season to taste and pour over potatoes. Reheat and serve.

Mrs. F. W. Stillman.

An Inexpensive Perfume

IN June, when my garden is fairly abounding in roses, I select petals from the most sweetly scented, full blown roses and place them on a clean piece of white paper in an airy, shady part of the house. I spread them out so they will dry more easily and sprinkle them with a generous handful of salt, the salt being used to help absorb the moisture. Every day, for one week, I stir the petals and turn them about. At the end of that time, I put the petals in a strainer and shake them thoroughly to remove all excess salt. Then I place them in jars, adding to each pint of petals the following ingredients: one-half teaspoonful of ground cinnamon; one-half teaspoonful of ground cloves; one-half teaspoonful of allspice; one-quarter ounce of orris root; one-quarter ounce of sandalwood; one-half teaspoonful of ground orange peel; one-half teaspoonful of ground lemon peel; two grains of musk; one-half teaspoonful of

ground mace and a little lavender. When the jars are filled, I seal them and do not open them until November. By this time, the perfumes are well blended and the mixture presents a most delightful rose sachet.

I make several dozen little silk bags and fill them with cotton batting and a generous tablespoonful of the rose sachet. These, I place among my lingerie, my linens and my frocks and it is really surprising to see how this dainty

Vacation Clothes

Everybody looks forward to vacation. For some people, it means all summer, but most of us have

to be satisfied with just a week—or two. However, that just serves to increase our appreciation of the trip.

One should have new sports clothes for vacation. No matter whether you favor the sea-

shore, the mountains or intend to spend your time motoring about from one

place to another, you will need sufficient simple frocks, suitable for all occasions, to enable frequent changing. And so we suggest that you order a copy of our Spring and Summer Fashion Magazine for, in it, you

will see illustrated many styles of just the right type. Attractive and

modish, but simple and easy to make. And, of course, there is a pattern available for each style illustrated. Better order your copy now. Just send 12 cents for it to Fashion Department, AMERICAN AGRICULTURIST, 461-4th Ave., New York City.

inexpensive perfume resembles the odor of the expensive, imported kind.

I also make a good many elaborate bags with lace and ribbon, filling them in the same manner and giving them to my friends as Christmas presents. They make a charming costless gift and one that is appreciated.—I. R. H., Connecticut.

A Time Saver

I find it takes a lot of time to make cookies, and cut them nicely. Now I roll them out and cut them in squares. By using a long ruler I can cut them with a knife quickly and evenly, and there are only a few pieces on the outside edge to roll over.

Drop cookies are still quicker but sometimes the children demand rolled cookies and these squares do nicely.—E. M. F.

An emergency ice bag to be used in illness can be made from an old rubber glove. Press the bottom just above the fingers together over a piece of adhesive tape and after the ice is in close the top in the same way with tape.

A Dress for the 'Teen Age

No. E 35-6—A smart suspender dress for a young miss of 14, 16 or 18 years. It is such a pleasant compromise between the "too old and the "too young."

The dress is of plain gingham and can be had in blue and yellow. The embroidery follows the Italian style and pattern but the work is in blue and gold. All of the scrolls and outlining were in a bright but deep blue. The filling in parts were cross stitch in gold color. We have called the outline part darning stitch, for want of a better name. It is really a series of single stitches taken from point to point of the angular outline. Bring the thread to the right side of the material, at the end of one of the scrolls and carry it over to the next turn in the outline, taking the smallest possible stitch in the material at the very corner. Be sure to take this stitch in line with the edge of the design, not across the corner. That is, take it at the very end of the last side, or at the very beginning of the next side, so that the corners will be well shaped. Then carry the thread over to the next corner. On the long side of the squares only, a darning stitch is taken in the middle of the space. You can see that this work will go very rapidly although it gives an elaborate effect.

Black and gold make a more striking, although a less youthful effect. Either combination will be suitable for the blue material as well as for the yellow.

The blouse is of plain white lawn. It is rather thick because there are no gathers. It is a perfectly straight blouse, embroidered in cross stitch around the neck and sleeves. The embroidery on the blouse is of the same color as the filling in stitches on the overdress. In the model it was gold color. Plain gingham stamped for overdress (both embroidery and cutting outline) 14, 16 or 18 year size, \$1.00. White material for blouse, stamped with embroidery and cutting outline, 75c.

day old rolls or biscuits and scoop out the inside. Set the shells and tops into the oven to crisp. Scald 2 cups milk in double boiler and add 4 eggs well beaten. As the mixture thickens season with tablespoon butter and salt and pepper to taste. Add the asparagus which has been cut in inch long pieces to this mixture. Fill the shells, replace the tops, put into the oven for three minutes and serve very hot. This may also be used as a main dish at supper time.

Peas with Mint.—You will need 2 cups hot cooked peas, 1 tablespoon butter, 2 teaspoons flour, $\frac{1}{2}$ teaspoon salt, $\frac{1}{8}$ teaspoon pepper, 1 cup milk and $\frac{1}{4}$ cup finely chopped mint. Melt butter,

Let Us Use Our Porches

The Outdoor Living-Room Makes Summer More Pleasant

WITH the first warm days of spring we wish we might move right out on the porch if we are fortunate enough to have one. Perhaps some of us do not realize that the summer will seem like a vacation if we only use the porch. But some one remarks, "We do not have any porch furniture." To them I say, take something out of the house, and make it do. Expensive furniture and new would make us more careful and we all want some comfort during the hot months. Go to the attic or the store room and see what you can find. Many people do and I will tell of some of the results.

There is an old bed that belonged to grandmother—a high posted one. Have the good man of the house cut the legs of the foot board off, take a part of the sides and fasten them securely to the head board and the lowered foot board, and lo, a lovely settee! Use the pieces left from the sideboards for the bottom of the seat. With scraps of old dresses make a cover for this, and then a good supply of cushions.

Pillows and Retouched Furniture

There are so many ways to make nice cushions, although the nicest ones are those that will launder, made of ginghams, colored linen, crash, etc. Make them up in odd shapes, and stuff with the feathers you saved while picking the chickens for use this past winter. Unbleached muslin makes a dainty pillow, when various patterns are appliqued or stenciled on them. Many pretty ones can be made of raffia, and in many localities there are native grasses that can be soaked and braided. Dry and then varnish, or paint them a soft brown, and then stencil on yellow daisies, and the effect is beautiful.

Do not use the old furniture as it is, but remove the varnish with lye and water, and re-stain any color you desire. They are as pretty as new, and it can be done; I know because we have done it.

Two chairs are needed. Perhaps a part of the "outfit" with which Daddy and Mother commenced housekeeping years ago will add this to the collection. Remove the varnish, stain them tan and trim with fine lines of yellow on the legs, and the old fashioned backs. Beautiful! Gingham covers can be placed on the rope bottoms, which those of my parents had. An old rocker should be treated the same way. A table is still needed. If one of the old fashioned drop-leaf kind ones can be found you are indeed fortunate. Treat this the same way you have the others, and your porch furniture is complete.

Flower Box As a Finish

Remember and have some flower boxes, either made of a grocery box painted like the house, or fine pottery ones, too expensive for us, but lovely. Very-pretty ones may be made of the bark from trees.

A corner closet may be made on the porch, where out door wraps may be placed. Another nice closet for dishes may be made. Use straw mats on the table when you serve a meal, and thus save laundering of the long tablecloths. Serve at least one meal a day out on the porch, and if it is the evening meal, do not worry about doing the dishes. Just leave them until morning. Dishes are so trustworthy, they will be just where you leave them, no matter how long you remain away.

Have some magazines out here, so you may read while you rest. A swing or a hammock also add to the pleasure of the porch, if there is room for one. Above all, let us enjoy the big outdoors this summer more than we ever have. — MABEL FERN MITCHELL, Prairie Grove, Ark.

Clever Guessing Contest

A CLEVER guessing contest for the afternoon on which you entertain the club is, to heap a small table with a varied collection of articles being sure that all the following are represented and some that are not mentioned in the game.

Provide each one present with a pencil and a slip of paper asking her to write following each description the article described, and assuring her that it will be found on the table if she searches.

The answers are given in parenthesis, but are not, of course, written on the slips of paper given to the guests.

A heavenly body (great dipper)
Out for the night (candle stick)
The Spring Offering (water)

The little peace maker (food chopper)
We part to meet again (scissors)
A line we all know (clothes line)
Cause of the American Revolution (tacks on a snail dish of tea)
The home of Burns (flat iron)
The reigning favorite (umbrella)
Bound to rise (a cake of yeast)
A dancing entertainment (ball)
Family Jars (fruit jars)
Reflection invited (mirror)
A rejected beau (an old hair ribbon)
Common sense (pennies)
An absorbing subject (blotter)
Bound to shine (cake of silver polish)
An old fashioned flower (lady's slipper)
Mightier than the sword (a pen)
Eyes of the family (a paper of needles)
Built around nothing (a doughnut)
Humpty Dumpty (an egg)
A book we all covet (a bank book)
Our favorite cartoon (a rolling pin)

The frequent visits to the table breaks the monotony that makes ordinary guessing games tiresome.—L. M. T.

Lemon Sponge Pie

2 tablespoons flour
1 tablespoon butter
¾ cup sugar
2 egg whites
1 cup milk
Rind and juice of 1 lemon
2 egg yolks

Beat the flour, butter, sugar, egg yolks and lemon together. Add the milk, stir well and finally fold in the egg whites whipped to a stiff froth. Pour into a deep pie-plate lined with pastry and bake about 40 minutes, reducing oven temperature from 450 degrees F. to 350 degrees after the first ten minutes of cooking.

Are you getting the extra washing help of Fels-Naptha?

Dirt-loosening naptha working with splendid soap make Fels-Naptha different from any other soap, or any other form of soap. Isn't this extra help worth a penny more a week? Try it, and you'll know!

Be sure to include Fels-Naptha in your camp kit this summer

Summer Styles for Juniors

Just imagine how charming these simple patterns would be when worked up in the beautiful new colors of summer materials which always look well on children. Voiles, percales, wash silks, dimities, chambrays,—any of these would suit for the dresses. Pongee or a light weight woolen material would make a good summer coat for use when a light wrap is needed.

This charming little pattern 2455 offers many possibilities for becoming combination of colors and trim. It comes in sizes 2, 4, 6, 8, and 10 years. In the 4-year size, 2½ yards of 36-inch material with 1 yard of 32-inch contrasting and 1¾ yards of binding are required. The quimper pattern is included. Price 13c.

This pattern No. 2452 is extremely easy to make but is very effective. It comes in sizes 6, 8, 10, 12 and 14 years. Size 8 requires 1½ yards of 36-inch material with 3-8 yards 36-inch contrasting. Price 13c.

Coat pattern No. 2322 may be worn closed or open at the neck. It comes in sizes 6, 8, 10, 12 and 14 years. The 8-year size requires 2½ yards of 42-inch material. Price 13c.

Pattern 2323 may be made with long or short sleeves, and with or without the belt. It takes two yards of 36-inch material with 2 yards of ruffling. Price 13c.

TO ORDER: Write name, address, pattern numbers and sizes clearly and correctly and enclose correct remittance in coin or stamps (coin sent at own risk) and mail to Pattern Department, American Agriculturist, 461-4th Ave., New York City.

PRICELESS HOT WATER

At a price which will surprise you

JUST think of abundant running hot water when and where and how you want it. All the comfort and health which it brings to any household. All this without gas.

American Agriculturist, June 13, 1925 Country Weeklies Help Market

Farm Products

E. H. VAN DUZEE

MOST farmers think they must take their produce to market. It took some Wisconsin farmers to discover that they could bring their markets to the farms.

The secret lies in making use of media close at hand but not often used. Nearly everyone living on a farm takes his home town weekly. If he doesn't, he should.

In the weekly paper there is a section for classified advertisements, a section that is carefully read by large numbers of people. If a farmer lives near a city on a good road he may be able to dispose of large quantities of his produce at good prices by inserting an inexpensive ad in this section of the paper.

Turned Loss Into Profit

In Wisconsin this plan was started by a farmer who found himself with a large crop of potatoes and no help to get them out of the ground. In desperation he told of his plight in a few little advertisements, putting a low price on the potatoes for those who would come and pick up their own in the field. Instead of a few replies he had dozens of buyers come out from the city to enjoy an afternoon in the country and obtain their winter's supply of spuds at a favorable price.

Within a short time this farmer had marketed his big surplus without moving off his farm. What he had left he took care of in the usual way and turned a loss into a profit. Since then the farmers of his neighborhood have used the classified advertisements to build up a regular trade, many of their customers coming back time after time. The butter and egg producers find this an especially valuable way to find new customers.

Helps the Farm Women, Too

The weekly paper has its usefulness, too. Many women on farms put up large quantities of fruit in season. At the end of the winter they may find themselves with more than they can use. At the same time the women in the villages may be running short and they would be glad to know where they could buy clean, home-canned fruits and jellies. A twenty-five cent ad in the home paper will bring the two together, to the advantage of both.

An Erie County farmer decided to retire from farming and wanted to sell his implements and tools. Instead of holding an auction, which seemed to be the usual way to dispose of things in his neighborhood, he put an ad in the "for sale" column of his home paper. It cost him about thirty-five cents a week for a few weeks but the cost was insignificant compared with the expense of an auction and it sold his complete line of tools at good prices.

Someone may be looking for just the things you want to get rid of. The classified ad columns of a weekly paper are read just as carefully as any other part. Farmers are overlooking a good method of advertising if they do not take advantage of these inexpensive little ads.

Remedy for Worms in Horses

Some weeks ago I saw in The American Agriculturist a remedy for worms in horses. I have mislaid the paper and cannot find it. Please tell me of a remedy. **J. M., Wayne County, N. Y.**

LIVE stock breeders have found that if worms are not abundant the horses will very often recover their normal condition when give a good variety and abundance of nutritious, laxative food, accompanied by a stimulating tonic.

On the other hand, stubborn cases may be treated with turpentine in 2-ounce doses, which is an excellent remedy. However, the turpentine should always be will diluted, usually with milk, olive oil, or raw linseed so that it will not blister the mouth or throat. This dose is given once daily for two or three days and then followed by a good physic such as a quart of linseed oil, which should be given with care.

Service Department

Legal and Other Problems Solved

"Please advise me what you know concerning the Associated Auto Owners Association. The reason I ask is that their representative called on us and made certain representations, under which conditions we entered into a contract with them for their listing, but they did not abide by the representations they made and we have written them twice and get no reply. It is our intention if they are fakers to expose them. One of the things they claimed was that they had 90,000 members."

WE have had several inquiries about this concern and have made an investigation of their methods of doing business. This is the second time we have called attention to it in these columns. They seem to have offices in many different cities and are evidently collecting a lot of money. They make rather unusual promises to those who sign up and pay their money, but so far as we can learn they do not make good upon these promises. In their contract, furnished to those who join, they agree to furnish among other things, free national towing, large discounts on merchandise, reduced prices on painting and renovating automobiles, low-priced automobile insurance and many other services; so many in fact, that it seems impossible on the face of things, for them to carry out their promises for the price they ask for membership. We have taken the matter up with several different Chambers of Commerce and with the Better Business Bureau of New York City. The Better Business Bureau answered our inquiry regarding the Associated Automobile Owners as follows:

"Your representative stated that one of your subscribers had made inquiry regarding this organization after having purchased insurance from them and failing to receive a policy covering same. We are in receipt of derogatory information from other sources regarding this corporation. However, this information is intangible and unverified. We are endeavoring to develop facts with respect to this corporation's activities and in this connection we would appreciate it if you would send us such facts as you may have with respect to the experience of your subscriber with this organization."

The Reading, Pa. Chamber of Commerce answered our inquiry as follows:

We have had complaints about their lack of service and some of our letters gave us the thought that it was an organization, selling service which was frequently not delivered. For a long time it seemed to be a one-man concern and neither the local Automobile Club of over 4,000 members nor our organizations are impressed with the value of the Association."

It would seem therefore, that until further information to the contrary is developed our readers should go slowly on subscribing to this service.

Is The Stallion Owner Responsible?

"I am coming to you for a little advice. Now June 21, 1923 a man by the name of R. T. Dygert came here with a stallion and wanted to breed my mares and as I was in hopes of getting a pair of colts out of the mare signed a contract and in June I bred her, but her time came up and no colt and the Stallion couldn't be found. It seems that it has traded hands several times and then the story came that it had been stolen. It was in the contract that he should be kept a certain length of time in the neighborhood. Now this contract was accompanied by two notes, one due in 10 months and the second a year later. I paid last year's note hoping he would return and do as he agreed but it is now time for the second note to be due and I would like to know if I will have to pay it also can I get my money back on same. I am not the only one that got stung. About twenty horses I know of around here were bred under the same contract as mine and only 2 colts arrived. —S. S., New York."

YOUR letter raises a very interesting question. In the first place, if the notes you signed are ordinary promissory notes and if they have been sold or negotiated by the person to whom you gave them to an innocent third person for value, there is no escape from making payment when payment is demanded by such third person. On the other hand, if the note which is now due is still in the original payee's hands, you will probably have a good defense with which to resist payment, depending on the wording of your contract.

If your contract provides simply for the service of the stallion, that you have had, and that is the consideration for the notes given. In such case, no defense to payment of the notes exists. However, if the contract contains a guarantee that such service will result in offspring, a defense will be available, however, only in case the original payee still owns the note or in case it is owned by a person who acquired same with notice of the guarantee.

As to the note paid, and as to this second note, if it is paid, your only remedy is in an action to recover the amounts thus paid. This action will be based upon the guarantee, and must be brought against the person with whom you contracted.

Is Your Service Bureau Sign Up?

WHEN you send for a Service Bureau sign for posting, be sure to enclose six cents to cover the postage. These signs cost AMERICAN AGRICULTURIST a considerable sum of money, but we are furnishing them free to all subscribers, except that we cannot afford to pay the postage on them when we mail them. Posting this sign will act more or less as a watch dog to protect you against the many frauds that are being put over at the present time. The Service Bureau of AMERICAN AGRICULTURIST has been fighting frauds now for years and a good many of the regular crooks have come to have a wholesome fear of what we can do when we get after them. Some of these at least will avoid the farms where our Protective Service Bureau sign is posted.

In addition to this, the sign shows that you are an accredited member of our Service Bureau Department with full right to call on the services of all of our experts without any cost whatever. The sign is free to subscribers, except for the six cents to cover postage.

Be Sure They Are Licensed

WE have received several claims against a concern known as the Como Cream Company of 82 Jefferson Street, New York from subscribers who had shipped eggs and cream to this concern and either received checks which were protested in payment for their shipments, or else received no returns whatever. When we received the first complaint, the concern promised to make good the protested check, but by the time we got in touch with them again for failure to do so, they had moved leaving no forwarding address. Although we have made investigation, we have been unable to locate the present whereabouts of this concern. This serves as a warning for other shippers to have nothing whatever to do with these people.

We have repeatedly warned against dealings with commission merchants who are not licensed and bonded by the state. There is always a risk in doing business with such merchants.

Notice

In 1923, an agent by the name of Gabbey worked one day as a salesman for American Agriculturist. We found that he was unworthy and discharged him. Since then, it has come to our attention recently that he is still selling subscriptions to American Agriculturist and is not turning in the money. Our readers are therefore warned against him. All of our regular salesmen carry full credentials.

A. A. Insurance Helped Him

"I thank you very much for your kindly help in my accident policy. I received \$60 for six weeks I was unable to work. I sure would not be without the insurance. I think it is wonderful. I hope I will not have to call on them again but of course, we never can tell what is going to happen to us."—C. A. S., Ohio.

Safety at the Crossing

The increasing safety of railroad work and of railroad travel is strikingly shown by the records of the Safety Bureau of the New York Central Lines.

Twelve years intensive effort by this bureau, with the active cooperation of the men of the New York Central Lines, has resulted in nearly a 60 per cent reduction in the number of casualties to employees and passengers.

But automobile accidents at railroad crossings have greatly increased. Seventy per cent of these crossing accidents occur in daylight—63 per cent in the open country where approaching trains can easily be seen. Last year 14 per cent of these accidents were due to automobiles running into the side of trains, and this percentage is increasing.

Crossing accidents could be practically eliminated if the railroads could enlist the same cooperation from automobile drivers that they have from their employees, and if drivers would obey this safety rule: "Don't attempt to cross the tracks until you are sure it is absolutely safe."

Cross crossings cautiously and save human life.

Time Tested Windmill

The Auto-Oiled Aermotor has behind it a record of 10 years of successful operation. In all climates and under the severest conditions it has proven itself to be a real self-oiling windmill and a most reliable pumping machine.

An Auto-Oiled Aermotor, when once properly erected, needs no further attention except the annual oiling. There are no bolts or nuts to work loose and no delicate parts to get out of order.

There are no untried features in the Auto-Oiled Aermotor. The gears run in oil in the oil-tight, storm-proof gear case just as they did 10 years ago. Some refinements have been made, as experience has shown the possibility of improvement, but the original simplicity of design has been retained while greater perfection of operation has been achieved. The Aermotor is wonderfully efficient in the light winds, which are the prevailing ones. The self-oiled motor works with practically no friction, and the wind-wheel of the Aermotor is made to run in the lightest breeze. It is also amply strong to run safely in the strongest winds. In any condition of wind or weather you may be sure that the Auto-Oiled Aermotor will give you the best of service. It is made by the company which established the steel windmill business 38 years ago.

called, and daily we sought them and brought them home to transplant in our garden, but now—"

"But now?" he repeated, wondering if he were, at last, to know—to be made a sharer in her secret.

But she eluded him. "Charlotte and I often came here to dream and play away the day—that is, I did," she laughed, "Poor Charlotte at times was bored, oh, so bored! Was it not so, Charlotte?"

"Enh, enh! Yes!" mumbled the Ojibway woman, who sat on a rock apart from the two, her restless eyes sweeping the scrub below them.

"Charlotte is not bored now; she's scared to death," suggested Steele with a laugh.

"Has she not reason, Monsieur?" protested Denise. "But we have not been here, she and I, since mid-summer. And I miss it so."

"You fear to come here now—believe in this thing?" He welcomed the opportunity to put the question directly.

The dark eyes frankly met his. "Is there not good reason, Monsieur, for fear in a woman? After the fur canoe—and that night?"

Natural as had been her reply, Steele intuitively sensed that she was dissembling—to avoid his inevitable questioning was willing to have him believe that she, too, was a victim of the general superstition. But she had betrayed herself the morning her father cut short her half-uttered warning. Well, the day was young and he feared to press her then for an explanation of what she patently desired to avoid. So with a nodded assent to her question, he changed the subject.

"We are to have gay music today, Mademoiselle. You remember, you promised we should be merry."

"Yes, today the violin shall sing of joy; it is too beautiful here to be sad. Even though the first gray geese of the year pass south, I shall send them no message."

"And this message—is it a secret?"

"A secret, Monsieur?" What secrets can a woman cherish in these forests? Her reply had been spontaneous, innocent of subterfuge; then, in his lifted eyebrows and humorous curl of lip, she caught the reflection of the double implication of her question, and her face flushed to the temples.

"Have you ever longed to journey south with the passing geese?" he quickly asked, gallantly covering her embarrassment. "As you play them down the skies, do you not wish to join them?" Her eyes shone. She leaned towards him, her eager face and parted lips picturing the interest his words had aroused. "To me," he went on, "the gray geese are the symbol—the very spirit, of the unshackled, the free country. I never hear that marching chorus of theirs without a bit of a thrill—an urge to swing up into line and wing south with them to the great gulf, or north to their nesting places on the Bay."

"Why, Monsieur Steele, you have stolen my dreams," she cried, radiant with surprise. "Always, as they pass, I stand here calling to them to lend me wings to follow—follow into the south. I try to lure them back with my violin—but no, they pass. So I send them down the wind to a mad quick-step—my bon voyage, my farewell—until spring pipes them north."

She had risen. And her eyes, shining with emotion, her face, vivid with the color of her thoughts, strangely stirred the man who listened. Swiftly turning from him, she gazed down where the lakes, broken by breeze, shot back the sunlight to the sleeping hills. From the dark masses of her head an errant strand waved like a plume in the restless air. The lines of her straight body, from shoulders to trim feet, held his eyes.

Watching her, Steele asked himself what this strange girl, tense as the strings of her violin, with her moods of aloofness and silence, followed by swift changes to whimsical gaiety and lightness of spirit, was coming to mean to him. As her eyes

again met his he wondered what memories he should carry down to Nepigon in October.

"And the message you send with the geese?" he asked. "There is homesickness in it for your France—your Touraine?"

"Ah," she sighed, "is it not natural, Monsieur? I do long for the roses and the poppy fields—the warm sun on the white roads and the laughter of the people. There is no laughter at Wailing River—now." She raised her hands in eloquent gesture. "The winter here is so long—so cold. The eternal wind in the spruce—does it not speak to you, too? To me there are always the voices—voices of hunger and pain—and death."

"Yes, summer or winter," he said, "the voices are everywhere, in the white-waters, the spruce, the hills. And often, in the breeze, the forest becomes one great orchestra."

It takes fewer bushels of wheat to buy a binder today than it did in 1913-'14—before the war!

McCormick
and
Deering

THE BINDER and GRAIN belong together; you must figure them together. When you consider the present prices of wheat (lower now than they were) and of all other grains, too, you will realize that the binder now costs you less in terms of grain than it would have cost twelve years ago.

It was poor economy to use an over-repaired binder in 1913 but it will be worse economy to run a worn-out machine in 1925. You cannot afford the risk. Grain prices are too high for that, and binders—which have always sold at extremely low figures, considering general price levels, quality and pound-for-pound values—have been lowered further.

When you make use of the larger binder capacities and the crop-saving improvements, a new binder in your grain may pay back its full purchase price in one harvest or two, in the savings in grain and time.

Don't take the chance of a breakdown or steady loss of high-priced grain this season. Harvest the year's crops with a brand-new improved McCormick or Deering grain binder.

INTERNATIONAL HARVESTER COMPANY

606 So. Michigan Ave. OF AMERICA (Incorporated) Chicago, Illinois
93 Branch Houses in the U. S., the following in American Agriculturist territory—Albany, Auburn, Boston, Buffalo, Elmira, Harrisburg, Ogdensburg, Philadelphia and Pittsburgh

You owe it to yourself to go in at the McCormick-Deering dealer's and look over the new McCormick or Deering Grain Binder

If you are the owner of an old, outdated binder, here are a few of the strong points in the 1925 McCormick and Deering binders which your machine is lacking today: *Better Construction; Improved Bearings; Improved Bevel Gears and Chains; Lighter Draft; Outside Reel Support; Perfected Binder and Knotter; Grain-saving Floating Elevator; Improved Bundle Carrier; Tongue Truck for Steadying and Carrying Loads.*

Is your binder of 6-ft. cut? Remember that in these days of high labor costs a new 8-ft. McCormick or Deering binder will cut one-third more grain, saving time, labor, money.

You will be interested in the remarkable McCormick-Deering Tractor Binder, made to be run by power take-off from the McCormick-Deering Tractor—the fast harvesting outfit cutting 10-ft. swaths and doing as much work with one man as two men can do with two regular 7-ft. binders.

Binder Twine: Arrange early for your harvest twine requirements. Insure saving all the grain and preventing delay and trouble by ordering a supply of McCormick, Deering, or International, wound in the convenient "Big Ball."

"GOOD EQUIPMENT MAKES A GOOD FARMER BETTER"

"You have heard it, too?" she cried, "the sweep of the violins, the moaning of the 'cellos?"

"I always hear them in the summer, from a river; with the drum beat of rapids as accompaniment"

"Ah, there is much of the poet in you, Monsieur." And for an instant there was a light in the girl's eyes which set wild thoughts stirring in his brain. "But our winter is beautiful, also, in moods," she went on. "The quiet days with the sun on the snow—I love then to walk in the forest. And the winding snow-shoe trails; do they not call you to follow?"

"Like the white roads of your Touraine?" he replied. "I think I prefer the northern winter to the summer, but, of course, it is often grim and lean for the families of the hunters—for the women and children."

Her eyes clouded. "It is always so, for the women and children—they find life hard—here—in the north." For a long interval she was silent and he knew that her personal problem again haunted her thoughts.

In a cleft of the rock Steele built a small fire, then went down to a spring for water for their tea while Denise set out their lunch. When they had eaten the two sat with eyes on the sweep of lake-studded valley while Steele smoked his pipe, and Charlotte, whose fears had succumbed to the warmth of the sun, drowsed, back against the rock. Then the music-hungry Steele handed the bag containing the violin to its owner, with: "Please, anything you care to play that is not sad. Today, you know, you were to forget," and he smiled significantly.

A Happy Hunting Ground *Old Westchester County and Something of Its History*

By W. H. SANDERS

AFTER reading Mr. Van Wagenen's fine story of Otsego County and its ancient villages, I feel an urging to pen a few lines in Westchester's behalf. Westchester County lays certain claims to be the best place on earth to live, also for its share of importance in historic days of the past.

A legend is handed down by the Indians that when they left the Garden of Eden the Great Spirit said unto them: "Travel East and you will find happy hunting grounds, peace and contentment." So they traveled to the East many, many "moons," coming to China then northern Asia and across to Alaska (which geologists tell us was, centuries ago, a connecting link of land between the two hemispheres). A few stopped off there and their descendants are known as Eskimos. Others passed on down the Pacific Coast and over the Rocky Mountains to our "plains," where buffalo were plenty. Many stayed here. However, a few of the stronger were not yet satisfied, and came on to the Atlantic Coast. Here they found game and fish in plenty, and with the corn or "maize" were contented, until the white man came along with his "fireworks." Westchester hills, valleys and streams abounded in fish and game,

and the mightiest and highest type of Indian reigned here in 1500. Their women had the most to say in law making.

Records show where white men bartered with them for 7,000 beaver pelts and bought the whole county for \$95. What a change in value. Our assessed valuation is now over \$800,000,000. We have \$40,000,000 worth of parks, 890 miles of highway; five lines of railways, several hundred trains polish these rails daily and many thousands of people commute to business in the "boss" city of our land.

Our original county was larger than Rhode Island or Delaware. It was settled on the Hudson River by the Dutch, and the French

Huguenots along Long Island Sound. Early Massachusetts settlers that could no longer agree, settled the Connecticut shore along to Stamford. From there they came to Westchester, settling the town of Bedford, the joint county seat with White Plains at that time. Then trails pushed on to Peekskill, connecting another water way, the Hudson River. From Peekskill, Mohegan Indian trails led on through to the Catskills and to friend Van Wagenen's fertile lands. There were also good stock from England and Scotland. John Jay was no doubt our most noted settler. He was twice governor of our state, and was the country's first chief justice. His good judgment had much to do with the laying of the foundation of our present laws. Among other great men of the country Alexander Hamilton, Gouverneur Morris, Enoch Crosby and many others on down to the honored Horace Greeley who lived at Chappaqua.

Westchester has given much to literature. Among those who lived and wrote here were, Edgar Allen Poe, John Savage, John C. Freemont and that peer in American literature, Washington Irving. Washington Irving's tomb-stone can be found now at Tarrytown, in the famous Sleepy Hollow Cemetery. James Fenimore Cooper, the up-State novelist, lived in Westchester County at one time, and while visiting at the John Jay homestead "Bedford House," plans were made for his famous story "Last of the Mohicans."

Importance in Revolutionary War Times

The Declaration of Independence was brought to White Plains on July 11th, 1776, and read officially to New York State. The Battle of White Plains occurred at Chatterton's Hill, October 28 of the same year, Lord Howe, being in charge of the British, and General Alexander McDougall, under Washington, commanding the American forces. In 1779, Aaron Burr was stationed at White Plains several months with Continental forces. At North White Plains still stands the "old Miller house" which was Washington's headquarters at intervals through the war. In this very house, plans were laid for the siege at Yorktown, Va., that decided the war and set our great land free.

Among our famous buildings is the old County Court House at Bedford, built in 1787, the John Jay house at Katonah, (named for old Chief Katonah, a ruling Indian in the County at one time) and Washington's headquarters at North White Plains.

The "Van Cortlandt Manor" at Peekskill is a very old building as well as "Sunnyside," Washington Irving's home on the Hudson River, and the old Dutch church at Sleepy Hollow Cemetery. Guard Hill at Mt. Kisco, the highest point in the county, played an important part in the war. It was used

Hot Weather Grows Crops

A Farm and Home Talk

By M. C. BURRITT

THIS has been a
hard hot week.

Beginning with some good showers on Sunday and Monday nights, the weather became warmer and warmer until the thermometer stood at from 90 to 105 de-

grees according to exposure, during the latter parts of the last two days. It is the hottest long continued spell in June in the memory of most of us. A wonderful growing period too, for weeds and quack grass as well as corn and other crops.

M. C. BURRITT

The last of the corn and most of the potatoes were planted this week finishing up these jobs in good time. Corn that was planted the previous week, got the showers at the beginning of this week followed by the warm period and came up immediately so that a good deal of this crop is all ready for the first cultivation. We expect to start the cultivators on June 8th. It has been an ideal week for corn if planted early. It will be pretty dry, however, for late planted corn.

Canning Tomatoes Being Set

Many thousands of tomato plants for the canning factory have been set this week. Like corn, those that were in early in the week, just after the showers, hardly stopped growing, but plants set later in the week are not doing so well. It is a hard back breaking job but was done promptly in spite of hot weather. Eight carloads of plants came in at our local station, mostly early in the morning and were unloaded and on the farms before 7 a. m.

A few farmers had planted beans on June 6 but most growers are working over the bean ground again—doing the cultivation before planting and preparing to plant this coming week of June 8. The week of June 15 is thought by many to be about the right time to plant beans, but those who intended to follow beans with wheat have to take this into consideration in relation to harvest dates.

Wheat and Hay Slow Up

Wheat and hay have slowed up perceptibly in growth on account of lack of moisture and the hot weather. Oats have a good start and show good color. Canning factory peas look well. Alfalfa will be ready for first cutting in a week or ten days.

The third or calyx spray on apples has

been finished this week. It was a long-

er job than the others because the trees are in full leaf and take more material. It had to be hurried also because the hot weather caused rapid development and the calyx end closed up very quickly after the petals were off. It was noticeable that many growers omitted this spray. The brown rot control spray on peaches and plums was also due to be made this week. Hot weather makes this more than usually important.

More Fruit Observations

It is too early yet to determine the set of fruit but some observations to date may be worth while. Pears which made such a very heavy bloom, are setting only fairly well and in some cases very poorly. At first I thought that Bartlett's must have been very badly injured by the cold weather and would surely be a failure, but an inspection on June 6 indicates a fairly good set well distributed on the trees. The same is true of Kieffer pears which are apparently setting even better. Dutchess have set well as usual. Twenty Ounce and Kings are not setting very well. Counts on several old Twenty Ounce trees show an average of only one apple set to every two blossom clusters. But even this may be enough for a fair crop. Baldwins appear to be setting enough for a good crop on trees that bloomed well.

Somehow these remarks seem very common place. Probably it is because they are, as well as the events of the week. The rush of the planting season which is now nearing its end and the hot weather have brought a general weariness which calls for a breathing spell before the harvest season begins. One cannot work at top speed and pressure all summer. There will always be plenty to do but the urge of getting it done today will not be quite so great during the next two weeks.

We picked our first ripe strawberries (two) on June 6, and the prospect of fresh strawberries and cream three times a day for the next three weeks is refreshing.

Oh, yes, I almost forgot to say that last week was circus week and of course we had to go to take Sonny, even if it was 95 degrees up under the big canvass! There are compensations!—M. C. BURRITT.

The margin of profit on growing oats is small at the best. Ways of increasing it can be learned from Bulletin 436, "Results of Experiments with Oats in New York" published at Cornell. This Bulletin tells the methods by which the College has developed high yielding strains of oats, and the results of field trials in different parts of the State.

"Didn't you promise me to be a good boy?"

"Yes, father."

"And didn't I promise you a thrashing if you weren't?"

"Yes, father, but as I've broken my promise, you needn't keep yours!"

Hens to Keep and Hens to Sell

It Is Not Hard to Tell the Difference and It Pays

By FRED W. OHM

Associate Editor, American Agriculturist

MY neighbor has a flock of hens. It is not a big flock by any means. But it is big enough to stand a little culling. We live about 30 miles from that spot in New York City known as the cross-roads of the world, in a little country village just south of the rich potato country of central Nassau county. Unlike other villages to the west of us, we are still considered somewhat rural. And we like it. But to come back to that flock of hens. It is just big enough to supply the family needs and a few more of us next door. Because the range and plant is limited is all the more reason why that particular flock can stand culling. As a matter of fact isn't that why every flock needs to be culled—to get every dollar possible out of the investment and plant at the lowest cost—to have every hen producing.

It is not a particularly hard job to cull hens. When culling was first talked of it seemed rather a mysterious procedure. But when you get right down to it, you will find that it is neither a secret art nor a real technical science—not too difficult for the average poultryman. It does require some knowledge and experience but the essential features are simple in detail, easily learned and may be practically applied by any one in the poultry business. Culling is no more or less than identifying certain well marked characteristics by examination and comparison that distinguishes the higher from the lower producing hens.

You have no doubt seen in the advertising columns of present day periodicals that famous slogan "15 minutes a day." That amount of time spent every day with Dr. Elliott's book shelf will bring knowledge to the reader. Fifteen minutes a day spent examining your flock of hens, picking out the less active individuals, is bound to increase the producing capacity and efficiency of your flock.

But how do we go about telling which hens

The head on the left is that of the non-producer. Notice the weak comb and eye in contrast to the layer on the right.

are which—layers or "liars"? A latter is a bird that is supposed to lay eggs and pay for her keep—and then some—but doesn't. She is always on hand at meal time to fill her crop and spends the rest of the day loafing and primping up her feathers while the layers are out foraging for bugs and worms. When you figure up her production, she is on the red-ink side of the calendar, pulling down the average of the whole working force.

You can do some culling without going into the details of head and body type. These are the

days when broodiness cuts down the egg yield something fierce. If you find a hen getting broody, put a leg band on her. She is the one to sell, particularly if you find her guilty of a second offense. L. H. Hiscock, who writes so interestingly of his experience with hens and who is well known to readers of AMERICAN AGRICULTURIST, tells of a little experiment he conducted with a broody hen. She became broody in February and he put a let band on her. By May she was "sitting" again and before the year was over

Here are some hens that won an egg laying contest at Vineland, N. J. Those on the extreme right and the one on the extreme left, show their capacity for production in their deep, well proportioned and well carried bodies.

she bore more rings. You and I have often heard folks say, as they hurled a broody hen out of the nest "that pesky thing is always on the nest." And yet they let her go back instead of fattening her for fricassee, for which she was worth infinitely more than as an egg producer.

Molting is another guide that you can generally bank on as an indication of a hen for sale. There are different kinds of molts. Some hens will go through a partial molt and start laying again for a short period and then will go back to shedding feathers. Under conditions of good management a good laying hen will hold off molting until later in the season toward fall when she will shed her feathers, take a rest and go back to laying again.

There are other physical characteristics that you may use in separating your good birds from the poor ones. At this time of the year the layers will have full, well proportioned combs and wattles that are pliable, bright red and waxy. The layer's beak is stout, whitish in color and well curved. Her eye is large, full, prominent and bright in expression. The poor layer on the other hand has a beak that is long, slender, yellow in color, has wattles that are small and shrunk and the eye is sunken and listless in appearance.

At this time of the year and from now on to October the layers will always look a little more shabby. Their feathers will appear rough and somewhat soiled. Their tails will be whipped out from turning in the nest. The drones will look more sleek and white and well kept. A comparison of the toe nails of the two, will show that the worker, always scratching and foraging, wears down her toe nails, much in contrast to the full grown nails on the slacker hen.

One more thing is very important and that is the shape and size of the body. Look at the illustration in the middle of the page on which this story begins. There are six birds in that picture. Notice the hen on the extreme left and the two on the extreme right. Observe the deep dull chest and how broad their backs appear and how their top-line coincides with the horizontal line of the under body. There is no question but what they are layers. Between these birds and in the back stands a hen that has the earmarks of one that does not produce quite as well. Do you see her sloping body? She may be a high producer and it may be that she is just standing that way. However, her position is characteristic of a hen with a poorly formed body, being too sloping, with the breast bone that curves up toward the back instead of out toward the front. The picture of Lady Bountiful shows the deep rectangular body and full breast characteristic of a good hen. She has a record close to 300 eggs a year.

The egg vent bears some importance in identifying layers. It will appear moist, soft, extended and light in color. The vent of a poor layer or a non-layer is contracted, dry, puckered and deep yellow in color.

If you will probe in the hen's fluff just beneath the egg vent, you will feel the ends of two bones. These are the pubic bones between which the egg must pass. If the ends of these bones are thin and pliable and

fairly far apart—so you can get three fingers between them—you may feel reasonable sure that your hen is laying. However, if the ends of the pubic bones are heavy, thick and rigid and so close

This is Lady Bountiful, the high hen in one of the Vineland egg laying contests. This picture shows clearly what is called for in a laying hen—deep, rectangular body, carried well, showing capacity. Her record is close to 300 eggs per year.

together that you have difficulty getting two fingers between them, you can generally rest assured that no eggs are passing through.

To go into all of the minor details of culling,

VOL. 115 June 20, 1925 No. 25

An Early Summer Review of Farm Conditions

In General Spring started out early, but with much cold weather during May, it ended up a little late. However, it was a pretty good spring to work, and the crops were gotten in on time. The only big general planting job left is the sowing of buckwheat.

Agriculture in general, while nothing yet to brag about, is in much better shape than it was last year. There is a little more labor available, although at very high prices, and in the East particularly, the better milk marketing conditions are giving our farmers more encouragement than they have had before in some time. One of the indications of the slightly improved times is the fact that there is some movement of farm real estate.

Grain Conditions The wheat harvest is already well started in the Southwest. The Department of Agriculture reports that more than half of the winter wheat acreage was abandoned in several of the western states and nearly a quarter of the acreage in the whole country. The June first forecast for winter wheat is the worst in 35 years. On the other hand, there are indications that the world wheat crop will be very good. If this is the case, it may be that the price of wheat this fall will be none too good and our farmers will not have a bumper crop to sell. The spring wheat crop may be better. However New York and Pennsylvania will fare well in winter wheat production. New York promises over a half million bushels better than last year and Pennsylvania a million and a half more.

There has been the usual acreage of corn planted and other spring grains. The corn crop may be affected some by the poor quality of seed this spring. What the result from these spring grains will be is yet in the laps of the gods.

On April 15, grain and wool prices had declined from the peaks and they reached a point slightly lower than last December. Oats were down to the lowest point in fifteen months. Wheat is showing a general upward movement again.

Meadows and Pastures Meadows throughout the country as a whole are just a little under the average condition for the past ten years. Pastures are a little bit better than normal. In the East, both meadows and pastures are considerably above the average. But at this writing the prolonged spell of hot weather has seriously affected pastures and meadows.

Fruit and Vegetable Outlook In a recent issue, M. C. Burritt gave a most excellent forecast of the fruit crop. We cannot improve upon it any. The government reports that fruit has been given a set-back by killing frosts.

So much cold weather and lack of rain throughout the country as a whole have affected both the fruit and vegetable outlook. Prices in the northern city markets at the end of May showed potatoes, cabbage, tomatoes and strawberries a little lower in price than a year ago. Apples and stored vegetables as well as new products are gaining in prices from month to month. Cantelopes, melons, and cherries are receiving a very keen demand. Strawberry production promises about three-fourths of what it was last year.

Hog Market The total supply of hogs for market in sight this year is much smaller than any year since the close of the war. This should mean that the farmers will realize at least fairly well on their hogs this fall.

Poultry Products For detailed comments and prices and conditions in the poultry market, watch our market page each week. We have one expert who gives a large amount of his time to obtain correct poultry information.

Incidentally, you will find valuable information on all other products in our regular market column each week.

The beginning of the flush production in poultry found the egg market fairly firm with prices well above last year. The flush started prices downward somewhat. Storage of eggs began earlier this year and stocks in the warehouses are therefore larger than they were last year at this time.

The movement of live poultry is beginning to recover from the effect of the embargoes. The long cold spring has had some effect upon the consumption of live poultry. AMERICAN AGRICULTURIST believes it is time to go slowly and to be conservative in enlarging the poultry business.

Dairying Conditions The dairy market is considerably stronger than it was last year and prices, particularly of fluid milk, have been well maintained, although there has been some complaint recently that reductions which have occurred in prices were unnecessary because of competitive price-cutting in New York City.

Although we started in last fall with a tremendous amount of butter in storage, it moved out rapidly so that when the flush season began there was practically no butter in storage. The average price of 92-score butter for the month of May was 42.58 cents. The price for April was 44.53 cents, and the price for May last year was 38.9 cents.

A strange situation exists in the cheese business. It is said that on June 1 receipts were the lightest in New York City of any June 1 since the early days of the industry.

The Department of Agriculture reports that the average price of Grade B milk testing 3.5 per cent butterfat paid producers at country points in the Middle Atlantic states was \$2.75 per hundred for May. For April, the corresponding price was \$2.76, and for March \$2.86. For April a year ago the price was \$2.49.

One of the signs that makes farmers themselves believe that dairying conditions are really improved is the fact that the price of dairy cows is beginning to strengthen. In any fluctuation in prices of dairy cows, purebreds are the last to go down and the last to come back. Not in years has the price of good purebred stock been as low as it is at the present time. Therefore, it seems that not in years has there been a better opportunity for men to get started with purebred sires and cows.

How the Grange Contest Is Coming

ENTRIES for the Grange Lecturers' contest are rapidly coming in to AMERICAN AGRICULTURIST office. We have read some of these and are surprised at the good material and suggestions which are being submitted. We feel that when the best ones are published they are going to be of real help to Grangers in putting on better lecturers' programs. If you are a Granger, why not give the matter some

thought and send in your entry? Do not worry if you are not a writer. Good English, not even good spelling, is essential. What is wanted is good ideas for improving Grange programs. Maybe you can win one of the big prizes for yourself and for your Grange. Or if not, perhaps you will have suggestions that we can pass on to other Grangers that will help them to put on better programs. Think it over, and give yourself a chance.

The rules were published in full in our May 23rd issue. Briefly, a first prize of \$50, a second prize of \$30 and a third prize of \$20 are offered by Henry Morgenthau, Jr., publisher of AMERICAN AGRICULTURIST, for the best suggestions for lecturers' programs in subordinate Granges for a series of three meetings. These programs can be those which have been already used, or they can be made up entirely new. One-half of the prize money will go to the individual winner and the other half will go to his or her Grange. Programs should be stated in sufficient detail so that they may be easily followed by any Grange, and each program may be accompanied by a brief discussion not to exceed one hundred words. Contest closes September 1, 1925.

Judges will be S. L. Strivings, Master of the New York State Grange, Henry Morgenthau, Jr., publisher of AMERICAN AGRICULTURIST, Raymond Cooper, Lecturer of the New York State Grange, E. R. Eastman, editor of AMERICAN AGRICULTURIST, and Charles M. Gardner, editor of the National Grange Monthly. Send all programs to AMERICAN AGRICULTURIST, 461 Fourth Avenue, New York City.

Hot Weather Helps Dairymen

DURING the first week in June we were reminded of mowing away hay in July in the loft under the horse barn roof. We have seen a lot of hot weather, but never in our experience have we seen it so oppressively hot for so long a period as it has been during this week in New York City. The whole country has suffered exceedingly, too, but there is a high humidity in the air here which makes it especially hard to stand the heat. People have died by the score and hundreds have been prostrated. Thousands flocked to the beaches and to the parks to gain a little on their exhaustion during the breathless nights.

One of the good effects for the dairymen from a protracted spell of hot weather is the increased consumption of dairy products, although it of course throws the cows off from their production. The large ice cream companies have reported that they could not make enough of their product to fulfill the demand. The consumption of milk also was increased greatly in the cities, although one company reports that this increase was somewhat offset by the number of people who have gone to the country. Most of these, however, still continue to use milk. The effect of the unseasonable hot weather on crops will for the most part be good, warming up the ground and giving the crops, especially corn, a good send off.

Eastman's Chestnuts

HERE is a story just the way it came to me in a letter from a Tompkins County friend:

A farmer from the hills went to Ithaca and was going into one of the stores. As it happened, a "Smart Alec" was just coming out, and as the old man turned to go by him, he dodged in front of him, so the old man turned to go by him on the other side. The young fellow dodged in front of the farmer again. After this was repeated the third time, the old man stopped.

"SAY, YOUNG FELLER, IF YOU WOULD BE GOOD ENOUGH TO STAND STILL A MINUTE, I'LL GO AROUND YOU!"

"My Experience With the Roadside Market."

Prize Winning and Other Letters from Our Interesting Contest

EDITORS' NOTE: Getting fair prices for their products is the farmer's biggest problem. On this page are the prize-winning and other good letters from our roadside marketing contest. You will find many splendid suggestions in these letters, taken directly from the experience of the writers. These suggestions may help you get more for your products.

Let us insert just one word of caution, however. We do not wish to encourage anyone to rush into the roadside marketing business without first carefully figuring all of the difficulties. It takes a very large amount of time and labor, and to succeed one must give great attention to detail. Also, the roadside markets are rapidly increasing

trees we planted when we moved here began to add to our profits and \$2,256.44 were our receipts. The climb now is more gradual but we have learned much, increased our variety, and in 1924, had \$2,729.50 to add to our bank account. During last season honey in clean, attractive bottles was a big seller and \$500 worth marked the season's close.

Satisfied customers of course are the best advertisements, and it is gratifying to have people return regularly the entire season. You meet people that become real friends, you make people happy by giving them the best possible that can be produced, and life is worth living because we can be of some real service to those we meet.

Sweet corn, both white and Golden Bantam, has always been a big attraction and one week end we sold 3,000 ears. We aim to always sell fresh products and when people drive a distance for vegetables they have a right to get corn the day it is pulled. A succession of corn is also necessary and when our first planting comes people know they can get a new planting every week until frost.

The same is true of peaches. We have all varieties from the middle of August until frost. They receive good care and cultivation, and every basket is sold at the farm and no peach is sold that is not in perfect condition. At this time our receipts have passed those of last year and with the peach trees looking better than ever and a large crop of peas ready to pick we look for a greater season than ever before.

Do not grow discouraged. Work hard and smile!

—M. L. C., Pennsylvania.

Fresh Products Well Graded

(Second Prize)

WE have conducted a roadside market for the last four years and have had the best success. We have disposed of all the produce from 12 acres, with the exception of what we use for our family of from three to five people, which last year amounted to over \$1,300, selling some days in the berry season to within a few cents of \$50, and on ordinary days anywhere from \$8 to \$30.

We sell every day except Sunday. We do no business on Sunday. We usually commence selling about May 1st and miss only a few days until December, then a few days a week the rest of the year when autos can travel.

There are certain important factors in operating a roadside market which must be followed in order to make a success of it. First, strictly fresh products; second, first quality; third, courteous treatment of your customers; fourth, a good full measure.

We raise all kinds of vegetables for sale, also berries, some fruit, eggs and chickens. We put our vegetables up fresh every morning, usually put up quite a quantity of such bunch vegetables

as beets, carrots, onions, radish and rhubarb, cut cabbage and cauliflower, lettuce and celery, and place in a cool cellar and display but a small quantity of each kind at a time. We pick tomatoes, peppers, squash, cucumbers, melons, and pumpkins, etc., take inside, wipe and clean, and display in any number or quantity desired by the customer. We pick and have fresh berries in season, every day after 9 A. M. We usually try to have as many varieties of vegetables as possible as that helps to make a good display on our table.

We sow in small quantities so as to have the main vegetables coming on fresh all of the season.

We have a large table painted green and white with display space on top and in front and space underneath for some surplus and for sacks, paper and string. We furnish sacks and paper to wrap and hold all purchases and have our name and address, fruit and vegetables, stamped on all sacks and baskets.

We are located on the main state road from Syracuse to Thousand Islands, only eight miles from the center of Syracuse and three miles from Oneida Lake and its many summer resorts. We have lots of customers who drive out from Syracuse in the evening before dark and we put up orders just to suit them.

We grade all of our produce and either use at home or feed all seconds, or sell as such if some party wants that quality. We find the main thing is to be fair and courteous and try to please all.—J. E. C., New York.

A Hundred Dollars For Strawberries

(Third Prize)

I JUST took up the AMERICAN AGRICULTURIST to take a ten minutes' rest. The first thing I started to read was "This is your last chance to tell us about your roadside market."

Two years ago I had quite a strawberry bed. For years I always had enough for our family, but that year I had a new bed and it was just

A building is not absolutely necessary. In some instances it will help.

so that unless one has a good location, good products, well graded, the strict competition may make the effort a failure.

It Takes Time and Determination

First Prize

AFTER six years' experience on a 134-acre farm, 26 miles from Philadelphia, we can give some words of advice. To begin with, you must realize the opportunity before you and never give up, though days of failure may come. Our mistakes must only help us to grow stronger; optimism and enthusiasm must go hand in hand with plenty of hard work.

We aim to sell all our own products and have neat signs to advertise the vegetables, milk, cake, fruit, etc. Give people what they want and when they drive thirty miles as many of them do, please them by having just the kind of home-made cake they like best. The milk is served ice cold in clean individual cups, 5,000 of which were used last season. We are sometimes called "The Milk Farm" by our customers, and on a hot Sunday often sell 100 quarts of milk by the glass.

We shun red paint and gaudy posters that mar the effect of the landscape and people like to come and spend the whole afternoon on the benches we have provided under the great ash trees over 100 years old. Just flat boards on trestles hold our produce, and a glass cabinet holding eight cakes is an attractive place for cake and pie.

Figures talk and tell something of the past six years of growth. In April, 1919, we came to "Sunnyside" a bride and groom, both born in Philadelphia. We bought a rented, run-down farm on a good automobile road and started our climb. The first year our receipts were \$400; in 1920, help was scarce and our receipts were only \$300. A discouraging period, but that is the time to work harder. In 1921 we took in \$1,000 from our market. 1922 was also somewhat discouraging and we fell back again with \$762.68 receipts. In 1923, we took on new life. Our 1,000 peach

A neat and attractive market that invites the more discriminating buyer. It has an air of quality about it.

loaded with berries. My husband went out to work and so I was left alone to take care of chickens and garden. We live on a hill off the main road so we very seldom sell anything at the house.

I said to my husband on Sunday, "I must pick berries tomorrow. I will never be able to use them all. Will you take them to the city?"

"Maybe I will," he said.

But Monday morning he went to work, saying, "I cannot be bothered with those few berries."

After I had my dishes done, I went and picked berries. How I hated to see my berries go to waste. I said to myself, "I won't. If I cannot sell them, I shall give them away." So I took a

Hens to keep and Hens to Sell

(Continued from 615)

would take a great deal of space. If you are interested in improving your flock I firmly believe you will be repaid a hundred fold by getting some good bulletins on the subject. Cornell issues an excellent bulletin on the subject by O. B. Kent. It is excellently illustrated, making more of a story in pictures. However, you cannot learn a whole lot about culling by simply reading. You have got to handle the birds at the same time. Another excellent bulletin is put out by the University of Maryland located at College Park, Md. It is known as bulletin No. 35. It is written in a popular manner and also well illustrated. Many poultrymen will go farther than sending for the bulletins. They will spend a few days at Cornell at the coming judging school and learn the game first hand under the instruction of men who have made a study of this business for years.

Trying to make money with hens that you have not culled is like trying to make money with a lot of cows that have hard work by making 3000 pounds of milk a year. If your flock is going to pay, every hen in it has got to be working. Business houses see to it that every employee has a job and when somebody is found loafing—not producing anything—that individual promptly gets the gate. In the hen world they should get the axe.

JAMES J. CUMMINGS PLYMOUTH, N. M.

The Cost of a Hen House

Can you give us some idea what it will cost us to build a hen house that will hold about two hundred hens. We have gravel on the farm and plan to do some of the work ourselves.—Anonymous, New York.

THE cost of a hen house should be kept as low as possible and still have a good house. An expensive house makes it so much more difficult for the hens to pay you a profit. Some good houses recently built have cost about \$2.00 for each hen that it will hold, but by doing some of the work yourself, the cost can be kept down. We know of one house that has been built at a cost of about \$1.00 per hen, but that is unusual. The cost is where four square feet are allowed for each hen, or 20 by 20 feet for 100 hens.

If you are planning to build, we would advise that you visit several of the best poultry houses in your community, and talk with the owners. Call on your farm bureau. He will undoubtedly know some very good places for you to visit right in your country. It will also be advisable to write to your State college of Agriculture and ask them for poultry house plans. Last but not least, do not feel satisfied with an estimate from one builder—get three or four with the understanding that you may reject any or all bids.

Holstein Men Convene

Grand Rapids Meeting and Sale A Success

I WAS very glad to have the opportunity to go as a delegate from New York State to the fortieth Annual Convention of the Holstein Friesian Association of America, held at Grand Rapids, Michigan on June 3rd. The meeting was called to order by the President, Frank O. Lowden of Illinois. There were present 133 delegates. A very impressive history in memoriam of Wing R. Smith, former Secretary, was read and adopted.

The first resolutions proposed were the following, by H. H. Wing of Ithaca, New York:

"Resolved, That on and after January 1, 1926, The Holstein-Friesian Association of America will admit cows to Advanced Registration only on an official record of 7 days or a semi-official record of 305 days.

"Resolved, That no record of an animal on semi-official test will be received in which the animal has been milked more than three times a day after the 30th day after calving.

"Resolved, That the By-Laws and rules and classifications for Advanced Registry be amended to conform with these resolutions."

These resolutions brought out much discussion. Some of the western delegates were opposed to it on the grounds that it would discredit a great many of the yearly records already made. No delegate saw fit to point out that yearly testing had fallen off so that it almost ceased to exist as a factor. In New York State I understand that there are about 106 dairymen making yearly records. Of this number only five are Holstein breeders and I happen to be one of these five. At Fishkill Farms I have sixteen cows on test for 305 days. I would not run these cows for the full year because I believe, it is the normal thing for a cow to have a calf every 12 months and she cannot do this if she is on test for a full year. If a pure bred Holstein breeder cannot afford to make long-time records, then he most certainly ought to put his herd in a cow testing association. I understand that in Michigan, where they are pushing the cow testing association for all it is worth, that most of the prominent Holstein breeders have joined cow testing associations. It is my belief that the pure bred Holstein cow has seen its worst days. Furthermore the breeder who will join a cow testing association and at the same time do official and semi-official on his best cows will reap the reward in the very near future. At Fishkill Farms I at least am practicing what I preach.

To Spread Gospel of Holstein Milk

The next resolution discussed was one proposed by Tom Pemberton of Greensboro, N. C. The final resolution as passed was as follows:

"That the Board of Directors may outline a three year program to devote a goodly portion of the time and energy of the Extension Department to the subject of plans for marketing Holstein milk throughout the country wherever such help is requested. The Board may spend not to exceed \$50,000 a year for this special milk marketing work, without limiting in any way the other activities carried on by the Extension Department at Chicago."

This ought to be a real help in spreading the gospel of the Holstein cow as 75% of the producers in the New York milk shed own either pure bred or grade Holsteins. The readers of the AMERICAN AGRICULTURIST stand to benefit by the work that the Extension Department will do for the next three years. The American people do not begin to drink enough milk. If some of you listened to the address of Dr. Kellogg of Battle Creek Sanatorium, given at the Holstein banquet, you would eat less beef, and would see that every member of your household drank at least a quart of milk a day. According to Dr. Kellogg, you would be healthier, wealthier, and wiser.

One of the few resolutions passed as originally drafted, was resolution No. 24 as proposed by C. F. Bigler of Syracuse, N. Y., President and Secretary of the

Association:

"Immediately after the Committee on Elections has completed its canvass of votes for delegates the Secretary shall notify by telegram, confirmed by registered letter, each delegate in every district so elected of his election. Within five days after receipt of such notice by telegram each delegate shall return to the Secretary at his office, a written acceptance or declination to attend the Annual Meeting to which he has been elected as delegate.

"It shall be the duty of the Secretary to ascertain from such returns if vacancies occur in any district and if so to fill same from delegates voted on by declaring elected the next lower in order of votes received until all vacancies are filled, same to be notified as in case of the regular elections.

"Should there be no other delegates properly nominated with whom to fill vacancies, the Secretary shall notify the president of state associations in all organized states requiring him to designate remaining delegates in the order of number for such district. In unorganized states the Secretary shall notify the Chairman of the Executive Committee who shall have the power to name delegates to fill the vacancies in these districts.

"Requirements of eligibility of appointed delegates shall in all cases be the same as for those elected by ballot."

The resolution proposed by H. W. Allyn, Byron, Ill., was of great importance. Many delegates felt that the \$300,000 reserve fund accumulated in time of plenty should be drawn on, now that we were passing through a lean period. The resolution as passed changes the section of the by-laws relating to the method by which the directors are authorized to use any portion of the reserve fund in the treasury of the Association. The Allyn resolution eliminates the necessity for a unanimous vote of the Board on reserve fund matters, and instead requires a three fourths vote, or 12 members approval before reserve fund can be dipped into.

Condemns Breeding Immature Animals

Two new resolutions under special business was presented and passed. One stated that the Association goes on record against the breeding of immature animals and refused to register the offspring of heifers bred at less than 12 months old. The other resolution was by ex-President Aitken, and related to the appointment of a committee to investigate the advisability of changing the seat of incorporation from the State of New York to some other more liberal state, and named a committee of five headed by President Lowden to prepare an amendment to the by-laws governing the same. Further action was taken in relation to certain modifications of the official test rule and a committee of three was appointed to meet at Indianapolis next October with the American Dairy Science Association to consider such necessary or advisable changes.

Ruth McCormick, daughter of Mark Hanna, of Rock River Farms, Ill., and Harold Stimson of Hollywood, Washington, were the only new directors elected. Mrs. McCormick succeeds George A. Fox of Illinois who declined to stand for re-election.

Directors reelected were D. B. Armstrong, Watertown, N. Y., Fred Pabst, Oconomowoc, Wis., and T. E. Elder, Mt. Herman, Mass. L. M. Thompson of Pennsylvania was renamed Vice-President of the Association; all votes were unanimous and no rival candidates contested the slate prepared by nominating committee. Michigan Sale After Meeting Averages \$763

The day following the annual meeting, the Michigan Holstein breeders held a very successful sale at the fair grounds, four miles out from Grand Rapids. At this sale, fifty-eight animals sold for \$44,250. They brought an average price per animal, of \$763. The highest-priced bull sold for \$3,700 to Mr. F. B. Ainger, Jr., of Michigan. The highest-priced cow sold for \$2,800 and was bought by Mr. Goodhue of Quebec. The animals that went through this sales ring were an exceptionally fine lot of Holsteins and the price at which they sold ought to be encouraging to the breeders throughout the country.

Listen to the Men Who Know

The owners of blue ribbon cows feed Corn Gluten Feed when they make a record-breaking test—because it produces the largest yield of milk and butter fat.

Successful beef cattle feeders prefer Corn Gluten Feed as the protein ingredient in their rations. They use it for both pasture and dry lot feeding, and as a substitute for corn—always with big results.

Successful hog feeders have fed thousands of tons of Corn Gluten Feed with shelled corn, tankage shorts, oil meal. It always pays.

They know that Corn Gluten Feed will give them the largest gains at the lowest cost and they are never disappointed. It will pay you to follow their example.

Whether you are mixing your own ration or buying it in a bag, be sure it contains Corn Gluten Feed.

The mixed feed manufacturer who uses Corn Gluten Feed as an ingredient is your friend. It will pay you to buy his feed.

We have published a new booklet—"Feeding and Pastures." Write us for a free copy.

slightly heavier arrivals. Receipts have been running light but on June 9 they turned more liberal and buyers immediately eased off. This created a pressure to sell and prices declined 1/2 to 3/4 of a cent in order to keep stock moving. As we go to press the tone of the market is unsettled. Business is not moving as it should to keep the tone healthy. As yet speculative operators are not showing any marked activity due to the fact that prices are too high in their way of thinking to warrant active buying. Most of the butter that is going into warehouses is being stored by receivers who are willing to take a chance on making a profit next fall rather than accept a loss now.

Reports from the country and producing sections indicate that pastures have suffered severely during the recent hot spell. Some sections have been relieved by rain while others continue to suffer. Even those sections that have been benefited by rains need more to give the desired relief. The hot spell had some effect on consumptive demands. More milk has been going into the fluid trade and the ice cream business has jumped by leaps and bounds. This industry has absorbed some of the unsalted butter.

CHEESE MARKET QUIET

STATE FLATS	June 9	June 2	A Year Ago
Held fancy 26 1/2-27	26 1/2-27	24 1/2-25 1/2	
Held aver. 25 1/2-26	25 1/2-26	23-24	
Fresh, fancy 22-23	22-23	18 3/4-20	
Fresh, av'ge ..21 1/2	21 1/2	18-18 1/2	

Things are very quiet and uninteresting in the cheese market. Up to within a few days ago receipts have not been over plentiful—just enough to supply the trade—and consequently prices held firm. During the last day or so there has been some increase in the offerings of fresh state flats. Most of these arrivals are of fancier quality. As yet prices have not been changed, although the top quotation of 23c is extreme, business not even being brisk at 22 1/2 to 23 3/4c. Average runs are not turning very freely at 21 1/2c. Receivers have been reluctant to lower prices due to existing high country prices. The trend of things at the moment, looks as though we may see shading soon. Of course something may step in to strengthen the situation. Up to the present receipts have just been heavy enough to supply the demand and keep things even—steven.

EGGS SHOW HEAT

NEARBY WHITES	June 9	June 2	A Year Ago
Selected Extras ..39-40	39-40	33-35	
Av'ge extras	37-38	31-32	
Extra firsts	35-36	29-30	
Firsts	34-35	27-28	
Gathered	32-36	25-30	

NEARBY BROWNS

Fancy	37-39	31-33	
-------------	-------	-------	--

The recent hot spell has made itself very evident in the arrivals of eggs from nearby points. Shrunken yolks have been responsible for a number of ordinarily fancy brands taking a lower classification. As was pointed out in these columns in past issues, it is very necessary for producers to exert every effort to avoid the heating of eggs if top prices are to be realized. At the present time the market is running as high as 40c on real fancy marks which are few and far between. The market on the whole cannot be said to be much above 34 1/2c. Therefore some men are loosing as much as 6c, or more, on every dozen of eggs that they could have saved had they taken a little more care in collecting, storing and shipping their stock.

The market is well supplied with eggs and trade can be characterized as not much better than easy. Normally fancy eggs would go a little higher, but a quiet demand is working against them. There are too many ordinary eggs in the market to warrant better quotations than the lower classification. With a rather quiet demand buyers are very selective even with the fancy marks. With the continuation of weather such as we have been having, men who are particular in their methods of handling eggs will find it much to their advantage. Eggs falling in the lower qualifications are not in a strong position.

GOOD DEMAND FOR BROILERS

FOWLS	June 9	June 2	A Year Ago
Light	29	30	28
Heavy	28	28	25

BROILERS

Colored	50	35-43	43-47
Leghorns	40-45	25-36	26-42

The live poultry market has almost re-

versed itself during the past week. On the Monday following Decoration Day the market was quite weak. The carry overs from the previous Friday were heavy. By Wednesday, however, the situation began to show increasing firmness due to free buying both of fowls and broilers. By the end of the week the market had turned into the seller's favor with broilers selling as high as 53c for the fanciest stock. Arrivals were heavier on the 9th. Although the demand has been very active, nevertheless receivers cut prices to 50c on colored broilers in order to keep the market in as healthy a condition as possible. The decline is not indicative of any weakness in the situation.

Those poultrymen who have radios and are following the AMERICAN AGRICULTURIST radio reports from day to day and are watching the up and down movements in the market closely, may find the radio a money maker for them. For the man who is handling fancy broilers there has been a spread of from 7 to 10c on quotations during one week. Although we cannot forecast prices, nevertheless from the facts given from day to day one can often draw conclusions that may indicate a possible rise or fall of the market within a day or so.

U. S. WHEAT CROP SHORT

What is said to be the smallest wheat crop since 1917 is forecast in the report of the U. S. Department of Agriculture released on June 9. The total production of wheat in the United States is estimated at 661,000,000 bushels, over 200,000,000 bushels less than the 1924 crop. According to the Department, the estimated yield is sufficient for only domestic needs. In fact, it is said that we will be short of our requirements for bread wheat. If the estimate of the Department is correct, it will mean that we will harvest the smallest wheat crop since 1917. This report of the Department was based on conditions on June 1 and does not take into consideration rains that have occurred since that date. However, it is known that conditions are very bad in some sections of the west due to dry conditions, insects and disease.

New York Wheat Crop Above Last Year

A combined report of the Federal and State Department of Agriculture forecasts the New York winter wheat crop at 7,178,000 bushels compared to the production of 6,500,000 bushels last year, a gain of over 600,000 bushels.

The forecast for Pennsylvania indicates that the 1925 yield will be about a million and a half bushels heavier than the actual yield in 1924, the figures being: 1924 yield, 19,850,000 bushels; 1925 forecast, 21,333,000 bushels.

The Ohio forecast amounts to 19,408,000 bushels while the actual yield in 1924 was 37,313,000 bushels, the forecast indicating a yield slightly better than half the 1924 crop.

Reports from Kansas indicate that the wheat crop from that state will be half of the 1924 crop due primarily to dry weather and high winds, which have done much damage since the first of May.

OLD POTATOES ABOUT DONE

There is little left of the old potato market. A few states are arriving but the quantity is insignificant. Maines are in heavier supply and they are meeting a very dull sale.

My Experience with the Roadside Market

(Continued from page 617)

basket in each hand just as I was and went down the hill to the first house on the main road where a man and his wife lived. The man was lame and was sitting under a big maple tree by the road. He had not done any work for two years. His wife thanked me and was so glad as she said her husband loved strawberries. As we were talking, I said "I wonder if you would try and sell some for me?"

He said, "Sure I will try," so I rushed home, got some berries, and made a sign. He sold all my berries. I made over a hundred dollars and he got five cents for every quart he sold. He was so happy to think that he was able to do something for his family. I gave them two quarts every day to eat and all his wife wanted to can at the last when they were smaller.

Well, my ten minutes are up and I must get to work. —Mrs. A. P., Connecticut.

Study Your Location

THE first and one of the most important factors in roadside marketing is location. The site should be selected with care and judgment, situated preferably on a main auto road between large cities. The more traffic the more business. The road should be level and wide, with plenty of parking space available. It is advisable to have a few good signs; for example a sign about fifty to a hundred yards on each side of the stand SLOW DOWN FRUIT FOR SALE; and one near the stand STOP FRUIT FOR SALE; also, signs telling what you have to sell, and the name of the farm or owner catch people's eye. It is very advantageous to have a shady place; people prefer stopping there to the hot sun. Keep things neat and clean about the stand. An elaborate building is not essential, but one that is attractive draws trade.

The next consideration is what to sell. A real roadside market sells good home grown fruit and vegetables. Things that have been cultivated and sprayed and are freshly picked—that is what people want. In any fruit, size and color make a ready sale and bring more money. It is also important to grade carefully. Have things the same all the way through. No trash or little stuff on the bottom—if anything, put the biggest there. Once people find you put your fruit up honestly they will not only come back but tell others. Use neat and attractive packages, also variety of sizes, some people want two quarts, others a bushel. In general, one, two and four quart tins, eight, twelve, fourteen quart, and bushel baskets will cover all needs. Try to display the fruit attractively. Give good measure; most people appreciate it.

Finally, a few general policies in regard to marketing. A reasonable price based on quality is the first essential in getting and holding customers. Never charge more than you would be willing to pay. Price things in town occasionally and keep a little lower. Stick to prices when once set, and don't sell less when some one tells you that they can buy cheaper in the city or at another stand. Very often those people come back and buy when they see the other product is not as good as yours even though it is cheaper. Treat all customers alike—don't have one price for Fords and another for Packards, for sometimes the people in the Fords have a better appetite and more ready cash than the people in the big car. Don't try to discriminate between transient and permanent customers, thinking, well we will never see those people again. Sell always with the hope they will come again, or if not, they will at least tell others where they got some good fruit. That is my idea of a satisfactory roadside stand. It would do a good business and develop each year.

—H. M. C., New York.

Among the Farmers

Retailers Discuss New York Meat Supply

EXTREMES met at the annual convention of the New York State Association of United Master Butchers of America held at Albany on June 8 and 9 when meat retailers listened to comments by representatives of the agricultural field on the advisability of greater production of small meat animals in New York State. It is the opinion of the retailers that New York farmers have a big opportunity to increase their income by growing more lambs, calves and hogs for the New York market in view of the fact that the greater city now has to draw from the west for most of its supplies.

Professor H. H. Wing of the New York State College of Agriculture was first on the program on the evening of the 8th. He answered the question of the butchers very aptly when he said that the main livestock business of New York state farmers was the production of milk. He said that farmers would turn to the raising of lambs, veals and hogs when these commodities pay more than the present farm business that is being pursued.

Jay Coryell, State leader of County Agents, pointed out that at the present time we are going through a period of transition in the hay market. With the increase of motor transportation in our cities and the decrease in horses, there is a problem before our hay growers who are steadily finding it more difficult to market their hay at a profit. He said that there may be some communities that are so advantageously situated that they may take up the cooperative feeding and shipping small meat animals on a carlot basis. He expressed the view that possibly the Farm Bureaus and the dealers' association may cooperate to the mutual benefit of the farmers.

Other speakers included: L. D. Green, agricultural agent of the Ontario and Western Railway, E. L. Moody of the New York State Sheep Growers Cooperative Association, R. W. Quackenbush, agricultural agent of the New York Central lines and F. W. Ohm, associate editor of AMERICAN AGRICULTURIST. Several of the representative butchers emphatically stated that New York is always eager for real fancy meat, especially at times such as at the present. They frankly stated that they were not acquainted with the problem the farmer has to face but it seemed to them that there is some opportunity for the nearby men to work into the trade that is mostly going to the distant western producing sections.

About 75 members of the New York association were present at the meeting, several from cities other than New York. These up-state men also reported a good market for nearby meat.

Dates of Long Island Potato Tour Announced

THE Farm Bureaus of Nassau and Suffolk Counties have announced that the annual Long Island tour will be held on June 24, 25 and 26. Final arrangements have not been announced up to time of going to press. However, the following preliminary schedule has been estimated.

The first day will include a tour of Nassau County, starting from the Court House at Mineola early in the morning. That night the party will put up at the New York State Institute of Applied Agriculture at Farmingdale. On the following day, the 25th, the party will travel through Farmingdale to points in Suffolk County covering the Sound Avenue section around Riverhead and to the north. On the last day the south side will be visited.

Up-state growers who are contemplating taking the trip should get in touch with H. C. Odell, county agricultural agent of Nassau County, whose address

is at Mineola, or D. W. Kelsey, manager of the Suffolk County Farm Bureau, with offices at Riverhead. According to Mr. Odell and Mr. Kelsey there will be plenty of cars to accommodate all who desire to attend.

Sisson to Speak at League Meeting in New York

THE Dairymen's League Cooperative Association, Inc., will hold its annual meeting at the Hotel Pennsylvania in New York City, Thursday, June 18. Approximately one thousand delegates from local associations will attend the meeting, and at least an equal number of members and guests will be there.

Francis H. Sisson of New York City, Vice President of The Guaranty Trust Company will be one of the principal speakers. His address will be given at 12:30 Eastern Standard time.

Mrs. Ruby Green Smith, Secretary of the New York State Federation of Home Bureaus, and recently appointed to the advisory committee of the newly organized Home Department of the League will also address the meeting.

This meeting will be the first business convention of farmers ever held in New York City.

New York County Notes

Ontario County.—May was a dry and cold month. We have only one real nice warm rain during the whole spring. Meadows have been injured by lack of moisture and by warm weather. Wheat has not been doing well for the past few weeks. About the 30th of May all barley and corn have been planted, the former crop growing nicely. Some late potatoes were planted after the first of June. The acreage is not as large as it was last season. Many farmers have gone into local peas for canneries. Just outside of Canandaigua quite an acreage of cabbage plants were grown for transplanting. Farmers were busy spraying during the first week in June for after bloom in apples. This should be a Baldwin year but the bloom was very light. Some estimate the crop at 40% but I would judge 10% lower. Greenings are placed at 50% but this looks high. Strawberries blossomed full as well as currants and gooseberries. Quinces bloomed heavily. Butter has been bringing 40c, eggs 28c, live hogs 12c, hay \$12 per ton.—E. T. B.

Franklin County.—Farmers in Franklin county had completed sowing grain about June 1st. A much larger acreage of barley, oats and peas has been sown compared with last year, perhaps about double. Reports indicate that the potato acreage will be less than that of last year. Potatoes and corn are just being planted. Cows have been turned out to pasture. Milk prices have taken a decided slump. Prospects are for a very good hay crop if we have some rain during the month. The farm bureau manager has made arrangement for several fertilizer demonstrations on several farms in the county.—H. T. J.

Essex County.—Up to the last of May, spring in this section was cold and backward. The ground was able to be worked early and some grain put in but the cold weather delayed growth. Cows that have just freshened are bringing a good price. Grades are selling for \$60 to \$75. Dressed veal has been bringing 15c a pound. Eggs are 30c a dozen. Butterfat for April brought 45c a pound. Farm help is more plentiful than for the past few years.

—M. E. B.

Schenectady County.—Spring is late owing to the cold weather. Up to the last of April very little work had been done on the land. There were comparatively few auctions this spring. Not many farmers are hiring help. They are doing what they can and are leaving the rest go. Price of potatoes and hay is very low.—S. W. C.

Standard Tires

Famous Oliver Oversize Cords

Positively the most sensational bargains in standard make tires ever offered! Right now —you can equip your car with brand new, absolutely first quality standard tires, GUARANTEED FOR 12,000 MILES, and not only save big money, but "pay as you ride" in small monthly amounts. Don't pass up this amazing offer. Order our Celebrated Oliver Big Oversize Extra Heavy-Duty Cord Tires on approval—without risking one cent.

10 DAYS' Free Inspection

Send only \$1 now, whether you order one or more tires. Take 10 days after they arrive to compare with any of the best known standard makes. The Oliver Cord lasts longer and rides easier, because there is more tire. It is bigger, heavier, better in every respect. But don't take our word for it. See for yourself—get the opinion of experts. If not convinced that you have found the biggest tire value in America, return shipment at our expense and get your money back.

3 Months to Pay

If you decide to put tires on your car, take 90 days to pay balance in small monthly amounts. You'll never miss the money by this liberal plan and you will enjoy perfect freedom from tire trouble the balance of the year.

GUARANTEED 12,000 MILES!

Order direct from us. Oliver Cords are not sold through dealers. We employ no salesmen, no agents, maintain no branches. Entire output goes to car owners direct, saving all expense of salaries, commissions, rents, etc. You pay much less for Oliver Cords than the list prices of nationally advertised brands. Yet Olivers are absolutely guaranteed for 12,000 miles. And many car owners report they have driven 18,000 to 20,000 miles and are still going good. Note amazing direct prices on the handsome all black Oliver Cords.

All Oliver Cords are Oversize and Non-Skid

	Price	Tube		Price	Tube
30x3 Clin.	\$9.85	\$1.68	32x4 S.S.	\$21.95	\$2.90

20TH CENTURY HATCHERY,

BOX 8

NEW WASHINGTON, OHIO

The Valley of Voices—By George Marsh

STRETCHED at length, with hands behind head, Steele listened as the violin of the girl ran the gamut of the composers. Rhapsodies, love songs of many peoples, fragments of melodies he had never heard, mad dances of the Slavs, of the plains of Hungary, serenades of Spain and Italy, a riot of love and joy, redolent of moonlight and fragrant gardens, of ivied towers and old romance, she conjured for the enchanted ears of the man lying on a Canadian hill-top. For two hours the violin sang on the height above the forest. At times his half-closed eyes idly measured and approved the grace of the forearm and wrist, the long, supple fingers of the left hand caressing the strings, the oval of the tilted face with its closed eyes, of the unconscious maker of this magic, and, as she turned from him, the coiled masses of her hair, the clean lines of shoulders and hips; or again, captive to the moment, his senses drunk with melody, he lazily followed the slow course of a cloud across the sea of sky. And as he watched and listened, he often compared this girl he had known but days, to other women, who in the past had caught his fancy; and to his surprise, as he conjured them up, and contrasted them with the vivid personality of Denise St. Onge, the memories of the former blurred to insignificance. Slight as was his knowledge of her, the quality which was so patently a part of her—the mystery of personality, had wrought its spell.

At length she ceased playing and asked: "Now would you like to hear something of my own?"

"It would be delightful!"

"I call this, 'When Spring Comes North.'" And she broke into a gay melody filled with the rush of the brooks, the soft wind in the young birch leaves, the love songs of the returning birds.

"You have caught it all—the spring!" he applauded. "Please play it again!" But she shook her head.

"Now I am to break my promise by playing 'Farewell.' We were to be gay today; if you do not care to hear it—?"

"Please play it! You mean farewell to summer?"

Her face darkened as she replied with a characteristic shrug:

"Farewell to summer—to everything!"

"Oh, you cannot mean that!"

Without replying she drew her bow across the strings in a low minor and swiftly lost herself in a stark revelation of grief and despair.

As he listened he heard again the moaning of a heart without hope, the anguish of a tortured soul, which had first met his ears at the rapids. Seemingly she was voicing through her violin what she could not express in words, and the sympathy of his quick understanding went out to the lonely girl with her unknown burden.

She ceased as swiftly as she had begun, and stood gazing out on the tranquil valley. He respected her mood by his silence, his brain active with conjecture, his emotions dangerously out of hand. Then the warning of the low sun called the girl from her brooding. She turned a wistful face as she said:

"I have broken my promise and have been very sad, Monsieur."

"You have been telling me much, in your 'Farewell,' Mademoiselle. I only wish you could trust me—that I could help you." There was momentarily in her eyes that which whipped the blood to his face as she said: "It was because you have the heart of a poet that I played my 'Farewell.' And I do trust you, Monsieur Steele, some time you may know—"

"Why some time, why not now, if I am to aid you?" he demanded impulsively.

But she only shook her head.

Carrying the violin and rifle, Steele led the way down the trail to the post.

They had reached a hollow at the foot of the ridge where the soil was spongy and moist, even in September, because of the springs beneath. Here and there in the forest mold, flowers vividly blue and fringed, bloomed on graceful stems beside the trail.

"Here are my gentians, Monsieur!" cried Denise. "Are they not beautiful? I cannot make them grow so lovely at home, it is not damp enough."

She bent and touched the petals of a flower, and looking up said: "I think I love them more than the other autumn—" she suddenly checked herself, her eyes widening. The man was staring at the trail beyond them.

"Monsieur!"

He turned to her, his puzzled look shifting to a smile. "Pardon me, your gentians are beautiful—but we should hurry or we shall be late at the post, and your father will wonder," he said, and started briskly up the trail, followed by the bewildered girl. He had walked but a few yards when a scream stopped him. With the lunch basket at her feet, fallen from shaking hands, Charlotte swayed in the path behind them, her face gray with terror.

What Happened In The Story Thus Far

BRENT STEELE, an American ethnologist is traveling through the Canadian wilds studying Indian life for the American Museum of Natural History. He is in the Valley of the Wailing River which gets its name from the moan of its fierce and treacherous rapids. It is rich fur country but the native Indian hunters are terror stricken and planning to leave it due to an unseen monster which howls and shrieks in the forest at the dead of night. The superstitious Indians say it is the Windigo, a beast of Indian fable and they fear that the Evil Spirit has come to bewitch them. It spells the doom of the Wailing River trading post, at which Steele stops for supplies, as well as the whole country roundabout. The post is in charge of Colonel St. Onge, a former French cavalry officer. With him lives his beautiful and cultured daughter, Denise. St. Onge faces ruin due to the activities of a free trader, Laflamme, who is giving the Indians whiskey for their furs in violation of the Canadian law, and also to the growing fear of the Windigo, especially since four Indians with a shipment of valuable furs have mysteriously disappeared in the rapids of the Wailing. St. Onge tells Steele that he is kept at the doomed post by Lascelles, his superior in the Revillon Freres, which is the trading company owning St. Onge's post. It is Lascelles' plan to ruin St. Onge and thereby force Denise to become his wife. St. Onge vows that Lascelles shall never have her. That night after all at the post have retired, the terrible shrieking howl of what the Indians call the Windigo, breaks the stillness. Steele is aroused. He is determined to hunt the Windigo and reveal its true character with the help of his guide, David and Michel, the head hunter of the post, who promises to aid him in running down the monster. The terror of the Indians is aggravated by the murmurings of an Indian medicine man at St. Onge's post by the name of Tete-Boule, whose actions arouse Steele's curiosity.

"Oh, what is it, Charlotte?" cried Denise St. Onge, as Steele strode past her, and seizing the palsied Ojibway by the arm, half carried her forward to her mistress.

"Please, Mademoiselle," he insisted, "hurry along! I'll take care of Charlotte. It's nothing. She thinks she sees something, but it's only imagination." And he started with the moaning Indian, numb with fright.

"Nia, Nial!" wailed the Ojibway, finding her feet. "De trail! I see trail, m'am'selle! Run! Run!" And with feet spurred by fear, Charlotte led the way back to the post.

"What was it that you tried to hide from me?" demanded Denise, as she walked rapidly at his side, "I saw your face. There was something."

"It was nothing. It looked like a bear trail, only a bear trail. Charlotte is full of Tete-Boule's myths and was stampeded. She's been uneasy all day." The doubting eyes of the girl searched his as they walked.

"It is kind of you, Monsieur," she said, "but you must not deceive me, I have to face this thing."

"You are not afraid—you do not believe in—"

"Afraid?" she cried, passionately, "yes, I am afraid, of, oh, so many things. You do not realize—it is so hopeless!"

He was walking close to her, over-conscious of her nearness. Her shoulder touched his, and his pulse leaped at the contact. A loose strand of her hair brushed his cheek, and he felt the blood in his face. He was perilously near rash action, but he coveted her good-will—and he feared the mystery in her—and the dignity.

"But is there no way out?" he managed to say, fighting for mastery of himself.

"Way out?" she repeated in a strained voice, "There is no way out—for the lost," and as she quickened her pace, the heightened color of her face betrayed her. Like the strings of her violin she had vibrated to his emotion. Beyond the mystery and the despair, there was the woman, and he followed her swift feet over the trail with an elation he had never before known; with the resolve to fight through to the root of this mystery if it meant a winter on the snow.

"No way out for the lost," she had said, and he smiled as he repeated to himself, "But the lost has been found; the lost has been found." Mystery, Windigo, intrigue at Albany, were as

"What have they got?" queried St. Onge.

"Give it up; maybe some of the fur!" hazarded Steele.

"We shall never see that again," muttered the factor.

Near them the post people discussed the safe return of the search party in awed whispers. Then, as Michel approached, Steele grinned. "Mcet!" he announced drily.

"Good, we need it!" added St. Onge with a sigh of relief.

Swinging the canoe from his shoulders David wiped his brow with his sleeve and grinned into Steele's questioning face as the latter gripped his hand.

"Back safe and sound, David?" Steele looked hard into the snapping eyes of his friend.

"Ah-hah! safe an' soun'! Bo'-jo' Meester St. Onge!" and the Ojibway took the proffered hand of St. Onge.

"Well, Michel, you found moose, if you didn't strike anything else," Steele said to the inscrutable Iroquois. "Don't see any signs of teeth on you; you must have run too fast for the Windigo," he suggested, but the head man glanced significantly at the post Indians and made no reply.

Steele drew David from the group, congratulating Michel on his escape from a hideous death down river and asked: "Any luck, David?"

"We fin' noding of canoe, but we see some sign. Ver' strange sign, boss."

"What was it?"

"Wal, we fin de las' camp of fur-cano', but no sign of cano' or men. Den we follow river shore an' noding there. Den we circle back from de camp an' two smokes into de muskeg we fin'—" David stopped short to scowl past Steele into the face of a hovering Indian, who quickly advanced with extended hand. "Bo'-jo'! bo'-jo'! Daveed," greeted Tete-Boule as David seized his proffered hand.

"Bo'-jo', Tete-Boule!" and the iron grip which was known from Nepigon to Las Seul closed on the unsuspecting interloper.

"Ough! Ough!" cried Tete-Boule doubling with pain over his crushed fingers. "Why you shak' de han' so hard?"

The broad face of David wrinkled in amusement as he surveyed the writhing victim of his hand-shake. "W'at de trouble wid you, Tete-Boule? W'en I ver' glad to see you, I give de good shake-hand."

As Tete-Boule left them nursing his fingers, Steele muttered: "He won't forget that soon. Trying to hear what you are saying, was he?"

"Ah-hah! De nex' tam eet weel be hees neck."

"But what was it you found in the muskeg?"

"In the muskeg we fin' ver' beeg track of somet'ing. We nevaire see such strange sign before." The Ojibway shook his head. "But de rain wipe eet out."

"Then I found more, staying here, than you did down the river."

"Wa't you see?"

"Well, David, I've seen the trail of the Windigo, and I've made another little discovery. We've got a Wabeno at the post and I let you guess who it is."

"A Wabeno!" echoed the surprised David. Then with a grimace he added, "I t'ink dat Wabeno got a sore han' now, but de Windigo trail—w'ere you fin' eet?"

"I'll tell you and Michel what I know after supper; they are calling me now." And the two friends parted.

CHAPTER IX

AS he met Denise at the door of the factor's quarters, Steele said quietly: "Let's not talk of the bear trail to—"

Lone Scouts of America

American Agriculturist Tribe

ONE fine part of the Lone Scout work has been the Amateur Publications. They are published by a group of scouts, sometimes a tribe, or perhaps a council, and some of them are great reading and well printed. Practically all of the Amateur Publications that we have seen have been Authorized Lone Scout Publications, that is they have been granted a charter from the Lone House at Chicago.

Certain qualifications must be met before such a charter will be granted. The publisher must have won the title of Lone Scout Contributor, or he must be a member of the Grand Council. The publisher must show that he is financially responsible to his subscribers and advertisers in case he suspends publication. A nominal charge of 50c is made for the charter. There are other small qualifications which are fully explained in the handbook.

Contribute to Lone Scout Publications

It will be some time before Lone Scouts of the AMERICAN AGRICULTURIST Tribe will be able to start Amateur Publications of their own, though we hope some of you will plan to do it in time. You can send contributions to them, though, and when they are accepted you will be winning points towards a Lone Scout merit medal, which is awarded after 300 points are won. You can send to us at any time for a credit card, costing five cents. You keep a record of the points won on this card, and when the three hundred have been won, you send the card to us and we send your merit medal. The points are awarded on the basis of about five for the first three hundred words of an article and 5 for each additional 200 words.

We will print the names, addresses and subscription rates of some of these publications so you can contribute or subscribe to them.

Okayto Scout, Lawrence Kenny, Oconto, Wis. 25 cents a year.
The Eastern Star, Box 61 Cuddy, Pa. 35 cents a year.
Lone Scout Collector, Thomas J Taylor, Georgetown, Del. 15 cents a year.
The Bay State Scout, Frank R. Bowker, Box 15, North Sudbury, Mass. 15 cents a year.
Pacific Scout, Ralph Salazar, 535 N. Main St., Los Angeles, Cal. 35 cents a year.
The Illini, Albert Shanholtzer, Coatsburg, Ill. 25 cents a year.
Black Hawk News, Chicago Boys Club, 1725 Orchard St., Chicago, Ill.
National Scout, 3 Grindon Ave., Laura-ville, Baltimore, Md. 50 cents per year.
The Humorous, Lock Box 45, Dollar Bay, Michigan. 25 cents a year.
The Council Fire, Ralph A. Lang, Route 2, Kane, Pa. 20 cents a year.

Lone Scout Letters

Dear Lone Scout Editor:

I am sending you my blank to join the Lone Scouts of America. I would like to hear from some of the other Lone Scouts.

Yours truly,

John Straitwell, Brookville, Pa.

Dear Brother Scouts:

It is with great pleasure that I welcome you into the good old Lone Scouts, of America. The American Agriculturist Tribe is off on a good start, and it will keep the pace if you do your part.

The first thing for you to do is to read your handbook. It tells you all about the organization and what it stands for. When you have read the handbook you will find that there are three ways to advance. First, by passing the degrees; second, by contribution to Lone Scout Amateur Publications. (The editor of the A. A. will send you more information on this subject), and third by boosting.

The first degree takes up your personal health; the second woodcraft; the third patriotism and first aid; the fourth outdoor cooking, bird study and signaling; the fifth camping and woodcraft; the sixth fishing, trapping, and swimming; and the seventh woodcraft, pioneering (engineering, bridge building, etc), or camping. You may be unable to have articles published in the scout magazines, or you may live

where there are no other boys to join the organization, but you can always get enjoyment and information by passing your degree tests.

The big thing in the Lone Scouts is comradeship—a Lone Scout is a brother to every other Lone Scout. How would you like to have a friend out in California, or down South, or up in Canada? If you want to write to other boys, send your name and address to the Lone Scout Editor, American Agriculturist, W. H.

Earn Your Own Money

All you who are Lone Scouts will find that there will be calls for small amounts of money from time to time for Tribe dues, degree books and badges. These things are not sold to you to make a profit, but to pay for their manufacture and mailing.

We hope that all Lone Scouts will follow the practice of earning the money for these things. You will appreciate them more and feel more pride in them if they were bought with your money.

The First Tribe

The first application for a tribe charter comes from Ottis Gilhousen, Brookville, Pa. He hasn't given us the Tribe name yet, but they have eight members and have had two meetings.

The officers are:

Tribe ChiefOttis Gilhousen
SachemMax Rhodes
Wampum BearerChalmer Fuller
ScribeIvan Dickey

The other members are: Paul Gilhousen, Richard Dickey, James Straitwell and John Straitwell.

This tribe gets the Tribe Chief pin we offered. Let's have some more tribes.

Cleaner Milk

Because of its improved sanitary features as well as because of its great time—and labor—saving utility, dairymen who produce high quality *Certified and Grade "A" Milk* prefer the *Universal*. It's clean! And it has been proven mechanically correct over a period of years. Approximately 25,000 in use.

The milk goes into a dust-tight aluminum container, and all parts that come in contact with the milk are easily cleaned after each milking without taking the milker apart! It automatically washes itself. Between milkings, teat cups and tubes are kept sterile by being immersed in a harmless sterilizing solution.

Write for free copy of our new catalog which fully describes and illustrates the *Universal Natural Milker*.

Cottage Cheese and Some of Its Many Uses

On Hot Day's Cheese Dishes Are Especially Welcome as a Substitute for Meat

TOO often sour milk is thought to be "spoiled" milk in spite of the fact that it still has much valuable food material in it. It may be used in many ways, but we can think of none better than to use surplus milk for cottage cheese.

Cottage cheese being bland of flavor may be combined well with other foods: this makes it a valuable addition to the family's diet. Cheese is doubly important because it is a source of protein, used by the body to build muscles. It is an excellent substitute for meat and when planning meals that fact should be considered. One pound of cheese is equivalent in food value to one pound of lean meat.

Lime salts, necessary if our teeth and bones are to be built and kept strong, belong especially to milk products, and to comparatively few other foods.

If whole milk is used in making cheese, the product is naturally richer than if skim milk is used. Since cheese is a highly concentrated, and, perhaps, a soft food, it is made much more welcome in the meal if it is combined with crisp foods. In some families it is almost impossible to get the cheese eaten. That may be partly due to time-worn ways of serving it, or of improper methods of making it.

For making cottage cheese either milk which has soured quickly should be used or sweet swim milk with a starter. The temperature should not be too high or a tough curd will result.

How to Make Cottage Cheese

1 gallon sweet skimmilk
1 cup sour milk for starter (should have good flavor.)

Mix thoroughly the sweet and sour milk, and set in a pail which is in a pan of hot water. Bring the temperature of the milk to 75° F. and let stand at room temperature (68° F.) overnight or from 12 to 15 hours. Cut the curd into one or two-inch squares, set the container in a pan of hot water, raise temperature of curd to 100° F. and keep there for about 30 minutes, stirring occasionally. Drain curd in a cheese cloth over a bowl about 20 or 30 minutes, season with salt and mix with sweet or sour cream if desired.

By using rennet or junket tablets with sweet skimmilk, together with a cup of sour milk of good flavor, a cottage cheese may be obtained which has a finer texture than the method given above. The time for making is about the same, however. The bit of junket tablet (about 1/8) is dissolved in 1 1/4 cup of cold water and added to the gallon of sweet skimmilk and 1 cup of sour milk (starter) after they have been warmed in a pan of hot water to about 75° F. This mixture is let stand overnight at room temperature. The curd is then poured gently into a muslin cloth over a bowl, let drain about 20 to 30 minutes, then pressed 20 or 30 minutes between clean boards, under a pail of water for weight.

In earthen or glass jars cottage cheese will keep in a cool place for several days without souring or molding.

Starting with a cottage cheese, which is properly made, there are many simple ways of using the cheese which will not only be delightful to the palate and eye, but which will give added nourishing value to the meal.

Cottage Cheese Loaf

1 cup cooked kidney beans
1 cup cottage cheese
1/2 cup ground peanuts
1 cup bread crumbs
1 cup boiled rice
1 tablespoon chopped onion
1 tablespoon savory fat or drippings
1 cup tomato juice
Salt
Pepper

Mix the ingredients well, and form the mixture into a roll. Brush it over with melted fat, and bake it in a slow oven for 35 minutes. Serve the loaf with a medium thick white sauce, to which may be added 2 tablespoons of minced sweet red pepper.

Cottage cheese may be used to fill

the cavities of tomatoes, canned pears, peaches, slices of pineapple, prunes, or celery stalks, and served on lettuce with boiled, or other, dressing. Or it may be combined with dressing and nuts, parsley or jelly, and formed into balls or a small loaf which is sliced and served on lettuce.

Cottage cheese balls may be rolled in grated Cheddar cheese and served on lettuce with dressing. Or the plain cottage cheese may be seasoned with chopped olives, or chopped green or sweet red peppers which also add attractive color to the balls.

Cottage Cheese and Dandelion Salad

2 cups dandelion greens, cut fine
2 tablespoons minced onion
French dressing
Cottage Cheese balls

Pour French dressing over the dandelions and onion, and allow them to stand for 20 or 30 minutes. Place three cottage cheese balls on each serving of dandelions, and serve the salad with boiled dressing.

Cottage Cheese Salad Dressing

1 cup cottage cheese
1 egg yolk
1/2 cup salad oil
1 teaspoon mustard
1/2 teaspoon salt
2 tablespoons vinegar
or lemon juice
Paprika

Add the beaten egg yolk to the cheese and stir it well. Add the oil and season-

Cheese with chopped parsley or celery;

Cheese with chopped pickles, dill, sweet, or sour, or with chopped olives.

Do Not Waste the Whey

The whey which is generally left to run down the sink drain has within it some of the valuable mineral salts and vitamins which we so much need in the diet. Whey may be used in many palatable ways, and here are some of those ways:

Whey Salad Dressing

Whey salad dressing is good on fresh or cold cooked vegetable salads.

1 cup whey
1/4 cup vinegar
1 teaspoon mustard
1/2 teaspoon salt
1/8 teaspoon turmeric
3 tablespoons flour
1/4 cup sugar
Paprika
2 tablespoons butter

Heat the whey and vinegar together. Mix all the dry ingredients and add them with the sweetening to the whey. Cook the mixture until it is smooth and thick. Remove it from the fire, add the fat, and beat the dressing well.

Whey Cornstarch Pudding

2 cups whey
1-3 cup sugar
4 tablespoons cornstarch
1 tablespoon butter
Salt
Flavoring

Some New Ideas in Practical Dresses

Figured materials are much in vogue this season, which makes it rather hard on the short, thick-figured women. The accompanying pictures show two designs suited to the slender figures while the central design is one of the best we have seen for the stout. Plain or narrow striped materials are better than pronounced figured goods for full figures.

2438

2461

2449

Pattern No. 2438 shows inverted side plaits which give a stylish flare to the skirt. It comes in sizes 16 years, 36, 38, 40 and 42 inches bust measure and requires for the 36-inch size 3 3/8 yards of 36-inch material. Price 13c.

Pattern 2461 has gathers over the bust and tiny tucks at the waist to distribute gathers evenly. It comes in sizes 36, 38, 40, 42, 44 and 46 inches bust measure. Size 36 requires 3 3/4 yards of 36-inch material. Price 13c.

Pattern 2449 shows the fashionable jabot attached to a simple, straight-line dress. It comes in sizes 16 years, 36, 38, 40 and 42 inches bust measure. Size 36 requires 2 7/8 yards 36 or 40-inch material with 1 3/8 yards of 18-inch contrasting. Price 13c.

TO ORDER: Write names, address, pattern numbers and sizes clearly and correctly and enclose correct remittance in coin or stamps (coin sent at own risk) and mail to Pattern Department, American Agriculturist, 461-4th Ave., New York City.

ings and beat the dressing well. A smoother dressing can be made from cottage cheese which is made from junket than from ordinary cottage cheese. The dressing is somewhat like a stiff mayonnaise and may be used on chopped lettuce or lettuce hearts or other green salad.

Cottage Cheese Sandwiches

Bread for sandwiches should be sliced moderately thin, and buttered. Cutting the sandwiches in fancy shapes adds to their attractiveness.

Cottage cheese used for sandwiches should be moistened with boiled dressing, cream, or a little lemon juice.

Cottage cheese filling may be served in the following ways:

A tart conserve on a layer of cheese
Lettuce leaves and cheese seasoned with salad dressing;

Cheese with chopped peppers, red or green;

Heat the whey until it boils. Mix the sugar and the cornstarch, and add this to the boiling whey. Add the fat, the salt, and the flavoring. Cook the mixture over direct heat until it thickens; then cook it over hot water until it is smooth and clear.—about 20 minutes. Turn the pudding into a mold. Serve it with a soft custard or cream and sugar.

Peach Bavarian Cream

2 tablespoons gelatin
1 cup whey
1/2 cup sugar
1 cup peaches cut in small pieces
1 tablespoon lemon juice
1 cup sour cream, whipped

Soak the gelatin in the whey, and dissolve it by setting the dish in a pan of boiling water. Add the sugar, the fruit, and the lemon juice. Chill the mixture and when it begins to thicken, fold in the whipped cream, and turn it into a mold. Serve it with a soft custard.

Whey Pie

2-3 cup sugar
3 tablespoons cornstarch
1 cup whey, strained
2 eggs
1 tablespoon butter
Salt
1 lemon, grated rind and juice

Mix the sugar and cornstarch and add them to the boiling whey. Cook the mixture until it is thick. Add the beaten egg yolks, butter, salt, lemon juice and rind, and cook it for 2 minutes. Pour it into a crust which has been baked. Cover the top with meringue made by beating the whites of eggs until stiff, adding 2 tablespoons of sugar and a little flavoring and beating until it is glossy. Spread the meringue on the pie and bake it in a slow oven for 25 minutes.

An Easy Way to Cure and Keep Dandelion Greens

CAREFULLY cleanse and remove every vestige of grass, weeds and insects, and thoroughly wash ready for the kettle your quantity of dandelions. Then, in the bottom of a clean earthen jar, place a thin layer of salt, then a thin layer of dandelions; alternate until all your dandelions are in, or the jar filled. Cover with an inverted plate and weight down.

The dandelions should be drained before packing, but only for a short time (say 15 or 20 minutes). They will make their own brine if enough salt is added.

They will shrink amazingly. Last season I filled almost heaping, two two-gallon jars. I pressed each layer as hard as was possible and put quite a thick layer of salt on the top of each, mixing about one-half a level teaspoonful of salt-peter through the last layer of salt.

In a few days these had shrunk so that all were put together in one jar and afterwards more were added. The beauty of putting them down this way is that one can keep adding the dandelions and salt as fast as they get them and have as large a jar as they desire.

After I get all in the jar that I want, I cover the greens with a thick or doubled cloth before putting on the inverted plate and weight. The jar should be kept in a cool place if one has it.

The tame dandelions are the best; we had so many of the tame ones that I sowed the seed promiscuously all about the yards and garden. I would pull up weeds and throw in a few dandelion seeds and in a few years we had all the dandelions we cared for, and that always meant a whole lot, in our family.

If the dandelions are cut off above the "crown" instead of below it they will keep growing out new heads of leaves until late autumn. I know, for I have tried it in my garden for years and had fresh tender dandelion greens, when the ground was about to freeze up in the fall.

Dandelions put down in brine, (or salt I should say) require freshening when wanted to use, and all of one day and night changing the water often, five or six times at the least. Then when freshened and ready to boil drain well, cover with boiling water in which a pinch of soda is added and cook slowly until done as hard boiling toughens them, the same as it does meats. They require no par boiling. I cook a piece of salt pork with them.—Clarice Raymond.

Pickle Vinegar

The vinegar from a jar of pickles is kept to be used again, and any good vinegar from an empty can of pickles is added to it.

The farm helpers are very fond of chopped onions and cabbage covered with this vinegar. I chop the cabbage and onions in a deep basin, using an empty baking powder can for a chopper; almost cover with the vinegar and it is ready for the table. As these vegetables are rich in vitamins this makes a wholesome addition to a meal, and the men folks do like it.—E. M. F.

The Faith That Fails

What Happens When Dad Has To Wash---Other Conveniences

LET us have faith in our children, by all means, but not the blind unreasonable faith that believes them incapable of wrong doing, and that never thinks it necessary to investigate their stories.

A father believed his boy's story about a stone throwing fracas, in which some high school boys broke a window in the school building. The Principal called at the boy's home and told the father that George was one of several boys who were guilty of the misdemeanor.

The father called the boy into the room and remarked in his presence that he had never had occasion to doubt his word, then turning to the boy, he asked him if he was guilty of the offense.

The boy was shrewd and saw the extent of his father's faith in him and so boldly denied any part in the affair.

The father with a sorrowing heart told me, years later, that he believed that was the beginning of George's downfall. It is probable, however, that the habit of deception began years before the high school age when the fond father failed to investigate a childish story and the child saw how easy it was to "get away with it," as the boys say.

Ignorance Not Always Bliss

Talking with the mother of a thirteen-year-old girl, not long ago, I asked, "What does Irene think of it?" referring to something that had happened in the community and which had been discussed all too freely.

The mother looked amazed at my question. "Irene doesn't know a thing about such things!" she exclaimed, "and I'm glad she doesn't."

As a matter of fact, only the day before I had chanced to over-hear Irene discussing the subject quite frankly with two girl chums and it was her mother's faith in her that kept her from discussing it with the only person she should have discussed it with, at her age—her mother.

It all reverts to the matter of keeping the child's confidence, which, nine times out of ten is lost in the very early years through fear on the child's part and lack of understanding on the parent's.

Blind Trust Is Not Wise

If George's father had investigated the boy's stories instead of believing them implicitly; and if, when he found the boy had told him a falsehood, he had talked kindly, correcting him of course but making him feel that he was understood and would be given fair treatment always, but that truth was necessary above all else; the boy and father would have grown up in a companionship in which deception could not live.

If Irene's mother had not thought Irene so innocent, but had recognized that she was vitally alive to all that was going on around her and was at least normally curious about life and its laws, she would have approached the girl tactfully, winning and keeping her confidence.

I am sure no normal person thinks himself above reproach—then why—oh why, should we believe our children to be, when they are but flesh of our flesh?

Investigate Johnny's story; if it proves to be true, give him full credit and let him know that you expect the truth from him—always; but impress it upon him that you are going to make it your business to know what he is doing, because you are his best pal and friend, and then your faith in him will be justified. — MRS. MAE N. MORRIS.

The Story of Lucy

LUCY is a marvel of success. How did we happen to get her? We were lucky for once. It happened this way. A very pleasant neighbor used to come in to wash for mother but she fell sick and could no longer come. So Dad had to go to the city to consult the employment bureau. The war was on and every one had easy work and big pay. There was only one woman looking for work;

she was tall, lanky, Irish, and just getting over a spree. Dad and this woman eyed each other. Questions passed and she went with him. A phone to mother, a six mile trolley ride, and Dad, rather skeptically, and the woman, very loquaciously, entered the kitchen door. Then the battle began.

The Job Falls on Dad

The conveniences in our kitchen are not palatial, to be sure, but there are stationary tubs, a boiler of hot water, and a good wash-board. But soon the stream of words from the washer-woman flowed faster than the water from the faucet at eighty pounds pressure. Too many sheets, soap not right, clothes dirty, not enough hot water; she had worked for the queen of money-bags and never seen such a wash before. She had the rheumatism, the ague, and graced over a pain at the pit of the stomach. Mother, worn to a frazzle—caring for two small children and getting dinner at the same time—under this bombardment, finally told her that if she didn't want to wash she didn't have to. Then there were some fireworks. She stamped and raged, got her hat and disappeared, tho the washing was not much more than begun.

It was up to Dad to finish the wash-

Use The Stairs

IF you need an extra cupboard, place one in the stairway, as shown in illustration number one. Any handy man can build one. And the same space could be used for a wardrobe, if desired, while the bottom step might be used as a shoe box. (See illustration 2). Hinges are fastened to it as shown, and provides a convenience that will always be useful.

Wall space may be utilized by placing a small cupboard in the stairway.

Clever use of bottom step of stairway for shoes, rubbers, etc.

ing for Mother was not able. That reminded him of a washing machine at the hardware store. Mother and Dad went to the city to see it and found that on account of the shortage of labor, purchasers were given ten per cent off sales prices for taking things home. Dad said that was pretty good, for a good neighbor of his would do the carrying for nothing. Next morning he said to his neighbor: "Sam, are you going to the city today with the truck?" "Yes, Mr. Dad, is there any thing I can bring out for you?" "Yes," said Dad, "if you are going to Sharp's store I'd like you to bring out a washer-woman. You will find her standing just inside the door." Sam looked at Dad as much as to say "What are you giving me, any way?" But Sam is a good joker and brought Lucy out that day.

Saved Money and Dispositions

Lucy is not a beautiful girl gracing the pages of a fiction story, nor is she a new movie star; she is only an electric washing machine. Yet by industry and ten years of faithful service, she has attained a certain personality; for, since her arrival on that bright spring morning, our Lucy has always been ready and willing to do the work required of her, and all that Lucy requires of us is a little oil and some attention to her wires. She eats only when working; her food is oil and a steady flow of electric juice. Her board bill, therefore, is small. Once she had the doctor but it was not necessary, for she was not really sick. It was only a bolt that needed tightening and not a death rattle as we supposed. The doctor, much interested in Lucy and her relatives, did not send in a bill. Every week Lucy has worked without a word to say about the wash being too large or too dirty; nor has she told of her service to the queen, and we have paid her no wages. On the other hand she has saved us our dispositions and from \$1,000 to \$1,500 in laundry bills and in wear and tear of clothes.

This is a true story for I wrote it,
Dad.

Novel Uses For Salt

Do you ever, when having new shoes, before wearing them, rub the soles on a paper, plentifully sprinkled with salt, to "roughen" them, so you will not slip? Why they make the soles of shoes so shiny and smooth, is a puzzle to me, for it entails a lot of arduous labor to get the family shoes so they will be safe from causing broken bones.

* * *

When making apple pie, or apple puffs, do you put just a wee sprinkle of salt over the apple before you do the sugar? It will greatly enhance the flavor, the same as a pinch of salt does in coffee—cocoa, postum, or fudge. But it needs, or requires—"only" a sprinkle—as too much is worse than none.

* * *

Salt, on a paper to rub the sad irons on, will insure a "smooth" surface and make them iron so much easier. It only requires doing occasionally.—CLARICE RAYMOND.

Did You Ever Try?

Substituting rolled oats, browned in the oven, for nuts in a cake?—Mrs. L. E. G.

* * *

Baking the apple sauce instead of boiling?—Mrs. L. E. G.

* * *

To keep cookies crisp, put a few handfuls of shredded tissue paper in the bottom of the jar, so the air can circulate.

* * *

The flavor of salt pork may be improved by adding a small quantity of whole black pepper to the brine.—I. M.

Extra help to get clothes thoroughly clean! Splendid soap and dirt-loosening naphtha, working together, make Fels-Naptha different from any other soap, or any other form of soap! It loosens dirt easily, quickly, safely. Isn't this extra help worth a penny more a week?

Be sure to include Fels-Naptha in your camp kit this Summer

Post Your Farm

— and —

Keep Trespassers Off

We have had a new supply of trespass signs made up. This time they are made of extra heavy linen on which the lettering is printed directly. There is no card facing to be water-soaked by the rain and blown away by the wind. We have had these new signs made up of extra heavy material because severe storms will tear and otherwise make useless a lighter constructed material. We unreservedly advise farmers to post their land and the notices we have prepared comply in all respects with the New York law. The price to subscribers is 95 cents a dozen, the same rate applying to larger quantities.

American Agriculturist

If You Have Anything to Buy, Sell or Trade

ADVERTISE

in the Classified Columns of the
AMERICAN AGRICULTURIST

A Happy Hunting Ground

(Continued from page One)

to pass on fire signals at night from New York City nearly forty miles away. There are still earthworks to be seen in the town of North Castle, and many battle scars about the county.

Agriculturally Speaking

As in other things John Jay was a pioneer in farming, having used the first mowing machine in the county. He also built and used one of the first silos. It was a square affair built of stone.

Fifty years ago the county supplied a goodly share of the milk going to New York City. That industry has almost entirely gone up-state, but we now supply a thinner fluid known as "aqua" or H-2O. This is a fairly profitable crop, as the city has six large reservoirs here that they paid many dollars for the land they take up. Also, they still return vast sums of money for taxes. Speaking of "finger lakes," one of these reservoirs is twenty-two miles long.

The northern part of the county still has much good farming land. The main crops are fruit, corn, potatoes, and some grains. There is considerable poultry, and some dairying.

Natural Beauties and Convenience

Westchester has many beauty spots in its rolling hills. There is a goodly number of natural lakes, as well as artificial ones. We have tide water on the eastern shore, and the mighty Hudson to the west. So with our present means of locomotion, good bathing is but a step. The nearness to the world's greatest city has brought many home-seekers. The central and southern parts of the county have many estates, almost a population of "hill-toppers." The county has nine public parkways, including around 4,000 acres. the Mohansic, the largest, covers 1100 acres of ground.

Our roads are good, and now we have in the northwest corner of the county the great and wonderful Bear Mountain bridge over the Hudson River. The bridge is at your service. You up-state folks all have a longing to see tidewater, and I know you want to see where the "bear came over the mountain," so come to Westchester and you will agree as the Indians did, that it is a "happy hunting ground."

Treating Fistula Withers

Having seen good information in your paper, I would like a little advice on treatment of a horse that has a fistula. It started first with a large swelling on top of her withers, then broke and has been discharging ever since. The swelling has practically gone but the discharge, still occurs.—L. R., N. Y.

FISTULA withers is a very difficult problem to treat and often takes more money than the animal is worth. The following, compounded at your pharmacy, may help: Tn. Cantharidia, 2 ounces; Tn. Iodi, 3 ounces; Ol. Teribenth, 4 ounces; Ol. Succini, Ol. Tiglii, aa, 1 ounce; Hydrarg. Chl. Cor., 3 drams; and Ol. Olivae, 8 ounces.

Inject these compound into the sinus at intervals of seven to ten days. Coat the outside of the fistula with vaseline, so as to save the hair on the animal, in case any of the medicine should fall out.

Service Department

Concerning Growing Frogs for Market, Enlarging Pictures, Etc.

YOU have probably heard the old story about the farmer who went to a hotel keeper and tried to sell him in advance ten carloads of frogs' legs. The hotel man told the farmer that he could not use ten carloads, but he could use ten pounds. A few days later the hotel man met the farmer on the street and asked him why he had not delivered the frogs' legs. The farmer look rather sheepish and then said: "Well, I'll tell you. By the noise that those old bull frogs made down in the pond back of the night pasture, I thought there was at least ten million of them, but after the boy and I worked for a whole day draining the pond, we found only three frogs!"

A Letter for Prof. Embury

We were reminded of this by an inquiry from a subscriber regarding the possibilities of making money from growing frogs. We wrote to Prof. G. C. Embury of the Entomology Department of Cornell regarding the proposition and he replies as follows:

"Undoubtedly report has come to your subscriber that a fortune may be made from frog raising. Indeed there was a little booklet put out several years ago which raised all sorts of false hopes. The author, however, neglected to sign his name to it but did not hesitate to ask two dollars per copy. I am glad to tell anyone the truth about raising frogs or fish but do not wish to encourage any proposition that is bound to fail.

No one to my knowledge has succeeded in raising frogs to marketable size in artificial ponds and with profit. There are a very few so-called frog farms consisting of natural marsh lands which have been fenced in and protected in such a manner that the natural increase in frogs has been larger than would otherwise obtain.

Must Grow Two Years

As you undoubtedly know the frog when first hatched from the egg is in the form of a tadpole free swimming in the water and feeding largely upon vegetation. It lives in this way from a few months to two years depending upon the species and then transforms to the adult four-legged frog. The newly transformed frog is small and must grow for two or three years more before it reaches a marketable size.

It is an easy matter to raise the tadpoles in a pond until they become little frogs but after they leave the water they feed upon living insects and other animals. So far as known they will not eat artificial food, and so must be turned out to pasture in a marsh. It is very difficult to catch them again because they distribute themselves over a large area.

Green Frogs the Largest

The largest kinds found in New York are the green frogs and the bull frog. Each lays a large pancake-shaped egg mass usually floating at the surface of the water but often anchored about some plant or partly submerged stick. The eggs of the green frog may usually be collected through the month of June, while those of the bull frog are laid in late June and early July.

They may be collected in large numbers with a dip net and pail and later transferred to any convenient pond where they will hatch and the young tadpoles grow to the stage of transformation.

If it were possible to obtain in large quantities some foods that the adult frogs would eat, then one might be able to raise them for the market with considerable profit. The best we can do, however, in the present state of our knowledge is to turn out the frogs into a fenced area of marsh or wet meadow, where they may forage upon their natural food.

It must be remembered, however, that

a great many of them will be eaten by snakes and green herons unless one gives them some protection and also that it may be difficult to collect them for market two years hence.

Reward for Captured Crooks

DON'T forget the standing offer of Henry Morgenthau, Jr., publisher of AMERICAN AGRICULTURIST, of \$100 reward for evidence which will lead to the arrest and conviction of any person or persons trying to sell stock or bonds of a fraudulent nature. The only condition is that the fraud must be attempted on a farm on which is posted an AMERICAN AGRICULTURIST Protective Service Bureau sign. We propose to do our part to drive out the crooks who yearly cheat farmers out of thousands of dollars of their hard earned savings.

If there is any person, or persons, selling stock of any kind in your neighborhood or county, get the details and write us. We will take the matter up directly with the attorney general's office and we are promised than an immediate investigation will be made. If the salesmen are honest,

crooks and is your certificate that you have a right to use all of our experts free of charge. The sign may be obtained free of charge from our salesman, who will nail it up for you, or it will be sent direct by mail to you upon receipt of six cents to cover cost of mailing.

We are glad to be of assistance in straightening out such difficulties as claims against all commercial houses, commission merchants, mail order houses, express and railroad companies, etc. We are glad to make investigations, so far as we can, as to the responsibility of concerns with whom you may want to do business. We also answer all general inquiries, including legal, financial, marketing, radio and engineering questions. All of these are in addition, of course, to any questions you may want to ask about any kind of farm practice or veterinary problems.

Avoid Too Old Claims

There is one kind of claim, however, that we do not care to handle because we are not in a position to; that is, claims of a personal nature, including especially personal debts. We are not a collection agency in the usual sense of the word.

Also, it is very important when writing to our Service Bureau for help not to have the claim of too long standing. It is, of course, impossible for us to do very much in adjusting a difficulty that has been running for several months or a year or more.

Will you also, when writing to us, be sure to state all of the facts, and above all,

sign your name and address in full. We are constantly throwing perfectly good questions into the wastepaper basket because they are not signed, or signed only with initials. All letters will be considered confidential. We will not publish your name in the paper. But most of the letters are never published anyway, for we answer them by mail. Even if we do publish them, it is often several weeks after you write before we can get them into the paper—therefore, the necessity of signing your name for an immediate reply.

Now, after reading this, if there is any way mentioned above in which we can help you, that is just what we are here for. Or, if you do not have anything troubling you just now, remember that if you should have trouble, AMERICAN AGRICULTURIST Service Bureau is at your call free of charge.

A Lifelong Friend

The check for \$99.60 in full settlement of my claim has been received. I can't thank you enough for the trouble you have taken in getting this claim for me. I know we would not have received the money without your help. I wish you would send me one of your Service Bureau Membership Signs. Whenever I can get a subscriber for you I do so. I have already spoken to some of my new neighbors and told them that all farmers should take the paper. I remain a life long friend to the AMERICAN AGRICULTURIST.

—E. W. B., New York.

I received the check due me from the milk company. Many thanks to you for I feel certain that I would not have received it otherwise, as their superintendent was notified personally that I had not received my pay.

If there are any charges, let me know.

—F. McL., New York.

the investigation will help them. If not, you and your neighbors will be protected. For your evidence leading to a conviction, we will give the \$100 reward.

A picture of our Service Bureau sign is on this page, and salesmen will put them up free of charge, or one will be mailed to you direct upon receipt of six cents to cover postage.

The Enlarged Picture Pest

AMERICAN AGRICULTURIST belongs to a group of the best farm papers in America, known as the Standard Farm Papers. We are constantly interchanging information and service that results in benefit to all of the millions of subscribers who take the Standard Farm Papers. We have just received word from a member of this group, *The Nebraska Farmer*, that the enlarged picture pest has made its appearance in Nebraska.

These crooked enlarged picture salesmen have in years past done a lot of business in AMERICAN AGRICULTURIST territory. Watch out for them. Don't let them get your money, and don't let them carry away your good pictures.

Our Service Is Growing

DURING the month of May, THE SERVICE BUREAU OF AMERICAN AGRICULTURIST COLLECTED \$1,704.48 for our subscribers. We settled 215 claims, answered 39 legal inquiries, 24 financial inquiries, 15 marketing questions, and 91 miscellaneous inquiries. On many of these inquiries, it was necessary to write several letters to get the correct information.

This report will give you some idea of what it means to be a subscriber to AMERICAN AGRICULTURIST, and what it means to have posted on your farm the AMERICAN AGRICULTURIST Service Bureau sign, a picture of which is printed on this page. The sign will protect you from

Frost & Wood MOWER

One Horse and Two Horse Sizes

Popular throughout the world for many years. Thousands of satisfied users. Built for heavy crops and rough and hilly land. Roller bearings assure light draft. Its cutter bar strength and superior cutting mechanism give long service.

The Internal Drive Gear is always ready for work in heavy or light crops. Quicker response at knife bar, less wear on gears and fewer repairs. The knives keep on cutting when bar is raised to clear obstructions, saving time and crop.

Sizes 3 1/2, 4, 5, 6 and 7 feet.

Write for catalog describing Frost & Wood Mowers, Dump Rakes, Side Delivery Rakes, Hay Loaders, Grain Binders, Corn Binders, Cultivators, etc.

Guaranteed by us and our dealers.

What Readers Want to Know

Harrowing Potatoes---Buckwheat After Hay

How late is it safe to use a harrow on young potatoes? Some farmers in our section harrow until the plants are quite high. It seems as though they would break some of the young vines. Doesn't this injure the crop? We harrow until we can just see a few sprouts.—G. F. E., New York.

THERE is no set rule for harrowing potatoes after they have been planted and when they are first coming up. A great deal depends upon the individual both as to his likes and dislikes and to the care with which he goes over the crop. Some Long Island growers use a weeder which is a light form of spring harrow until the plants are as high as 6 inches. What little breakage does occur or what few plants are pulled out, are more than compensated by freedom from weeds and conservation of moisture. Much depends upon your local soil conditions. We believe you will be perfectly justified in continuing your harrowing operations, until the plants are at least 3 inches high.

You might try a little experiment in part of the field by harrowing a little longer, say until the plants are 5 or 6 inches high. There is nothing like trying things out in a small way on your own place.

Buckwheat After Cutting Hay

Can a crop of buckwheat be grown after cutting a crop of hay from the land? How much should be sown and how much fertilizer should be used.—L. C. N., New York.

BUCKWHEAT is one of the quickest growing grain crops, and in some sections is sowed quite late in July. If sowed too early, hot weather may injure it at blossoming time, and of course there is some danger that it may not mature in the fall before it is injured by frost.

It is quite common to sow after harvesting the hay, but we believe the practice is not increasing, because the yields are usually much lower than when the land is plowed earlier in the season. When plowed late the sod does not decay rapidly and it interferes with the rise of moisture through the soil.

The usual rate of seeding is one bushel per acre. Buckwheat seems to make good use of a rather low grade of fertilizer, but unless some fertilizer is added, the yield is commonly quite low. From two hundred to four hundred pounds of fertilizer analysing twelve to fourteen per cent of phosphoric acid, and two to three per cent of potash should prove satisfactory. Nitrification will be quite active in the hot summer months, and if nitrogen is added in the fertilizer, lodging of the grain is likely to result.

Hog "Self-Feeders" Practical

Is the so-called "self-feeding system" for hogs safe to use under general farm conditions? I am particularly anxious to cut down my labor in the care of my Berkshires, but I do not want to take chances. How are others meeting this problem?—A. M. L., Pennsylvania.

THE Ohio Experiment Station recently expressed its confidence in the self-feeder, as follows:

"The 'cafeteria' system of self-feeding hogs has proved very efficient and economical, particularly in the case of the ration of corn and tankage. In this system of feeding shelled corn or other grain is placed in one compartment or bin of a self-feeder, which is a hopper feeding down into a trough; and tankage or meat meal, or similar protein feed, is another compartment.

"The pig will eat about the right amounts of each to 'balance' his ration. Pigs have thus established a reputation for being very 'food wise', much wiser than any other farm animal. A weanling pig is still a baby that needs his stomach filled every few hours. Otherwise he will shiver and shrink since he depends on his feed to keep him alive and warm. Only feed in excess of that so-called maintenance requirement can make him grow big and fat.

"Small pigs, particularly at this time of year, when they are called upon to 'fight the climate' should be fed morning, noon, and night, for their small

stomachs do not hold enough feed to last them for twelve hours or more. If self-feeding has a place anywhere, it has for weaning pigs.

Bee-Louse Makes Appearance

A NEW pest of bees, popularly called the bee-louse has been found in Maryland, and in a few other places in the United States. It is undoubtedly imported from Europe with queen bees, and while it is not, so far, to be regarded as a serious menace, beekeepers will do well to take steps to eradicate it from their colonies when discovered.

It is not a true parasite, according to the Bureau of Entomology, but it is capable of weakening a bee colony by taking its food and by tormenting the queen bee. It lives on the honey carried by the bees, not on their blood, as was at one time supposed. It is found singly on the workers and in numbers on the queen bee, but seldom on drones.

Scabs on Horse's Knees

I have a horse with scabs on the back of his front knees, which are very sore. Can you tell me anything to do for it. C. C. B., New Jersey.

THE following prescription made up at your local drug store, and applied to the sore parts, twice daily, should be helpful: Powdered Zinc sulphate, ½ ounce; balsam Peru, 4 drams; camphor, 3 drams; benzoin, 3 drams; and vaseline, qs, ad, 4 ounces.

Treating Simple Coughs

We have a horse that coughs a good deal, and has done so for about three weeks. The cough shakes him badly. Please let me know something to stop the cough.—M. M. N., New York County, N. Y.

COUGHING as a rule is only a symptom of some disease but from your description it may be a simple cough. We suggest that you secure from your local druggist syrup cocillana compound, and give one-half ounce every three hours.

The Valley of Voices

(Continued from page 622)

night, Mademoiselle." And the grateful look she gave him was ample reward for his tact.

"As I feared, Monsieur, the men found nothing down river," said St. Onge as they sat down to the simple meal.

Not knowing whether Michel had as yet confided in the factor, Steele didn't mention the strange trail.

"It is certainly a puzzle, Colonel."

"Yes, a riddle which will be solved in only one way, Monsieur—by time. Some day when we have left the Wailing River we may hear of the fate of my men."

"Then you have no faith in the Windigo theory of their disappearance?" Steele boldly challenged, with a curl of the lip.

The tired eyes of St. Onge twinkled. "So far as our Indians are concerned, Monsieur, the Windigo will drive us out of the valley. But I am not prepared to say that the Windigo have my fur."

Brent Steele was narrowly on the point of demanding that his host put his cards on the table face up. St. Onge's failure to take his guest fully into his confidence was irritating to a degree. As he ate in silence, the American promised himself that there should shortly be a showing of hands or he would go south at once. Then the brooding eyes of Denise St. Onge met his and he realized what it would mean to leave Wailing River to its fate—what memories he should leave behind when he started south for the Nepigon.

Ride on Hasslers

with
**BALLOON
TIRES**

with
**STANDARD
TIRES**

there is a "jerky" effect in riding over rough roads, which can absolutely be eliminated by lengthening the leaf springs and checking the rebound.

Engineers for high-priced cars have changed their designs to meet this new condition.

If yours is a Ford car, you can ride on Balloons without any of this bad effect, simply by adding HASSLERS.

They give the effect of lengthening the springs. In addition, they are a powerful rebound check. Two devices in one—and at the price of one. Ask your dealer.

ROBERT H. HASSLER, Inc.

the Hassler Rebound Check and Shock Absorber gives your Ford car that velvety, easy-riding sensation which on OTHER cars can only be had by means of Balloon Tires plus a good Rebound Check.

Nearly two million motorists were riding on Hasslers long before balloon tires were thought of.

They bought Hasslers because of the combination of comfort and economy which comes of perfect spring control.

A single ride in a Hasslerized car will convince you. Ask your dealer.

How to Control the Enemies of Cantaloupes---Cost of Growing Tomatoes

We are growing cantaloupes this year as an experiment. We are on a good highway and have a good roadside market. After reading in the A. A. about cantaloupe possibilities, thought we would try some. What insects are most destructive and what early preparation is advisable against them? We prefer to be ready and fight before they arrive.—J. N. D., New York.

ONE of the commonest enemies of the young plants is the well known "cut-worm." If you expect much trouble from this pest, it will pay to poison them before the plants come through the ground with poisoned bran. As there have been so many recipes printed for this material, I will not take time to go into this matter further, except to say that it is best to apply it late in the afternoon, just before sundown, as these worms work mostly after dark. If you do not succeed in getting them all before the plants are up, repeat if they cause much damage.

Striped Beetle Most Dangerous

What is justly regarded as the most dangerous of all insects is the striped

cucumber beetle, the small hardshelled bug with black and yellow stripes on its wings. They usually arrive in numbers soon after the plants are out of the ground, and if not kept off then will quickly ruin the young plants. But it is quite as important to keep them off all the season, as they are usually present after the vines have begun to run, although they are not so noticeable then, and many people make the mistake of thinking that they have gone, or that they do not do much damage after the vines are putting out runners. The fact is that they do great injury to the vines as long as they are present, chewing the stems and blossoms, which weakens the vines from bleeding, and hurts the setting of fruit, and the scientists now tell us that they are one of the greatest factors in spreading diseases from plant to plant. It is most essential to control the beetle, and fortunately the new methods of control are very effective.

We long ago found that no method of

poisoning was very effective, so for years we had fought them quite effectively with repellants. In the last two years we have been trying the nicotine dust treatment, and find to our great surprise and pleasure that it will really kill the bugs, the only thing we have ever found that will do so. A good dusting with the 3 or 4% nicotine dust will on a warm day, kill all the bugs which are hit by it or by the fumes. But more will come later, as they will hatch out in the grass of other fields or fencerows. It will pay every grower to keep after them.

Lice Are Bad Customers

One of the most dangerous of insect pests, if allowed to get started, is the plant louse, or aphid; if it gets beyond control it may ruin a whole crop of nearly ripe melons. They are very small, and come in millions on the under sides of the leaves, where it is hard to get at them with a liquid spray. They cannot be poisoned as they suck

the juice of the plants instead of eating the surface. Nicotine will kill them if it touches their bodies, commonly called by contact. We find the same dust we used for the beetle to be very effective, and the dust can be blown close to the ground and rises against the under sides of the leaves, where it is so hard to get the wet spray to touch.—H. J. WALRATH,

The Cost of Growing Tomatoes for Canning

Can you give us any information as to what it costs to grow a ton or an acre of tomatoes? This section grows many acres for canning, and the opinion as to whether it is profitable or not seems to vary among the farmers.—O. N. T., New York.

YOUR question is a difficult one to answer. The cost of growing tomatoes will vary on different farms, and in different parts of the state. The following figures which were sent us by the Fancher Growers' Cooperative Association, of Fancher, N. Y., show that the cost of growing and marketing a ton of tomatoes depends greatly on the yield obtained per acre.

	Cost Per Acre	
	Man Hours	Horse Hours
Plowing	5	10
Harrowing, 5 times	5	10
Discing	1.5	4.5
Cultipacking, 2 times	2	4
Rolling	1	2
Hauling and applying fertilizer	3	6
Hauling plants	2	4
Marking	1	2
Setting and dropping	15	1
Resetting	1	
Cultivating, 2 horses, 2 times	3	6
Cultivating, 1 horse, 3 times	8	8
Hoing	10	
Spreading manure	5	15
Total to harvesting	62.5	72.5
62.5 man hours at 35c		\$21.87
72.5 horse hours at 17.5c		12.68
3,555 plants at \$5 per M		17.78
800 lbs. fertilizer		14.00
8 tons manure \$3, \$24, 40%		9.60
Rent of land		17.00
Cost, up to harvesting, per acre ..		\$87.93

Cost Per Ton			
Yield Per Acre	Up to Harvesting	Packing and Hauling	Total
5	\$17.60	\$4.00	\$21.60
6	14.66	4.00	18.66
7	12.57	3.50	16.07
8	11.00	3.25	14.25
9	9.77	3.00	12.77
10	8.80	3.00	11.80
11	8.00	3.00	11.00
12	5.86	3.00	8.86
15	7.33	3.00	10.33
20	4.40	3.00	7.40

The average yield last year of the members of the Fancher Growers' Cooperative Association, Inc., was 11.6 tons. Ninety-five per cent of them made a profit last year. An effort will be made in 1925 to make it 100 per cent.

Level Potato Culture Versus Ridging or Hilling

I wish you would answer a question for me. I have heard some people claim that level culture is better in growing potatoes, while other folks claim that it is best to ridge up potatoes. What is your opinion.—J. N. W., New York.

LOCAL conditions determine the practice. If you are in a climate that is generally cool and if your soil is loose and deep and abundantly supplied with moisture, you will undoubtedly get good results from hilly culture. If you are in a section where you are apt to suffer from the lack of rain during the summer months, where the soil dries out very readily and where the ground heats up considerably in the summer time, then level culture will usually prove superior to ridging. Down on Long Island the soil is sandy and drains readily. Furthermore they suffer some seasons for lack of rain over quite a period. It is therefore more desirable to practice level culture. In the fall they facilitate digging by going through the rows with a shovel plow and covering some of the weeds, creating a ridge into which the digger works more readily.

Most Reliable!

Louden Hay Unloading Tools

Sold by your home town Loudon Dealer who must handle reliable goods in order to remain in business in your community.

For 58 years Loudon Hay Unloading Tools have demonstrated their superiority beyond all argument. They may save their cost for you the first season, as they have for other farmers, by their dependable service in getting the hay up before a rain. Why gamble with tools in addition to the weather?

Lessons Learned In Marketing Fruit

Western New York Cooperative Completes Reorganization

By M. C. BURRITT

IN AMERICAN AGRICULTURIST, issue of September 27th, 1924, the writer told of the reorganization plans and of drastic changes in the management of the Western New York Fruit Growers Cooperative. These plans were only a start in the right direction. They reduced central costs to a minimum, which was an essential thing to do. The Association is

M. C. BURRITT

about to close its books for the year 1924-5, and in spite of an unusually small crop of fruit has kept within its budget of 10 per cent of net sales with all the year's bills paid. In a sense what was done was negative. Before a new structure can be built on the old foundation the old one has to be overhauled and sometimes torn down entirely. But unless the unserviceable old is rebuilt or replaced with a new and better one no progress is made. The action of the Association directors last fall simply cleared the foundation for the new structure.

Surveyed Before Changing

The directors knew that other and wiser policies and procedure must be established. They did not do more at the time for several good reasons. The active marketing season was on and time was lacking to put certain new policies and plans into operation. It seemed unwise to attempt too much at once. Moreover, some proposals were doubtful and needed further study. So after the rush of the packing season some of the more important changes of policy proposed were put up to the members to think about. At the same time the Bureau of Agricultural Economics in the United States Department of Agriculture was asked to make a careful analysis of the Association's business with recommendations as to changes in policies and operation. The Bureau sent two men, Messrs. Christensen and Swartout, who were given free access to all records of the Association. With the help of clerks they tabulated important data in the office. They visited local association members and talked with local boards of directors. Other investigators visited the trade in several large markets and studied the reputation of the Association's pack with the buyers. Finally, they reported their findings and recommendations to the directors and later to the Board of Representatives.

It is naturally a source of gratification to the Board of Directors that most of its own plans and proposals were confirmed by this independent study

and report and several new and valuable suggestions, all supported by the best data obtainable, made. The most important changes recommended and approved by the Board of Representatives on May 1, 1925 were (1), the practical abandonment or vigorous modification of quarter inch sizing and in its place establishing a pack better suited to trade demand, (2), stimulating demand through better merchandising and selling service; (3), a more scientific and accurate method of deciding when to sell; (4), the reorganization of certain business practices in accounting, pooling, etc.; (5), establishing a reserve; (6), changing the central's commission from a percentage to a flat per package charge, together with other detailed items.

Give the Consumer What He Wants

One of the most important lessons learned by the Association is that it must either give the public what it wants the way it wants it, or be prepared to spend a large sum of money to convince the public that it ought to want something different. These two ways are always open to the seller, first, find out what the consumer wants and how he wants it and then give him what he wants, first of course convincing him that you have it; second, decide for the consumer what he ought to want and convince him that you have something better than what he has been buying. The Danish cooperatives selling butter to English housewives follow the first alternative. Mrs. Britisher wants to see the butter she buys dug out of tubs, so the Danes sell butter to English retailers in tubs, instead of pound prints which they might theoretically decide were better.

To Discontinue Quarter Inch Sizing

The Cooperative Packing Association chose the second method. It decided that the apple consumer ought to buy his apples quarter-inch sized and not faced, the same uniform size all through the barrel. To be sure, he was used to buying them well faced and with a minimum size only usually two and a half inches and up, all in the same barrel. Many growers

and a few dealers still believe that the consumer is wrong in his preference for the minimum size well faced pack and regret exceedingly to abandon quarter-inch sizing. They are probably right theoretically. Practically, the Association's experience shows that the buyer will not pay a premium to cover the additional cost of quarter-inch sizing. He will take it when he can get the larger sizes only or at the same or sometimes a smaller price. He is not sold on the idea. One wholesaler, who believes that the idea is sound and will eventually be accepted by the consumer, and who is competent to express an opinion, says that it would take a half million dollars to sell quarter-inch sizing to the trade. Western New York growers freely admit that they have not the half million to spend. A homely maxim sums this situation up: "Don't bite off more than you can chew."

The Association has therefore adopted, although with some reluctance, the only possible policy under the circumstances, and discontinued the practice of quarter-inch sizing as formerly employed, and will hereafter pack its fruit to conform to the general trade practice of a two and a half inch minimum pack. Some few exceptions may be made to this general practice and when it seems desirable. This change also involves discontinuing Cataract Brand because it is so associated with quarter-inch sizing by the trade that the two cannot be separated. The Association has offered prizes for a new brand name which will embody the idea of helpfulness, quality and flavor, rather than geographical location. The new brand will be faced, not with the idea of deception but of good merchandising display. Good facing is only advertising and must be backed up by the uniform quality for which the brand stands.

Identifying Each Grower's Fruit

One of the most difficult problems with which the Association has had to deal is that of assembling the members' fruit in uniform cars of approximately the same keeping quality. It is common knowledge that there is wide variation in the keeping quality of apples due to soil, location, cultivation, handling and

other causes and especially to the time elapsing between picking and packing into storage. The dealer meets this problem by selecting the orchards he buys for immediate shipment or for storage. The Association must take all the fruit of all of its members. Moreover, after packing the lots of fruit lose their identity and are mixed in the storage. Hereafter, each grower's fruit will be identified by a number which is to be stamped on the packed barrel. It will be the local

VOL. 115 June 27, 1925 No. 26

What Cooperatives Can Do

AFTER a recent study of marketing conditions in New York City, the Department of Agriculture reported that it costs more to haul a sack of potatoes in New York City than to transport it by freight from a farm a thousand miles away. This illustrates in a nutshell the chief reason for the great difference between producers' and consumers' prices. The Department found a spread of some 47 per cent between wholesale and retail prices due to the heavy costs of distribution in New York. These costs include trucking charges, railroad switching costs, loading, unloading, credit and delivery service. New York is, of course, worse than most cities because of its size and because of its great length and narrow width. But the same costs hold to a lesser extent everywhere.

The chief reason why these costs are so high is the high price of labor. Labor is of course employed all the way along the line with high pay and short hours, with the result that every time the product is touched it leaps in price. What is the answer to the problem?

In our opinion there is nothing that will result in startling reductions of this spread between producers' and consumers' prices. As long as people insist upon living in cities in such large numbers it will cost a lot to get their supplies to them. One magazine writer has suggested that the answer is de-centralization, that there are too many people in the city and not enough in the country. Another, writing on the same subject, has said that this de-centralization will come when the aeroplane is perfected so that men may work in the cities but live a hundred miles from them in the country.

However that may be for the future, we of the present must look to some other remedy, and the only ones that we see, at least while the labor costs remain so high, are small economies all the way along the line. Incidentally, this is where the greatest service of cooperatives should be. A reason why some people have become discouraged with cooperation is because it has not succeeded in cutting out as much of the spread as farmers hoped it would. This is unfair because the best cooperative organization in the world cannot alter the fact that a tremendous amount of costly service must be performed between the producers and the consumers. But an efficient cooperative can cut down the costs.

Dr. G. F. Warren of Cornell is reported to have said in a recent speech in Washington that if the cooperatives work hard enough they may find some way to save the farmers a nickel or two here and there. What Dr. Warren meant is that the greatest service of the cooperatives is in the way of small economies and in better marketing service. This may be done first by the cooperative keeping its own house in order by cutting expenses to a mini-

mum and in reducing overhead; second, by inaugurating such better marketing methods as raising the quality of the farmer's product and by practicing better grading and packing; third, by informing itself and its membership about the market so that it can properly distribute its members' products on the market in such a way as to avoid gluts; and fourth, by businesslike negotiations with the buyers of farm products, not to interfere with the law of supply and demand, but to see that the farmer gets a price that the demand justifies.

Fruit Organization On Right Principles

EVERYONE interested in marketing, and that includes every farmer, will want to read M. C. Burritt's feature article in this issue on how the Western New York Fruit Growers have completed their re-organization and are now squared away for business. The members and officers of this organization have had their courage with them. They found out that they could not go on as they were and instead of giving up in despair, they backed up and started up all over again. We have followed their work very closely and we have found that in their re-organization they have taken into careful consideration nearly every right fundamental principle of cooperation that has been gained by all cooperatives during the last ten years.

One of the things that the Western Fruit Growers did was to call upon the experts of the Department of Agriculture to make a careful investigation and study of just what had been done by the Association, what its mistakes and successes were, and to make recommendations for future action. The Department made this study and in a very frank report suggested what the Association could do and could not do if it hoped for success. The recommendations have been put into practice.

Incidentally, the Department of Agriculture did what the Department of Commerce never could do. The men in the Department of Agriculture are experts who thoroughly understand farming and farm problems and it is because the Department of Commerce never can rightly understand such problems that supervision of cooperative work always should be kept in the Department of Agriculture.

We have just attended a very successful annual meeting of the Western New York Fruit Growers' Cooperative Packing Association. A report of the meeting will be found on page 639. There was real enthusiasm evident, enthusiasm based upon common sense, with no illusions about what the organization could do and what it could not do. On this enthusiasm of the membership, plus the efficiency and common sense knowledge of the directors and officers, we predict that this organization will build a real success.

The State Parks Controversy

GOVERNOR Smith called a special session of the New York State Legislature to convene in Albany on Monday night, June 22nd, in an effort to reach some agreement on what body shall control the State parks and the money which will be expended in extending and improving them.

It will be remembered that at the election last fall, the voters approved a bond issue of \$15,000,000 for developing and extending the parks of the State. If this money is properly expended, it will mean much to both country and city folks in furnishing and preserving the beauty spots throughout the State for the enjoyment of everyone.

Naturally, it is important that this large sum of money be expended to the best advantage. During the last legislative session there was a bitter controversy between the legislative leaders and Governor Smith over the control and management of the parks and the method of expending money for park develop-

ment. The legislative leaders insisted, and still maintain, that this control should be given to the State Land Board. This Board consists of the Lieutenant-Governor, the State Engineer, the Speaker of the Assembly, the State Treasurer, the Secretary of State, the Comptroller, and the Attorney General. The State Park Council is a much larger body consisting of the heads of the unpaid Regional Park Commissions, with the Conservation Commissioner, the President of the American Scenic and Historic Preservation Society, the Director of the State Museum, and a large number of other well-known men from many different professions throughout the State.

We believe that the Governor is right. The Land Board is political in character, it has no facilities for managing the parks, its members were not elected for that purpose, and have little time or opportunity to study park management. If they did acquire the necessary knowledge, a new election would likely put in a new set of men who would have to start all over again. Anyway, if the amendment to consolidate the State departments is approved by the people this fall, as it should be, the Land Board will undoubtedly be abolished. On the other hand, the Park Council is not particularly political in character and its membership is composed of many public spirited men, some of whom have spent years in studying park management and layout.

However, we believe that both the Governor and the Legislature are open to criticism for not settling the matter during all of last winter when they were in session. This is the time to keep government expenditures down, and a special session costs a lot of money. Further than this, if an agreement could not be reached during the regular session, it is doubtful if it will be in a special session, and it would seem, therefore, that it would have been better business to have held the matter back until the coming regular session this winter.

Milliman General Manager of the Fruit Growers

THE Board of Directors of the Western New York Fruit Growers' Cooperative Packing Association has just hired Thomas E. Milliman to become their general manager. If this fruit organization had searched the country over, it is doubtful if it could have found a man better fitted in every way to fill this position than Mr. Milliman. He grew up on a farm in Western New York and has been familiar from his earliest childhood with the many problems of the fruit farmers. As a County Agent for several years in Orange County, he won the appreciation and regard of thousands of the Orange County farmers. So great was his success that he was promoted to be Assistant County Agent Leader of Farm Bureaus of New York State, and went from this position as Manager of the Membership Service Department of the Dairymen's League, which position he has held for several years.

Tom Milliman is honest, sincere, and a hard worker. He knows the cooperative business as well as any man. He has ability and he knows farmers and the problems that they have to meet. We congratulate both the Western New York Fruit Growers and Mr. Milliman on making a connection that we believe will work out with benefit to all concerned.

Eastman's Chestnuts

A STORY that is about as old as the automobile that ran over a dog and killed him. Turning to a nearby farmer who was mournfully gazing at the dead dog, the motorist handed him a five-dollar bill and said:

"I am awfully sorry, sir, but take this and get yourself another dog."

After the motorist had driven on, the farmer stood looking at the dog and, scratching his head, said:

"NOW I WONDER WHO OWNED THAT DOG!"

"The Worst Mistake I Ever Made"

Some More Interesting Letters from Real Life

THE worse mistake I ever made? If it was not the worse, it was the biggest. It might have been fatal. I recoil from the thought of the consequences that may have developed from a too hasty act, a most unfortunate incident that became a stumbling block in my life ever after. Call it what you may, temper, mental urge, nervous tension, the loss of my self control for a moment resulted in an injury to an innocent boy and a blight on my career.

It happened a score of years ago. I was a teacher in a grade school in a fair sized village. In addition to my regular class assignment, I was placed in charge of the physical culture work. I never was athletically inclined and the task that was delegated to me was very distasteful. But I tried to be a good soldier and did my level best to lead the classes through their drills.

It was summer—a few weeks and school would be dismissed for the summer recess. The day was hot and sultry. I felt irritable. It was not due to the disobedience of the students for they were everything a man could ask. There was some urge within me that seemed to drive me to do something, but I did not know what. I wanted to strike out. I left the platform in the front of the gymnasium and walked along that file of boys standing at attention. Suddenly something snapped in the back of my head, things seemed to have gone black—what happened I scarcely can recall. Why—I never can explain. That urge came over me to strike out at anything. Nearest me stood a boy about 11 or 12 years of age. My arm flew out and I struck him all too hard, driving him against the solid masonry room in which we were. He did not expect the action—I saw that the moment it happened. He was a stout boy and his awkwardness added to the unexpected attack, prevented his saving himself. He fell head foremost against the stone wall. He was hurt—I could see it.

There was a brief hearing. The boy's classmates testified against me. I had no explanation to make. In a few days a communication came informing me that I had been transferred to another school of lower rating. My reputation went before me. I have never been able to recover the lost ground. I have provided well for my family but had it not been for my loss of self-control I would have been able to have advanced far beyond my present situation. That is not all. I cannot but help thinking of that boy—and whether it affected him in any way. I have a boy of my own and know how I would feel and act—too vigorously perhaps—if a teacher were to treat him as I attacked that student. It was one time when I really lost my self control.

It was my most costly error. I hope my experience will help others to think twice before they do likewise.

Sent to "Coventry"

AT the school I attended the boys were formed into a company and drilled during the noon hour by the seniors who acted as officers. The head master warned us to desist from climbing over into neighboring wheatfields. Very severe punishment was promised for disobedience.

For some time this warning was observed. Then one day we were ordered over the wall. I remembered the promised punishment and being

classed amongst the little ones and placed in the rear, I simply stood still and let the others pass on without calling the attention of the corporal. This was my mistake. The farmer saw us and complained to the head. The roll was called and all who had disobeyed were ordered to come to the front. All obeyed and formed in line. Beginning with the oldest, the head strapped each boy with all the strength and skill acquired by long practice and constant practice. When he finished, there were one hundred tingling hands. I had kept my seat.

"Did you cross the wall?" said he.

"No, sir."

YESTERDAY, TODAY AND FOREVER

Copyright, 1925, New York Tribune, Inc.

By Winsor McCay

He appealed to the officers.

"Yes. He was over every time."

"Hold out your hand."

When I had gotten the same as the others, he doubled the punishment for lying, as he believed. That was not all. When school was dismissed I was court-martialed for (a) desertion, on my own evidence and (b) for failing to stand up and support the company by sharing in its punishment.

I was then punished again and sent to "Coventry" until the holidays.

The head was told of his mistake afterwards by someone who had seen me leave the ranks. It is forty years since the above occurred but I have never again made the mistake of leaving any doubt as to where I stood.

The Evil of Gossip

THE worst mistake I ever made was made a few years ago when I was a young girl and a member of an organized class in a country Sunday School. It was time to elect new officers and teacher. The teacher we had was a well-educated, married lady, who was a leader in church affairs and made a fine teacher. She understood the Bible and knew just how to keep

the class interested during study hours as well as other times. Being one of the girls, I had a good chance to hear what the girls thought of their teacher and I did hear many things, what we call "gossip."

When it came to elect our teacher, we called a special meeting to elect our future teacher. I was in my teens and thought myself old enough to pass opinion upon any subject that came up. When it came my turn to say if our present teacher was to be our future one, I said, "No. She is gossiped about and we ought to have a teacher whose name is above reproach." So they did as I suggested and got a new teacher.

The consequence was not at all to my liking. Some of the girls who were there for a good time and not for study lost interest and dropped out, and others looked upon me as a tale-bearer, and do yet. Besides, it hurt the teacher very much to have the girls go back on her. There never has been the interest there was before. Last but not least, it was all brought about by the meanest and lowest of things in this world, "Gossip," the most cruel of all to our character. Never gossip or believe gossip, for if we do we are breaking one of the commandments, the sixth, "Thou shalt not bear false witness against thy neighbor."

Left School Too Soon

THE greatest mistake of my life was when I left High School at the age of sixteen. My father died when I was nine years old. I worked for farmers for my board and clothes and went to school. People were very kind to me. I seldom saw my mother as she was living in another village, taking care of my two little sisters. At the age of fourteen I began to work for a man who owned two large farms near a village. I was to have my board and clothes and attend High School. I had already passed my preliminary examinations direct from rural school. I entered High School about a month after the opening. I did not get my chance on the farm till then. I got along very nicely even though I entered the classes late. We had good instructors. I made

all my subjects some with honors, the first year.

The second year started off with promise. I enjoyed the work on the farm and the work at school. But others were making money and I had but little. So I decided to go to work on a large dairy farm for big wages. What a mistake! Many people told me not to do so. But I thought I knew best. So I left High School without completing the second year.

I have since seen my error, but it has taken many years of home study and summer school work to accomplish what I could easily have done in three years in my teens.

Failure to Keep Accounts

I believe any one starting out in life without keeping accounts makes the worst mistake of all. Either indoors or out, it surely pays. We have tried both ways and know whereof we speak. We are farmers and started out keeping no accounts whatever. At last we decided to try the accounting system. It has been very satisfactory, and such surprises it brings! You just cannot imagine until once you try. We will not go back to the old way again. It surely does take time to be sure, but the time is well spent.

OHIO ACCREDITED CHICKS

THEY COST NO MORE—AND YOU CAN FEEL SAFE. Chicks from our hatchery come up to the standard set by Ohio State University for purebred chicks. They have been inspected and have stood the test. Order today for immediate delivery, or send for catalog. Order our chicks and feel safe.

When You Sell Eggs

Things That Affect the Price You Receive

ANY egg, good, bad or mediocre, will find some sort of a market some where, BUT the price is determined by the quality. In this one respect the farm egg in general has a chance to show improvement. I am basing my conclusion on an hour's conversation I had with a commission man in New York City. During the course of our conversation we went over in minute detail the failings of farm eggs to make better prices in this market. And we could go into minute details, for I knew some of his customers in my own community and I knew further that they were not satisfied with the prices that they received for their eggs. Now I was listening to the other side; what a commission man actually has to sell in the way of eggs or else receive a black name for his low prices.

By L. H. HISCOCK

thumb, and you can see what the inside of the egg looks like and the size of the air cell, which will cast a shadow in this end. In five minutes, with a little practice, you can run through a goodly number of eggs, and you will see just what their quality is internally. It is not necessary to candle all of them; a few will tell the story.

Get Rid of the Rooster

If you do not want to bother to do this, you may be going ahead blindly, but you can still improve your eggs in other ways. For example, if you buy your stock as baby chicks, never keep a rooster; they are absolutely worthless to you and hens lay just as well without them; they simply consume feed. On the other hand, when you are hatching your own chicks, a male bird becomes a necessity. The hatching is, however, over before real hot weather arrives. This gives you a chance to either dispose of your birds or else pen them rather than leave them with the hens. One male bird can materially affect the price on any case of eggs during hot weather.

Collect Eggs Twice a Day

When the weather is hot, it will help, if you take up the eggs twice a day. The very fact that hens are on and off the nest all day is enough to cause heating in an egg, for the laying day is a long one during the spring and summer. When these eggs are gathered, keep them in the coolest place you can find on the farm and ship them away as often as you can fill a case.

How You Pack Is Important

There is one other question that deserves a little attention and this is packing eggs. The AMERICAN AGRICULTURIST some time ago published an excellent article on this problem. The point I wish to stress is this: use the very best shipping cases available. Where second hand cases, flats, fillers, etc., are used and damage results, you cannot collect any money from the express company. A filler that has been used once tends to be weak on the ends; the chance of breakage, therefore, is increased. If there is any breakage in New York, the case is inspected by express authorities before its sale; you have no chance, therefore, of establishing a claim if you were in the wrong. Second-hand cases, that is, the outside part, can be used if the ends of the case are wired. At a reasonable price you can obtain new flats, fillers, and pads from poultry supply dealers and use these in your second-hand cases. It is a good form of insurance, because it will give you a chance to collect for reasonable damage. When eggs are unusually large, you can increase the depth of the case by nailing an inch strip on the ends and center. Also your poultry supply agent can procure

(Continued on Page 636)

L. H. HISCOCK

For a moment let us take a look at the specifications for New York eggs. That city wants fresh eggs of good size, uniformly or evenly graded, with a pale or almost invisible yolk under the candle, always clean but never washed, infertile, and with sound, strong shells. In addition, it likes to have these eggs packed neatly in clean flats, fillers and pads. Every case that reaches the commission man is gone over for the above mentioned points; that is, enough of the eggs are candled—put in front of a light to show their interior condition—to set the price. For every point they fail in, the price per dozen comes down accordingly. In other words, it is an impossibility to get the top price if these eggs were not right in the first place.

What Candling Reveals

To give you some illustrations. A fertile egg in hot summer weather will show some signs of germination in forty-eight hours. If eggs have been left in the nests all day during the hot weather and then shipped during more hot weather, the air cell in the end of the egg will be large and the color of the yolk will be dark. If your eggs have been washed, the size of the air cell will increase twice as fast as in the normal unwashed egg; washing destroys the bloom or natural covering on the shell so that air sweeps into the egg more rapidly. Dirty cases and fillers may taint an egg or cause mould.

Perhaps it may be argued that the New York market is the strictest market in the world on eggs. Very well. But, if eggs are packed along the specifications outlined above, it is also true that they would be sure of a good reception in any other market, for most of the trouble can be eliminated with satisfaction to any consumer, New York City or any other place. The main trouble is that a farmer does not have time or will not take the time with his hens. As a matter of fact, the time involved in checking your eggs would amount to less than ten minutes a day, and you would have a good chance of receiving more money for your eggs.

How to Candle at Home

If there is a flash light or bull's eye on the farm, take it after dark and sit down with your eggs. By placing the lighted end in your palm and closing your hand around it you have a good machine for candling. Close your thumb and finger over the glass or lighted end so that there will be left a hole about as large as a quarter. Place the big end of the egg in the cavity formed by your finger and

Shall We Feed With Pasture?

THERE is a very common feeling among dairymen that pasture grass is the one perfect balanced ration for dairy cows and to a certain extent this feeling is justified. In addition to its fine feeding value, grass has another valuable characteristic in that it is one of the cheapest feeds for the dairy herd. We all know how production jumps when the cows are turned out to pasture, but unfortunately when a dry spell comes, there is a gradual but sure drop in production. Flies irritate the cows, and the grass becomes tough and unpalatable as well as lacking quantity. Thereupon the dairyman is faced with the annual question, "Will it pay me to feed some grain this summer, or shall I take what I can get without feeding."

The answer depends on several facts and conditions, and to a large extent must be answered by each farmer in

How cows shrunk that were fed pasture only. They gave 46 pounds of milk on August 1 for every 100 pounds produced on June 1.

terms of his own farm. It may pay one man, but not add to the profits of his neighbor. The relative prices of grain and milk must be considered. Through long years of experience, dairymen have concluded that little profit can be obtained by feeding grain to cows unless they can get at least as much for a hundred pounds of milk, as they are obliged to pay for a hundred pounds of feed.

Grain Reduces Rate of Shrinkage

There is the fact to consider that in addition to the immediate increase in milk flow, the cows will shrink in production more slowly if grain is fed, and will continue to produce longer than if they are compelled to depend entirely on pasture grass. There is some evidence

When cows were fed grain with grass they dropped to 68 pounds of milk on August for every 100 pounds produced on June 1.

to show that they will produce more milk the following year, if fed grain during the summer. To demonstrate this, the Cornell station divided a herd into two lots, feeding one grain but giving no grain to the other group. The ones getting grain produced a pound more milk for each pound of grain given them, which might lead to the conclusion that it did not pay. But in addition to the gain in milk, they also gained in body weight, and the following summer with the same care given to both groups, those that had received the grain the previous summer produced 16% more milk than the cows that had been given no grain.

The conclusion of several experiment stations is, that it does not pay to feed

(Continued on Page 641)

Arithmetic or Results?

Whenever you buy a bag of dairy feed, you must depend upon the integrity of its manufacturer. Upon him you must rely—no matter what you purchase. It is his responsibility to make the name on a sack of feed represent real feeding values, as well as high and uniform quality. He stakes his business success on every bag of feed he makes.

You Buy Feed, Not a Formula

It can make no difference to you whether a list of ingredients and proportions is printed on the tag or not. Names and quantities of feed stuffs do not insure quality. Arithmetic cannot guarantee results.

We recognize our responsibility to dairymen in the manufacture of Larro. All the experience, ability and facilities of this company are devoted to giving you the one thing in which you are interested—the largest possible profit from every dollar spent for feed.

To this end we developed the Larro formula on our own Research Farm. Years of experiment and

practical feeding tests have proved it will keep cows healthy and produce milk both economically and in large quantity. This formula will never be changed unless constant research develops and proves a better one.

With the same care we have perfected the manufacture of Larro. Our mills are equipped with laboratory facilities to safeguard you against inferior quality; with special blending, mixing and weighing machinery to insure uniformity; with electro-magnetic equipment to guarantee safety for your cows from dangerous particles of iron and steel.

More Value, Dollar for Dollar

The result is value in Larro—value that you can measure definitely by returns in dollars and cents; value that is constant no matter how markets vary.

The experience of a large and growing army of Larro users is daily proving the real economy of Larro quality.

Reviewing the Latest Eastern Markets

MILK PRICES

THE Dairymen's League Cooperative Association announces the following prices that dealers will pay the League during the last half of June for milk testing 3% in the basic zone on 201 to 210 miles of New York City. It is understood of course that the prices mentioned below are not received by the farmer but go into the pool. They are prices dealers pay the League.

These quotations are subject to change between time of publication and mailing due to conditions in the market.

Class 1 Fluid Milk	\$2.33
Class 2A Fluid Cream	1.80
Class 2B Ice Cream	1.95
Class 2C Soft Cheese	1.90
Class 3A Evaporated whole milk	
Cond. whole milk	1.80
Milk for Chocolate	1.70
Class 3B Whole milk powder ...	1.80
Class 3C Hard-cheese other than	
American	1.70

Class 4 prices will be based on butter and American cheese quotations on the New York market.

League Announces May Pool Price

The Dairymen's League Cooperative Association announces that the pool prices and deductions for the month of May are as follows:

Gross Pool Price per cwt	1.95½
Less Expenses05½

Net Pool Price	1.89
Certificates of Indebtedness10

Net Cash Price to Farmers1.79

The net pool price for May 1924 was \$1.40 and the net cash price to farmers \$1.30.

Sheffield Producers

The Sheffield Farms Producers announces the following prices for 3% milk in the 201 to 210-mile zone:

Class 1	\$2.33
Class 2	2.00
Class 3	1.65

Class 4 prices determined by butter and cheese quotations on the New York market.

Non Pool Cooperative

The Non-Pooling Dairymen's Cooperative announces the following prices for 3% milk in the 201 to 210-mile zone:

Class 1	\$2.23
Class 2	2.00
Class 3A	1.70
Class 3B	1.65

Interstate Producers

The Interstate Milk Producers Association (Philadelphia Price Plan), announce the receiving station prices or the price to the farmer in the 201 to 210-mile zone from Philadelphia for 3% milk is \$2.19. In the 101 to 110 mile-zone, the price is \$2.29.

BUTTER MARKET UNSTEADY

CREAMERY	June 16	June 9	A Year Ago
SALTED			
Score higher than extras 43½-44	43	43¾	43 -43½
Extras (92 sc)	43	42¾	42 -42½
84-91 score	40 -42¾	40½-42½	36½-42
Lower G'd's 39	-39½	39	35 -36

Although the price of 92 score butter in this report is just a little better than it was a week ago, nevertheless the butter

market cannot be said to be steady and firm. Business is spotty. Some houses report a good turnover, others are complaining that there is not enough trading to effect satisfactory clearances. In some quarters there is an increase in accumulations and as a result the tone of the market there is barely steady. There are two reasons for this. In the first place the severe hot spell that New York experienced a week or so ago was responsible for a heavy falling off in consumptive demand. Since then the weather has improved but trade is recovering very slowly. The other factor that is holding the market unsteady is the lack of active speculative buying for storage, which is at the best, spasmodic. Speculators are afraid to take hold with any freedom on account of present cost prices. A number of receivers are putting butter away because the terms of shipment are such that sales cannot be effected at current rates without a loss. The chief buying is being done by distributors, confining their purchases to immediate needs which leaves a considerable surplus on the floors. Speculative buyers are holding off and waiting developments of the next week. Some buyers have given up the hope of getting June butter at a lower figure and are taking on a moderate supply. Storing is said to be more active in the West and other points than New York where operators are still following a very conservative course. This has been responsible for shipments being diverted to those sections and a slight loss of receipts in the Metropolitan districts.

The June 1 report of the Bureau of Agricultural Economics of the U. S. Department of Agriculture, gives the total cold storage holdings in the United States, as 12,863,000 pounds as compared with 22,348,000 pounds on June 1, 1924, showing a decrease this year of 9,485,000 pounds.

CHEESE MARKET STEADY

STATE FLATS	June 16	June 9	A Year Ago
Held fancy ..26½-27½	26½-27	24½-25½	
Held aver. ..25½-26½	25½-26	23 -24	
Fresh, fancy 22 -24	22 -23	19 -20	
Fresh, av'g'e -21½	-21½	18 -18½	

The market on fresh cheese is just about steady although there is not a great deal of business being done, especially in fancy marks. There is quite a demand for average run State flats and the offerings of this class of goods are light. Most of the fresh cheese arriving is of high grade. In spite of that there is enough business going on to maintain the price and a fairly firm tone. Wisconsin prices have eased off during the past week slightly. The receipts of Wisconsin cheese at primary markets are becoming heavier. In fact, they are much heavier than they were a year ago. This increase in production is offsetting some of the shrinkage here in New York State. High grade fancy New York State flats are increasing in supply but country costs are still high. The situation in the West and these high eastern costs have made local buyers somewhat reluctant to take hold.

The June 1 report of the Bureau of Agricultural Economics of the U. S. Department of Agriculture gives the total cold storage holdings in the United States as 29,471,000 pounds as compared with 27,172,000 pounds on June 1, 1924, an increase this year of 2,299,000 pounds.

Held cheese is becoming relatively

scarce and prices are hardening. It is interesting to compare the prices this year with those of last year at the same time, showing an increase of anywhere from 2 to 4 cents a pound this year over last year, depending on the kind and quality of cheese.

NEARBY EGGS HIGHER

NEARBY WHITES	June 16	June 9	A Year Ago
Selected Extras	41-43	39-40	37-39
Av'ge extras	39-40	37-38	35-36
Extra firsts	37-38	35-36	33-34
Firsts	34-36	34-35	30-32
Gathered	32-37	32-36	28-33
BROWNS			
Fancy	38-41	37-39	33-35

The market has advances on nearby eggs of fancy quality. Lower grades are approximately the same as they were last year. There are two reasons for this. First, there are not as many fancy nearbys coming forward. Secondly, the hot spell that we have been experiencing has been responsible for shrunken yolks and other complaints that attend hot weather. Marks that ordinarily sell without inspection (on their reputation) are falling into lower classifications. Receipts are lighter all along the line and this fact is responsible for some slight improvement in the intermediate grades. Egg shippers should read the article by L. H. Hiscock on page 634 of this issue relative to the handling of eggs during hot weather.

Storage activities are still going on but the reports of the U. S. Department of Agriculture indicates that the increase over last year's figures is not particularly burdensome. On June 1, the Bureau of Agricultural Economics gives a total cold storage in the United States as 7,707,000 cases as compared with 6,875,000 cases on June 1, 1924, showing an excess this year over last year of 832,000 cases.

LIVE POULTRY SELLING WELL

FOWLS	June 16	June 9	A Year Ago
Colored	31-32	29	27-29
Leghorn	28-30	28	26-27
BROILERS			
Colored	40-45	50	40-42
Leghorns	25-37	40-45	25-38

Although the market is not what it was on June 15, when both express fowls and express broilers were selling top notch, nevertheless the market at this writing is considered to be in a fairly steady condition. During the week ending June 13 there was an unusually heavy increase in the receipts of express broilers and this was responsible for a decided slump in values. Although the demand was very active, nevertheless the burdensome offerings during the middle of the week resulted in a sharp decline in prices. They recovered some of the last ground by the end of the week. The express receipts were heavy enough to react upon the freight market. Colored broilers, particularly Plymouth Rocks, are still meeting a good market. Fancy Rocks will still bring 45c a pound, although the average market on colored stock is from 40 to 42c. Leghorns have been spilling the beans, so to speak. The supplies of this line of goods being extremely heavy. The demand at the present time is very selective, being chiefly for the large fancy colored stock which leaves the White Leghorns to go begging, especially the smaller size. Unusually large Leghorns are meeting some buyers but the small birds, averaging a pound or under, are going begging. Express fowls have been selling fairly well. During the week ending

June 13 they closed out as high as 34c for fancy colored stock. Leghorn fowls have not been doing as well. Since then the edge has turned off the market and values are a little lower. On June 13, Long Island ducks went to 24c a pound and at that figure had only a fair sale.

GRAINS AND FEED

July futures on wheat have suffered a decline due primarily from favorable crop reports from American and Canadian northwest. However, some early threshing returns from Kansas are disappointing and these have been responsible for local upward turns.

FUTURES	June 16	June 9	A Year Ago
(Chicago quotations)			
Wheat	1.49½	1.66¾	1.145½
Corn	1.08	1.17	.82½

Oil Meal	46.00	44.00	

As reported by the New York State Department of Farms and Markets.

HAY MARKET EASIER

The hay market has turned considerably easier since last week, due primarily to the fact that more supplies are on hand. It only takes one barge to put the market in this condition. At the moment only the very finest hay will bring \$25 delivered in the New York City sheds, while No. 2 is worth from \$22 to \$24. Fancy light clover mixed is worth about the same as No. 2 timothy. Second cutting alfalfa will bring \$28 to \$30 for No. 1, \$25 to \$26 for No. 2 and \$23 to \$24 for No. 3. The market is steady on high grades only.

NEW POTATOES WORK NORTHWARD

The new potato crop is gradually working northward. States and Maines are still arriving but they are of no consequence in the market. The heaviest supplies are coming from the Eastern Shore and Norfolk sections of Virginia. These are selling up to \$5 a barrel for the best stock, most of the business going on however, from \$4.00 to \$4.50. These potatoes from the Eastern Shore known as the Red Star brand, are taking precedent over the other marks due to the high quality in the grading. Because of their excellent appearance, of this Southern stock, old potatoes are absolutely ignored and there is an accumulation of stock in the absence of active trading.

Long Island potato prospects took a boom during the early part of the week of June 20th, when heavy showers broke the prolonged dry spell. East End growers had been much worried as many potatoes began to show quite decidedly the effects of the dry weather.

When You Sell Eggs.

(Continued from Page 634)

fillers for you which are two and seven sixteenth inches deep as compared with the standard filler which has a depth of two and a quarter inches. Clean flats and fillers are a big asset in showing to advantage a case of well graded eggs.

The egg is the most perishable product in existence. The best reward for careful handling and good quality is the price received. The chance is yours, if you want to take it.

LEGAL AND HEBREW HOLIDAYS FOR THE YEAR 1925

With List of Foodstuffs in Demand and the Best Market Days Preceding the Holidays as compiled by the New York State Department of Farms and Markets.

HOLIDAYS	DATE	MARKET DAYS	COMMODITIES IN DEMAND
Independence Day	July 4	June 29-July 2	Live broilers especially.
Jewish New Year (Rosh Hashonah)	Sept. 19	Sept. 15-17	Live fat fowls, turkeys, ducks and geese.
Day of Atonement (Yom Kippur)	Sept. 28	Sept. 24-25	All prime stock of live poultry especially White Leghorn chickens and roosters.
Feast of Tabernacles (Succoth)	Oct. 3	Sept. 30-Oct. 2	Live ducks, fowls and fat geese.
Feast of Law (Hannukah)	Oct. 10	Oct. 6-8	Prime quality of all kinds of live poultry.
Columbus Day	Oct. 12	Oct. 8-9	Live chickens, fowls and rabbits.
Thanksgiving Day	Nov. 26	Nov. 20-24	Live and dressed turkeys, geese, fowls, ducks, rabbits and dressed roasting pigs.
Christmas Day	Dec. 25	Dec. 19-23	Live and dressed turkeys, geese, fowls, ducks, dressed suckling pigs, live rabbits, and live goats.

Shippers are advised to have their consignments on the market on the first of the market days.

On the floor is shown Congoleum Gold-Seal Rug No. 323. The 6x9-foot size costs only \$9.40.

The sewing room of your dreams—

What a charming sewing room! And so practical! Note, for instance, the Congoleum Gold-Seal Rug. Would you ever dream that this rich, colorful floor-covering could be kept dust-free and new-looking simply by an occasional light mopping?

Easily and Quickly Cleaned

Lint, broken threads, scraps of material—all the odds and ends of sewing—can be removed in a jiffy from Congoleum's smooth surface. No tedious, time-taking sweeping as is necessary with dust-collecting woven floor-coverings. Every busy woman will appreciate the freedom from drudgery that Congoleum Gold-Seal Rugs afford.

Patterns for Every Room

So varied and appropriate are Congoleum patterns that it's easy to find a design which will harmonize with any room in the home. There are fascinating Oriental motifs, dainty and charming floral effects and extremely neat tile and wood-block patterns.

Congoleum Rugs are laid without any kind of fastening. Tacking or cementing is never necessary. Just unroll them—and in a few hours they hug the floor. They never kick up at the corners or edges to trip unwary feet or interfere with swinging doors.

And though unqualifiedly guaranteed for service, they are amazingly low in price.

Note These Very Low Prices

6 x 9 ft.	\$ 9.40	The patterns illustrated are made only in the five large sizes. The smaller rugs are made in designs to harmonize with them.	1½ x 3 ft.	\$.60
7½ x 9 ft.	11.70		3 x 3 ft.	1.30
9 x 9 ft.	14.05		3 x 4½ ft.	1.95
9 x 10½ ft.	16.40		3 x 6 ft.	2.60
9 x 12 ft.	18.75			

Owing to freight rates, prices in the South and west of the Mississippi are higher than those quoted.

"Things Every Woman Should Know About Congoleum Rugs," an interesting booklet by Anne Lewis Pierce, shows all the patterns in their actual full colors. It will gladly be sent to you free upon request to our nearest office.

GOLD-SEAL ART-RUGS

The Hood Flat Tread principle is one more demonstration!

This tread was developed in the Hood laboratory to minimize the side-wall flexure so dangerous to balloon tire life. It is another demonstration of Hood's intent to build more miles into any tire bearing the Hood White Arrow mark.

The Hood Flat Tread puts more rubber on the road—distributes the load over the greatest number of square inches—and gives the utmost protection against skidding. It provides an easier handling car, with greater traction in every kind of weather and on every type of road.

The Hood Dealer will be glad to demonstrate these facts to you. It will pay you to 'Look for the Hood White Arrow' on the tires you buy.

Look for the Hood White Arrow

The Hood White Arrow is a time tested guarantee of design, materials, and workmanship. Look for this identifying mark—for safety, economy and dependability.

One Way to Keep School Taxes Down

Neighbors Hold "Bee" to Paint Their Own Schoolhouse---Other Farm News

THE week of June 8 in western New York saw the long hot spell broken and by a strange freak of nature, a cold spell of two days following it. The contrast was strong. The first two days of the week thunder showers brought some relief locally. Just here we had a fine two hour rain which helped everything wonderfully. In some parts of Western New York it is becoming very dry and everywhere there is need of more rain. If rain does not come within a week it will be too late to help the hay and wheat crops.

Practically all of the remaining bean planting has been done this week. Generally the seed went into seed beds in wonderfully fine condition although a bit dry. It has been a fine season to kill quack grass and weeds and with early plowing and working over the ground is clean and has fairly good moisture underneath. I should say that the bean acreage is about normal for the last two or three years.

Corn Looks Good—Canning Crops Backward

Corn is up and has nearly all been cultivated during the week. It is for the most part a good stand and because of dry conditions and early cultivation is clean and off to a good start ahead of the weeds. The moisture conditions were generally fine when corn was planted and it had a good rain just after planting.

Canning factory crops are only in fair condition. The hot spell of week before last seriously injured early peas which were just coming into bloom and which needed cool weather. They will be short and likely not well filled. The stand of tomatoes is none too good because they were mostly set during the hot week. Grubs have taken their toll too. Sweet corn is perhaps in the best condition.

Hot Weather Hits Wheat and Clover

Wheat has come on very fast during the last two weeks. It is heading out and the fields show a very good stand but the straw will be short and without very favorable weather from now on is not likely to fill well. The wonderfully fine bottoms of clover in the meadows will not give yields in proportion to the

early promise because of lack of moisture. Clover is in bloom now. The crop is certain to be short and will have to be cut early. Alfalfa is a splendid crop and is ready to harvest on June 13th. It is tall, thick and shows 15 to 20 percent of bloom now. I have seen three or four fields cut already.

The set of fruit appears to be somewhat variable and on the whole only fairly good. There was evidently considerable frost injury and none too good pollination. The set of Bartlett pears is poor. Kieffers are set fairly well. In general the set of fall varieties of apples is not as good as Baldwins. Reports at the annual meeting of our local packing association last week resulted in estimates varying from less than last year's crop to three times last year's yield. On the whole the pack of 34 men is estimated at this time at somewhat less than double last year's production. The quality promises to be considerably better.

We Paint the Schoolhouse and Save Money

This past week we had another worthwhile piece of neighborhood cooperation in this school district. At the annual school meeting we decided to paint the schoolhouse. The cost of professional

painters is so high that we planned to do it ourselves. So yesterday trustee Wilber Chase called nine of us together with ladders, pails and brushes and we put on the first coat in half a day. Next week it will be up to the other half of the taxpayers to put on a second coat. Since we purchased the paint at wholesale the saving in cash is considerable—probably more than a half mill increase in the tax rate. Moreover we all had a good time doing the job, and it meant very little sacrifice to anyone.

In the present period of high prices of labor and materials most farmers would be glad to effect such cash savings as this. For example we are discussing the building of an electric transmission line in a part of this district. Some of us have offered to haul and set the poles and otherwise assist the company with labor. But the company seems averse to our doing so and demands a cash contribution of about \$200 apiece to build the line. This condition is likely to preclude the building of the line at present, when half the amount plus donated labor might be forthcoming. Perhaps the Farm Organization Conference Board could help the electric companies to see this problem a little differently.—M. C. Burritt.

League Delegates Meet in New York City

THE first big business convention of farmers ever staged in New York city was held Thursday, June 18, when the Dairymen's League Cooperative Association, Inc., held its annual meeting at the Hotel Pennsylvania.

F. H. Sisson, Vice President of the Guaranty Trust Company was the main speaker of the day. In his address, he stressed the importance of recent developments in producers' cooperative marketing associations in the United States, and held out this system of marketing as the great hope of the dairy business of the future.

The business session in the morning was taken up with the election of the directors that had been nominated by each district, and the reports of President Sloeum and Chester Young, Treasurer of the Association. President Sloeum stressed the benefits which have

come to the dairymen through organization, emphasizing the matter of prices, higher quality of milk, and the elimination of uncertain and uneconomic factors in the dairy industry. He pointed out the need for economy and sound financial policies, if producers hope to achieve success through their cooperative marketing associations.

John D. Miller, vice president of the association, and President of the National Cooperative Milk Producers Federation, spoke to the convention in his usual convincing manner. "Hal Eppes" of Accord, led the delegates in community singing at both morning and afternoon sessions. Mrs. Ruby Green Smith of Ithaca gave an address at the morning session.

Approximately fifteen hundred delegates from local associations attended the meeting as well as many visitors. Many members arrived in the city Wednesday to take advantage of a sight seeing and entertainment program provided for them by the organization.

Indictment of Cortland Cattle Dealers Expected

ACCORDING to Attorney General Ottinger, charges of conspiracy are to be brought against a ring of cattle dealers in Cortland County. The investigation which has been conducted by Deputy Attorney Generals Maurice Kaman and Almon W. Burrell has revealed the fact that at least sixteen animals with a T brand were killed and buried after the investigation had started. The discovery of the burial places and the affidavits of witnesses to the slaughter and burial has furnished evidence sufficient to warrant its submission to the Grand Jury. The investigation will be continued, but the evidence already secured has been turned over to District Attorney Haskell and is sufficient to warrant submission to the grand jury. There has been some talk that the investigation would end in a general "whitewash party" but from the evidence thus far available, it appears that the guilty parties will be brought to justice.

Charge Dealers adulterate New York City Milk

AN investigation in New York City has revealed the fact that the milk which is delivered to patrons in the city, does not have the same amount of butterfat which it had when it left the farms. Milk from Orange, Broome, Delaware, and Chenango Counties in New York State and from Sussex County, New Jersey, was tested and found to contain about four per cent of butter fat, with some dairies testing nearly five per cent. Tests made of a large number of samples taken in the city revealed the fact that few samples contained over three per cent of fat and a number of samples had less than three per cent, which is the minimum legal requirement.

The charge that adulterated milk is being sold in New York City is made by Harold G. Aron, Chairman of the Republican publicity committee, who has been conducting the investigation. "The people of New York City do not get milk as it comes from the farm," he says "but buy the same milk twice, the first time buying the whole milk, and paying a second time for the cream which is skimmed off".

The New York State Department of Farms and Market Law defines adulterated milk as any milk containing less than three per cent of butter fat any milk which has had anything added to or anything removed from it.

County Notes from Among the Farmers

Nassau County—We had a terrifically hot dry spell during the first week of the month which threatened to do a lot of damage to crops. Rain came just in time to save potatoes but some early peas are an entire loss. Potatoes that are on good ground are looking excellent and the dusters have started work. We have been having ideal weather for dusting, having a heavy dew in the morning and little or no breeze—just enough to carry the dust across the field very slowly. Reports from Suffolk County say they are also spraying and that the potato season down there is about 10 days to 2 weeks ahead of last year.—D. F.

Erie County—Farmers have their crops mostly all in. Grass looks good. We are having very dry weather. Not as many potatoes will be put in this year as last. The same holds true for corn. Wheat looks good.—A. C.

Fruit Growers Endorse Reorganization

THE entire membership of the Western New York Fruit Growers Cooperative Association is solidly behind the plan and policies of reorganization as suggested by the directors of the association. This was emphatically brought out at the large and exceptionally well attended meeting of the fruit growers which was held at Hilton on June 16. The plans of reorganizations are discussed by M. C. Burritt on page 631 of this issue.

If this meeting may be used as a barometer, the fruit growers are in a very confident mood relative to the future outlook.

T. E. Milliman Introduced

In the election of officers, Roy P. McPherson of LeRoy, N. Y., was made a director and Charles S. Wilson was elected to succeed himself. The annual reports were read as usual, the auditor's report being looked upon with especial interest. It showed the association is in a sound financial position. During the meeting T. E. Milliman, the new general manager of the association, was introduced. Mr. Milliman recently resigned as head of the Membership Service Department of the Dairymen's League Cooperative Association to accept the managership of the Fruit Growers Cooperative.

It was requested that the address given by E. R. Eastman on "Common Sense Principles of Cooperation" be printed in AMERICAN AGRICULTURIST and a copy sent to all of the members. We

will be glad to print this in our next week's issue.

Horticultural Society Announces Summer Meeting

The New York State Horticultural Society through its secretary Roy P. McPherson of LeRoy, N. Y., announces that the annual summer meeting will be held at the New York State Horticultural Experiment Station at Geneva, Wednesday, July 29. The association has issued a welcome to members of the Pennsylvania State Horticultural Association who will visit the New York Experiment Station on the same day.

The Valley of Voices—By George Marsh

THAT evening, three men, heads together, smoked on the beach. Slowly that evening, three men, heads together, smoked on the beach. Slowly and in detail Michel and David told Steele of their search and discovery of the strange footprints. While making a wide circle, a mile back from the river, they had run upon them.

"What were they like, Michel?"

"Dey een des contree mak' dem so big."

"Queer t'ing de bear wa't mak' de track," broke in David, "was starv', for dey not seenk far een de mud. An' he have seex-seven toe on fore feet."

"Just like the ones I'll show you in the morning!" exclaimed Steele. "And you found no trail of the men with the canoe?"

"No sign but 'round de camp—no trail in muskeg."

"Well Michel, what do you think? Could the brute that made the track you saw, howl like the one on the ridge here?"

The Iroquois' small eyes narrowed to slits. He puffed hard for a space before answering. "De howl on de ridge was no bear—bear onlee yell w'en he get hurt. Michel not know w'at howl on de ridge but he fin' out before de long snow melt."

"What do you think made the trail David?" Steele grinned into the set face of his friend.

David shook his head. "I nevaire see so beeg bear track."

Then Steele told of his search of the ridge for signs of the night wailer, and of the tracks he had seen that afternoon. But cudgel their brains as they would, the three men were at a total loss for a solution of the riddle of their origin.

The night shut down but the three men on the river shore still sat smoking, hard at their council of war. From his brooding in the trade-house, St. Onge emerged to call a good-night and continued to his house without joining them. Before the shadows swallowed them up, the figure of a woman appeared for an instant at the factor's door. Shortly the wailing of a violin floated out over the silent post. Soon the flickering light of candles, begged of the factor, marked where the post people, distraught by the tale Charlotte had brought home with her, had turned into a night of fear and sleepless waiting for the coming of the prowler. On the beach the striking of a match momentarily lighted the set faces of two half-breeds and a white man.

In the middle of a sentence, David suddenly stopped, raising his head as though listening. Then, silently rising, he plunged into a clump of alders close by! A low curse—the sound of a scuffle.

"By gar! W'at you got, Davced?" demanded Michel as he and Steel followed to the brush.

"I show you somet'ing!" was the muttered reply, as the dark shape of the Ojibway dragged an indistinguishable, struggling mass from the alders.

"Tete-Boule!" gasped Michel, peering into the face of David's prisoner. "W'at you do dere?"

"So you t'ink to hear somet'ing, Tete-Boule?" growled the angry voice of the Ojibway shaking the man he held in the vise of his two hands as a husky dog shakes a rabbit. "You crawl lak' de mink, but I smell you lak' de wolf smell de wood mouse," and the man from Nepigon shifted a hand to Tete-Boule's throat. The mouth of the trembling eavesdropper gaped for air.

"Now I geeve you somet'ing to lceson to, Wabeno! Shaman! Maker ov de Beeg Medicine! Eef you don' be ver' careful, David, de Nepigon Wolf, will tear de devil out ov your t'roat." And with a wrench he sent Tete-Boule sprawling on the beach.

"Guess he won't eavesdrop again in a hurry!" laughed Steele, as the cowed

Indian disappeared in the shadows. But Michel seemed so strangely silent that the American asked:

"What's the matter, Michel, don't you like to see him handled so roughly?"

The Iroquois made no reply.

"Wake up, Michel and tell us what you think?"

"I t'ink," said the head-man slowly, "dat de long snows will be red in dees valley."

"What, you think that fool Tete-Boule will make trouble?"

"Tete-Boule ees no fool." He would say no more.

The house was silent when Steele, filled with the events of the day went to his room. Late into the night his thoughts were busy with the hours on the ridge with Denise St. Onge, with memories of her flushed response to his emotion, of her abandon to the feeling which had swept her when she played her "Farewell," of her reticence and yet her desire to make clear the situation which her father seemingly feared to reveal to Steele. Then the matter of the tracks in the mud; what manner of beast could be loose in the "bush?" A bear never before seen in this section of the north, and just at the time

At this palpable dissimulation Steele demurred.

"Come now, this is no joking matter; what have you got in that square head of yours?"

David barred a set of strong teeth in a characteristic smile.

"W'en we start up river for de Nepigon, I tell you. You laugh at me eef I say w'at I t'ink now."

Michel took up the trail forward while David and Steele followed it back only to lose it shortly in the dry birch leaves. On their return they found Michel waiting.

"She don' run far," he announced. "I don' followed eet far in de dry bush."

Then the three made a wide circle, but failed to pick up the elusive tracks. Disappointed, they were returning to the post by another route than the trail to the ridge overlooking the "Vale of Tempe," when Michel, who was leading, suddenly stopped in his tracks, raising his hand in warning.

Stiff as the spruce around them, the three stood listening. Faintly to their straining ears came a low chanting, accompanied by the rhythmic beating of what sounded like a drum. Steele turned

trouble all winter with his sorcery."

As they talked, the low droning continued, accented by the beating of the drum.

"Let's see what he is about," suggested Steele, and they crept forward.

Within a hundred yards they made out a small, round skin tipi from which the sing-song emanated.

"Naske awass, Windigo!" moaned the voice inside. "Ahuah! ahuah!"

"He tell de Windigo to go away," whispered David to Steele.

Then Michael wormed his way to some small balsam near the tent, while the others watched.

Presently a low mewling from the Iroquois stopped short the wailing in the tent. Then from the balsam rose the caterwauling of a lynx in the mating season.

The drumming started furiously, accompanied by vociferous shouting. The scream of the lynx rose to a maniacal shriek. The drumming ceased, and the maulin cries of a creature frenzied with fear filled the tent. Presently the flap was thrust aside, and a grey-faced Indian scrambled out and fled like a deer in the direction of the post, leaving behind him a white man and an Ojibway doubled with laughter, and beside them, his face set like stone, a tall half-breed deep in thought.

"Why do you do that, Michel? He will only make things worse at the post."

"I try eef he scare ov de Windigo, heseff."

"Well, are you satisfied?"

"Ycs. Eet ees ver' strange he ees so scare." And the head man shook his head doubtfully. "He talk to de Windigo, an' we'n he cum, he run."

In the tent was the complete paraphernalia of the Ojibway shaman or conjuror. The otter skin pouch, the medicine drum of untanned caribou hide, the rattle and mystic shells, familiar to Steele from his knowledge of the medicine rites of the Salteaux nation.

"He must be a member of the Mide-wiwin; he's got the tools," said Steele, examining the crude passports by means of which the Indian sorcerer enters into communication with the supernatural world. "He's a Wabeno, too. Puts the devils into people. I'm inclined to think he's an outlaw from the conjuror's union, as you say, for he kept it quiet here for some time after he arrived."

Back at the post Steele related to St. Onge the events of the morning.

"This Tete-Boule, Colonel, is only a source of trouble here. He is filling the minds of the Indians with the Windigo, and then makes medicine to drive him away, doubtless for a consideration."

St. Onge smiled wearily. "You may remember when I told you of Tete-Boule reporting cries in the muskeg and tracks, you scoffed, monsieur. Now you admit he may have told the truth?"

"True, but he is only stirring up your people—making matters worse, and will drive them away before winter at this rate."

St. Onge shrugged with indifference. "It will not matter. I am expecting a packet from Albany any day ordering me to abandon the post."

Steele stared at his host in surprise. Where was the old fighting blood in this veteran? What hidden cause had paralyzed his nerve? And his love for his daughter—that at least should drive him to fight through to the bitter end.

They were on the river shore and alone, so Steele grasped the opportunity for which he had waited. The matter between them had to be cleared up if he were to give his best efforts and those of David in the days to come.

"Colonel St. Onge," he began, "I am deeply interested in your situation here. I have offered the services of David and myself, in an attempt to aid you in your

(Continued on opposite page)

What Happened In The Story Thus Far

BRENT STEELE, an American ethnologist, is traveling through the Canadian wilds studying Indian life for the American Museum of Natural History. He arrives at the fur trading post of Colonel St. Onge, a former French army man. With him lives his beautiful and cultured daughter, Denise. The country is considered by native Indian hunters, to be spirit-ridden and bewitched. An unseen monster has been traveling through the nearby forest, screeching and howling in a most terrifying manner. The Indians, panic stricken, are preparing to desert the country, believing the weird noises are made by the Windigo, a vicious, fiendish beast of Indian fables. A villainous free trader, LaFlamme, who is buying furs from the Indians for whiskey, contrary to Canadian law is also working against St. Onge. St. Onge is kept at his post by his superior Lascelles who wishes to marry Denise and hopes to force St. Onge's consent by ruining him. Her father vows that Denise shall not be sacrificed. Steele determines to hunt the Windigo and solve the mystery of the noises. He is assisted by the two Indian guides, David and Michel who immediately leave the post to search for tracks of the beast in the section where it was last heard. While Steele is out walking with Denise in the forest back of the post, he sees strange tracks in the soft forest floor, unlike any animal tracks he had ever seen.. He thinks immediately of the Windigo. Steele's curiosity is also aroused by an Indian medicine man at the post, Tete Boule, whose actions and murmurings aggravate the terror and superstitions of the Indians.

the post Indians would make the most of it. The Windigo epidemic was surely launched in earnest. There was work to be done at Wailing River before the snow flew. In the morning they would take up that trail and follow it, but when they lost it in the dry going, what next? Well, they had a plan for the next month, but the Frenchman would first have to show his cards. If he refused, there was nothing to do but get on to Nepigon. On the way there was Ogoké and Monsieur LaFlamme. That ought to be interesting. But little did Steele realize as his drowsy brain dwelt for an instant on the call on Monsieur LaFlamme, free-trader, just how interesting that visit was to be.

CHAPTER X

AT daylight three men were bending over tracks which ran through a wet hollow less than a mile from Wailing River.

"Well, Michel, did you ever see a black bear that would leave these behind him?" asked Steele as David and the head man carefully inspected the peculiar trail.

"Ver' beeg track but ver' strange bear," laconically vouchsafed the kneeling hunter.

"How about it, David?"

David turned a blank face to his chief. Then sitting on his moccasined heels, scratched his head. "Seven toe in dat track, also. Windigo starv'. He cum to de pos' soon and eat Tete-Boule. Den he be ver' seek."

a questioning face to David, who grinned broadly, nodding his head in time to the far drum beats.

"What in thunder!" queried the curious scientist.

"You hear dat down on de Nepigon, one tam," dryly returned the Ojibway.

"It sounds like it. Somebody doing some conjuring, eh?"

"Tete-Boule, de beeg shaman, mak' heseff some medecine dees morning."

"Is he driving away the Windigo, or is he trying to get you bewitched for shaking him up last night?"

"I t'ink he try to call de Windigo for to mak' de beeg medecine togedder," laughed David.

"Do the post people know that Tete-Boule is a Wabeno, Michel?" Steele asked of the silent man who had vouchsafed no comment.

"Tete-Boule mak' medicine for long tam, to drive away de Windigo. De people t'ink he ees beeg shaman, for sure."

"Well, the first thing for St. Onge to do is to get rid of this nuisance, Tete-Boule. He keeps the post Indians stirred up with his mumbo-jumbo, and ought to be kicked out. What do you think, Michel?"

For answer, the tall Iroquois drew an ugly skinning knife from its sheath in his belt. Then he said, "It be good t'ing eef I put dees een hees back?"

"No, not without orders from your chief," replied Steele, amused at the literal interpretation given to his suggestion. "But this Tete-Boule will make

Lone Scouts of America

American Agriculturist Tribe

WE are all fond of wearing uniforms. There is something about a uniform that is magnetic. Lone Scouts have asked where they may buy Scout uniforms, and I am glad to know that they are intending

to get them. It is one way to let folks know that you belong to the organization. However, it is a good thing to remember that the uniform does not make a Lone Scout. Many of the boys do not own one, and yet are doing good work.

In all towns where there are Boy Scout troops, there is a clothing dealer known as an official Boy Scout outfitter. Perhaps some of you have already tried to buy a uniform and have been told that they can sell them only to Boy Scouts. Since the Boy Scouts and Lone Scouts have merged, the uniform is the same for both of them. You will be able to buy a uniform by taking your membership card along to show that you are entitled to wear it.

Perhaps you will want to buy part of it now and the rest later, which is a good way to do, as it will give you a chance to earn money for it.

If your town does not have an Official Boy Scout outfitter, you may write to the Boy Scouts of America, 200 5th Ave., New York City and ask them for a catalogue of Boy Scout material.

"My Lone Scout Experience"

I FIRST heard of the Lone Scouts through the magazine "Lone Scout." When I was sick I found an old copy in some papers which we had tied up to sell. I read it all through, advertisements and all except the long stories which I didn't care for. The membership badge and Mail Tribes attracted my attention most. So I decided to sell "Lone Scout" as I didn't feel like looking up the money for a subscription, so I sent for a sample order. The first week a slip came which said that agents who sold Boyce papers could join free after they had sold them so many weeks, so I joined on February 23, 1923. I finished my degrees on January 23, 1925. I have some points toward the Booster title and am in hopes to have enough to get it by fall. I have had five "contributions" published in tribe papers. I take about ten of them. I belong to the National mail tribe, W. L. S. Radio Tribe, and Wallace's Farmer tribe. Some of the scouts and I

The Pledge of a Lone Scout

"I pledge allegiance to my flag and the Nation for which it stands, with liberty and justice for all. I will do a useful thing each day and be worthy of the name Lone Scout."

are forming a local tribe of about twenty members. I have passed seven national degree tests toward the National Degree title. Any one who would like to join the National mail tribe send me ten cents and I will send your name in. You will receive a membership badge, card and official instructions. In the National Mail Tribe you can earn tribe badges for boosting and passing degrees. You will surely get your money's worth if you join. I am also a Boy Scout.

MAURICE BLACKMAN, L. S. D.

Shall We Feed With Pasture?

(Continued from Page 635)

concentrates when pastures are good, unless the cow is a very high producer. The cow that produces over forty pounds a day on pasture must take some materials from her body as it is impossible for her to consume enough grass to make the milk. She may draw upon her body for a time, but there is a limit to this, and a longer time will be required by the cow between lactation periods to regain this weight.

Savage and Maynard draw the following conclusions in their book, "Better Dairy Farming":

"The cow that falls off in milk does not easily come back. Thus under-feeding her on pasture means less milk not only then but for the rest of the lactation period. She may dry off a month or two earlier than she would have with a little more feed. Further, starving her at this time means less milk in the next lactation also. A little extra feed means more milk at the time, more milk for the rest of the lactation period, a stronger calf, and better condition for the next lactation period."

"It is not economical to supplement the pasture with grain alone. The cow should get some succulent feed, and perhaps some hay, also. Many dairy-men have a small silo that they use for summer feeding. The amount of feed needed will depend on the condition of the pasture and the milk flow of the cow. Where the pasture is still good, feed one pound of grain for every six or eight pounds of milk. Feed about five times as much silage or green feed as grain. As the pasture gets poorer the amount of grain must be increased."

Professor C. E. Eckles, Chief of the Division of Dairy Husbandry at the University of Minnesota made a study

of the question of feeding concentrates in summer with the following results.

The herds of sixty dairymen delivering milk to one creamery, and who were feeding no concentrates delivered 46 pounds of milk on August 1 for each 100 pounds delivered on June 1. Professor Eckles says that these figures represent typical conditions where no grain is fed.

At the same time the College herd, where concentrates were fed, produced 68 pounds of milk on August 1 for each 100 pounds produced on June 1. This herd shrunk 32% as compared with 54% where no grain was fed.

These figures are interesting. Of course every dairyman knows that the cows will give more milk if fed grain, but he also wants to know if he will make a profit from feeding it. Figures compiled from a thousand cows in Minnesota cow testing associations show that the dairies getting grain averaged sixty-four pounds of butter fat above those that had no grain, and that the extra feed cost was \$7.48 per cow. In other words the cows getting grain produced the extra butter fat at a cost of 11.6 cents a pound.

Another fact that indicates the profitability of summer feeding is that so many dairymen are following summer feeding. If there were nothing to be gained by the practice you would not see clear-thinking men, and successful men, doing the same thing over, year after year. If it did not pay to invest money in feed with a reasonable assurance they would get their money back and some profit besides, you would see these men putting their money elsewhere.

The Valley of Voices

(Continued from opposite page)

trouble; but I must say, candidly that you are not meeting me half way. If I am to put in the next three weeks in an effort to run this thing down, I must first have your full and complete confidence. I must know—what you know—and think. This is due me. It is evident that you and Michel have certain suspicions which you have withheld from David and myself—that your daughter is laboring under a great strain. If you cannot take me into your confidence, I shall be compelled to thank you for your hospitality and bid you good-bye, deeply as I shall regret it."

St. Onge listened patiently, as the speaker thought, hopelessly, to the ultimatum.

"Let us sit down and talk it over, Monsieur," he replied.

The two men moved to a rock and lighted their pipes.

The Delicious Cherry

May Be Used for Many Good Things

IN the summer time the appetite natu-
rally asks for the things that are best
for health; too often, however, the nat-
ural appetite has become perverted by
its owner and foods are demanded which
would be better for winter.

Fresh fruit and fruit sauces, melons
and fresh crisp vegetables have the cool-
ing and appetizing effect which is need-
ed when the atmosphere is oppressive
with heat and moisture. These foods
should not be considered luxuries but as
necessities on the farm.

Here in the East where cherries can
be grown so well they go far toward
meeting the demands of the season for
appetizing dishes.

Cherry pies are so delightful to the
palate that we are usually content not to
seek further for ways of using that de-
licious fruit. The pleasing tartness of
the cherry is especially welcome on
warm days and it therefore lends itself
well to combinations for fruit drinks.

In canning fruits I always sterilize
left-over juice and have it ready for use
summer or winter. It gives a very com-
fortable feeling to know that on a mo-
ment's notice I can have a glass of cool
fruit juice for an unexpected occasion.
It has saved situations for me more than
once.

When there is not enough juice left to
can I use it in the form of pudding
sauces. Almost every woman has a pud-
ding sauce recipe which calls for boiling
water. Fruit juice can be substituted
for the water, with perhaps more sugar
added if the juice is very tart.

Cherry Punch

Combine 1 part of sweetened cherry
juice with 3 parts of a foundation fruit
drink made as follows: (This foundation
is good used alone or combined with
juice from raspberry, pineapple, or
grape).

Fruit Foundation Drink

2 oranges	6 tablespoonfuls
1 lemon	sugar
	3 cupfuls water.

Squeeze the juice from the fruit and
strain. Make a syrup by cooking the
sugar with 1 cupful of the water 5 min-
utes. Cool, add the fruit juice and the
rest of the water.

Cherry Ice

A delicious dessert may be made
by freezing the mixture as given for
Cherry Punch. The ice will be much
smoother after freezing if 1 tablespoon
granulated gelatin softened in ¼ cup
cold water is added to the hot syrup.

Good for Picnics

We are especially fond of all the fruit
ices for picnic lunches. We have a
vacuum freezer which requires no turn-
ing. By mixing the juices the night be-
fore the picnic and keeping cold over
night, the packing is not such a task in
the morning. Of course, the freezer
with the handle will make a good pro-
duct, only it takes time to do it when
everybody is in a hurry.

Candied Cherries

Stone the cherries, saving any juice
that is extracted. Place 2 cupfuls of
sugar and 2 cupfuls of water in a kettle
and stir until the sugar is dissolved.
Then add a pinch of cream of tartar and
boil until a thick syrup is made. Skim
thoroughly, add the stoned cherries and
cook gently until the fruit is tender.
Drain the cherries and place on platters
to dry. When thoroughly dry, pack in
boxes lining them with oiled paper, plac-
ing this paper between every layer of
fruit and sprinkling liberally with sugar.
Put cover on box, wrap with paper and
store in a dry place.

Cherry Pie

2½ cups cherries	1 cup sugar
2½ tablespoons flour	1 teaspoon butter

Line a pie plate with paste; fill with
the berries, add sugar and flour mixed,
and dot butter over the top. Moisten
edge of paste with water; roll out paste
for top crust, lay in position, cut out

¼ inch larger than plate. Turn edge
under lower crust and press firmly. Cut
a few small gashes in the center. Brush
with milk, or beaten egg diluted with
milk or water, and bake about 40 min-
utes. The oven should be hot the first
fifteen minutes and then the heat should
be reduced.

Cherry Muffins

2 cups flour	½ teaspoon salt
4 teaspoons baking powder	1 egg
1 cup cherries	2 tablespoons melted butter
½ cup sugar	1 cup milk (scant)

Mix and sift dry ingredients; pour the
liquids slowly into the dish, beat thor-
oughly; add melted butter, and the cher-
ries which have been stoned and drained.
Bake in rather quick oven.

Steamed Cherry Pudding

2 cups flour	1 egg beaten light
½ cup sugar	3 tablespoons melted butter
3 teaspoons baking powder	1 cup milk (scant)
½ teaspoon salt	

Mix and sift the flour, baking powder,
sugar and salt. Mix the beaten egg,
milk and melted butter; pour it into the
dry materials and beat it well. Add
cherries which have been stoned and
drained. Turn it into a greased can or
pail, cover it, and steam about two
hours. Serve with a suitable sauce.

Cherry Sauce for Puddings

1 cup sugar	¼ cup hot cherry juice
1 tablespoon corn starch	1 tablespoon butter

Mix sugar and corn starch thorough-
ly, pour on boiling juice; boil 10 min-
utes, stirring constantly. Add the but-
ter. Serve it hot.

Cherry Blanc Mange

Cook and strain cherries, add one cup
of sugar to each pint of juice. Heat in
a double boiler. When boiling hot, add
for each pint, two tablespoonfuls of
cornstarch, which has been wet with
cold water. Boil three minutes and turn
into molds. Serve ice cold with sugar
and cream.

Canada Replies to Aunt Janet About Spring Cleaning

Dear Aunt Janet:

You tell us we are inclined to place
the housecleaning business in too prom-
inent a place but when you are on the
job all the year round you can't help
but be interested in your work and

No. E370-6—A bunny romper for play
wear that will delight the little folks.
The long ears forming the shoulder straps,
should have a snap fastener sewed on, so
that the ears are snapped together to hold
the garment on. The material is pink or
blue cloth slightly heavier than gingham,
especially designed for children's garments.
The embroidery is black and white. Head
and ears are outlined in black while the
other parts, including the buttonholing
around the edge is done with white. The
garment is supplied stitched up and
stamped for embroidery. Sizes 1 and 2
years. Stamped to embroider and floss to
work with, 75c.

ordinary women wouldn't be happy un-
less they could talk about it. There is
little doubt that this spring cleaning
business satisfies us women folks, what-
ever the men may say or think.

Is it the trace of wandering gypsy
blood in all of us? We farm women are
tied down to one place more or less all
our lives. Are we not partly cheating
ourselves into the belief that we are
moving to some fresh unknown country?
We turn things out doors, rip off old
wall paper, put on something entirely
different, change the color of the paint,
re-arrange the polished furniture and
pictures, as much as we possibly can
and feel just as satisfied after it is all
over as if we had moved a hundred miles
and into a new house.

The rest of the family don't suffer as
much as the funny man would have us
believe. In fact, I think they rather en-
joy it; that is, if Mother manages to
keep calm through it all and doesn't
become a nervous wreck.

For that sort of women it is best to
postpone housecleaning rather late in
the year so that things are dried up and
clean out of doors. What is more har-
rowing to the nerves than a pair of
muddy boots on a polished floor when
one of the family in a fit of absentmind-
edness marches in?

For myself I like to get the cleaning
over in April, then I have May to get
the flower garden started, the chickens
out on the tender grass and everything
going smoothly for the beautiful sum-
mer weather. There is time to get rest-
ed too before the berries are ready for
picking and preserving begins once
more.

Make Every Telephone-Post A Home for Wild Birds

FELIX J. KOCH.

FROM Hazelwood, in southern Ohio,
there comes this suggestion, which
every boy or man, able to whittle at
all, can carry into effect most easily,—
of a 'roost' on every telephone, or tele-
graph-post for wild birds!

In the case of this originator—a game-
warden named Kuertz there, this roost
consists of a small box, with a sharp-
pointed roof, and a hole cut through the
one, broader side, for the birds to enter
and build their nests. A bit of a pole
beneath the hole gives the birds a perch
for feeding; a bit of branchwork below
conceals barbed-wire, to keep out prow-
ling cats. Upper edges of the box pro-
trude and form a roof against the rain,
for the birds here.

While the telephone and telegraph
interests may be made the debtors of
the birds very soon cancel those lease-
holds, and this in an obvious wise:

Not a bird choosing such a place as
that for nest but is, by nature, an insect-
eater, and will destroy far and away
enough worms and borers otherwise
destructive to the poles, to repay his
keep.

On the roads around Hazelwood, Mr.
Kuertz has adorned any number of the
posts with such bird-houses of various
sizes and all of his own whittling to at-
tract various sorts of birds. The result is
that the countryside about his farm
fairly echo and re-echo with bird-songs,
not only in the nesting-period, but, be-
cause of 'stayers-on,' through all the
warm months of the year!

Old Stocking Legs.

SAVE some of the good stocking legs.
They are good for long wristlets when
making the "snowmen." They are good
for berrying in the summer, and are good
to pull on over stockings for extra leg-
gings. The leg of a thick woolen stock-
ing will make a warm cap for the baby.
Just pull it on and see how nicely it fits.
It can be sewed together at one end.—E.
M. F.

June Brings Weddings

And so Does the Fall---to an Ever-Increasing Number

ALTHOUGH June is the traditional month for weddings, recent figures seem to indicate that the young people themselves are changing that practice more and more. Whatever may be the reason for this, whether economic or otherwise, often the occasion for collecting the hope chest and for planning details of the wedding itself, occurs in the fall.

In that case, spare moments of summer offer opportunity for making the dainty things which most girls adore having, either for the home-to-be or for herself. It seems a poor time to obtrude such practical ideas when all is supposed to be romance, but the romance may last longer if the practical aspect is not too much ignored! In fact, when young men are deferring marriage more and more it does not seem amiss that the young maiden be soundly advised about how to reduce the High Cost of Weddings!

There are many things which may be made ready in advance, and it is well to do them if possible before the actual setting up of new establishment begins—that usually provides enough to do at one time! There are some articles, however, which are far more satisfactory if made to fit the furniture which they are to grace: chiffonier scarfs, dressing-table covers, and especially cloths for the dining-table. This usually means waiting until the home is actually started. In most families there is not an unlimited amount of money to be spent for these purposes, and the less money there is, the more carefully should things be chosen. Then it is that a girl should know whether to buy linen or a cotton substitute for linen, whether silk or linen underwear must take precedence over such prosaic everyday things as bath towels or cotton pillow-cases; whether the cost of the wedding itself shall be given preference over the needs of the new nest.

These must be settled by the girl herself since it means more to her than to anyone else. Memories of her wedding day are sacred to a woman, and it means

Spring and Summer

When my year was at its Springtime,
Blossom-studded, pulsing, gay,
I joyed to hear the lusty birds,
That lilt the songs of May.

Their music stirs my heart beats yet;
But—the notes I love the best,
Are the wee, sweet, wistful twitters of
Their nestlings in the nest.
—Mrs. K. S. Oakes.

much to her to have it unmarred by anything unpleasant. Every detail should be as beautiful as time and thought can make it; some of the most charming weddings I have seen have been the simplest in arrangement.

For a home wedding an altar may be improvised easily with the mantel as a background, banking it with ferns and flowers, and the effect is heightened by using lighted candles. If the room has no mantel, a long mirror may be hung on the wall, with pedestals for cut flowers or plants placed on each side. If the bride and groom kneel during the ceremony cushions should be placed ready for them in front of the place reserved for the minister.

The bride's dress for a home wedding is often her "going away" dress or suit. If she wishes to have a veil, however, the conventional dainty white dress should be used. Few or no attendants are customary for home weddings.

An air of easy hospitality and sincere welcome to guests provides the right atmosphere for such an affair. Too much formality is apt to make everyone stiff

and awkward. Refreshments should be simple, but delicious and daintily served.

If anyone wishes more information about what the hope chest should contain, the details of the wedding itself, and the wedding reception, write to the Household Editor, AMERICAN AGRICULTURIST, 461 4th Ave., N. Y. C. State time of day and month when the wedding is planned if you wish information to be most helpful. Any details about how you plan to live helps in planning the trousseau and hope chest.—G. W. H.

Clothes hooks and hangers are not to be found in many a camp and small hotel. The nails that are furnished for clothes are sometimes rusty and in any case are not satisfactory for dresses. An empty spool slipped over the nail will protect the clothing from the sharp edge, and prevent rust discoloring. A few empty spools should always be a part of the traveler's equipment.

Do You Want More Crosswords?

Solution of Last Week's Puzzle

Charming Summer Styles

Easy to make and easy to look at describes the patterns shown below. For hot days, the voiles, wash silks, gingham and other cool material are best. Those showing gathers should be made of the softer materials: the tailored effects call for goods of greater weight.

Pattern 2447 is, especially attractive with its drop shouldered bodice and new expression in full skirts which cuts in six sections. Crepe or crepe de chine would work well in this pattern. It cuts in sizes 16 years, 36, 38, 40 and 42 inches bust measures. Size 36 requires 3 3/4 yards of 36-inch material. Price 13c.

Pattern 2077 by the accompanying diagram. There is one piece for the back of the dress and one for the front. All you have to do is hem the skirt, sew up the side seams, gather the slashed edges at the waistline, bind the neck and armholes add the ribbon sash, and the dress is completed. The pattern 2077 cuts in sizes 6, 8, 10, 12 and 14 years. The 8-year size requires 1 1/4 yards 36-inch material with 3 3/4 yards of ribbon. Price 13c.

Pattern 2442 Every mother wants her little girl to be well-dressed and with pattern 2442 which cuts entirely in one piece, a number of pretty dresses could be made—a gay

Pattern 2389 A dress made by this cut on the bias for using different blouses; ham, with the striped pattern can be varied by trimming, a yellow tailored waist made by a linen trimmed with pattern shown, or a green, and a dainty peasant blouse looks shell pink voile with well with this stylish trimming of crepe and easily made jumper de chine and ribbon, dress.

Pattern 2389 would be nice. Dress pattern 2389 Pattern comes in cuts in sizes 16 years, sizes 6, 8, 19, 12 3/4, 38, 40 and 42 inches and 14 years. Size bust measure. Size 36 requires 1 3/4 yards 36-inch material for the dress and 2 1/4 yards 36-inch contrasting of 40-inch plain material for the blouse. Price 13c.

TO ORDER: Write name, address, pattern numbers and sizes, clearly and correctly and enclose with correct remittance in coin or stamps (coin sent at own risk) and mail to Pattern Department, American Agriculturist, 461-4th Ave., New York City.

Lessons Learned in Marketing Fruit

(Continued from page 631)

superintendent's business to know the condition of each member's fruit when packed. Crops that are in condition to keep will be piled together in storage. Other lots which should be sold early will be kept by themselves.

Personal Contact with Buyers an Asset

Preferential demand for any product or brand rests on belief in the honesty, uniformity and reliability of the product or brand and on the reputation of the seller for business fairness. This confidence can best be secured, the directors believe, by the establishment and maintenance of personal contact with the buyer.

It is for this reason that the Association now proposes to employ a general manager or a general and sales manager, one of whose first and most important duties will be to visit prospective buyers in nearby markets to make personal contacts with the buyer, tell him of the Association's pack and brand and of the ideals behind them. Perhaps this personal contact between a man who knows intimately what the Association

American Agriculturist, June 27, 1925 has to sell, just how it was grown and packed, and a man who buys it, cannot be had in all cases but the directors intend that much more of it shall be done in the future than in the past.

One of the most frequent criticisms of members has been the slowness of making final returns. This is due to the fact that the final pool price could not be determined under old rules until all the fruit was sold and paid for. The directors have now recommended and the Board of Representatives have approved closing and estimating the value of the balance of a given variety when approximately 90 per cent of the funds have been received, and to make returns to the locals accordingly. Since the selling and collecting for the last straggling ten per cent or less usually holds up the pools for from ten days to a month, this action ought to materially speed up the getting of returns to the growers. Balances of the ten per cent which may be under or over estimated will be put into an underage and overage account ought eventually to come out about even. The December first advance on packed barrels is to be continued as it is an effective and equitable means of getting a large percentage of this money for his fruit in the grower's hands at an early date and when he is likely to need it. Picking or pre-season advances by the central are to be discontinued.

Change in Charges and Reserves

The Central's charge which has hitherto been on a percentage of the net sale basis is to be changed to a flat per barrel or barrel equivalent basis. This will tend to relieve the grower of good f. it from excessive charges and to increase the charge on poor fruit, which is not only fairer, since it usually costs more to handle and sell poor fruit than good fruit, but which ought to stimulate the production of better fruit.

Few cooperatives have accumulated substantial reserves. Many of them are still in debt. This is poor business. While the Association operated on its ten per cent commission even with a small tonnage and has paid all its bills, it still has a small debt for its 1924 expansion campaign. A definite plan of amortizing this debt in three years was voted by the Board of Representatives. What will help even more to put the Association on a sound basis is the resolution passed by the Board to deduct one cent per barrel or barrel equivalent on all future packs of fruit to be put into a reserve fund, which, when large enough, is to become a revolving fund.

More Local Responsibility Needed

None of these changes alone nor in fact all of them together can make the Association a successful marketing organization unless the local is efficiently and economically operated. No possible sales price can overcome extravagant and careless local operation. The biggest single items of cost to be deducted from the gross sale price are the package and the packing charges. The latter in particular is almost entirely controlled by the local grower members, through their local directors and their local manager. The efficiency and economy, or inefficiency and extravagance with which the local business is conducted goes far towards determining the returns they will receive. The building and proper functioning of strong locals is therefore absolutely essential and their importance cannot be overemphasized.

Summarizing, the Western New York Cooperative Fruit Packing Association started out on an impracticable program, made some costly mistakes, and lost some of its membership. The majority who stood by the Association have learned their lessons, paid for them, courageously taking their medicine. They have made an intelligent and vigorous effort to locate their troubles, analyze the causes and have corrected mistaken policies and laid out for themselves what seem now to be a sound and constructive program.

Service Department

More Legal Problems Unscrambled

I am writing for information regarding a foreclosure action on a farm which I sold to a Polish fellow six years ago. This man paid so much down and as security for balance gave me a bond and mortgage which he and his wife signed. Since that time the farm has changed hands twice. Now if this farm when sold by referee does not bring the price of the mortgage who do I look to for the balance and also there are four years taxes both land and school. Who will have to pay them? When this farm is sold would it be necessary for me to make a bid on it?—H. B. C. New York.

WHEN the farm referred to is sold, the proceeds will be used in paying whatever liens exist against it. Such liens will be paid in the following order: First, taxes; Second, the first mortgage; Third, second mortgages if they exist.

Our suggestion is that you attend the sale and buy in the farm at as low a bid as possible. If there are other bidders, however, and you do not want the farm, you might bid until the price is sufficient to pay taxes and first mortgage and then let the opposing bidder have it.

Can Lumber Be Taxed?

Is there a law which justifies a tax on lumber. I am on a lumber job, bought the lumber standing and I am cutting it off. This year I was taxed over \$41 school tax and common tax on this lumber that I have stacked. Have they any right to tax it?—L. B., New York.

We are sorry to advise you that under Sections 4 and 6 of the Tax Law, the lumber referred to in your letter is subject to tax.

* * *

Who Votes at School Meeting?

I have been a subscriber to your paper for a number of years and now I turn to you for advice. Will you please publish as soon as convenient, if a person who sends no children to school and doesn't own any property can hold an office or has a right to vote at school meetings? And also how many hours are they supposed to hold school? Are we required to pay a teacher at least twenty dollars a week? Is that the school law?—P. E., New York.

In the first place, always sign your name to communications sent us. Otherwise we must guess whether you are Miss, Mrs. or Mr., and it is much more interesting to correspond with an identified person. It was only through our subscription list that we were able to identify your initials and we are therefore, able to make a personal reply to your inquiry. Ordinarily letters not signed in full go into the waste basket.

Now, as to your inquiry. To vote at a school meeting, a man need only be a resident of the school district. His vote is not conditioned upon possessing children or owning property. The same is true as to his right to hold office.

School should be in session from nine o'clock in the morning until three o'clock in the afternoon, and teachers' salaries should not be less than twenty dollars per week.

Can A Wife Get More Than Her One-Third?

What I wish to know is if a wife having an income of her own and pays debts for a husband that has a farm in his own name, should he be taken away could the wife in addition to her one third of the estate, could she also collect what she has paid in?—E. A. H., New York.

It is our opinion that if a wife has a valid claim against the estate of her deceased husband, she can assert and collect such claim in addition to her right of dower (1/3 interest in realty).

However, it will be well to keep detailed evidence of all loans made to the husband. Payment should be made to or for him by check, and each check should bear a short statement as to the object of its payment. Thereafter, checks should be preserved.

Inheritance Tax Law In Pennsylvania

Is the Inheritance Tax Law the same in Cambria County, Pa., as it is in New York? What percentage are they allowed to take?

The inheritance taxes in Pennsylvania amount to 2% for close relatives (father, mother, sister, brother, son, daughter),

and 10% for all others. In New York, the taxes run from 1% to 5%, 5% being the highest rate.

Woman Votes Where Residence Is

A man and wife living in Maine, the man votes there and the wife votes in New York State. Is that awful or must she vote where her husband votes in the State in which they live.—E. P., New York.

A woman can vote in any place where she has her legal residence. Residence of her husband is immaterial.

* * *

A Family Row

Could you tell what a young man can do who married a girl in Philadelphia, Pa. and lived with her 15 months and during that time she would not go with him to a home of their own which he wanted to do. But would not leave her mother, forcing him to live with her and mother. She was always finding fault with the work he was doing and he changed jobs to try to find one that would suit her, but didn't succeed. He stood it 15 months or as long as he could so he left her. She called up his mother, calling her vile names on the telephone also the son. So he left the State of Pennsylvania over two years ago and has not been back or heard from her since then. He would like to get a divorce from her. Can you tell what he would have to do, where he will have to go to get it and how long it would take?—W. T., New York.

Ordinarily we do not give divorce advice, but if the facts stated in your letter are uncolored, your son should certainly not be compelled to remain the husband of such a woman.

He cannot, however, get a divorce in New York, and will either have to get it in Pennsylvania or in a State such as Nevada. It will be necessary for him to secure the services of an attorney in either State.

Had Right To Kill Eagle

I shot within 30 rods of my house what I thought was a big hawk as it was killing turkeys nearly half grown and large hens that were laying. The game warden tells it was an American Eagle. It was the first time one ever was seen around here if that was one. Please advise if one is liable to a fine when it was destroying property and they shot it thinking it was a large hawk. The color was about like a brown leghorn hen or have we got to stand the loss of poultry and also pay a fine for shooting it?—P. R., New York.

It is our opinion that under the circumstances of your case you are subject to no liability for shooting the eagle. A person always has the privilege of using reasonable force to protect his property from destruction, and we can see no infringement of this rule in your case.

Incidentally, we commend you on being such a good shot.

Location Determines Taxes

Would you be kind enough to give me the following information? Fifty acres of my farm extends over the Town line in another Township. Can this land be taxed for school purposes, no buildings on it, simply pasture land. I pay school taxes in Town where I reside, on 178 acres and farm buildings.—B. H. B., New York.

Replying to your recent letter, it is our opinion that the land referred to as being located in the adjoining township is subject to school-tax in that township.

It is not, however, subject to such tax in the township in which you reside. The theory behind taxes on land is that the land itself and not the owner is responsible for the tax. Hence, it is the location of the land that determines who has power to tax it.

Time Tested Windmill

The Auto-Oiled Aermotor has behind it a record of 10 years of successful operation. In all climates and under the severest conditions it has proven itself to be a real self-oiling windmill and a most reliable pumping machine.

An Auto-Oiled Aermotor, when once properly erected, needs no further attention except the annual oiling. There are no bolts or nuts to work loose and no delicate parts to get out of order.

There are no untried features in the Auto-Oiled Aermotor. The gears run in oil in the oil-tight, storm-proof gear case just as they did 10 years ago. Some refinements have been made, as experience has shown the possibility of improvement, but the original simplicity of design has been retained while greater perfection of operation has been achieved. The Aermotor is wonderfully efficient in the light winds, which are the prevailing ones. The self-oiled motor works with practically no friction, and the wind-wheel of the Aermotor is made to run in the lightest breeze. It is also amply strong to run safely in the strongest winds. In any condition of wind or weather you may be sure that the Auto-Oiled Aermotor will give you the best of service. It is made by the company which established the steel windmill business 38 years ago.

"Cheap" red clover seed and dangerous lubricating oils have all the "looks" of the prize-winning varieties.

Don't let "Looks" cheat you out of Farm Profits

Pick up a handful of Italian red clover seed and examine it as closely as you like.

It can't be told from the finest Michigan variety.

The two *look* alike and *feel* alike—but right there the likeness ends. They certainly don't *grow* alike.

Thousands of acres of winter-killed Italian red clover explain why farmers this year insist on knowing the source of their clover seed and are not picking by "looks" alone.

It is just as expensive to pick oil by "looks."

The *best* and the *worst* can look identical. Your eye can't detect the difference.

But your motor can. It may not protest at first. But your engine knows when it is being cheated, and a wear-crop of repair bills is as certain as death and taxes.

*Make sure of the source
of your oil*

Just as farmers today are going to dealers who handle certified seed, so farmers everywhere are making certain of the source of their oil. More motorists are driving up to dealers and

asking for Gargoyle Mobiloil than for all other brands combined. They don't buy oil of unknown quality and uncertain origin, just because it is peddled around at the back door and offered for a few cents less. Experience has shown that cheap oil seldom means cheap lubrication, and that low-cost-per-quart usually travels with high-cost-per-mile.

Gargoyle Mobiloil is made by the foremost lubrication specialists in the world. It is sold near your farm by a dealer who wants to show you a cash-saving in your operating costs. He wants you for a steady customer. He knows that in actual performance Mobiloil will save you real money over other oils.

The Mobiloil dealer sells more than just oil. He gives advisory lubrication service which assures the grade, or grades, of Mobiloil best suited to your car, tractor and truck. He bases his advisory service on the Mobiloil Chart of Recommendations, which hangs on his wall. Those recommendations are the work of a group of 38 engineers who spend their entire time analyzing motors under every conceivable operating condition. Their recommendations for low-cost lubrication have received the okay of practically every automotive manufacturer in America.

Tractor Lubrication

The correct engine Lubrication for the Fordson Tractor is Gargoyle Mobiloil "BB" in summer and Gargoyle Mobiloil "A" in winter. The correct oil for all other tractors is specified in our Chart. Ask for it at your dealer's.

MAKE THIS CHART YOUR GUIDE

THE correct grades of Gargoyle Mobiloil for engine lubrication of prominent passenger cars are specified below.

The grades of Gargoyle Mobiloil are indicated by the letters shown below. "Arc" means Gargoyle Mobiloil Arctic.

If your car is not listed here, see the complete Chart at your dealer's.
